At the end of her first season in the wa she had learned, without compulsion any kind, and even without coaxi enough of the breast stroke to swim so ten yards. We took off the belt, and was amazed to find that she knew h to swim.

Example is so powerful that if it is go nothing else is necessary.

IF YOU want your child to be polite polite. If you want your child to be n be neat; nothing else is required. To strong or excited language to the c whatever the provocation, is to set u it, for imitation, the memory of vio speech. Good manners can be ta only by patiently persistent example is difficult and involves almost the re cation of ourselves; in this way our dren rear us.

We have tried to direct every instin Ethel to some beneficent end. She has as acquisitive as any young animal, has not been any more disposed to s her toys than most children. But she been impressed by our way of divi things with her and helping her when we can; and the sense of security tha come from this friendly aid has mad more considerate and generous. F

Two Sets or Three?

© 1928 M. L. I. CO.

Lucky is the baby born of the modern, intelligent mother. While she dreams that her child will be a great man, perhaps President of the United States, she studies and plans for his health.

ONE of the things this modern mother found out is that teeth, so vital to well-being, begin to form before birth. And that in order to give her baby good teeth her own diet must consist largely of eggs, fresh vegetables, fruits, whole-grain cereals and milk.

The first set of baby teeth is very important in its effect upon the second set and should be given the greatest care. When one of the little teeth is lost, before nature is ready to send out its successor, the shape of the jaw is likely to change in such a way that the second teeth will be crowded and come in unevenly.

Especial attention must be paid to the double molars of the temporary set. By good dentistry, these should be made to last until the tenth or eleventh year. And so, when her child is only four years old—hardly more than a baby—and thereafter every six months, the modern mother takes him to her dentist.

The first permanent teeth are called the six-year molars because they come in at about the sixth year. They appear behind the two temporary molars, and can easily be distinguished by counting the double teeth on each side. If there are three double teeth in a row the back one is the permanent one.

These first permanent molars are the keystone of the dental arch and govern the position of all the later teeth. Coming in as they do in a mouth full of temporary teeth, they are frequently neglected and sometimes extracted as part of the baby set.

Good teeth do not just happen. They are built by food—like every other part of the body. First in importance comes the food the mother eats before her baby is born, then the food she gives him through babyhood, and finally the food that he selects for himself. Teeth are living parts of the body and need the minerals contained in eggs, milk, vegetables, fruits and cereals.

Lucky is the baby whose mother has determined that he shall have such fine first and second sets of teeth that he will never need an artificial set.

Your Doctor will tell you

Poison from tooth infection may damage vital organs, may cause eye, nerve, or joint trouble, rheumatism, headache, or any one of a long list of serious ailments.

The expert dentist of today employs much of the wisdom of medical science; he uses real engineering skill and his work is often touched by the grace of artistry.

If teeth are lost, artificial substitutes can usually be made which will insure comfort, good appearance and efficient service. Without the latter, good digestion and therefore good health are impossible.

A famous physician once made the statement "Bad teeth are the most common cause of physical breakdown".

Health scientists warn us that teeth should be watched not from the outside alone, but from the inside as well and that a tooth which has never ached nor shown decay may yet hide unsuspected poison. Dentists use x-ray photographs to tell the story. If the x-rays show poison at the root that cannot be dislodged by treatment, perhaps the tooth should be extracted.

The Metropolitan Life Insurance Company will gladly mail its booklet, "Good teeth, how to get them and keep them," to anyone who requests it. Ask for Booklet No. 39-A.

HALEY FISKE, *President.*

"Rules 'n' regulations"

... now turned into play

New ways of guidance that many mothers are using

"THERE'S a game for teaching almost every habit to children," says Miriam Finn Scott, author of "How to Know Your Child," and "Meeting Your Child's Problems."

How impatient children are of everything that interrupts the one important business—play.

But there are ways, now, in which mothers can use this very spirit of play to form lasting habits.

For instance, right habits of eating, particularly breakfast habits. School tests have shown this arresting fact: children are definitely handicapped, at work and at play, unless they start their day with a *hot, cooked* cereal breakfast. Over 70,000 teachers have hung this rule on their class room walls:

"Every boy and girl needs a hot *cereal breakfast"*

Mothers are apt to feel their duty so strongly that they are sometimes too earnest at the breakfast table. They may even let anxiety creep into their voice when they talk about hot cereal.

Then children resist. They believe they don't like Cream of Wheat—or oatmeal—or whatever *hot, cooked* cereal it is. But what they really don't like is the dead seriousness of the whole business.

One of the ways to change all this is a children's club—called the H. C. B. After a mother has sent for free membership for her children she needn't do anything else—except cook the hot cereal!

©1929, C. of W. Co.

FREE—*the plan that works wonders*

A club that children work out for themselves. A plan that arouses children's interest in a *hot, cooked* cereal breakfast and makes them want to eat it regularly.

Badges and a secret, gold stars and colored charts. All materials free, sent direct to your child, with a sample box of Cream of Wheat (if desired). Children cannot resist the H. C. B. Club! Eating Cream of Wheat becomes a fascinating game, then an enjoyable habit. Mail the coupon now—watch the club idea work.

Recommended for 32 years by leading authorities

Authorities on child health have for 32 years recommended Cream of Wheat as ideal. Here are three of their reasons:

1. It is rich in mental and physical energy—all real food.
2. Cream of Wheat is amazingly quick and easy to digest, for it contains none of the harsh, indigestible part of the grain.
3. Raisins, dates, or prunes, easily added while cooking, vary its creamy goodness.

Make this a habit with your children—a good hot bowl of Cream of Wheat every morning.

CREAM OF WHEAT COMPANY — DEPT. P-21
MINNEAPOLIS — MINNESOTA

Gentlemen: Please send my child the free material for the H. C. B. Club as described above.

time she hankered after pennies and nickels. We steered around this by arranging a monthly "salary" for her, dependent upon her keeping her room tidy, making her own bed, getting up promptly, arriving at school on time, and doing her lessons well. I have been taken to task by my friends for "corrupting" Ethel with this monthly wage; but I have always been unprincipled, ready to experiment with anything. It is too early to say whether my friends are right or wrong, but I should say that the signs are against them; the money has made Ethel less acquisitive, not more.

As with acquisition, so with pride; it can be a nuisance and an absurdity, or it can be a source of character and development. I should not want a child to be humble or submissive; and when Ethel is willful I console myself with the thought that she will make things hot for anyone who may try to exploit her when she is grown. Character has to have some pugnacity in its make-up, some willingness, occasionally, to resist.

As to pride, it is the mother of honor and the vertebra of courage; it can be used to good purpose endlessly. We suggest to Ethel that she is too proud to let anyone see her untidy or unclean; that she is too proud to take more than her equal share of anything; too proud to run forward for gifts or favors or preferment; too proud to let anyone surpass her considerably in her work. (I hope she will not see this revelation of our secrets.) Pride is an admirable substitute for punishment; it is a positive stimulant, not a negative deterrent; it begets backbone and bravery, and beats down timidity and cowardice. How can one be brave without pride?

Perhaps, too, we can substitute praise for blame in forming the character of the child. Instead of pouncing upon work ill done and heaping up reproaches for it, we keep an eye alert for things done well. Ethel has to report that she has fallen short in arithmetic (which is her *bête noire*) we show regret, but we do not reprove her. When she comes home with news of perfect marks, we dance and celebrate and praise her.

WHAT if this method of praise and fondness should work less well than the method of invectives and penalties? I would rather lose by one way than win by the other. We shall vote for any plan that makes for Ethel's happiness. If we must choose, we prefer to spoil our child with affection, rather than make it hard with suffering.

I do not know whether it has been a problem or a blessing that through no choice of our own we have had but one child. I confess that we have spent more time on Ethel than we could possibly have given her if the stork had been more generous. I have seen households with two or more children and found them a little too noisy for my taste. I do my work at home and see a great deal of Ethel; but if she had brothers or sisters, I must have some sort of an office or an attic at least a mile away. As it is, Ethel's nearness is no disturbance but an inexpressible delight; the sound of her voice in the other rooms, even her occasional invasion of mine, stimulates and refreshes me.

Nevertheless, this single-child-blessedness presents difficulties. We try to meet them by welcoming playmates from

This Simple Habit

safeguards natural beauty of teeth and gums

Keeping teeth healthy and lovely is really easier than perhaps you imagine.

"Use a dentifrice that really cleans,"—that is the simple rule which dentists urge. For clean teeth are likely to be healthy teeth. And healthy teeth are likely to be pretty teeth.

If you have any reason to feel that your teeth need treatment, see your dentist. Otherwise, do as he would have you do—brush your teeth twice a day with a safe dentifrice *that really cleans!* That, say leading dental authorities,* is the most that *you* can do to guard the natural loveliness of your teeth.

We asked dentists this question, "What kind of dentifrice will best safeguard the health and beauty of teeth?" Their answer was simple. "A dentifrice that really cleans. Put in as much cleansing power as possible and leave out drugs, strong antiseptics and harsh abrasives—they are unnecessary and sometimes dangerous."

Why Colgate's Cleans Better

Upon this authoritative advice we made Colgate's. We produced a toothpaste of maximum cleansing power—yet so mild and pure that it cannot harm even the most delicate teeth.

Colgate's contains the most effective of all cleansing agents—in a special, mild, pure form. As you brush, this cleansing agent bursts into a bubbling, sparkling, delicious foam.

This foaming, searching wave carries a fine calcium carbonate powder which cleans away mucin and food deposits and polishes the enamel to shining smoothness. It penetrates between the teeth; reaches difficult surfaces—purifies and sweetens the entire mouth.

—and Only 25c

Colgate made the original 25c tube of dentifrice. It is today the largest selling toothpaste in the world. Due to enormous volume production, and to the resources of a hundred-million-dollar business, Colgate commands the finest materials and the widest scientific research to safeguard quality. *Also, Colgate's is more* economical. *In the famous 25c tube, you get more toothpaste than in any other nationally advertised brand at that price.*

***AUTHORITY—"The dentist of today believes that there is very little curative or medicinal value in the average dentifrice. The chief function of a dentifrice is to clean the teeth . . ."**

From an interview with a leading dentist in Printers' Ink, December 20, 1928.

Try Colgate's one week—FREE

CASEY JONES tells Jim Henry (Mennen Salesman)

Casey Jones, President of Curtiss Flying Service, is one of America's foremost pilots. As chief pilot and operating manager of the Curtiss Flying Service, "The oldest flying organization in the world," he has done much to make aviation safe and practical. This photograph of Casey Jones and Jim Henry was taken at Curtiss Field, N. Y., just before Casey hopped off for California.

"We flyers vote for cool heads and COOL SHAVES"

Jim Henry—famous Mennen salesman—is interviewing some famous users of Mennen Shaving Cream. His reports will be published frequently in this magazine.

JIM HENRY: "Before you take off, Casey, I want to ask a question. What do you think of our new idea of Menthol-iced Shaving Cream?"

CASEY JONES: "Say, a flying field is certainly a good place to ask *that* question! A flyer is a crank on shaving and shaving cream. And there's a good reason for it. Out in all kinds of weather—flying every day—sometimes in an open cockpit where the wind hits you full in the face. Every morning my face feels grateful for the cooling, soothing feeling that I get from Mennen Menthol-iced and my whiskers come off without a yank. Mennen Menthol-iced gives me the coolest, smoothest shave I've ever had. I'm for it . . . . every day."

Mennen Menthol-iced— The Young Man's Shave!

Modern — refreshing — unique — that's the new Mennen Menthol-iced.

Young men are using it—men who appreciate cooler, cleaner, smoother shaves. Jim Henry has talked with hundreds of men asking what they think of Menthol-iced. Here are some of the answers:

An executive—"Mennen Menthol-iced certainly makes a difference in my shave! I can sense it in the smooth way my blade works; I can see it in the mirror; I can feel the difference through a whole business day."

A well known artist—"Particularly good for blue Mondays. I like the invigorating after-effect on my skin."

A famous doctor—"The soothing menthol relaxes the facial nerves and protects the skin. I recommend it highly."

Mennen Menthol-iced Shaving Cream is the newest member of the Mennen line—a modern team-mate for the regular Mennen Shaving Cream. Both Mennen creams have *dermutation*—a three-way shaving improvement—exclusively Mennen's. 1—it softens the beard, 2—it lubricates the razor blade, 3—it invigorates the skin. . . . The proof is in a trial! Send the coupon.

Also Mennen Skin Balm—the touch of luxury to a perfect shave, and Mennen Talcum for Men—the man's powder that does not show. Great after a bath!

MENNEN MENTHOL-ICED SHAVING CREAM

Jim Henry's treat—14 COOL shaves.

JIM HENRY, The Mennen Company, Dept. D-1, Newark, N. J. All right, Jim! If Mennen Menthol-iced is as good as you and Casey Jones say it is, send me a FREE tube. And a trial tube of Skin Balm, too.

school, by encouraging the return of these visits, by having a young nephew live with us in vacation and holiday time, by occasional week-ends in other homes, and above all by playing children ourselves, joining Ethel in her studies and her games. She is having French lessons; we learn her week's vocabulary with her and make a jolly competition of the task, digging each word into the memory with quips and puns. When she has difficult home work in arithmetic, we sit together around the dining-room table, and the whole family adds, subtracts, divides, and multiplies together for an hour. Is it a waste of time for us? Well, how do you waste *your* time?

THE secret of parentage is the ability to be young again, to throw off all dignity and degrees and play on an honest equality with the child. Perhaps it is by such unassuming intimacy that we may win that complete trust and love which is the corner-stone of education. How shall we ever succeed in the development of character if we cannot, by honesty, draw honesty and honor out of the native moral resources of the child? We tell Ethel that every thought imperceptibly molds her face, and that in the long run all elements of character are written on the countenance for every eye to read; but we are not content with frail intellectualities of that sort. We know that if we wish her to be honest we must be honest ourselves, even when it hurts; and that we must never frighten her with the fear of any worse punishment than to let her see how her defection from honor has darkened the day for us all.

We are confident that example and affection will make her honest with us. Lying is sometimes permissible with adults as few moralists will admit (for adults seldom want the truth); but it is hardly ever wise with children (who hunger for knowledge), though moralists are especially apt to fight shy of the truth when children seek it. Ethel has fallen short of the ideal here as in other things; but I suspect that it is because her father has not been honest with her to the hilt. We shall try again.

The severest test of honesty is in the sexual education of the child. Why do we resist that passionate curiosity which is the root of science and the nurse of education? Essentially, because the increasing postponement of marriage from puberty to a later age has left a dangerous interval in which every unnecessary stimulation to a latent and powerful instinct must be avoided. It is a difficult question, with more than one side to it; but even when we are resolved to take our chances with the truth. We shall do what we can to keep these questions from popping till the last possible moment. But we want to answer those questions before uninstructed or prurient children answer them. How shall we deal with them in any other way or in any other tone, than with other questions. "Reverence" here is the watchcue, and invitation to mystery and mischief; a man should speak of reproduction as he would speak of digestion or respiration, with the quiet impartiality of a scientist.

Knowledge and health are the best psychoanalysts; where the body is strong and the mind is clear, "complexes" will not grow. Diderot said that anatomy is the first thing he would teach his daughter.

KAFFEE HAG COFFEE

The coffee that lets you sleep

though I should be in no hurry about it. The usual disturbances of youth in this regard will not worry us; we shall let Nature take her course, without sermons and without lies; but we shall provide the child with all the sporting goods in the catalog and lure it out into the sun.

Sterilized with truth, the love life of the child can be, like everything else around it, a thing of beauty and delight. Here, for example, Ethel comes from school, sits on the arm of my chair, and whispers coyly, "Daddy, I'm in love." What am I to do? —berate her for this terrible romance? I can't; instead I laugh and invite full details. Why should I darken that bright soul with the problems of morality?

But what shall we do when puberty comes? At the first sign of it we shall flood the situation with knowledge; we shall leave no pebble unturned to avoid the sensibility, the self-consciousness, and the brooding introversion that so often discolor life at this critical turn in its tide. Let that first year of adolescence be no year of fretting and tragedy, but the springtime of the soul, seedtime of devotions and ideals, season of adventure and poetry, Maytime of health and growth in body and brain. Now intelligence sprouts with doubled pace; from that moment the body recedes into the background, character stands as already formed, and the task of the educator centers at last on the problems of the mind.

I DO not know when Ethel's "mind" began; but we did not bother much about it till she could say, with Milne, "Now we are six." She would not want me to imply that she had no mind to speak of before that; had she not taken lessons every hour or so in the abominable irregularities of the English language? Here too the choice was between commands and example; and so we had to admit that if Ethel was to talk English correctly, we must learn to speak it pardonably ourselves; that if Ethel was to keep roughneck phrases from her vocabulary, they must find no entrance to ours. Not that the juicier metaphors of slang were excluded; these might be the very life-color of a sentence and say in a word what would have taken a paragraph from Dr. Johnson.

Meanwhile we had to face the question of private schools. Should we send Ethel to the neighborhood public school, or to a private institution of high repute but inconvenient location? I visited both and was astonished to see what progress the public schools had made since the days when I taught in them for ten dollars a week. Bright classrooms, smaller classes, individual desks, competent and cheerful teachers, every material and scholastic facility; I could hardly believe my eyes.

We tried the public school, and everything went well. Perhaps there was a little too much of patriotification; but after all we had no objections to having Ethel learn to love her country if she might be permitted to value the greatness of other nations as well. The four public schools to which Ethel has gone—two in Brooklyn, one in Sea Cliff, and one in Great Neck (all on Long Island)—were models of efficiency and humanity.

I must not generalize from this experience; and I confess that in some localities we would not use the public school if we could help it. Associations are half

Now with Frigidaire you can regulate the speed of freezing ice cubes and desserts

THE NEW COLD CONTROL

offers greater convenience . . . utmost simplicity

Today Frigidaire offers a new and far-reaching development in automatic refrigeration. Now you can regulate, at will, the temperature in the freezing compartment.

QUICK FREEZING

If, for any occasion, unusually quick freezing of ice cubes is desired, just set the control lever at "Colder". The temperature drops! Freezing is accomplished with much greater speed.

In the freezing of desserts, various ingredients require different temperatures for best results. The Frigidaire Cold Control enables you to set the temperatures of the freezing compartment just right for the particular dessert you are freezing.

The New Frigidaire is now equipped with the "Cold Control" without added cost to the buyer. Its adoption is in keeping with the policy that has established Frigidaire's leadership and made it the choice of more buyers than all other makes of electric refrigerators combined.

INCREDIBLY QUIET

Frigidaire offers dependable refrigeration . . . a temperature in the food compartment below 50 degrees. Frigidaire offers economical operation so that its savings more than repay its entire cost. Frigidaire offers utmost convenience in the arrangement of food shelves . . . incredibly quiet operation . . . and a low price that could be possible only as a result of quantity production.

FRIGIDAIRE

PRODUCT OF GENERAL MOTORS

MAY WE SEND YOU THESE BOOKS?

We should like to tell you more about the New Frigidaire . . . what it will do . . . the work and bother it will eliminate . . . the protection it offers to health. We want to give you a book of recipes for the new delicious desserts that can now be made so easily and quickly. And we want you to know how Frigidaire can be bought on the easiest of terms.

You can get the complete facts at any Frigidaire display room, or mail the coupon and we shall gladly send you copies of the recipe book and the New Frigidaire catalog. Frigidaire Corporation, Subsidiary of General Motors Corporation, Dayton, Ohio.

The Comptometer with a trained operator, safeguarded by the Controlled-Key, will turn out more work at less cost than any other combination

Faster operators mean cheaper figure work

WITH the Comptometer, which has speed to spare, faster and better operators will reduce the cost of your figure work more than anything else.

Only through a dependable service of training and supplying such operators, can employers be assured of getting them when and where needed.

For a quarter of a century the Comptometer has been rendering this service through a world-wide system of day and night Comptometer schools. The system today comprises 151 schools—105 in the United States and Canada and 46 overseas.

Each school maintains a free employment service for the placing of graduate students and for the convenience of employers seeking trained operators.

In the year ending October 31, 1928, employers obtained from these schools in the United States and Canada alone, 25,977 operators. In the same period, approximately 22,000 more were instructed in customers' offices, making a grand total of nearly 48,000 clerks and operators trained by our organization in the year.

Ask any user of this service about the economy of the Comptometer with trained operators and the reliability of our service.

game in life, and we must be forgiven for selecting them. "Send your son to college," said Emerson, "and the boys will educate him." Such a consideration drove us to experiment with a private school—one of the finest in New York. We soon discovered that Ethel disliked it; she complained of the noise and disorder which the principal called freedom; and though she learned some interesting little crafts and had much outdoor play well supervised, she asked us, time and again, "When are they going to teach me something?" At the end of the private-school year we entered her in a public school and found that despite an intelligence quotient four years beyond her age, she was behind in many branches necessary for her promotion.

Having found a school, the next thing is to coöperate with it. To permit no absence or lateness except for the most vital reasons, to keep an eye on daily progress and monthly reports, to watch the home work and show keen interest in the class lessons of every day; all this is part of the parental job. Of course, it not only helps the school, but it helps the child; any worthwhile regularity or order is a boon to character. And when we take walks through the fields we turn the talk, if we can, to history, or geography, or literature.

Geography is dull? How is it, then, that a ship at anchor in the harbor, or setting out under full sail or steam, is an irresistible suggestion of romance? Every child longs to see foreign lands; therefore, the way to teach geography is by real or imagined travel. The teacher lands her class at Shanghai or Singapore, and all the mystery of Asia welcomes them; or they go down the Nile from Alexandria to Abyssinia, and through a thousand strange tribes to Johannesburg and Cape Town, and Africa becomes a reality rather than a name. Why should not every school be equipped with such travelogues as those that Holmes and Newman give, with views and fascinating moving pictures? And history—surely for children it should be what Carlyle called it: "the Biography of Great Men." To accustom the child to honor genius is to offer it a devotion that age will not wither though every other love depart.

TO ENTER that Country of the Mind where all remembered geniuses still live and teach, it is only necessary to read and see. To see, without haste, those pictures and statues in which artists have written their philosophies of life into a figure or a face; to drink in leisurely the nobility of the Parthenon or the grace and tenderness of Chartres; and to read without haste those books which time has winnowed for us out of the dross of every age to carry down the intellectual heritage of mankind. How pleasant it is to have Ethel tell stories heard in school, of Raphael and Rembrandt, of Leonardo and Michelangelo, of Reynolds and Gainsborough, of Rubens and Van Dyck! At her age I had never dreamed of the existence of these men.

She is just graduating from the literature that is specifically written down to her age. The older items in this literature—such things as Alice in Wonderland and the Nonsense Book of Lear—are admirable enough; but most of the later volumes written for children are spoiled by underestimating and insulting the intelligence of the child. There is no stimulation

NEW DEPARTURE BALL BEARINGS

NOTHING ROLLS LIKE A BALL

Designed upon nature's infallible laws of motion, the perfected ball bearing has proved itself invaluable to industry. *For nothing rolls like a ball*—and no ball rolls easier, truer and with less friction than a marvelously accurate sphere of highly polished steel.

Herein lies the reason for the unprecedented demand that has made New Departure the world's largest producers of anti-friction bearings for all industrial needs.

Wherever mechanisms revolve, the New Departure Ball Bearing has attained mastery over friction, wear and high upkeep expense. Makers of motor cars, airplanes, electric motors, electric household appliances, machine tools, farm machinery, mining machinery and many other devices that contribute to the world's progress—have proved conclusively that the New Departure Ball Bearing has the pre-eminent ability to give the utmost in service regardless of speeds and loads.

So universally is this fact accepted that it requires over 165,000 New Departure Ball Bearings daily to supply the demands of these manufacturers.

No More Sleepless Nights

Instant Sleep Now Utterly Without Drugs

Accept 3-Day Supply

A New Discovery That Not Only Induces Instant Sleep, But Induces the Kind of Sleep That Brings All-Day Energy Next Day

If you are troubled with restless nights, we urge you to accept the test offered here. Doing so has made a great difference in the lives of thousands of nervous people.

On doctors' advice, millions are employing this new way. For it is as free of drugs as the bread you eat or the milk you drink. And does far more than simply induce sleep! It rebuilds your wasted tissues while you sleep.

What It Is

It is called Ovaltine; a scientific food concentrate developed in Switzerland by a scientist of world-fame. You take it in a cup of warm milk at bed-time; a super-delicious drink.

First it induces sleep; sound, natural sleep. The kind that rebuilds and rejuvenates.

Then *while* you sleep, Ovaltine re-supplies your system with the energy lost the previous active day. For it contains practically every building element necessary to life and energy, in a form which the human system can easily absorb while you sleep. You can take it night after night and not only not form a habit, as with drugs, but build up your health as well.

Do you wonder then, that people are flocking to its use? New to America, Ovaltine is being recommended by over 20,000 doctors. Used over 30 years in Europe, its use has spread to over 54 different nations. It marks one of the most important scientific findings of its time.

Accept Test

Doctors urge it not only for sleeplessness, but for all nervous and run-down conditions. They recommend it, too, for nervous, underweight children. Thousands of busy people take it during the day to relieve fatigue. A few weeks' use will make an amazing difference in the way you feel.

Believe or not what people claim for Ovaltine. *Try it.* Obtain at any drug or grocery store, or use coupon for special 3-day test.

MAIL FOR 3-DAY SUPPLY

Make this experiment. Drink a cup of hot Ovaltine before retiring, for three nights. Note how quickly you go to sleep; how refreshed you feel when you awaken; your unlimited energy next day. Mail coupon, with 10c for a 3-day introductory package.

this material; it does not produce active reading or make for growth; it is intellectual coddling, and alert children may lose all their taste for reading if they are fed on this skimmed milk. There are many supposedly adult classics that can be enjoyed at nine or ten—say, The Three Musketeers, The Talisman, Moby Dick, even Les Misérables; and the child will relish the book all the more if told that it was not meant for children. Nowhere in the world are there better books for the child than Robinson Crusoe and Gulliver's Travels; and yet neither of them was written for children, and one of them is not yet understood by adults.

In every home that cherishes books it should be pleasant to have an hour of reading aloud together one evening or more in the week. Children and adults can take turns at the book, and corrections may be postponed till the entire reading is over, and then made privately.

How good it is to see Ethel seated near the fireplace of an evening, her sturdy brown legs thrown over the side of the chair, her chubby arms exposed, her red ribbon flashing across her middle, her hair falling down upon her book, her face lighted up with interest and feeling, her soul snatched away for a while to distant places and times, traveling and enlarging its borders, and making itself fitter, day by day, for the company of great women and great men.

I hope she will not become too learned to love life and that she will never think of books as better than friendship, or nature, or motherhood. I will not hold her complete, whatever her career, if she does not some day lift up another child beyond her height as I try to lift her beyond mine. But she shall be free, even to disappoint me; no one can say what is right for another; she shall choose her own path and define her own good. It is enough for me that she has come and that into this life, so questionable in origin and so obscure in destiny, her laughter and her guilelessness have brought sparkling fountains of delight.

Shorty Caraway, Cowboy

(Continued from page 27)

dropped the chicken dish an' went to turning flips. For in those days in New Mexico old hands were only getting thirty dollars a month.

Shorty was a full-fledged bronc rider when he finally left the ranch, for he stayed a year an' a half. He quit, intending to go back home an' visit his folks. But in town he happened to meet a boy they called Rusty Dirty Hands. Rusty was coming to Arizona to try his luck at punching cows. Shorty had never worked with cattle, so he decided to come along.

The trip was uneventful, for they came out on the train, but at each stop they paraded the station platform to show off their cowboy rigs. Arizona was wide open then an' Rusty Dirty Hands went broke the first night they hit town bucking the roulette wheel. He borrowed of Shorty to win it back, ten dollars at a shot, until Shorty got down to thirty dollars an' then he cut him off. For they had to get out o

What's Your Tailor?

town some way an' they were both afoot. Shorty finally bought two horses that he got for thirty dollars. One was a broken-down cow horse. The other was a colt.

Rusty had an uncle in Arizona, so they headed for his place. But the colt gave out a few miles out of town an' the boys took turns in walking an' leading him till they finally came to a ranch. Here Shorty traded his colt for an old spoiled, locoed horse an' his troubles really began.

When they finally reached his uncle's place Rusty was glad to stay an' swea (work for his chuck). But Shorty wa hunting a paying job. So he pulled ou on his locoed horse.

THE ranches were few an' far between the water holes were scarcer. Short says that riding that locoed horse alone wa much like traveling with a crazy man. A times old loco went along just like an ol cow horse, then all at once he'd come aliv an' kick at his shadow on the ground a throw a regular fit. He didn't pitch lil any horse; he just jumped an' fought h head. Usually he wound up by fallin with Shorty in the middle of one of h fits. The thing was beginning to get Shorty's nerves, for the country w strange to him. He says himself no o but a crazy kid would have ridden a hor like that. He missed the ranch he w headed for an' made a dry camp th night. It wasn't till late the next eveni that they finally came to water.

The banks were steep, an' dry as loco was, Shorty couldn't get him do the trail. He would stand an' sniff at t water, then go to fighting his he Shorty finally found a place where horse could drink from the bank, and af sniffing the water for a while the ho finally lowered his head. But just as touched the water with his nose he m have seen his shadow, for he struck w both forefeet an' fell off in the wa an' drowned.

Shorty says it was the first time si he left home he ever felt sorry for hims an' he sat down an' bawled. For all knew he might be forty miles from a where, with his horse an' saddle g But he finally slipped off his clothes got his rig an' after piling it up in a l pile he walked on down the canyon. T night at dark he found a camp an' punchers took him in. He didn't g job but one of them gave him a burr ride an' Shorty went back next day got his saddle. It was better than b afoot but Shorty was feeling pretty For he figured he'd never get a job rode up to a ranch on a burro. T evening he came to a ranch.

There was no one there but there plenty of chuck in the house an' Sh was fixing to hobble his burro out, w he noticed some horse tracks coming the water corral. Right then he cha his mind about hobbling his jack turned him loose instead. But it was midnight before a bunch of horses into the water corral an' Shorty shu gate. Shorty says he never felt bett his whole life than then. For he kne matter what else came, he was th with riding burros.

Next morning as soon as it broke he was out at the corral to see wh had caught. But when he spied a high-headed black in the bunch S

DR. GASTON LYON—*one of the outstanding figures of the medical profession in France, on whom his colleagues have lavished professional honors; he has been chief of the Medical Clinic of the Faculty of Paris; he is Laureate of the Academy of Medicine; he is author of "Consultations on Diseases of the Digestive Tract," and many other works.*

"Yeast regulates the intestine,"

says DR. GASTON LYON, *of Paris*

'IN FRANCE, especially since the work of he scientist, Dr. L. Brocq, yeast has en-ered the realm of therapeutics, and is today n current use. It is especially used in dis-rders of the skin but should not be limited o skin diseases. It reduces intestinal fer-ientation, and regulates the functioning f the intestine. Its mode of action should e taken advantage of all the more, since east can be taken with-ut inconvenience."

DR. GASTON LYON, author and promi-nent physician of Paris; authority on aladies of the digestive tract, verifies the ex-rience of millions of Americans—that eating ast relieves constipation.

In an authorized interview he says, "Yeast odifies the intestinal action while not being stroyed itself." He further points to the lue of yeast in the treatment of skin diseases and declares, "Its efficacy in this field is already strongly established."

In a recent survey in the United States, half the doctors reporting said they prescribed yeast.

Fleischmann's Yeast is fresh. Unlike dried or killed yeast, it contains millions of living, active yeast plants. As they pass through your intestine daily, they combat harmful poisons, purify the whole system.

Eat three cakes of Fleischmann's Yeast every day, one cake before each meal or between meals, plain or in water (hot or cold). To get full benefit you must eat it regularly and over a sufficient period of time. At all grocers and many leading cafeterias, soda fountains and lunch counters. Buy 2 or 3 days' supply. It will keep in a cool, dry place. Start today!

Write for latest booklet on Yeast in the diet —free. Health Research Dept. J-62, The Fleischmann Company, 701 Washington Street, New York.

FROM THROAT TO COLON is one continuous tube. Poisons from clogged intestines spread and attack the weakest spot. Colds, sore throat, headache, bad breath, bad skin—90% of your ailments—start here, doctors now agree. And here, too, is where yeast works. For bubbling good health, keep this entire tract clean, active and healthy with Fleischmann's Yeast.

looked no farther. He could tell from the saddle marks the black horse had been rode, but from the way the black whistled at sight of him he knew it had been some time ago. So, shaking out a loop, he forefooted him an' tied the big black down till he got some hobbles on him an' laced his saddle on.

From the snaky look in the big black's eyes Shorty knew he'd have to ride. He was too small to cheek the black an' step across, so he slipped a blind on him. Then, taking the hobbles off, he eased up in the saddle.

The big black hung his head the instant Shorty pulled the blind. An' when he made the first jump with him Shorty knew he was the hardest bucking horse he'd ever tried to ride. By pulling all the leather in sight he managed to keep his seat an' he was still in the saddle when the big black hit the fence. The next thing Shorty remembered he was on the ground, with his horse an' saddle gone. The black had bucked clean over the fence but Shorty got a break of luck this time, for the horse had fetched up in a pasture.

Shorty couldn't catch him alone, so he waited around all day. That evening two punchers happened by an' when Shorty told them his troubles they caught his horse for him.

"Kid, you picked a horse," said one, "an' if you're man enough to ride 'im your chances of landin' a job is mighty good if you ride into camp on him. For he belongs to the feller we're workin' for."

Neither puncher thought Shorty could ride him, but Shorty's first heat alone with the black had taken some of the edge off him. The punchers hazed him away from the fence an' Shorty kept his seat. Shorty says that ride was the hardest one he ever made. For the black horse was pitching so crooked Shorty couldn't see the ground. An' each time the black hit the ground it felt like someone was clubbing him across the neck an' shoulders. Shorty was just about all in when the big black's head came up. But that night when he rode into camp on the black horse the foreman gave him a job.

MOST kids have trouble in holding a steady job when they are startingout. Shorty was no exception. For he didn't realize he was following a game that takes most a lifetime to learn.

For punching cows meant to him at first nothing but roping an' riding, an' as long as he got plenty of that he was perfectly satisfied. An' Shorty could never understand at first why they laid him off after the round-up an' kept some old hand instead. Not realizing the old hand did twice as much work without a third of his charging. For no man is a real cow hand until he's spent years at the game and knows what a cow is thinking of before she knows herself.

It was several years after Shorty started punching cows before he could hold a steady job. But the same qualities that made him a bronc rider as a kid had made him a real cow hand. Some give up an' turn to other jobs after a few years at the game. But your real cowboy sticks it out until he comes into his own.

The fall that I met Shorty we slept in the same tepee. I was wrangling horses on that work an' Shorty was running the outfit. The first one up in the morning

GOOD NEWS!

GENUINE LEONARD REFRIGERATORS

HERE'S an announcement that home-makers the nation over will receive with enthusiasm! Leonard has applied the modern progressive-system to the manufacture of refrigerators and now, for the first time, makes possible a good ice refrigerator for every home in America!

For as little as $35 you can get a genuine Leonard with all the worth that name implies—insulated with thick compressed corkboard, the greatest ice-saver known—and approved by the National Association of Ice Industries following their thorough temperature tests at Columbia University. Some of these $35 to $70 models even have the famous "Leonard Cleanable" seamless porcelain lining!

Every home needs a good refrigerator because ice protects food and food means our very existence. Leonard Refrigerators at $35 to $70 make it possible for every home to have this positive health protection. See the new-season models now.

All adapted to electric, ice and gas refrigeration. Visit the Leonard dealer in your city, or drop us a postcard and we'll send you a catalog.

Leonard Refrigerator Company
603 Clyde Avenue
Grand Rapids, Michigan

USE YOUR ICE REFRIGERATOR NOW

The average daily temperature during March and succeeding months requires watchful care of the family foods. Start using the refrigerator now. Depend on ice rather than weather-cold.

LEONARD
REFRIGERATORS

an' the last one to bed at night. I have never seen his equal at handling a bunch of men. Most cowboys are prima donnas an' blow up when something goes wrong. But Shorty went through that round-up without a man quitting on him. For Shorty never took the best of it just because he was foreman.

At night around the fire it's all roping an' riding, for the days' work is done over again. Cowboys seldom have a chance to read, but most of them are good story-tellers. But once Shorty took his place by the fire the outfit sat back with a grin. For Shorty's sense of humor is the keenest I've ever seen.

To some cowboys the past is buried. Others are shy on talk. But Shorty was full of stories of the things he had done as a kid.

"Anything I ever believed," he said, "I always believed it strong. An' any time I ever started a thing, I always seen it through."

ONE story he told one night in camp I think will illustrate his point:

"Me an' my cousin both learned to swim with gourds," he said, "when we was pretty small. An' we could make it clear across the pond with a gourd in each hand before we could swim a lick without 'em. It was just while we was learnin' to swim with them that they made us stay to church. We always had to stay to Sunday school but we usually had some good excuse for duckin' church. But for some thing or other that we'd done they kept us in that day.

"Naturally, we wasn't payin' no heed to the sermon, for we wasn't interested until the preacher started talkin' about Christ a-walkin' on the water. Then we started perkin' up.

"'He used gourds,' I whispered to my cousin. In fact, we was both so shore of it I felt like tippin' the preacher off. But my cousin kept me from speakin' out. An as soon as church was out we made a hi lope for home to try it.

"We got four gourds apiece an' tie two on each foot. I got mine tied on firs An' to show my faith was strong I neve even peeled my clothes. An' I walke right off the dam with them in the deepe part of the water.

"I don't remember much that ha pened then except my feet stayed up a my head wen under. But as soon as I saw the fix I was in, my cousin run f help. Dad didn't have no trouble locati me, for my feet was both in sight. I w unconscious when he pulled me out. B I finally come alive again when he roll me over a barrel. Somehow my fai has never been quite so strong sin then."

Like all cowboys, Shorty has had his u and downs. For nine years he lived alo in the hills trying to pay out on a bun of cattle he had bought. But because the drop in prices an' the drouth, Shor lost them all.

Two years ago Shorty went over Hollywood an' tried the movies for while. But after doubling for seve "western stars," he was glad to go b to punching cows.

Until he went to Hollywood Sho thought the western stars really did th own stunts. One star had always bee favorite of his until Shorty doubled

AT LAST

A LUBRICATING LATHER TO RELIEVE

SHAVING FRICTION

THERE IS MORE to shaving than merely softening the beard. Men have learned that by painful experience.

For there still remains the harsh scrape and pull as the razor's steel edge is forced across the tiny peaks which hold the hairs. This friction scours the skin, producing heat and painful smarting.

To take the torture out of shaving in a scientific way, Listerine chemists have perfected an amazing shaving cream which *lubricates the skin!*

A velvety film of soothing glycerine smooths the path of the razor. The effect is instantaneous. The same old blade which used to hop-skip-and-jump, slides along as gently as if it wiped the whiskers off.

The toughest beards, the tenderest skins, yield to this new-type cream, which includes cosmetic lubricant, menthol for extra coolness, and the antiseptic essential oils of Listerine.

No need to rub the lather in. No need to rub the lotions on. Your face will feel glad, and you will grin and bless the day on which you first tried Listerine Shaving Cream.

Will you pay 10c a month for shaving comfort?

There are certain little luxuries which every man deserves. One of them is the finest cream he can get to ease the daily irritation of shaving. So we offer this new lather-maker of supreme and unrivalled quality. Listerine production economies make possible the big white tube crammed with 118 inches of lubricating, cooling cream. More than enough for 157 shaves, easily a five-months' supply. At 50c the saving is obvious.

Ask at any good drug or department store for Listerine Shaving Cream.

LISTERINE *Shaving Cream*

him. "Come to find out that ham couldn't ride in a covered wagon," said Shorty. "You know I wouldn't think a bird like that could look a real cowboy in the eye.

"They paid good money for doublin', though. I got fifty dollars for one stunt an' all I had to do was jump my horse off a twenty-foot bluff into a water hole. But I was as sore all the time I was there as if I'd been beaten with a pole. I've had my share of falls on the range when horses turned over with me, but they was nothin' to the falls a movie director can think up."

When I first met Shorty he hadn't been home in twenty years. One rainy night in the tepee he showed me a picture of a sister he had never seen. "She's eighteen now," he said, "an' ever since she's been big enough she's been writin' letters to me. A feller took some pictures of me once when I was breakin' horses for the Flying H. I sent 'em home to her an' she wrote back how interesting they was but Mother wished I'd send some of myself. It seems they didn't know me."

"Why don't you go back some time?" I asked.

"I don't guess there's been a Xmas yet since I left home but what I've planned on goin' back. A dozen times I've had the money saved, but somehow when I hit town the money slips away. I wouldn't go back broke."

No breed of men I know of have as much pride as the puncher. But money to most punchers is just a thing to spend. He will work for months in the hills risking his neck each day. Then blow what he has coming just as soon as he hits town.

BUT Shorty finally did go back. We went part way together. An' no kid on his first trip on the train ever enjoyed it more. For the last time Shorty had been on the train was nearly twenty years before, when he an' Rusty Dirty Hands had come to Arizona.

We went through a part of New Mexico where Shorty had worked when he was just starting out. An' Shorty's face was pasted to the window all the while. For the country was all familiar to him.

"See that red butte, yonder? I laid out at the foot of it one night when I was huntin' for a job an' nearly froze to death. The outfit where I landed my first job is just a few miles north of there—right through that saddle yonder. . . ." And so he went on.

No one knew him when he got back home, for Shorty didn't write. But Shorty says he wasn't long in getting acquainted again. He still talks of that trip home an' how much it meant to him.

"They wanted me to stay," he said. "But once them hills get holt of a man I reckon he's hooked for life."

One night when we were all in camp one of the punchers said he wouldn't be punching cows an' living like a coyote in the hills if he knew anything else.

"I would," said Shorty, speaking up. "No matter how much I knowed. I started out to be a cow-puncher an' I'm proud that's what I am. Of course, I cuss my job at times an' wish it was somethin' else. But if I had it all to do over I reckon I'd do it again."

For Shorty is a real cow-puncher. He couldn't be anything else.

You can barely hear it !

WHEN a proud owner of a General Electric Refrigerator takes her friends in to see it, the first comment is apt to be "Why it's *so* quiet—you can barely hear it."

The thing which seems to impress everyone is the extreme quietness with which these refrigerators operate. Their unique construction has indeed established a new standard for quiet operation.

This design, however, accomplishes something even more important. It makes possible the top-unit arrangement—a distinctive feature found only in the General Electric Refrigerator. Placing the unit on top makes it possible to enclose all the machinery—together with a permanent supply of metal protecting oil—in an hermetically sealed steel casing. There the hidden machinery, always oiled, remains safe from dust and difficulties. No one can tinker with it—no one needs to.

Quietly, automatically, the General Electric Refrigerator gives you the perfect refrigeration that does away with food spoilage and safeguards health. It provides a generous supply of ice, makes menu-planning so much easier, permits you to serve the sort of food that your guests will instantly recognize as perfect . . . crisp lettuce, well-chilled beverages, smart desserts. For further details, drop us a card for Booklet A-3.

EASTMAN KODAK COMPANY *Announces*

$30,000.00

for Amateur Picture-Takers Only . . .

Read these simple conditions

1 Any resident of the United States and its dependencies or any resident of the Dominion of Canada is eligible, excepting individuals and families of individuals engaged, either directly or indirectly, in the manufacture, sale, commercial finishing or professional use of photographic goods. This contest is strictly for the amateur. Contest starts March 1, closes May 31, 1929.

2 Any Kodak, Brownie, Hawk-Eye, or other camera producing negatives not larger than 3¼ x 5½ inches (postcard size) and any brand of film, chemicals and papers may be used in making pictures for this contest. A contestant need not own the camera. The finishing, of course, may be done by his dealer.

3 Both ordinary contact prints, and enlargements not to exceed 7 inches in the long dimension, are eligible; but,

4 In the Special Enlargement Competition, prints having a long dimension of not less than 9 inches or more than 17 inches, are eligible. Entries in the Enlargement Competition are eligible for Special Enlargement Prizes only.

5 Prints shall be unmounted, but an entry blank shall be enclosed. Use the accompanying blank, obtain others from dealers; copy the form, or write Prize Contest Office, Eastman Kodak Company, Rochester, N. Y.

6 An entrant may submit as many pictures as he pleases and at as many different times as he pleases, provided that the pictures have been made on or after March 1, 1929, and that they reach the Prize Contest Office, Eastman Kodak Company, Rochester, N. Y., by the specified closing date.

7 Entries in the Child Picture Contest to be eligible for the March award shall be received at the Prize Contest Office, Eastman Kodak Company, Rochester, N. Y., by midnight of March 31, 1929; and for the April award by midnight of April 30, 1929. The child in the picture shall not have passed the twelfth birthday.

8 A picture that is to be considered in the Child Picture Contest must be so designated on the back.

In the case of other pictures, however, the entrant need not, unless he wishes to, specify into which of the classifications his pictures should go. The Prize Contest Office reserves the right to change a classification for the benefit of the entrant. If not classified on the back by the entrant, the pictures will go into the classes in which they are most likely to win.

9 Each prize-winning picture, together with the negative, and the rights to the use thereof for advertising, publication, or exhibition in any manner, becomes the property of the Eastman Kodak Company.

10 No prints can be returned, except that entries in the Enlargement Competition will be returned upon request. All mailings are at the owner's risk. Do not send negatives until they are requested.

11 The decision of the judges will be final. In the event of a tie, the advertised award will be paid to each of the tying contestants.

12 All pictures will be judged 50% on subject interest; 25% on composition and arrangement; 25% on photographic excellence (correctness of exposure, etc.).

13 Mail pictures to Prize Contest Office, Eastman Kodak Company, Rochester, N. Y.

14 An entrant may receive only one prize. In case the judges select any entrant for more than one award, he will receive the largest thereof. If he wins, for example, a $100 state prize in the Child Picture Contest, and if either the same print or another of his prints in the General Contest wins an award larger than $100, he will receive the larger amount. The Eastman Kodak Company will consider the purchase of desirable pictures even though not prize winners.

15 Winners of the state prizes in the Child Picture Contest for March will be notified as soon as possible after March 31, and for the April Contest as soon as possible after April 30, 1929; winners in the Special Enlargement Competition and all other classifications will be notified as soon as possible after May 31, 1929.

1,223		$30,000.00

$11,400 in Special Monthly State Prizes

For the most interesting picture of Children submitted during March and April, $100.00 will be awarded in each state of the United States and each province of Canada. $11,400.00 in all. Read the details below.

THIS is a contest for *everyone*. It is easy to enter—and there are 1,223 money prizes. Perhaps you have not taken more than a half-dozen pictures in all your life—you may never before have held a camera in your hands—yet *your* entry may please the judges most. And regardless of the make of camera you use—from an inexpensi Kodak, Brownie or Hawk-Eye on up to a camera of the costli kind—your chance to win is just as good.

This prize money will not be awarded for technical skill alo You do not need to be an experienced picture maker to win. T bulk of this $30,000 will go to those who send in the *most intere ing pictures* in each of 10 different classifications. Now is the ti to get your camera into action. The opportunity to win a c prize of anywhere from $2,500 down is knocking at your door.

Here is the way in which the $30,000 prize money is to be c tributed. You may enter for each and all of the classes. Send in many entries as you like. The more pictures you submit in t contest the better is your chance of being numbered among 1,223 fortunate ones to win.

GRAND PRIZE—For the Best Picture of Any Typ The best picture of all of those submitted in the following cla fications will be awarded a grand prize of $2,500.

STATE PRIZES—For Child and Baby Picture: $11,400 will be awarded for the pictures showing the most inter ing children . . . in both March and April $100 will be given the best child picture in *each state* of the United States and *province* of Canada,* making 114 prizes in all.

*District of Columbia counts as one state; Hawaii, Alaska all other U. S. dependencies combined count as one state; Maritime provinces of Canada count as one province. Bri Columbia and the Yukon count as one province.

Snap as many pictures as you want from babies to boys girls who are beginning to think of themselves as young men women. Maybe there's a baby right in your own family that c help you win first prize by a big margin. Not necessarily a beau child, but one with personality, character, "IT"—in eyes smile and dimples. Maybe there's such a youngster next doo next street, but no matter whose baby it is, get the kind of pic that shows it at its best.

Every picture of children that you submit stands a chan winning the Grand Prize; or any of the 103 prizes in each of other awards. And even if you don't come in for a share o prize money you will, at least, have made an attractive pictu add to your collection. With a little patience, however, you almost surely get a picture good enough to win. A striking clo of a boy or girl; a group at play; youngsters laughing, sleepin every-day clothes, rompers, overalls or fancy costume. Any goes as long as it is a picture of children, and if it has the

Landscapes and marines, stant and nearby views, mountains and water, nearby bits of nature composition, travel subjects and street scenes.

AWARD NO. 2—Informal Portraits—Pictures made at from, say wo to ten feet distance, for the purpose of showing a person's features . . . first prize of $500; a second of $250; a third of $100; 25 prizes of $10 each d 75 prizes of $5 each.

AWARD NO. 3—Story-Telling Pictures—For the pictures telling e most interesting story . . . a first prize of $500; a second of $250; a third $100; 25 prizes of $10 each and 75 prizes of $5 each.

Take a picture in which children, adults or animals do something—anything except looking at the camera. For instance, a puppy pulling at a baby's eve; children in any form of play; father proudly exhibiting the new car a friend. There are any number of opportunities for you to take pictures e these.

AWARD NO. 4—Sport Pictures—For the best pictures of sports d games . . . a first prize of $500; a second of $250; a third of $100; 25 prizes $10 each and 75 prizes of $5 each. It may be skating or coasting or skiing—baseball, tennis, golf. Hiking, too . . . and boating, archery, polo riding—serve as opportunities to make prize winning pictures.

AWARD NO. 5—Animal Pictures—For the best pictures of pets, stock, wild animals, either at large or in zoos . . . a first prize of $500; a ond of $250; a third of $100; 25 prizes of $10 each and 75 prizes of $5 each.

AWARD NO. 6—Nature Study Pictures—For the best pictures of vers, birds, butterflies, leaves, rocks, spiderwebs, any nature subject . . . st prize of $500; a second of $250; a third of $100; 25 prizes of $10 each 75 prizes of $5 each.

AWARD NO. 7—Building and Architectural Detail—For the t exteriors of homes, churches, schools, offices, libraries, other buildings ortions thereof . . . a first prize of $500; a second of $250; a third of $100; rizes of $10 each and 75 prizes of $5 each.

AWARD NO. 8—Interior Pictures—For the best inside views of ns, corridors, staircases, or other portions of homes or other buildings a first prize of $500; a second of $250; a third of $100; 25 prizes of $10 and 75 prizes of $5 each.

AWARD NO. 9—Still Life Studies—For the best pictures of art cts, curios, cut flowers, any still-life subjects in artistic arrangement . . . st prize of $500; a second of $250; a third of $100; 25 prizes of $10 each 75 prizes of $5 each.

AWARD NO. 10—Unusual Photographs—For the best pictures e at night; pictures of fires, lightning, storms, silhouettes; or any pictures are unusual either as to topic or as to photographic treatment . . . a prize of $500; a second of $250; a third of $100; 25 prizes of $10 each 5 prizes of $5 each.

ecial Prizes for Enlargements—$1,350—Any picture is a better picture when enlarged. For the best enlargements from negatives made on or after March 1, 1929 . . . a first prize of $500; a second of $250; a third of $100; 25 prizes of $10 and 50 prizes of $5 each. Your film dealer or photo-finisher will be glad to help you choose a picture likely to win. (See Conditions Nos. 2 and 4.)

Each of these big cash prizes will have to be won by somebody . . . why not you! Aim at the big money and you stand an excellent chance of winning it or of coming in for one of the smaller prizes. Don't miss this chance of winning a share of the big prize money. There is always the certainty of being rewarded with some excellent pictures you might otherwise fail to get.

THESE ARE THE JUDGES. Observe how diversified are their interests and how broad are their viewpoints and experience. You must admit that no fairer Board of Judges could be assembled than that represented here:

Madame Galli-Curci, internationally known singer; Miss Ethel Barrymore, leading actress; Howard Chandler Christy, noted artist; Clare Briggs, famous cartoonist; James R. Quirk, publisher, Photoplay magazine; Rudolf Eickemeyer, distinguished photographer, Medalist Royal Photographic Society of Great Britain; Hector Charlesworth, author, critic, editor "Toronto Saturday Night"; Kenneth Wilson Williams, editor "Kodakery" and photographic expert.

For the two Monthly Child Picture Contests, the following will be judges: James R. Quirk, Rudolf Eickemeyer, Kenneth Wilson Williams.

NOW—*read the simple Contest Conditions and get your camera out!*

Kodak Film in the familiar yellow box is dependably uniform. Reduces the danger of under- or over-exposure. It gets the picture.

Rolls Cigarette That Burns For Half an Hour

Edgeworth Plug Slice provides a new thrill—and saves Mr. Hjermstad $200 a year

Pipe-smokers! Here's a hot tip on how to roll a real good cigarette with Edgeworth Plug Slice smoking tobacco, and it comes from the man who claims to be its originator.

Portland, Oregon
c o Elks Club
August 29, 1928.

Larus & Brother Company,
Richmond, Va.

Gentlemen:

As you are now saving me about $200 a year in tobacco money, may I speak a somewhat delayed word of appreciation.

I have used Edgeworth for twenty years or more and it is to me the best pipe tobacco extant. On a fishing trip, some six months ago, I rolled my first Plug Slice Edgeworth cigarette. I enjoyed it so much that I've been "rolling 'em" ever since. And I'm saving at least $15 a month in cigar money. Also, my several pipe. on home duty get a chance to cool off between smokes, for, while I smoke only between meals, I smoke continuously, and to refill a hot pipe isn't fair even to dependable Edgeworth.

Thousands may be doing it, although I haven't seen anyone roll a Plug Slice Edgeworth cigarette before I did it. But everybody desiring a long, satisfying and aromatic smoke should try it.

This is how I roll 'em. I take two plug slices (sometimes two and a half or three) and place one slice to cover one half of the paper; then place the second slice to cover half of the under slice—the other half of the upper slice extending over the paper towards me—then I fold the top slice over till it reaches the nearest edge of the under slice, then roll both slices as I would any other cigarette—but without wasting any tobacco whatever—and I have a perfectly rolled cigarette that looks well, draws well and burns well while I smoke, but ceases burning when I lay it aside. When relighted, it's as sweet as ever. I can smoke one of these Edgeworth cigarettes continuously for thirty to forty-five minutes, and the long filler eliminates the annoyance of spilling any ashes.

(signed) C. O. Hjermstad

We wonder how long Mr. Hjermstad's claim will go unchallenged. Until some other resourceful smoker comes forward, Mr. Hjermstad will wear a blue-ribbon honor.

Personal: Let us send you free helpings of both Edgeworth Ready-Rubbed and Plug Slice so that you may experiment yourself.

Simply write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

Both Edgeworth Ready-Rubbed and Edgeworth Plug Slice come in various sizes from small pocket packages, to handsome pound humidor tins.

On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave Length 270 meters. Frequency 1110 Kilocycles.—Special Feature: The "Edgeworth Club" Hour every Wednesday evening at nine o'clock, Eastern Standard Time.

The Best Christmas I Ever Had

FIRST PRIZE

The Christ-Child Shares His Birthday With Me

THE best Christmas I ever had was not a complete one, for it was late in the day when I reached here from the Never-Never-Land.

It was not so good a day for my mother. But Mother forgot that part of it and said that her Christmas babe was truly a Christmas present itself. Other Christmases I have spent, realizing her love and her thoughtfulness, but none has equaled that first one, when I, all unconsciously, received my mother's precious gift of Life.

No physician, I believe, had a greater devotion to duty and a higher ideal of his profession than my father. His cheery presence in the sickroom, his gentleness and sympathy, his watchfulness, and the hope and confidence he inspired were felt by his children just as surely as by his patients. Of my father's Love and Solicitude for his children, then, I received my first share as his gift that day.

My arrival upset the Christmas scheme not only for my family, but also for the physician in charge. Eminent in his profession, he could easily have made the day an excuse for turning my case over to a younger and less well-established colleague. But through his sense of duty and his friendship for my father, I received from him as a Christmas gift the benefits resulting from his Experience and Skill.

The one person who refused to let me disrupt her Christmas was the nurse engaged for the occasion; she just didn't come. The first nurse, then, that I knew was a neighbor, an old French professor who came to us and held me in his arms all that first long night. From that dear old man, whose arms were my first cradle, I received as a Christmas gift the combination of friendliness and Christian charity that go to make up Neighborliness.

With gifts such as these, truly I may say that my first Christmas was the best one I ever had. A. B.

SECOND PRIZE

I Had a Great Time Playing Santa's Ma

DECEMBER 24, 1927, was cold and rainy. A friend and I had planned to drive through the mountains of North Georgia to spend Christmas day at Chattanooga, Tennessee, with my son, his wife, and my two grandsons.

But rain means red mud in Georgia, and red mud means skidding. We gave up our trip.

About eleven o'clock the sun came out and my common sense melted under its cheering rays. I decided to go—and alone.

I knew there was an element of danger and I might have hesitated had I known of a terrible detour near Blue Ridge, Georgia.

I do not believe Daddy Ford himself could have engineered a passage through that sucking red mud. I moved forward at a three-miles-an-hour pace until I saw a twinkle of light.

Leaving my car, I waded through the mud to a mountain cabin. Inside, a pine fire crackled in the open fireplace; two small boys and a big-eyed girl, all under ten years of age, turned startled faces toward me; a gaunt man chased hound dogs aside to place a chair by the welcome blaze. During my explanation a five-year-old whispered: "Be you Santy's Ma? We's been a-prayin' he would na fergit."

I learned the mother had died a month before; the mule had died; father was sick; Janie, the ten-year-old girl, was "tending the house and doing the wash."

I put them to bed in the "tother room," including poor, sick "Pa." But first o all I made them hang up their stockings.

My over-supplied dear ones got nothing from me that year. Santa's "Ma" needed the oranges, candy, chu-chu cars, balls, books, and stockings.

What joy I had that Christmas morning. I cooked their dinner—wild turke and yams. Then we sat around the fir and had oranges, nuts, and—*happiness*.

M. M.

THIRD PRIZE

The Miracle of the Nativity Was Revealed to Me

THE Christmas which lingers in m memory is the one on which I attend my first Midnight Mass. The magic of stayed with me for days afterwards, and thrilled each time I thought of it.

I went for the first time when I w sixteen. The silence of the night w broken only by the peal of the chur bells. Never had I seen so many peo going to church, never had I kno that so many felt the thrill of Chri mas and were moved by that great mira to worship.

The church was beautifully decorat with pine trees that towered almost to t ceiling, and garlands of holly hung fr the pillars. Lights blazed everywhe and on the altar tall candles twink 'mid flowers and plants. The organ s forth its rich, sonorous tones, now lo now soft, mingling with the clear tones violins. The choir sang Hosannas to new-born King, and the organ ech back its praise.

A hush fell on the congregation as priest prepared to read the story of birth of the Babe in Bethlehem. It wa new to me. But on Christmas Eve, so how, it was different. It seemed to car message of hope and cheer that reflec itself in the faces around me.

After the service was over I went the front of the church, where a miniat stable was built, smelling sweetly of h A star shone over the door, and inside the Infant Saviour, while close by k the Blessed Virgin and the adoring sh herds. I dropped on my knees, and w head bent gave thanks to God for all goodness. H.

MORE THAN EFFECTIVE— IT'S *DELICIOUS*

...more people eat it today than any other bran cereal in the world

It *means* something when you find more people eating Post's Bran Flakes than any other bran cereal in all the world.

It means they've found a wholesome, *effective* cereal to safeguard them every day against the menace of a constipated system—a cereal they can safely count upon to keep them regular, fit, and normal—and it means still more. It means that in this effective cereal they have found a daily breakfast that they *like*—a flavor so delicious that it tempts them to eat regularly every day the bran cereal that does them so much good.

For the next two weeks, try giving *yourself* the daily benefit of this wholesome breakfast. A bowl, a spoon, a little milk or cream, and a golden shower of delicious, mellow flakes—crisp from the package—and you, too, will know why Post's Bran Flakes has become the favorite bran cereal of all America!

Cases of recurrent constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

You can't paint a house with APPLESAUCE

CHEAP PAINT ISN'T CHEAP AT ALL

WHEN a *"low-price"* paint is offered to you with the assurance that it *isn't a "cheap" paint*, it's time for a good laugh. That's the latest style in *"cheap" paint* applesauce.

A "low-price-per-gallon" is *always* a dead give-away. It indicates "price" paint—designed to mislead you as to economy. And "price" paint is always *cheapened* to make the low price possible. It saves you a few cents on the gallon. But, oh, how it *eats up your money* on the wall!

Only one thing is more costly than "Cheap" Paint and that is *"Cheap" Painter.*

He's the fellow who tells you he will do a beautiful job for you at a suspiciously low price.

Steer clear of "Cheap" Painter if you don't want to *lose* money. To make his low price he does a careless, slipshod job. He leaves nothing but grief, dissatisfaction and expense behind him. *His* "applesauce" is a costly luxury.

To be safe, just remember this:—"Low-price" is a danger signal *every time.*

To be economical a paint must have exceptional "covering" qualities—a tough, durable film—colors that do not fade. These qualities can be produced only with finest materials *which are expensive*, and scientifically *"balanced"* formula.

Fine old SWP House Paint is a *super-quality* product. It may cost *slightly more per gallon — BUT*—

—where eleven gallons of "cheap" paint are required to paint an average house (2 coats), only *7 gallons of* SWP *are needed.*

That four gallon difference makes the "material" cost about the same

Digitized by Google
Original from UNIVERSITY OF IOWA

To save money on your painting, use the best paint and hire a good painter

Labor cost is about two-thirds of any painting job. The other third is for paint.

And please remember that it costs just as much to apply "cheap" paint as good paint.

But "cheap" paint has no stamina—no durability. Repainting time comes soon and often. In five years you pay that labor charge *from two to five times,* in addition to the expense for new paint.

Avoid this heavy repainting expense

SWP, being a quality paint, has wonderful stamina. When applied by a master painter—a man who is an artist at his profession—who uses the equipment—who prepares the surface skillfully—who takes pride in his work—*it assures you many years of beauty and service.*

You pay the material and labor cost *only once in five or more years.* And your house looks good *all the time.*

In other words, a master painter and fine old SWP House Paint is the most economical combination you can use.

It means not only *the lowest paint* cost per square foot of wall—but also *the lowest labor cost per year.*

The "Master Touch"

Men may argue about formulas and get nowhere. The formula is only one of several important factors in paint. Anyone can copy the formula of SWP. It is publicly printed. Still SWP will remain unchallenged as to quality.

That is because there are other vital factors in SWP. One is the superfine quality of materials specially made for SWP.

The other is the *"Master Touch"* of the men who make it—which defies successful imitation.

These scientific men of Sherwin-Williams are to "paint" what Edison is to Electricity—what Marconi is to Wireless.

Their "Master Touch," a combination of genius and long experience, is what makes SWP different from all other paints. It is a *human* touch—that none can copy. It is *Sherwin-Williams.*

See Paint Headquarters and save money

Before you let out your painting job see Paint Headquarters—the Sherwin-Williams dealer in your town. Get an estimate on the amount of SWP required. Call in a *responsible master painter.* Get his estimate on the job. Only by using the best paint and a good, reliable master painter can you save money.

And the same is true of any refinishing job whether you use paint, enamel, varnish or lacquer. "Cheap" stuff is always too costly.

If you want the name of a reliable painter who will apply SWP for you write us. We will send his name and a copy of our famous Household Painting Guide which saves costly mistakes in painting.

Side-tracked

(*Continued from page 21*)

he sat with her in an agony of torment. He knew she loved him; he saw it in her eyes. And he wanted to fling his caution to the winds and crush his lips down hard on her lovely pomegranate mouth. But there *was* that caution. It warned him. It adjured him. It dogged his footsteps.

In sheer desperation, one night, he blurted the whole thing out to her. She sat listening with widening eyes. And when he had finished:

"Why, Boyd," she said, "I wouldn't want you to marry me if you feel that way about marriage. That it's the end of things. I like to think of it as the beginning. I wouldn't want to feel that, because of me, your career was ruined. But that, through me, it was made!"

"HOW can it be?" he argued miserably. "A man gets married. He has to think of his wife. What she wants. What she needs. Then there is a home, rent to pay, things to buy. Children come. He's got to worry about them. He isn't free any more. He can't *do* things. Don't you see?"

"I see," said Sallie, "that he does those things *because* of his wife, and his home, and his children."

"Not an artist, Sallie. To be an artist, a really good one, you've got to *live!* Got to be *free* to live! Got to travel, see the world, get impressions, become broadened. Got to pick yourself up and go when the call is upon you. Got to get up and work when the urge is in you."

"Oh!" said Sallie, in a small, hollow voice.

And, "I love you, Sallie," submitted Boyd, illogically, humbly. And then, in a burst of despair, "I don't know what to do! I love you, and I love my work, and —I don't care! I don't care!" His ramparts, his inhibitions went down. Without warning, he swept her to him. His lips found her pomegranate mouth and the throbbing pink-and-white hollow at the base of her throat.

"Sallie!" he said hoarsely.

"Boyd . . ."

He tore himself away. He looked into her eyes and went stumbling off. He was half-sobbing. He said brokenly, to himself, as he went, "Sallie, I love you!" And again, "I love you, Sallie!"

He was wild-eyed when he came into his house.

"My goodness!" said his mother, who had been sitting up, reading. "You look as if you had seen a ghost."

He was afraid to go near Sallie in the weeks that followed. But he saw her going out with other men. His agency was up in the theatrical district of the city, and twice, when he was going home after working late, he ran into her on the way to a theater with a prosperous-looking chap. He doffed his hat and she flashed him a smile that belied the misery in her eyes. Sallie loved him. She loved him.

One night, his father said, "Well! Wouldn't be surprised if we had a visit one of these days from Max. His time's about up. Nearly ten years, isn't it, since he was here last?"

"About," said Boyd's mother.

And as if the conversation had be prompted by a premonition, Boyd arriv home one evening, to hear music escapi from the living-room. Out through t windows it poured, into the dusk the street, a flood, a fall of melod strange, beautiful, arresting. Only o person could create such music.

His uncle Max was at the piano. Fro the doorway Boyd stood and watch him, the way he sat with his head u Even from the back, Boyd knew that h eyes were closed. He was "smellin the music, playing with that tense lit lift of his nostrils and the curious wrink over his brow. Almost, he was afraid see his uncle's face when it should turned toward him. It might be change aged, altered.

But, no. No! It was the same. Old but the same. Dark, smooth skin; da shock of wavy pompadour; dreamy da eyes. One would think him thirty-eig forty, perhaps. But never the fifty-f which he must be. Looking at him, Bo McKim had the queer feeling that he w standing before someone who was pere nially young.

"Well, well, well!" said Uncle Ma greeting him with outstretched han "And how's the artist?"

"Coming," said Boyd.

"You must show me some of yo things, my boy." And turning to Jo McKim, "My! But he's grown into *man.*"

"We're hoping so," said Boyd's fath He looked curiously old and worn besi Uncle Max.

"He has a little something of you him, Max," said Boyd's mother. "Do you think so?"

"Perhaps."

Uncle Max never debated or argu any point too heatedly. He didn't th it worth while.

BOYD thought about Uncle Max a gr deal in the next few days. Especi about his unchanging air of youth, his playing. Why hadn't he ever d anything with that playing? He had touch of a genius in his fingers, and love of the piano amounted to worshi

The question worried him, until fin he tackled Uncle Max himself, one r Saturday afternoon when they were a in the house. He went about it ginge stepping carefully, lest he give offens

"You play so beautifully, with so m love," he said. "Why haven't you done anything with your ability?"

"Why," said Uncle Max. "Why! hear you talk, son, one would think I genius. I'm not. I'm not really a player. I used to think, once, that I w be, that I had it in me. But it d turn out that way. I didn't have it i after all. The years proved that. delude myself? I'm just a natural lover of music with a nice little apt for the piano. That's all."

But that answer did not satisfy McKim. His uncle did have it in He must have had it in him when he

Land of Gorgeous Scenery Where the Romance of Gold Rush Days Still Lives

Come north this summer. Cruise a thousand miles through the calm waters of the "Inside Passage" to Alaska—land of sky-piercing mountains, giant glaciers, valleys ablaze with wild-flowers—land of romance and gold. A delightful ten-day voyage; stops ashore at Ketchikan, Wrangell, Juneau and Skagway, with their quaint native homes and grotesque totem poles.

From Skagway follow the "trail of '98" through the once dreaded White Pass, across Dead Horse Gulch to Lake Bennet and Whitehorse; on to Dawson and Nome if time permits. See the "ghost towns" which stand as silent and deserted reminders of the Klondike gold rush.

Make this glorious tour to Alaska over the Jasper Park-Pacific Route across Canada—stopover at Minaki in the Canadian Lake and woods Country and at Jasper National Park in the heart of the Canadian Rockies.

The whole trip is one of comfort and relaxation—deluxe train service across the continent—palatial Canadian National Steamers with large airy lounges and smoke rooms—dancing and music—excellent cuisine, deck sports, promenades. Put Alaska on your program this summer.

For information on Alaska tours—consult the nearest Canadian National office.

youth. He must have. Being an artist himself, he was quick and sure to divine and recognize the spark in another. His uncle had had it in him! But it hadn't come out! Why? *Why?* Somehow, he felt that if he answered that question about his uncle, he would answer a greater one for himself! He would know how to settle the great doubt and unrest within him!

He grew moodier and moodier at his work. Sallie's face kept coming up between him and his sketching. He saw her lovely pomegranate mouth and the flash of pain in her eyes. He thought of the night he had crushed his lips into the warm, throbbing hollow at the base of her throat, and he wanted to rush out of the office to her, crying as he went, "Sallie! Sallie!"

But he gritted his teeth and kept his nose down. And one morning, the production man of the agency stopped at his desk with a folded newspaper in his hand. He pointed to an item in it, and Boyd's eyes followed his pointing finger.

John Starbuck Bouvier Arrives on Liner Homeric

Noted Painter to Give Three Months' Course to Selected Students at His Summer Home

"Yes?" he said, having read, and wondering why he was asked to read.

"Want to get into his class?" asked the production man. "I know him. Chummed with him in Paris, years ago. He's a crack in his line. One of the foremost. Done the nobility of England and Italy. Been decorated and admitted to the Société of—"

"I know," said Boyd.

"I can fix it for you, if you want me to. You'll learn more from him in three months than you could anywhere else in three years. I'll get you a leave from the office on half pay."

"I'd like to go," said Boyd.

"All right. I'll give you a card, and you can run up to the Ambassador this afternoon. Paper says he's staying there for a couple of days."

JOHN STARBUCK BOUVIER. giant of a man with a great, worn, lined tired face. His hair was white; the pointed beard that sloped from his chin was white. Under a massive forehead were his eyes, pools of wisdom in which danced a bright, live interest in the world. Puffy bags hung whitely under those eyes, and fine wrinkles sprouted star-wise from the corners. It was a map, that face, a map of the emotions, thoughts, longings, starvings, that had torn the man for the sixty years of his living.

"So," he said, coming forward to greet Boyd, after he had read the card previously sent in to him. "So. My friend Brotheridge sent you to me. Sit down and let us talk." A great amiability radiated from him, an ease, a kindliness. A little foreignism of manner and speech clung to him. He had spent so many years abroad.

"You—paint?"

"After a fashion," said Boyd. "Mostly I sketch. Pencil. Pen-and-ink work. Some color, but not much."

"I see. You work with my friend Brotheridge?"

"I'm in the agency with him."

"How long?"

Summer Snow-peaks! . . . no words can overtell the lure of the High Sierra . . .

High Sierra glaciers and snow-pockets fascinate Southern California's summer vacationists

[Written by an Easterner who came to Southern California in 1927]

BLIZZARD-SWEPT and ice-locked, and resisting close approach, the High Sierra assume even more awesome magnificence in winter.

Just after I came to Southern California I had my thrills crossing the Sierra via Tioga Pass one *July* day, driving through snow-pockets and fishing icy trout-abounding waters. I longed to experience the Sierra's winter moods.

With eastern visitors I have been basking in the mellow winter sunshine of the Owens Valley town of Lone Pine, watching great snow-swirls batter themselves against the shivery gray granite walls of Mt. Whitney. The contrast between the valley's sunny comfort and the mad battle on that loftiest of United States peaks (14,501 ft.) is astounding. I wish you had witnessed it, too.

The photograph above was made last July. So, when you come out this summer, a few hours drive from Los Angeles will put you into the heart of thousands of square miles of scenery so faithfully expressed in the illustration

To my never ending delight I find islands rivalling Capri rising out of the blue Pacific; for 270 miles extends an American Riviera. Golden-fruited orange groves are on every side as you motor to the Old Spanish Missions. Beaches are broad and safe. You will quickly agree with me that there is no end to the new things to see and do here!

Los Angeles, with its Hollywood—in the very heart of this scenic wonderland—is the Pacific coast metropolis! Gay hotels, cafes, fine theatres, "Symphonies under the Stars" in the Hollywood Bowl—everything! Night life, you too will find, lacks nothing. Los Angeles County oil fields alone are rated at a billion dollars. Agricultural products annually approximate $95,000,000. Hawaii is reached over the southern route from Los Angeles.

The new, authentic book "Southern California Through the Camera" pictures what I've seen here winter and summer—surprises that await you! Send for it.

"Past five years."

"Five years? In one place?" And gravely, as if to himself, "That is good. You are a worker then, not a flitter."

Boyd flashed him a startled look.

"You're surprised at my saying that, eh? But it's true. Most people with the artistic impulse are—flitters. I don't know why it should be so, yet it is. They wander around too, much. Change, all the time. Go from one thing to the next before they have mastered the first; move from one place to another before they have gone as far as they can in each. It is a failing with us. I had it too, when I was young and knew no better. You have brought some of your things for me to see, yes?"

"Yes." Boyd opened his folio. Bouvier took it. He sat a long while turning the sheets, nodding, frowning, scowling, nodding again, as if some things pleased him and others did not. When he had finished, he tied the folio, carefully, with the two strings that held it together, and handed it back. He made no verbal comment upon what he had seen.

"We will work very hard for twelve weeks," he said. "Through the hottest days of the summer. It is little enough time. But we can do something in it."

"I am ready," said Boyd; "if you will let me."

Bouvier nodded.

A KNOCK sounded on the door leading to an adjoining room, and following it a woman came in. She was gray-haired, soft-stepping, with an alert, sparrowlike lift to her head. Behind her followed two young women and a boy of perhaps fourteen.

"Tea time, John," she said, and her voice was like a fluted bell.

Bouvier rose. He introduced Boyd.

"Mr. McKim, who will be with us the summer. Mrs. Bouvier. And the family—Nina, Hélène, John Junior." And turning to Boyd, "But you must have a family of your own? Tell us, how many?"

"How many?" Boyd looked bewildered.

"Yes. How many? Little ones?" Bouvier made a gesture with his hands to indicate steps.

"Oh!" Boyd laughed aloud. "But I'm not married."

"Not married? Why not? Such a fine, strapping, upright young man."

"Why—Why—" floundered Boyd. "You see—you see—" And before he had time to think, he blurted out, "I didn't see how I could. I wanted to go somewhere first. With my art work, I mean. Broaden out a bit, travel, see the world, meet people, *live* a little, you know. And you can't do that if you get married and have a family. You don't *live* then, you just suffer!"

"Eh? How's that?" Bouvier's great brow contracted into wrinkles like corrugated parchment. His voice was sharp, uncomprehending. His wise eyes were puzzled. He spread his hands in a little foreign gesture.

"*Live? Suffer?*" He cut the two words each from the other, spoke them with sharp inflection. He peered straight into Boyd McKim's eyes. "And what is living but suffering, my son?" He straightened up, paused. "And suffering but living?"

The most beautiful, largest and most powerful Knight-engined car ever offered at such low prices

THROUGH quantity production, improved manufacturing and merchandising methods and volume sales, it is now possible to present the largest, most stylish and most powerful Willys-Knight Six ever offered at so low a price—a value that breaks through the cost barrier!

Fashioned to the minute, the new Willys-Knight Six is distinguished by sweep and verve of line, harmony of color, perfect symmetry and proportion that place it in the front rank of the most outstanding creations of today's style specialists.

And of course, the new Willys-Knight Six is notable for the velvet smoothness, silent power, rugged stamina, sustained high speed, flashing activity, marked economy and increasing efficiency which have won for the *patented* double sleeve-valve engine its high regard with America's most experienced motorists.

Visit your nearest Willys-Overland dealer and see the new Willys-Knight Six. Your first glance will reveal its beauty of design. An inspection will reveal a wealth of tasteful appointments. A demonstration will simplify the problem of deciding what car your next one shall be. *And the low price will win your instant decision.*

Vacation

in the land *where some day you may live*

The public golf course at Lincoln Park, San Francisco, overlooks the Golden Gate.

CALIFORNIA*

In the back of many people's mind is the thought: "Some day I would like to live in California."

In the meanwhile, why not *see* California? Why not make a summer trip, while the highways are gay with holiday travelers and the railroad excursion rates are low? This is a state of immense variety.

Eight hundred miles of it lies along the sea,—a distance as far as from Massachusetts to Virginia. Its two mighty mountain ranges contain streams stocked with trout; thousands of square miles of national forest for camping; five national parks. The cities, the hotels and resorts, and the radiant agricultural valleys are knit together by scenic rail lines and smooth motor highways.

Here is every climate; golf and all outdoor sports; and somewhere—who knows?—the personal business opportunity which you have dreamed about, and which will perhaps let you live permanently here "where life is better."

To make the utmost of your far western vacation, buy your ticket, book your passage, don your helmet or turn your front fenders for

San Francisco

Central gateway to the whole Pacific Coast vacationland. This is America's coolest summer city (average summer temperature 59°, and no *rain*), and is one of the holiday cities of the world.

Here is the largest Chinatown outside of China, quarters where English is almost never heard, gay theatres and restaurants, picturesque hills; smart shops; summer symphonies; and two great universities offering summer courses. San Francisco is the business capital of the West.

Let Californians Inc., a non-profit organization, send you a sumptuously illustrated travel book of 32 pages, describing San Francisco's haunts and scenes, and the California vacationland. It is free.

* "WHERE LIFE IS BETTER"

And Boyd McKim stood speechless, gaping, like an adolescent high-school youngster facing a blinding revelation.

Bouvier shrugged his massive shoulders. He waved an expressive hand toward his wife, his two daughters and one son. "A man gets married," he said. "Takes unto himself a wife. She brings him children. They build a home. In a city, a town, a country place. They help that city, that town, that country place grow, become better. And they grow and become better with it. They have money. They haven't. They have food. They haven't. A child is sick. It dies. Or it becomes better. It goes wrong. And is set right again. With tears. With words. A child marries. Goes off. They've lost it. After all the years. And it comes back with grandchildren. The years are full. With sorrows, with worries, with suffering, with a little gladness. *That's* living, my son. *That's* the living that produces great thinkers, great writers, great musicians, great artists. Suffering! Nothing but!"

"But—but traveling?" stammered Boyd McKim. "And seeing the world—different lands, different people, different—"

"Always time for that, my son. It helps, of course. But it is not essential. What is here—" and he pointed to his head— "and here—" indicating his heart —"and here!" holding up the ten fingers of his hands—"these count! When one travels, one does little work. One is a flitter! . . . And now will you have tea with us?"

Tea? Tea? When his whole world had been turned upside down for him. No! No! Right side up! And inside of him a great gladness was waiting to surge upward and engulf him in its warmth. *Tea?*

"Thank you. But I can't. The office, you know—"

AND he was outside. In the warm New York streets throbbing with life. People coming. People going. All around him. Up and down. Here. There. People with their own little gladnesses and sorrows. Life. *Living.* He was in the midst of it! You didn't have to go to Singapore, or Trinidad, or Cairo, or Bombay, to live! Wherever you threw up your tent and met your share of the common weal or woe, there there you *lived!* Wife, children, home, work, come one, come all! The fuller the years, the richer!

And in the middle of the street, Boyd McKim laughed—like a crazy man.

"Sallie!" he cried. "Sallie!" In a voice loud and joyous.

People turned to look at him. Stared.

He saw them not. He went dashing toward the subway that led away from the office, not to it. There was a girl, crinkly golden, with a pomegranate mouth and a pink-and-white, throat, little hollow right at the base of the throat. Oh, Sallie!

NEXT MONTH "The Bomb That Blew the Movies Upside Down" will give you the inside story of the tragedies—this sensational newcomer to the motion-picture field which is revolutionizing the whole industry and bewitching the public with its novelty

NEW

Dodge Brothers Six

Inspired by Walter P. Chrysler

NEW MONO-PIECE BODY! Unusually roomy, with wide doors and windows. An exclusive development positively eliminating squeaks and rattles. Scientific one-piece construction insures constant riding-steadiness and road-balance.

NEW BEAUTY! Deep radiator with pleasing narrow profile; *new* sweeping roof lines and sculptured mouldings; fenders of exclusive one-piece design blending with Chrysler steel channel rubber-covered running boards; Chromium plated exterior metal fittings.

NEW COMFORT! Ventilated driver's compartment with foot-controlled side ventilators; engine heat carried forward by front-end exhaust manifold. Ample head, leg and elbow room. Deep self-conforming seats.

NEW INTERIOR LUXURIES! Finely textured upholstery; Butler-finished metal parts; beautiful instrument panel; vanity cases; smoking sets; *new* style robe rails and foot rests.

NEW EASE OF OPERATION! *New* easy turning roller-bearing steering gear; *new* finger-thin steering wheel with composite headlight control; *new* dash-button starter; *new* Chrysler hydraulic weather-proof 4-wheel brakes: Lovejoy hydraulic shock absorbers all around.

NEW PERFORMABILITY! A 7-bearing engine of super-power, with self-aligning bearing caps. *New* live rubber rear engine mountings. Invar-strut aluminum-alloy pistons. Remarkable acceleration, power and stamina.

NEW DEPENDABILITY! Sturdy transmission with extra wide-faced gears. Staunch rear axle with *double* thrust absorbing roller-bearings. *New* style wheels with stocky, elliptical spokes for greater strength. *New* oversize tires (5.50) for excess mileage economy.

EIGHT NEW BODY STYLES! All at unparalleled low prices. $945 and upwards. All prices F. O. B. Detroit.

THE GENIUS of Walter P. Chrysler is expressed in every smart and sparkling line in the new Dodge Brothers Six. The exclusive Mono-piece Body — the narrow-profile radiator — the harmonious silhouette—all are typically the creation of Chrysler.

Now open the wide-swinging doors! Observe the same fine artistry within the spacious interior. Sumptuous upholstery — fitments of rare charm — vanity cases — smoking sets — an instrument panel handsome as a piece of rare plate.

Here in a car of surprisingly low price you find every appointment of highest priced cars. The greatest value in Dodge Brothers history, this *new* Dodge Brothers Six is without equal at or near its price.

I Haven't Cluttered My Head with Things Not in My Line

(*Continued from page 22*)

few minutes after five they were all but deserted—only a lone worker here and there continuing at his tasks. Among them was Maloney.

"There is a lull now," he explained.

At seven when I left, he returned to his desk. On it were heaps of papers awaiting his attention. Outside his door, even at that hour, several men waited to see him. I turned to one of Maloney's assistants. "How long does that man work?" I asked. The young fellow smiled; "Unt'l he is through."

I asked, "But when is that?"

"Sometimes it's eight o'clock," was the reply. "Sometimes it's ten or eleven. I'm not always here when he quits. During the day he sees countless visitors on company business. Since he has been here he has seen and talked with more of the customers of this company than did all of his predecessors combined. Then, at night, he does what he didn't have opportunity to do during the day. Each day's work is complete before he quits."

AND I recalled one thing Maloney had said to me:

"When a ship is in action, the captain's place is on the bridge. A going business is in constant action. A going *life* is in constant action. Life *is* action!"

Maloney is one of the hardest workers I have ever met, and I've met some prodigious workers in my experience as a reporter. I've had scores of them tell me that "work never killed anybody," but no man has ever told me that with greater earnestness than did Maloney. He made that withered old commonplace sound as if I had never heard it before; and he added with equal emphasis, "But work has helped every man or woman who has given it a trial!" His philosophy is one of work, and he learned it in the coal fields.

He was born, he told me, in a little mining settlement called Rappohanock, in Schuylkill County, Pennsylvania, on February 12, 1884, which means that he is forty-five years old. Today a culm heap stands on the site of his birthplace, but then, as now, the chief interest of the community, and of all that region, was coal. Villages, or "patches," as they were known, sprang up around mines, the only reason for their being. Coal offered the chief employment. When the mines were prosperous, the community lived; when the mines shut down, the community existed, or starved. Maloney's father was a miner who had learned the trade under his father; and there were ten children in the Maloney home, Andy being the second oldest.

The first house had only two rooms, one up and one down, but as the family grew the Maloneys moved to a larger house over at Conner's Patches, now Connerton, a suburb of Girardville. Here was the big Hammond Colliery that dominated the village like a feudal castle. And around the colliery were the houses of the miners.

"I suppose we had good times as boys," Maloney said thoughtfully. "I don't r member."

What he does remember is going to b at night, to lie beside his brother and r peat over and over in his mind the sums had learned in school. Addition, then su traction, later multiplication, and final division and "decimals"—the figur marched in swift, orderly processi through his thoughts. In school, wh other boys chewed their pencils and fuss over slates, Andy did his arithmetic " his head." And the harder problems we home with him, went to bed with him, a there in the darkness he figured them o He did not know it, but he was developi an asset for later life—and a memory.

Ask Maloney today when somethi happened and he will immediately tell y the month, the day, and the year. " was on a Wednesday," he will say, or wh ever the day was, though it is now two three decades gone. If figures were volved, he will recall them. Or, if you gi him an arithmetical problem, he will sol it without touching a pencil. The facili both in figures and in the memory of fac was gained as a boy.

But, characteristically, Maloney guided his memory to a single end—to him in his work. As he put it, "I have cluttered my head with things not in line." He recalls every detail of a busin transaction, but none of its drama. remembers the name of the day, but gets whether it rained or snowed. He members his boyhood studies, but forg his play.

HIS father was a kindly man, one sou out by his comrades for advice. F time he was constable, and he might h gone higher had he cared for politics. mother, who is living, was a former sc teacher, an earnest church member saw that her children, too, revered reli and its teachings. It was a well-ord home, a godly home, in which young A was reared. His parents were above average, in outlook if not in means. their great hope was that their would "rise higher than we have."

"Get out of the mines," counseled father.

But when he was eleven years old cessity forced Andy to the mines. He his place between two chutes in the H mond breaker. From the one he pi pieces of slate from the coal as it endlessly by him, and tossed the slat the other chute. He worked ten ho day, and earned $4.00 a week. He this money to his mother.

He moved up to a better job i breaker, that of "chute boy." Th was placed in charge of a little tra mine cars to haul coal from the chut the loading dump. He was now ea a wage of $6.10 a week, but that wa only a boy's wage and Andy felt t was doing a man's work. He was and his muscles were hard, as hard man's. His endurance was that of a So he went to the foreman and dem

That's *One* Reason Why I Want 100 Men who wish to TRIPLE THEIR INCOME

THE demand for Fyr-Fyters is growing fast. Five hundred million dollars' annual fire loss, 17,000 lives and the mortal dread of fire that's in everybody are reasons why we must get men in our open territory to take orders and supervise installation of Fyr-Fyters.

Selling Fyr-Fyters is comparatively easy, so powerful and convincing is the story of the losses. Previous selling experience, although desirable, is unnecessary. Without charge we train our men to become high-powered salesmen in a short time, and they also become real fire-prevention experts. Earnings start immediately, no investment in stock or territorial rights asked.

Big Earnings Possible

Payne averaged $20.77 a day for 217 days; Graham and Mendenhall each averaged $100 a week working only part time; DePries made $500 one week; Hill sold 1,400 Fyr-Fyters in one sale. In our records are many other instances of earnings of $50 to $60 a day and incomes of $3,600 to $7,200 a year by Fyr-Fyter men.

An Amazing Story for You to Tell

Read your daily paper, listen to the fire alarms, ask your local fire chief, notice the inflammable material everywhere and judge for yourself the need of Fyr-Fyters and why we are able to make this offer. Let us tell you the sensational story which sells Fyr-Fyters so rapidly and puts men in the high-earning class so quickly.

Fyr-Fyters have the approval of the (Fire) Underwriters Laboratories, are used by Standard Oil, International Harvester and many other of the largest concerns in the world.

Factories, stores, garages, auto owners, warehouses, schools, hospitals, farmers, private homes and other places use thousands of Fyr-Fyters. Thousands more await their installation. The Market is vast, unlimited, and your earnings as a Fyr-Fyter Representative are only limited by your ambition and desire to work.

This Opportunity is for You

Among Fyr-Fyter men are former clerks, mechanics and others who saw in Fyr-Fyter their real opportunity. Now we are ready to appoint 100 more men. It is your opportunity, your chance for $5,000 or more, easily and quickly, from your first year's effort—$100 a week to start. Write immediately for full details of our offer.

THE FYR-FYTER CO.

Dept. 1-P, Fyr-Fyter Building Dayton, Ohio

a real man's job and a real man's pay, which was $8.10 a week.

"There is no man's job open," said the foreman.

"Then give me a man's pay," insisted the boy.

"There's no man's job and no man's pay for you at this breaker now," the foreman repeated.

"Well, if it isn't here," said Maloney, "I'll go to where it is." And he quit.

Five miles from the Maloney home a quarry was getting out stone for a new colliery. Andy got a job in the quarry, walking to work in the morning and walking home again at night. He wasn't fourteen yet, but he did a man's work, got a man's pay, and carried a man's dinner pail.

Then the quarry closed down.

No work. It was customary when no work was to be had to sit around and wait for it, but Maloney isn't a sitter. He went to Girardville and enrolled in a business school there. For the next sixteen weeks he studied stenography. And though he completed the course as well as anybody could complete a stenographic course in that time, nobody rushed up to hire him nor seemed greatly impressed by his "diploma."

WINTER was on. At home, food and coal had to be bought, clothing and shoes and medicine. Andy's older brother, Michael, had gone to Philadelphia, where he was running a street car, with dreams of becoming a lawyer some day. Andy's help was sorely needed at home. And he was jobless.

He packed his dinner pail, got into his working clothes, and that morning when the whistle blew to begin work at Packer No. 5 colliery, he was in line with the regular workmen, ready for work. A foreman spied him. "Hey, you, what's the big idea?" he demanded. Maloney's answer was that he had come to work.

"Who told you to?" scowled the foreman.

"Nobody," Maloney admitted.

"Then why are ye here?"

"I just came," said Maloney. "What d'you want me to do?"

The foreman walked away saying things under his breath. When he came back, there was Maloney.

It was the Monday following Christmas, which had been on a Saturday. Maloney knew full well that many a miner had too sore a head that morning to report for work as usual. He knew that many a post would be temporarily vacant that Monday morning at Packer No. 5, and that the foreman might be mad enough to hire him.

"The foreman was mad," Mr. Maloney told me, smiling, "and he did put me to work. He gave me a job coaling the fires in the power plant, work that couldn't be left waiting until the regular man showed up."

The basic weekly wage for sixty hours of work was $8.10, man's pay. During the next two years, Maloney literally did two men's work! He worked overtime. He worked Sundays. On pay days, which were every two weeks, he drew from twenty-seven to twenty-nine dollars, or almost double the basic rate.

"I don't know how I did it," he told me. "I just did it. We needed the money at home.

"The hard work of those days did me good," he insists. "It taught me, for one thing, how easy is the ordinary work most of us in business have to do. I doubt if many of us really exert ourselves to more than half our working capacity. We are like one-hundred-horsepower engines doing fifty-horsepower jobs, and refusing to undertake greater jobs because we have self-imposed this limit upon ourselves.

"Accustom a man to sixteen hours of work a day and he will regard ten hours' work a soft snap; but accustom him to working seven or eight hours, and he will look upon ten hours of work as an unbearable hardship. Young men of today too often are under the disadvantage of having been trained in the eight-hour idea. You will find mighty few men at the head of big companies today who enjoyed eight-hour days as boys."

An opportunity came, through a friend for Maloney to quit the mines and go to New York to work as a stenographer in a shipyard. But one of his sisters, who had been ill, died, and on the day he was to have left home she was buried. The New York job had to be given up.

However, in Philadelphia, his brother Michael was not idle. He was now a telegrapher, and through a chum he obtained a position for Andy as a stenographer and usher in a vaudeville theater. The pay was seven dollars a week, the hours from eight o'clock in the morning until eleven o'clock at night. But it was a step from the mines, and Andy came to Philadelphia.

"I was a dub on that job," said Maloney. "You see, I had had no real stenographic experience, and I was fired at the end of the first week."

For some time after that he walked the streets of the city in a vain search for work. At every office where he applied they wanted only "experienced" men and those who could furnish city references. But he did not ask his brother for help, nor did he think of going home. Desperate at length he took his last fifty cents and advertised for a position.

"I was flat broke," he told me. "I had a place to sleep through the kindness of my landlady, but my stomach was as empty as my pockets. In short, the situation was so tough that it couldn't get any tougher. I've since discovered that when things get that tough there is bound to be a break.

HE PACED the floor of his office, talking in short, quick sentences. "I know dozens of men," he said, "who failed simply because they didn't hold on. It's the old story over again of being unable to judge their own capacities. We all have these weakness. We won't let fate try us out. We won't try ourselves out. The fault is not so much lack of confidence in ourselves as lack of knowledge of ourselves. Not knowing what we can stand, we arbitrarily put limits upon our endurance, and when we reach those limits we throw up our hands. Why? Not because our endurance is exhausted, but because we have exhausted our estimate of it!

"There is such a thing as wearing trouble, for it too has its limit. Trouble may be bad, but hold on. Don't be surprised or frightened if they grow worse, for that is possible and not unlikely, but when they have reached their worst, hold on by all means, for that is the limit of trouble. You'll find no word in the

tionary beyond *worst*. The only change from it must be for the better.

"A friend of mine asked a famous Texas sheriff why it was that he always got his man. Said the sheriff: 'I just keep comin' on. If he pulls his gun, I keep comin' on. If he shoots, I keep comin' on. And since shootin' is the worst he can do, I just keep comin' on.'

"That philosophy works in business. It works anywhere. You can't stop a man if he keeps coming on in spite of the worst!"

So, during that jobless period, Maloney kept "comin' on." The break that resulted from his advertisement in the newspaper was a job with a sewer pipe agency that also sold coal. Practice in every spare moment had made of him a better stenographer. The agency agreed to pay him eight dollars a week.

Within a week he had made a friend of his immediate employer, the agency's salesman. The latter showed him how to improve his work, taught him the run of a business office, and gave him an insight into selling methods. But trouble wasn't through with him yet: the agency failed, and the failure taught Maloney another lesson.

"The failure wasn't due to lack of opportunity, nor to lack of business," Mr. Maloney explained. "It was the direct result of lack of attention to business, as well as too many outside interests. The partners in the agency had reached a point where they imagined the business was good enough to run itself, but no business will run itself long."

MALONEY wasn't eighteen, but experience had already taught him lessons which were to be guides for him to the present day. It had taught him, first, that he possessed an almost unbelievable capacity for work; second, that business won't tolerate incompetence; third, to hold on in adversity; and, fourth, it had shown him the penalty of "easing up" in effort. And these lessons, rigidly applied, were to make the man—you can take that statement almost literally.

Once more out of work, he made application for a position at the office of a metallurgical engineer. A long line of other applicants was ahead of him, but when the door opened for the first interview Maloney was at the head of the line. Three minutes after he was in the engineer's office, the telephone rang. His friend, the salesman for whom he had worked, was at the other end of the wire. When the salesman had stopped talking to the engineer, Maloney had a job at ten dollars a week.

While in the employ of the engineer, Maloney studied mechanical drafting. He didn't become a draftsman, but he did learn to read and to understand blueprints. In about six months, when opportunity came to go with a cement company at twelve dollars a week, he there plunged into a study of chemistry, the science used in cement manufacture. Never again was he going to be charged with being a dub at his work.

He studied chemistry, though he had no intention of becoming a chemist. It was his thought that chemistry would make him a better stenographer, a better employee of the cement company! He went to work at nine and quit at five. After work, besides his chemistry, which is a college course in itself, he was studying at Temple University, in association with his brother, the subjects that would qualify him to take a university course in law. Keep in mind that his only schooling had been gained in a coal-town school. Yet somehow he was doing college work, in a reputable college.

"We made up the studies we hadn't had," explained Maloney. That means that he and his brother "made up" a high-school course, or its equivalent, while attending college and holding down jobs at the same time. They had to sit up most of the nights in order to do it. But Maloney had worked harder at the mines! In comparison, he says, this work with books wasn't hard!

And down at the cement office, too, he was giving just a little more time to his work than he had to, by the clock. The cement company was owned by a powerful group known as the Wentz interests. This group also owned coal mines. One Saturday afternoon, Dr. John S. Wentz, the senior of the group, called up the cement office about a small difficulty. A carload of cement had been rejected by a customer, was now on the customer's railroad siding, and somebody was needed to take care of it. Maloney, the only employee at the office, sticking there overtime on a Saturday afternoon, answered the telephone.

"I'll attend to the matter at once," he promised.

"And who are you?" Dr. Wentz asked.

"A stenographer," replied Maloney and gave his name.

That was all. The whole incident was trivial; but old Doctor Wentz, a keen judge of men, began to watch this fellow Maloney. Now and then thereafter he paused at the youngster's desk to pass the time of day and to ask a few seeming aimless questions. Maloney's twelve dollars a week grew suddenly to fourteen, to eighteen, to twenty dollars, a week. One day he was told to go out and try to sell cement. It wasn't long before he was selling cement pretty regularly, taking trips of two or three weeks' duration on the road.

And on the trains, or in his hotels at night, he was reading some odd books for a saleman. He was digging into philosophy, economics, stuff about human character and psychology, and biographies of great men. Just as he had applied a study of drafting to his job with the engineer, and a study of chemistry to his cement office job, so he now studied to learn men, because as a salesman he dealt with men.

ON DECEMBER 5, 1906, Maloney came to work at the cement office as usual. He was now past twenty-two and earning $125 a month. He and his brother Mike, had brought their parents and other children to Philadelphia to live. Once more the family was united. Maloney was thinking of that, of how pleasant it was.

"You're wanted inside at once," Maloney was told.

Wondering, he went into his employer's office. What was it all about? And when "inside" he was almost startled out of his boots.

At Virden, Illinois, the Wentz interests owned a coal mine. Things weren't going well there; in fact, they weren't going at all. Three managers had resigned in

"MAROONED!"

Another woman writes us:

"MAROONED! That is the fate of many a woman, and it was mine until I got an inexpensive car for my very own.

"We live about six miles from town and there are no bus lines or street cars. As my husband and most of the neighbor men work in town and use their cars to drive in and out, we women would be left stranded here many a day when we want to attend a lecture, concert, cooking school or card party, if it were not for my powerful old bus, which carries five; and every seat is always spoken for when there is anything going on in town.

"The neighbor women who haven't cars envy me. We go shopping, swimming, picnicking, huckleberrying in this car. If I want to take my little boy to the dentist or doctor, it is always nice to know that there is a car on the place in emergencies. A large share of our good times can be traced directly to this car, and without it, our home would seem almost a prison."

More than 3,000,000 American families have learned that a second car is not only a great convenience but an economy. The second car need not necessarily be a new car. Many used cars have thousands of miles of *unused transportation* in them and can be purchased at low prices. For the purchase of new and used cars alike, General Motors dealers offer the convenient GMAC Payment Plan.

A New Improved

CHAMPION

for

Every Type of Engine

DESIGNED and made to meet the stresses of the most advanced modern engines, the new improved Champion is far in advance of the Champion Spark Plug of even six months ago.

The new and exclusive sillimanite insulator is as vast an improvement over all previous insulators as the original sillimanite over porcelain. It has been specifically designed to meet *all* conditions of the most advanced engineering. A remarkable new sillimanite glaze remains practically impervious to carbon and oily deposits.

The advanced new solid copper gasket seal remains absolutely gas-tight against the much higher compression of today's engine. The special analysis electrodes have been greatly improved to resist pitting and burning.

***Remember*—it is a genuine economy to install new Champions every 10,000 miles. A complete new set of improved Champions installed in your car will show actual savings in gas and oil which will more than offset their cost.**

CHAMPION

cession, and with the last one had also resigned the entire office and sales force at the mine's headquarters in Chicago. Something had to be done, and done quickly, said Maloney's employer, and added:

"We've picked you to do it. We want you to go to Chicago as sales manager and take charge."

"But I don't know the first thing about soft coal," stammered Maloney.

"We know you don't," was the answer, "but we think you can learn."

"I'd like to think it over tonight," said Maloney.

"It's now nine o'clock," said his employer. "We've got to have your answer by eleven this morning."

Maloney went out and walked around the block, walked it a second time, and then returned to his chief. "I'll go," he said.

Next morning he was on his way to Chicago.

MOST of the Wentz mine holdings were in Pennsylvania and the Virginias. The Illinois mine, operated under the name of the Royal Colliery Company, was thus isolated from the other Wentz properties, an outpost that had never been profitable. When Maloney reached the mine's offices in Chicago he found them deserted except for a lone stenographer, a woman.

She gave Maloney the office key. "I've been waiting for you," she said, "and since you're here now, I might as well resign like the rest did."

"What has been your pay?" asked Maloney.

"Thirty-five dollars a month," said the woman.

"From today on you'll get sixty a month," said Maloney. "Now tell me all you know of this business?"

With the aid of the stenographer he familiarized himself with the office. Then he repeated the process at the mine. That night he took to his hotel with him some books on bituminous coal, and also every scrap of informative material he could find at the office. He read, talked, ate, and dreamed in terms of bituminous coal until he knew the coal he was to sell. The mine's problem was not production, but sales.

However, Maloney told me, he wasn't content to try to sell his coal purely by sales argument. He felt that the coal could be made to "sell itself." Therefore he took a hoisting engineer at the mine who was thoroughly familiar with the coal and its uses and arbitrarily made him a "combustion engineer."

"I called on industrial plants that were likely customers," Mr. Maloney explained, "and arranged for a practical demonstration of the use of our coal in their own power plants. After me came the combustion engineer, who demonstrated the coal in use. In other words, we made no statement we couldn't prove. And we sold coal."

The mine, at the outset, was producing about 1,500 tons of coal daily. By the installation of up-to-date machinery, its output was rapidly increased to 3,000 tons daily. Despite this increase, Maloney soon had sales keeping pace with production; while back in Philadelphia old Doctor Wentz chuckled. And it wasn't long before Maloney was made vice president and sales manager of the Royal Colliery Company.

For a youngster of twenty-two to take a losing mine where three previous older managers had failed and to put it on a profitable basis within a few short years, implies spectacular methods. Maloney assured me that his methods were anything but spectacular.

"Other Illinois mines were selling coal," he said. "What they could do, I reasoned we could do also. We simply put more effort into our work; we combed the field more thoroughly; we kept at possible buyers more persistently; we were rigid about keeping promises and about keeping our coal clean and up to standard. And once we landed a customer, we gave him just as much attention as we had when we were trying to make him a customer."

But, strange as it may appear, despite his success with the Royal mine, Maloney wasn't satisfied. Once the mine was operating as it should, he had time to spare on his hands. That is, he had a job that he could do in an eight-hour day—an ordinary one-man job. And he felt like a loafer. What were eight hours of work to a man geared up to do sixteen? Maloney himself put it this way: "The job was all right but it was too easy."

There was another newcomer in the Illinois coal district—George B. Harrington. The latter had come into the field as president of the Chicago, Wilmington and Franklin Coal Company, a concern that had bought the assets of another company which had failed. Harrington was doing in his company a job almost identical with Maloney's in the Royal Colliery Company—that is, rebuilding a disorganized business. The two men had many ideas in common. One of them was that both were capable of doing more and bigger work.

The two got together, and the upshot of their meeting was an agreement to operate the Royal mine in tandem with one of the Chicago, Wilmington and Franklin mines in the same district. Substantial economies could thus be effected. The plan was worked out on a management contract basis under which the Royal mine was taken into the operating program of Harrington's company, and Maloney was to sell the output, not only of the Royal mine, but also of the three mines under Harrington's direction.

THE plan was almost immediately successful. Harrington was left free to direct all operations and Maloney to direct all sales. So successful was it, in fact, that negotiations opened with Doctor Wentz resulted in the Royal mine's being taken into the corporate structure of the Chicago, Wilmington and Franklin Company outright. And Maloney became the vice president and sales manager of the larger concern.

Shortly, out of profits, Harrington and Maloney began to add new properties to the enterprise. From a comparatively small daily output, the coal produced and sold under their management increased to a peak production of 35,000 tons daily during the excess demand period of the war. When the war ended, some of the mines, including the Royal, were worked out and ready for abandonment. This was just as it should have been. The production dropped naturally with

Take me with you and get a kick out of driving instead of a "knock"
Ethyl

The reason is HIGH COMPRESSION

IT isn't the fault of your *car* when it "knocks" and slows up after carbon has formed in its cylinders. *Nature* is to blame. Nature gave us the fuel which made possible the automobile—gasoline. But nature failed to make gasoline a perfect fuel. For it explodes too soon—"knocks" and loses power—when it is pressed beyond certain limits. And as every one knows, it is the degree of squeezing of gasoline and air in the combustion chamber before ignition that determines the force of the explosion and the consequent power produced.

So General Motors Research Laboratories undertook to find something which, when added to gasoline, would control its combustion rate and make it possible to build engines of higher compression and greater efficiency.

After seven years of experiment, involving thousands of different compounds, the answer came: Ethyl fluid (containing tetraethyl lead), the "anti-knock" compound which leading oil companies are mixing with good gasoline to form *Ethyl Gasoline*—the standard high compression fuel.

National distribution of Ethyl has made possible the new models of higher compression and superior performance. A "high compression" car obviously requires high compression fuel to show its best.

But Ethyl Gasoline has meant even more: the millions of owners of cars of average compression can enjoy high compression performance by using Ethyl. For carbon automatically raises compression by decreasing the size of the combustion chamber.

Fill your tank with Ethyl today. You'll find a real difference in driving satisfaction.

A Background that Will Broaden Any Mind

NOW you can have at your command what man has learned in the six greatest branches of human knowledge and culture. Six great romantic outlines, six comprehensive sections that will bring you—compressed into one 700-page volume—the thrilling story of the world's HISTORY down to date—the stirring march and trends of RELIGION—the thought and wisdom of man's PHILOSOPHY—the intriguing beauty of the ARTS—the all-embracing survey of every branch of SCIENCE—and a complete panorama of the world's LITERATURE from the first neolithic scribblings to the work of modern authors.

A Liberal Education Complete in Only One Book

THE OUTLINE OF MAN'S KNOWLEDGE, by Clement Wood, is the ONE book, the only book, that gives you the fascinating story of what man has learned and accomplished from the world's birth in a flare of meteoric splendor up to the arrival of radio, aviation and television. Here is the whole story—all of it—*Science, Art, Literature, History, Philosophy and Religion*—in one large beautiful volume that you can actually BORROW for a week at our expense.

Send No Money—BORROW It at Our Expense

Clip and mail the convenient coupon and it will bring you prepaid, a copy of THE OUTLINE OF MAN'S KNOWLEDGE, by Clement Wood. Examine it. See for yourself how fascinating is the story of knowledge. Read it freely for a week. See how much you have missed in the realm of things you OUGHT TO KNOW. If you are not completely satisfied, send the book back within seven days. Otherwise, keep it as your very own and remit the astoundingly low price of only $1.50 and two dollars a month for two months thereafter.

But don't decide now. See this all-absorbing work first. You can do that at our expense. Send no money. Fill in the coupon and put it in the mails at once. Do it now. LEWIS COPELAND COMPANY, Dept. 79, 119 West 57th Street, New York.

drop in demand and become stabilized at 30,000 tons daily.

And when, in 1927, the Philadelphia and Reading Company looked out over the country in search of a new president who knew how to sell coal, it found that the Chicago, Wilmington and Franklin Company, started on a foundation of previous failures, had grown to a $21,000,000 corporation of outstanding accomplishments. It controlled more than 6,000 acres of coal lands. With two of its mines, it had broken world records for production.

So the big coal company in Philadelphia got its new president from the soft-coal fields of Illinois—not because Maloney had sold coal in good times, but because he had sold it equally well in bad times; because he had "kept comin' on." And in Schuylkill County, Pennsylvania, after twenty-eight years, the word passed that Maloney had come home to roost.

THE INCOMPARABLE WILL ROGERS gives you a barrelful of laughs next month in "The Hoofing Kid from Claremore." People who followed "The Bunion Derby," which was run from Los Angeles to New York, will recognize in the "Hoofing Kid" Andy Payne, the winner of that remarkable event. Andy is from Will's own home town.

Gypsy Wisdom

(*Continued from page 31*)

her own food. Considered physically unclean, everything she touches becomes polluted.

Among English gypsies, however, there are customs which tend to make one believe that they believe, themselves, in the things they have fostered in others. Most of these customs are concerned with marriage; with the insensate desire of all young women to know who their future husbands will be. On New Year's Eve the gypsy girls throw boots or shoes onto a willow tree. If the shoe catches in the branches, the girl who threw it marries in the course of that year. Or they go to the tree, shake it, and sing as they do so:

"Scattered, scattered leaves,
Where is the man I love?
Bark, white dog,
And my lover comes running."

If the bark of a dog is heard during the singing, the girl will be married before the winter is out. On St. George's Night the girls take a white dog and blindfold it. Then they let it loose after they quietly go each to a different spot. She to whom the dog runs first marries first.

At Easter and St. George's Eve every girl eats fish if she wants to see her future husband in her dreams, or she boils water and tries to make out his face in the bubbles. A girl takes nine seeds of the thorn apple, digs up the earth from nine different places, takes water from nine different sources, and kneads the whole into a cake which she lays on the crossroad on the morning of Whitsunday. If a woman is the first to step on the cake, then the husband will be a widower or an old man, but if a boy or a man steps on it, then her husband will be young and handsome.

THE gypsy mind is forever creating fantasies in which to enmesh the romantic longings of other people. All such fantasies are graphically called "spider webs." The spider, however, is never caught in his own webs. As a matter of fact, I have never met a more realistic people than the gypsies. They know both the price and the value of everything. They could never have existed so long under the conditions in which they live had they been otherwise. The belief in witchcraft and sorcery has not died out completely in the civilized world. There are as many people who have faith in such things as there ever were. The gypsies themselves don't believe in their supernatural powers, but since the world has thrust this money-making faculty upon them, they are only too ready to take advantage of it. Can you blame them?

THE gypsies have frequently been accused of stealing white children. This is not true and has never been true. Every gypsy children are a great trial on the road. They are a burden and mean more mouths to feed. Only gypsy children could survive the tremendous hardships to which they are submitted from earliest childhood. Cold, rain, wind, dust, blistering sunshine, hunger, thirst, nakedness, and filth. A white child could not survive such conditions long. Anyway, have the gypsies not enough children of their own?

It is said they have frequently stolen children out of a spirit of revenge. The gypsy's revenges are purely personal and are never transferred upon another member of the family or any of his cattle. The gypsy has a horror of bloodshed. It goes against his grain to kill anything. Without being cowards, they prefer to run away instead of facing a fight, even when superior in numbers and strength.

The gypsy knows that the worst peace is better than the best war.

Bulwer-Lytton said, according to biography, that he was offered marriage by a gypsy girl in England; that the marriage was made gypsy-legal by breaking a pipe of burned earth with the girl before the oldest woman of the tribe; and that such a marriage was binding for only five years. He and other authors have spoken rather lightly of the gypsy custom of "swapping" wives. The truth of the matter is that while gypsy men and gypsy women are extremely faithful to each other, nevertheless, at the marriage ceremony it is said or it is understood that they will leave each other as soon as love has vanished from their hearts. A man may divorce his wife and a woman may divorce her husband whenever he or she wishes.

The gypsies believe that children belong to parents who are not passionately in love with each other will be weakling and that every child, to be loved by its parents, has to be a child of passion.

Grit Magnified is like Broken Glass

THE most destructive type of dirt that lodges in your floor coverings is *grit.* Magnify it and you will see its sharp, cutting, glass-like edges. These grind and saw away at the rug fibers, or cut sharply through them. Every passing foot, every piece of furniture moved, sets these sharp edges at work destroying your rug.

If this grit lodged on the surface of the rug, ordinary cleaning would remove it and prevent this destructive action.

But grit is heavy and sinks deep into the pile. It lodges in the minute pockets between the threads, it packs into caked masses at the bottom of the rug.

SUCTION alone does not remove it. *Beating* is required, to shake it out of the pockets into which it is wedged and to dance it to the surface.

There are only two ways to beat out this dirt. One is by hand; the other is by means of The Hoover. In no other cleaner than The Hoover is an effective beating action provided for the removal of the dirt below the surface. In The Hoover "Positive Agitation"—a cleaning principle exclusive with products of The Hoover Company—vibrates the rug on a cushion of air, dislodges the embedded grit and flutters it to the surface.

To the beating action of "Positive Agitation" is added sweeping to gather up the thread and lint, and suction to remove the surface dust, the swept-up lint and the fluttered-loose grit.

BECAUSE of the combined action of beating, sweeping and suction, The Hoover is able to remove more *dirt per minute* than is possible with other cleaning methods; to clean more thoroughly; to clean more quickly; and to clean with less effort.

Could you ask more of any electric cleaner? Can you obtain elsewhere as much?

ANY Hoover dealer will gladly give you a demonstration of "Positive Agitation." Telephone him. Three Hoover models, $59.50, $75 and $135. With dusting tools, $72, $87.50 and $150. Floor Polisher, $7.50. Only $6.25 down. Liberal allowance for your old cleaner.

MASSAGES

like a rubdown

Every Pro-phy-lac-tic does double duty

"Massage of the gums stimulates a better circulation of blood in them. And gums, properly massaged, help keep the teeth healthy, sound and clean."
W. P. COOKE, D. M. D.
Prof. of Preventive Dentistry, Harvard University Dental School

VITAL NEWS for America's teeth!

Healthy gums mean sound, white teeth. And gums to be active and firm need a gentle massage every time you clean your teeth. That's the glorious double benefit Pro-phy-lac-tic now offers to you!

Every Pro-phy-lac-tic now cleans *and* massages!

Pro-phy-lac-tic is scientifically shaped to clean every part of every tooth—glistening white. The live, springy bristles are perfectly spaced to clean even *between* the teeth. More, they are blended so as to gently massage the gum tissue to firm, rosy health. Try a fresh Pro-phy-lac-tic tonight. Brush from the base of the gums to the tip of the teeth. You'll feel your whole mouth respond with a tingling sensation of good *health*. Pro-phy-lac-tic Brush Company, Florence, Mass. Pro-phy-lac-tic Brush Co. (Canada), Limited, Montreal.

Masso Pro-phy-lac-tic—for gums needing special attention.

Oval Pro-phy-lac-tic—for small dental arches.

love. Whether this be true or not, we need not insist upon the wisdom of this belief.

Because neither adultery nor promiscuity is possible in a gypsy camp, gypsy girls and gypsy young men are married very young. Mothers of thirteen and fathers of fourteen and fifteen are no rarity. Both the young girl and the young boy are given thorough physical examinations by the parents of the other side and allowed to marry only when they have been unanimously pronounced sound.

It is true that in the Orient the gypsies are polygamists, and I have met tribes in Turkey that were polyandrous. Whether a gypsy tribe is polygamous or polyandrous does not depend on morality or religion. It depends entirely upon whether there are many more men than women in the tribe or many more women than men. Where the sexes are evenly divided they are strictly monogamic.

WHAT is the religion of the gypsy? It is not known what the religion of the gypsy was when he set out from India two thousand five hundred years ago. There are many signs and indications in their customs and legends that gypsies were sun worshipers, fire worshipers, and that they had great faith in the powers of the moon. But this does not prove that they worshiped the same things in India. It is quite possible that they had adopted the worshiping of the sun, the moon, and fire while they passed through Asia and Egypt. Religiously, the gypsy is a very adaptable animal. In Mohammedan lands he makes believe he is a Mohammedan; in Catholic lands, that he is a Catholic; and in Protestant countries there is no better Protestant than he is. He submits willingly and easily to any religion that is imposed upon him. Yet where he is given complete freedom, he does not follow any religion in particular, but is continually making up one for himself which changes as the years go by, and is different not only in every tribe but in every family.

The one belief current amongst most gypsies the world over is the one in metempsychosis: in the return on earth of the souls of the dead ones in the bodies of different animals. This belief may be the only one which they have taken along with them from India.

The choice of a new leader is perhaps the most important event in any gypsy tribe. The outside world has always fancied that the gypsies are ruled by a king and that the title is an inherited one. Literature is full of gypsy princes and princesses. However this may have been twenty-five hundred years ago, it is not so today and has not been so for many hundreds of years. The wisdom of life and of the road had long ago dictated to the gypsies that leaders had to possess particular merits and were not to be chosen because of the merits of their fathers or forefathers. It happens often that the son of a chief becomes chief in his turn, but this only because qualities of leadership are frequently inherited.

Should a gypsy chief prove incompetent, he is deposed, without much ceremony, by his people and another may be chosen in his stead. Should the deposed chief have many partisans, the tribe may split, sometimes peacefully and sometimes not so peacefully. Having no sense of duty, no gypsy will submit to a leader

Film on Teeth—*Don't let it rob you of a fascinating smile*

The Film

that is found by dental research to discolor teeth and foster serious tooth and gum disorders

How to remove film—the question millions are asking. Now a special film-removing dentifrice is urged by dentists. Please accept a free 10-day supply

SN'T there something I can do?" wrote a young woman recently. "I am so sensitive about my low' cloudy teeth. I brush them for hours only neet with failure."

oday, three months later, she writes, "My teeth as sparkling white and lovely as those I used to y.... How awfully near I came to never knowing Everyone should accept the free test you offer."

Millions do not know

agic story with a happy ending. ... There are isands like this charming girl whose winning onalities are shadowed by unattractive teeth.

ow science has discovered, 9 times in 10, the e of "discolored" teeth is a dingy film that coats . It is your greatest enemy to loveliness. It is ngerous enemy to health, too, for film is held onsible for decay, pyorrhea, bleeding gums and troubles. Your dentist knows how true this is.

You must fight film

for film with your tongue—a slippery, sticky ng. Food and smoking stain that film. Germs by illions breed in it... germs of many different kinds.

Film hardens into tartar. And germs with tartar are the chief cause of pyorrhea. Film is also the basis of decay.

The special way to remove it

Ordinary brushing ways are not successful. You must employ the scientific method that first curdles film. Light brushing then can easily remove it in safety to enamel. Old ways may be discarded.

As children's teeth appear you marvel at their whiteness. Yours may once again regain that color. May take on a brilliance that is actually amazing. Lustreless, dull teeth are known to be unnatural.

Test FREE for 10 days

Perhaps unattractive teeth have cost you too much in society and business. You must not delay another day in testing this method.

Get a full-size tube wherever dentifrices are sold, or send coupon below to nearest address for free 10-day tube to try.

ORANGE, N. J.

because the others have chosen him. The leader has no power to mix in the private life and private doings of his subjects. His duties lie in the choice of the road to be taken, in the date of departure, or the length of stay anywhere. He is judge when any quarrel arises between two gypsies. His decisions are final only when the rest of the tribe agrees as to their wisdom.

A chief's most important duty is to keep the tribe happy. When I once questioned some gypsy friends of mine why they had deposed Marcu, who seemed to have been a great chief and had helped them become powerful and wealthy, I was answered:

"Since Lucu is our chief we sing and laugh every night. Somehow, in spite of all his wisdom, Marcu's leadership was not conducive to song and laughter. What good was all the gold we had in our pockets when there was no gold in our voices?"

Laughter is called, in gypsy, "The gold of the voice."

Women are on perfectly equal terms with men. They have the same rights, have the same vote, and are not looked down upon as inferior animals by the men of the tribe. It has happened more than once that women have been chosen chiefs of tribes. A gypsy does not feel humiliated when he is ordered about by a woman. If anything, the female is more important than the male of the tribe, and there is greater rejoicing at the birth of a girl child than at that of a male child.

When a gypsy man wants a wife, his father has to pay the parents of the girl for her. Should he want to divorce her, he does not get his money back; but her parents have to return to his parents all the money if she wants to divorce him, and pay him something in addition if a girl child has been born to them in the meantime. Nine tenths of all gypsy marriages are made with those outside the tribe, and marriage among blood kin is frowned upon by gypsies, though it is not forbidden.

A REAL gypsy wedding is celebrated on such a huge scale that both tribes are impoverished for years. I was a guest at a wedding once that lasted nine days and nine nights, during which four hundred people were continually eating, drinking, and singing. The tribe of the groom and that of the bride were very wealthy when they sat down to eat the first meal. They had eighty horses and bags full of gold. At the end of the ninth day they had barely enough horses left to pull their wagons, and they had sold their winter clothing and emptied their pockets of all the gold to buy food and drink.

Camp was broken only when there wasn't enough money among them to buy new strings to replace the brokens ones on the fiddles. What mattered? That wedding has remained one of the legends of both tribes and was reported by *patterans* to every tribe of gypsies roaming over th face of the earth. The story had bee brought over the ocean, and gypsies i Brazil and Mexico, in New York, Chicag and San Francisco spoke of it for year Recently I met that wedded couple again They had twelve children. In less tha a half-hour I had two hundred gypsie about me, all eager to hear from the mout of a personal witness the tale of that fan tastic wedding. I rhapsodized for hour at a stretch, yet my audience was disap pointed. The tale had grown beyond th powers of my imagination; I could no even approximate its present proportion Other witnesses had told them there wer five thousand people at that feast; tha not only had two tribes impoverishe themselves, but that forty tribes ha spent their last coppers.

"WHAT is the difference between th *Rom* and the *Gajo*, the gypsy an the white man?" I once asked Murdo, th wisest of all gypsy chiefs. I had known hi a long time His tribes had camped f twenty years every spring on our lan In a sense, Murdo was the chief of chie of all the gypsies of the Balkans. Whe ever a dispute arose between two tribe they came to him of their own accor Whenever a question arose involving th welfare of all the gypsies, they relied o his wisdom. Murdo and his tribe ha traveled all over the world. He knew th roads of every country and could sum u the psychology of a people in a sing sentence.

He looked for a long time into th burning fire before answering my que tion, then, closing his old eyes, he put h big, brown hands, covered with whi hair, over mine, and said:

"Man was born from the kiss of t eagle and the snake. What is eagle in m longs for the peaks of high mountai But to reach the peak man cannot l He must crawl there. And when he l nearly reached the top, either he k spent all his strength or the snake him drags him down. Watch man da ing. He tries to rise from the mud. I why men drink. Because they want make themselves feel lighter. But wh the wine has gone to the legs, the sn has risen to the head.

"Man's wisdom is the wisdom of snake; the wisdom of the crawling thi of the snake that crawls through dirt dust and yet wants to come out cle There is a little more eagle and a li less snake in the gypsy than in the g It is why we go always from one p to another. All man's dreams are flying. When the blood of the snake s die out in man and that of the eagle co to the surface, we shall all grow wings fly.. The gypsies shall be the first to d And that difference between the w man and the gypsy; the difference tween the *Gajo* and the *Rom*: The g shall be first to fly, just as he has first to travel."

THE EAGLE is our national emblem. Yet how few of us know anyth about him. This ignorance can be changed to knowledge next mo by reading "The Lord of the Air," by Herbert Ravenel Sass. It is of the most complete presentations of this glorious and spectacu bird that has ever been made within a brief space. Symbol of victo strength, and valor, the history of the eagle takes us back to antiqui He has become more than a bird—he is a legend, a demigod of natu

AMERICA'S NEWEST, GRANDEST WONDERLANDS—NO OTHER VACATION TOUR EQUALS THIS—

See them this summer! You won't know America until you do. You won't know what relaxation can be until you've lost your cares in the silent magnificence of sky and mountains—and breathed the tonic of western climate!

You won't know the rainbow immensity of great canyons — until you've seen Bryce Canyon and Zion National Parks, and the Grand Canyon itself. You won't know the charm and mystery of deer-filled forests until you've seen the Kaibab. You won't know the magnificence of water hurling itself into the sky until you've seen the proud geysers of Yellowstone. You won't know the breathtaking spectacle of ocean and mountains till you visit California, or the spell of the Rockies till you see Rocky Mountain National Park.

The cities, too, are among the most interesting in the world. Denver, the mile-high Queen City of the Plains; Ogden, Salt Lake City, capital of the Mormons; Portland, City of Roses; Seattle and Tacoma on lovely Puget Sound; San Francisco, romantic and sophisticated; Los Angeles, the movie metropolis—each with its own unforgettable atmosphere.

Come out to the West this summer! To the best of the West—the Union Pacific West, which includes Colorado, Utah, Idaho, Arizona, Nevada, California, the Pacific Northwest and Alaska, and twelve great National Parks.

You may go independently, or in an Escorted All-Expense Tour with interesting companions. The low cost will amaze you. Send coupon today!

The Grandeur of Zion National Park is unforgettable

Mother knows best what to do for SORE THROAT

WHEN your throat tickles, when it feels raw or irritated—gargle with Listerine full strength at once. Keep it up. Note how quickly you improve.

Sore throat is usually a sequel to a cold, and is caused by germs. And full strength Listerine, as you know, is powerful against germs. Its early and frequent use will often check cold and sore throat before they become serious. When it doesn't, call your doctor.

Wise mothers insist that members of their family gargle with Listerine systematically night and morning during Winter and early Spring weather.

Once you realize that full strength Listerine kills even the B. Typhosus (typhoid) and M. Aureus (pus) germs within 15 seconds, you can understand its effectiveness against lesser germ infections. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

LISTERINE

THE SAFE ANTISEPTIC

JOINED YET?
Get in the circle of men who've found the perfect shave—the cool shave with
LISTERINE SHAVING CREAM

Get the jump on COLD

Before every meal rinse the hands with a full strength Listerine. Listerine attacks germs picked up by your hands during th rendering them harmless when, on food, they the body through the mouth.

Ordinary soap and water help destroy But they are not enough. Listerine comple job. It's a precaution worth taking.

Miller Has Always Minded the Other Fellow's Business

(*Continued from page 59*).

Miller became a journeyman's helper in few months, but he didn't stop with learn- ng to drive rivets. He was on locomotives, nder them, inside them. He studied team power, strains, the tensile strengths f metals.

I thought of these early days when Mil- er made a certain remark to me:

"Young men getting started in busi- ess," he said, "complain frequently that hey are bigger than the jobs they hold. ne young man informed me that his job onsumed only ten per cent of his ability; had to take his word for the existence of e other ninety per cent, for he was giv- g no evidence that he had it. Such men ould see that the little, beginning job is ly a fraction of what business demands f them."

Miller spent a year in the boiler repair op. A year older, he had little difficulty getting work in the yards as a night itchman. At that, he was the young- t man on duty. The fact that he was ade an exception to the rule requiring at switchmen be at least twenty-one ars old indicates that he must have been pretty competent switchman.

And by day, as I've told you, he was ending every hour he could spare from ep firing that little switching engine. s kept up for almost another year. To intents, during that one year, he did years' work—today he doesn't recall s having been an especially hard task. d he knew the Hannibal yards well ugh to shut his eyes and be able to pick mentally, every switch and signal re.

EXT, he turned his attention to the offices. In the ticket office at the sta- , in the express and baggage offices, over at the freight houses were clerks hose work he knew nothing. Oddly ugh, it was his promotion to day switch- that gave Miller the opportunity to liarize himself with the offices. Eve- s he began to relieve clerks who were in for overtime work, which was al- t a regular occurrence.

A clerk who had a 'date' with his girl ld be only too glad to let me do his ex- work for him," Miller explained. "It n't long before it was generally known nd the various offices that I was ready ll in where a substitute was desired. he course of two years, I worked in y office connected with the railroad at nibal. There were mighty few nights n't have an office job of some nature her."

Iow late did you work?" I asked.

ome nights until nine, others until or three. But don't make too much e hours of work. The railroader of day was expected to work until his was finished.

or example, during the cattle-ship- season, when tens of thousands of of cattle were moved from the graz- ountry to eastern markets, the day men got on the job at three o'clock e morning. Frequently that day's work wasn't done until eight o'clock in the evening. The day was from dawn until dark, literally. Nobody thought of over- time pay, for there wasn't such a thing. We were hired by the month and paid by the month. It was the railroad life, and men were supposed to be tough enough to endure it."

At twenty, before he had reached the required age of a switchman, Miller was made night yardmaster. Not long after- ward the day yardmaster was taken ill. He was off duty for three days, during which Miller filled the two jobs without relief. He smiled as he told me of this.

"I MADE the mistake of going to the superintendent about it and suggest- ing that I was entitled to three days' extra pay.

"'Hired by the month, aren't you?'" he asked.

"I was, and that was all there was to it."

And Mr. Miller went on:

"The next ten years were probably the hardest of my life, and they probably did me the most good. They were hard be- cause I made them hard, not because the work was difficult. I was pretty young to be a yardmaster and the promotion at twenty made me think that I was going to rise fast and high in railroading. Se- cretly, I expected to be trainmaster within three or four years.

"But five, six, eight years passed and I was still yardmaster. I kept reviewing in my own mind the work I had done, the improvements I had made, the big jobs I had handled well. And I slowly but most surely began to get the notion into my head that I wasn't being treated fairly in the matter of promotion. That idea changed my whole viewpoint until I got rid of it.

"One day I came to an abrupt realiza- tion that at twenty-nine I was standing still. Instead of looking ahead for the new and bigger to do, I was looking back over my 'record' and sulking.

"Then I came to my senses. I saw that what I thought of my 'record' didn't count for much, for I wasn't the man who made the promotions. All that did count was what the fellows higher up thought of it, and apparently they weren't much impressed. The thing to do, and the only thing, was to stop sulking and to improve the record. Since nine years of work hadn't brought promotion, maybe ten would. In other words, I had yet to qualify in the other fellows' eyes."

THAT year Miller did qualify, and at the end of his tenth year as yardmaster he was moved up a notch, to trainmaster. The Hannibal and St. Joseph Railway had become a part of the Burlington System and was now known as the Hannibal Division. To this division he was assigned. Within five years he was its superintendent. Three years later, he was general superintendent of the Burlington Lines in Missouri.

I talked with an old railroader who was closely associated with Miller in those days.

YOUR car looks worn and battle scarred. Months of fighting wind and rain and dust and sleet have dulled its original lustre and faded its bright finish to a lifeless, drab hue. You are ashamed of it—you hate to drive it any longer—yet you cannot afford a new one. Then, one day you see these three magic words:

"MOTORISTS WISE-SIMONIZ."

You have seen them many times before, but this time you take their advice. YOU SIMONIZ YOUR CAR.

The Simoniz Kleener quickly and easily removes all grime, discolorations and blemishes, restoring the lustre, and then the Simoniz is applied.

. . . and behold, you have a bright, shining car, brilliant in its beauty. And, you thank heaven for Simoniz.

The sooner you Simoniz your car, the better. It gives lasting protection in all weather, makes the finish last longer and keeps colors from fading.

Easily applied with a cloth.

The biggest little thing in easing business routine is a really good pencil.

That's why, office by office, American business is adopting Dixon "Ti-con-der-oga" as standard equipment —

DIXON
"TI-CON-DER-OGA"
An extraordinary five cent pencil

Made in the U. S. A. by
JOSEPH DIXON CRUCIBLE COMPANY
Pencil Dept. 167-J Jersey City, N. J.

He told me of how Miller, as trainmaster, could walk the length of a long line of freight cars, come to the office, and write down from memory the number of every car in the row.

One winter the Hannibal yards were so jammed with cars that no train could get in or out. A thousand waybills were piled in an unsorted stack in the yardmaster's office. Nobody could locate a car that was wanted except by the tedious process of actually making a search of the yards.

Miller was sent to Hannibal. He began at the first track in the yard and walked its length. Then he wrote down the numbers of all cars on that track. Next he took the second track and repeated the process, and the third, fourth, and so on, until he had the numbers and track locations of all cars in the yard. With these data on paper, he was able to sort the waybills and determine the destination of each car. Largely through an extraordinary use of his memory and the fact that it enabled him to make every move count, he had the yards cleared inside of a week.

The World's Fair at St. Louis produced a railroad traffic problem unprecedented at that time. Miller handled it, and in all the bustle and hurry of that event not one passenger under his charge was injured.

Then F. A. Delano, general manager of the Burlington, was made president of the Wabash Railway. One of his first acts was to send for Miller and make him his general manager and, shortly, his vice president and general manager in charge of operation.

DURING the ten years that followed, bridges and tracks were reconstructed to carry heavier trains; double track was laid in and out of all dense traffic centers; freight houses, team yards, grain elevators, and other facilities designed to attract traffic were provided. Modern locomotives were added and shops built to maintain them. New yards for the assembly, classification, and distribution of freight, modern coal chutes, water-treating plants, stations—these were built largely under Miller's direction.

It was this work which brought Miller into national notice and established his reputation as an authority on yards and terminals.

At the close of the World War, the fifteen trunk lines of the Terminal Railroad Association summoned Miller to take command there. Within an hour of his acceptance of the post, he was waited upon by a committee of baggagemen who threatened to strike. He settled that trouble, only to discover that the yard switchmen had already decided upon a walkout in defiance of their leaders in the union. So, on the very day that Miller took his office, the "outlaw" switchmen's strike of 1920 broke, with the St. Louis yards as its storm center. The strikers knew that to tie up St. Louis was to tie up the whole Southwest.

Before nightfall of the next day Miller had several hundred volunteers, recruited from the Association offices, switching cars out in the yards. And he was out with his men teaching them the job and organizing them in such a way that they could work as they learned.

And the yards were kept open! With the aid of his volunteers, Miller handled 750,000 freight cars and 150,000 passenger cars without an omission. Passenger cars, live stock, and perishable freight were kept moving, and even the slow freight, like coal, was gradually put under way. This feat broke the "outlaw" strike.

Since then, Miller has spent more than $10,000,000 in improving and extending the St. Louis facilities. In eight years, despite a record rise in volume, he has increased the terminal capacity of the area by fifty per cent. He has almost doubled shop production, and he is still, in a big way, "minding the other fellow's business."

SEVERAL years ago one of the great locomotive builders of the world laughed tolerantly when Miller insisted that his shops were capable of building their own engines at a cost below that of the builder's own huge works.

"You're dreaming," said the man who had been building locomotives for years. "No shop can go under us in costs."

"I am dreaming," agreed Miller, "and my dream is of a new type of locomotive. It will cost less and be a better unit."

"But you have only repair shops here," continued the other. "Your men are utterly inexperienced."

"They've been tearing locomotives apart to repair them," reminded Miller, "and I've an idea that they can reverse the process. Anyway, I'm going to give them a chance to try it."

Miller had never built a locomotive, not even designed one. Engine building was not his business at all. Yet, at a cost of $7,000 less per engine, he proved so satisfactorily that locomotives could be built in St. Louis that the Terminal Association has adopted the policy of building all its own locomotives—a thing unprecedented in railroading.

The chassis of these locomotives was designed by Miller to be cast as a single piece, the weight of which was 40,000 pounds. By this revolutionary departure from rule, he eliminated twenty-six different parts in each underframe and simplified the problems of repair and maintenance. The tank plates of his tender were welded together, instead of having them riveted, as formerly. In this way he increased both the strength and the capacities of the tenders and also did away with more than 2,000 rivets in each of them. In eighteen months' time he constructed two super-switching engines at a saving of $70,000!

"You might say," said Mr. Miller, smiling, "that was in the nature of a dividend on the overtime spent in the shops at Hannibal, when I was called a fool for working for nothing."

A TWENTIETH-CENTURY MIRACLE MAKER! That's Mark Wood, whose personal story appears next month. Here's a man who changes rivers to their beds, puts unruly ones back where they belong, and forces cannibalistic rivers to disgorge the land they have swallowed. All this and does and much more. In "My Money is on the Man Who Believes in Miracles" you'll read about a typical, wide-awake American, who went gunning for Old Man Opportunity and brought home the whole darn fam

If permanence is important . . .

Use J-M TRANSITE *on* Walls *and* Roofs

TEMPORARY materials will do for temporary structures, but if you are interested in long life, specify Johns-Manville Transite. Transite is made by combining asbestos and cement under heavy pressure into a material which is as long-lived as granite.

In fact, tests prove that Transite is actually stronger with each year it is exposed to weather. Of course it is completely fireproof, and cannot rot, rust or corrode. Transite is not damaged by salt air, nor by the common industrial gases and fumes.

Transite provides a covering for skeleton frame structures which will actually outlast the steel frame work. Wherever used, Transite forms a permanent barrier against fire and weather. It has a pleasing tile-like appearance. Transite requires no roof deck, but can be laid directly on the steel frame.

For side walls and partitions, Transite may be used either corrugated or in flat style. Transite is the most economical building material when costs are figured in terms of length of satisfactory service.

Johns-Manville manufactures scores of products which are used in industry as well as in homes to control and conserve heat and power and to guard against damage by fire and weather. These include packings, insulations for every temperature range, brake lining, built-up roofing, and asbestos shingles. The J-M trade mark is a guarantee of expert design, skilled manufacture and satisfactory service.

Everlasting TRANSITE *Serves Scores of Uses*

Originally made as a building material, Transite, because of its durability, strength and general adaptability, is used to advantage for many purposes. Between circuit breakers or switch panels Transite makes efficient arc barriers. As an outer wall over insulation, Transite has been widely adopted in furnace construction, and wherever it is important to have a material fireproof, everlasting, comparatively light in weight, yet structurally strong.

fishing poles, stood about in odd corners, gleaming dully in the lamplight. Here gathered men who had stories to tell, a song to sing, or music to play—farmers and trappers, college professors and concert stars; they came from afar.

A NEIGHBOR with whom the boys spent a great deal of time in those early days was Reinhold Dietsch, another pioneer of the section. Dietsch was interested in ginseng and he took the boys into the woods with him and taught them how to find this wild plant in shaded spots.

"Of what use is it, Reinhold?" they asked.

Dietsch told them that the Chinese used the ginseng root for medicinal purposes; that it was a plant most difficult to cultivate and that the Chinese paid high prices for it.

"It takes five years for the ginseng root to grow to maturity," Dietsch explained. "It needs just the right amount of shade and sunlight, and just the proper soil and moisture, but even then it seems to get all kinds of diseases. It is far too troublesome a plant for most folks to bother with."

Yet Dietsch was planting the wild ginseng in his garden in an effort to learn the secrets of its culture. The Fromm boys soon had a little patch in their garden. They hunted the woods over for ginseng to transplant, for the seeds themselves would not sprout. As harvest was on and all hands were needed in the fields, Fred Fromm's patience broke at this "nonsense."

"Here my wheat is ripe and yet you boys monkeyshine with weeds," he stormed.

"Let them alone," rebuked the mother. "Reinhold Dietsch is no fool and he says there is money in this ginseng."

But the practical farmer in Fred Fromm refused to see any value in "raising weeds for heathens" when wheat was to be harvested for Americans. In him was a vein of iron stubbornness, but that same vein persisted also in the sons.

Despite their father, they planted ginseng in a plot of ground set aside for them by their mother in her garden. Though their ginseng withered and died, they planted it again—and each time they planted differently, in new ground, in a new way, under new conditions. They studied the hard-shelled ginseng seed to discover why it wouldn't sprout like other seeds when put into the soil.

"Ed" Fromm, spokesman for the brothers, told me:

"The difficulties in ginseng culture were the very things that made it worth cultivating, because they kept the price high and the supply of ginseng roots scarce. Anybody could raise wheat, and so wheat was cheap, but not many farmers had the patience to raise ginseng."

Dietsch discovered presently that by building arbors of lath over his ginseng plants and spacing the laths an inch apart, he could create the same light and shadow effects found in the deep woods where the wild ginseng plant grew best.

At once the Fromm boys decided to build arbors over their ginseng, and they went into the Fromm wood-lot to cut the arbor posts. Fred Fromm was eating dinner when he heard the sound of the busy axes, and, rushing out into the woods hatless, he put a stop to it.

"You get no posts from woods of mine," he ordered.

So the boys had to buy their posts from a neighbor.

Presently, their ginseng patch outgrew the space in the garden. Unless they obtained the use of more ground for their experiments, the boys were checked.

Near by was a huge stone heap formed of stones hauled off the fields in clearing them. It had been growing for years.

"You may use the ground underneath the stone heap, but not one foot beyond it," said Fred Fromm grimly, and he had no doubt that the formidable task of moving the stones would put a quick stop to the "ginseng nonsense."

But by hand and by wheelbarrow, the boys moved the stones—and at that Fred Fromm threw up his hands. Maybe he conceded, there was some good in the blamed weed after all, and surely there was some good in these boys of his who could not be awed by a stone pile.

BY THAT time Arthur, the eldest brother, had been graduated by the University of Wisconsin and was teaching school. One by one, the younger boys followed him away from home to study at various teachers' training institutes and normal schools. Every one of them helped to pay for his own education, while Fred Fromm helped them all he could, dreaming of the day when his six sons would be schoolmasters.

Walter was graduated and began to teach, then Herbert, and next Edward. They came home in the summer to help with the farm work and to continue the ginseng culture, which was now beginning to promise real success.

And then the fox cry rang out from the Canadian woods.

Every Fromm school-teacher, except Arthur, rushed home!

Small wonder, that night, when foxes were mentioned in the log house, that Fromm roared "Bah!" and stamped out of bed in a dudgeon.

"It was the woods that called," Ed. Fromm explained to me.

Born and reared in the woods, back in the woods came five of the brothers, Arthur joining them a few years later.

That winter they bought the Witt foxes, and by hunting and trapping over a radius of twenty miles they managed to make captives of three additional pairs of red foxes. Their efforts also netted the variety of small furs, the sale of which provided a narrow income and capital.

Spring came and with it high hopes. Each fox pair was provided with its private enclosure. But there was only silence around those pens that first spring. The captive foxes refused to breed.

The next spring, twelve red foxes were born, but most of these sickened and died within a week or two. The only

Digitized by Google Original from UNIVERSITY OF IOWA

was the capture by Walter of a litter of seven red fox pups. But though two years had gone by, the brothers had not yet even seen a silver black fox. Returns from their ginseng arbors alone enabled them to continue with the venture, which to date had not yielded a penny.

"Nevertheless, we had learned a few things about foxes," Edward Fromm told me. "The most important fact of these was that red fox, or even black fox, breeding wouldn't pay us. A red fox pelt was worth about twenty dollars. It could easily be dyed to look like a black pelt. The one pelt that can't be successfully imitated is the silver pelt.

"The silver hairs in a silver black fox are not of a uniform color. A single hair is dark at the base, and then it shades gradually lighter until about a half-inch of white is formed, and beyond this white is a black tip. The black tips on these hairs make a veil over the white, under which it glistens like silver.

"Furriers can take plain white badger hairs and glue them in a black fox pelt, but anyone who knows fox furs will detect the imitation at a glance. A successful imitation would cost more than the genuine silver pelt, and this fact, we saw, meant that imitation could not lower the prices on silvers, while it certainly could lower prices on black pelts.

"In those days, live silver foxes were to be purchased only at the most exorbitant prices, for breeders did not want to part with their mature stock. In Wisconsin it was almost impossible to buy a silver fox, for none were in captivity. You can understand how eager we were to get one."

IN JULY, 1913, a rumor reached Hamburg that a silver fox was for sale at Polar, Wisconsin. Henry and Ed at once set out for Polar on foot. They walked to Marathon, thirteen miles distant, and there took a train to Antigo. Leaving the train at Antigo, they walked the remaining eleven miles to Polar.

A fox was for sale and its owner insisted that it was a silver in poor coat because of the season. It was a sorry-looking animal, but the price set for it was $3,000. The two boys hadn't a penny; the railroad fare had taken all their funds. They proposed a partnership, but the fox's owner laughed at them. All night they sat up arguing with the man, but he refused to listen to any proposition other than cash. Bitterly disappointed, the boys started home again, with a total of sixty-two miles to be covered on foot.

They walked all day, and by nightfall their shoes had worn their feet so sore that they decided to go barefooted. After a few hours of this, their bare feet were so badly cut and bruised that they put on their heavy socks and walked in those. They reached home at seven o'clock the morning, ate some breakfast, and then started to plead with their father for money. Finally, he consented to lend them $3,000 only on the condition that he accompany them to Polar to make the purchase. This trip was made in Fred Fromm's car. At last, the boys felt, they had convinced their father of the desirability of the fox business.

Polar, the fox was displayed again for the inspection of the elder Fromm, and became time for the settlement. As if had not been there, Fred Fromm had

"Just notice the fine skins of men who use WILLIAMS!"

Texture!

Lather of close texture is lather that holds a maximum of moisture,—*holds it.* Makes beards non-resistant.

Williams lather is lather of the closest texture. It holds 10 per cent more moisture, by authentic test, than any other we know of.

Lather of close texture is super mild. It's the thin, open lather that roughens and stings.

Texture—moisture—mildness! The specialized experience of 89 years and the utter purity of uncolored, triple-distilled ingredients have given, in greatest possible measure, these qualities to Williams.

Williams reveals an entirely new shaving comfort to the man who tries it for the first time.

The drug clerk knows. Listen to him: "Oh, yes, sometimes they change . . . . *but they all come back to Williams!*"

THE J. B. WILLIAMS COMPANY, GLASTONBURY, CONN.—MONTREAL, CANADA.

Next time say

"Williams Shaving Cream *please!*"

Afterward find out how perfectly AQUA VELVA completes the shave.
Made *just* for that!

Iron Clad

vanished! The purchase money, of course, had vanished with him!

Fred Fromm had taken one look at the sorry animal offered for sale at $3,000, and had then slipped out to his automobile and driven back to Antigo, where presently the boys found him impatiently waiting to start home.

"Not even thirty dollars would I pay for such a fox," was his ultimatum, and that decision stood to be justified a few months later. The fox was exposed as being a "Samson"; that is, a fox without guard fur or sheen or depth of coat. Its real value was about twenty-five dollars.

Another winter passed. Herbert Fromm, accompanied by Henry, succeeded in capturing a black fox near Cameron; but again only red fox pups came in the litters born that spring. The whole countryside was laughing at the Fromm boys.

THEN, one day, Fred Fromm packed up and left for a visit in Iowa. No sooner was he gone than the boys outlined to their mother a desperate plan. The deed for the farm was in her name. They proposed that she mortgage the property and lend them enough money to buy one pair of silver foxes that had been proved as breeders.

Mrs. Fromm had helped her sons get started in ginseng raising and she had seen the ginseng venture grow to a promised success. She had faith in these boys; she had courage.

Together, mother and sons went to their bank. The banker, a friend of the family, listened to the odd proposal but shook his head against it. "You are entering too big a speculation, Mrs. Fromm," he said. "I couldn't approve such a loan without Mr. Fromm's consent."

Undismayed, Mrs. Fromm went to a rival bank. Again the plan was frowned upon as highly dangerous speculation that might result in her loss of the farm.

"But your bank can't lose," retorted the woman. "My sons will give you their notes for the sum borrowed, made payable in one year. If they don't pay the notes in one year, you can foreclose the mortgage and take the farm."

The loan was granted. Several days later the Fromms bought in New York State one male and two female silver foxes of a reliable strain. They paid $6,500 for the three animals and congratulated one another on getting a rare bargain.

One month later, war was declared in Europe. The bottom fell out of the silver fox boom in a night. The three foxes which had cost $6,500 weren't worth $1,000 on the market!

"What did your father say to this?" I asked Ed Fromm.

"What could he say?" he replied. "What was done was done beyond undoing. The farm was at stake. Our ginseng roots, which had been selling at as high as twelve dollars a pound, dropped to a third of that price. Our red foxes weren't worth their keep. We were in a pretty pickle, with $6,500 in notes due in eleven months."

All over the country, silver fox breeders were crowding each other to get out of the business. One big dealer failed with a carload of fine Alaska silvers on the siding—animals which a few weeks prior had been worth a fortune. Pelts dropped to $100 and $200 apiece, and several years of war, it was feared, were ahead.

"We couldn't quit; we didn't dare to quit," related Edward Fromm. "So, instead of retrenching, we took advantage of the low prices to add to our breeding stock. Among the animals we bought was an outcast fox that we got for almost nothing. The next spring she presented us with six silver fox puppies. Altogether that spring we got seventeen silver pups in the litters.

"I need hardly say that we worked—with the farm, with the foxes, with the ginseng. And as our notes fell due at the bank, we met every one of them in advance. That feat established our credit. It also finally enlisted the coöperation and support of Father.

"In 1916 we had twenty-five silver foxes. This number grew to twenty pairs of breeders in 1917 and to twenty-seven pairs in 1918. After the initial collapse of the fo boom, the business proceeded to reorganize on a more sensible basis, and whil prices were never to return to the peak c 1909 to 1913, they were to rise to substan tial figures again. For example, we sol several pairs of breeders in 1918 for $2,oc a pair, and in 1919 we got as high a $3,000 a pair. At the same time, good silv pelts brought about $250 apiece in Ne York."

ANIMALS which are no larger than small dog and are worth $1,000 and u apiece are as valuable as any good bar stock. A sharp reminder of this fact car to the Fromms one night when they su prised some men in the act of attempti to cut through one of the wire fences i closing a breeding pen. No game law pr tects the fox. Once the animal is loose, is free game to anybody with dogs, tra or gun. From that night on, the From stood guard over their inclosures, w loaded rifles.

And scarcely had this danger been r than a far more formidable enemy inva the enclosures. Valuable animals, se ingly in the best of health, suddenly si ened and died before anything could done for them.

"Poison!" suggested one expert.

Laboratories in Chicago made analy but not a trace of poison was found in stomachs of the dead foxes. The gro of the fox runs was analyzed, without sult. Feeding methods were changed. one year more than $20,000 was spen the Fromms for medicines and advice, the animals continued to die.

If you own a good dog, you know dog lover's dread of the word distem For years scientists have been tryin find a preventive of this canine dis which takes its annual toll of dogs world over. Suspecting distemper an their foxes, the Fromms went to Prof Robert G. Green, head of the departi of bacteriology and immunology at University of Minnesota. They ple to Dr. Green the sum of $20,000 ann to support distemper research at the versity if he would study the distemp foxes. Dr. Green accepted the task.

"We supported this research fo years, and last year we increased our port to $25,000 a year," said Ed Fromm. "As our foxes increased in bers, which they did rapidly each after 1920, our losses from disease proportionately. For instance, in 19: lost $200,000 because of deaths and

Digitized by Google
Original from UNIVERSITY OF IOWA

ness among our foxes. Between fifteen and twenty per cent of our animals died every autumn.

"But Dr. Green believes that he has at last discovered a preventive with which healthy foxes may be inoculated and so escape this scourge, which he has determined is encephalitis. This form of distemper, the most deadly of all, attacks the spinal system and finally the brain, and afflicts dogs the same as it does foxes."

A fox mother gives birth to young once a year. Often she has as many as seven puppies or more in a litter, and a good average litter numbers four or five. Keeping this fact in mind, you will readily comprehend the spectacular rise of the Fromms in the fox industry.

The turn in their fortunes came in 1920. When John and Edwin Nieman joined the partnership. Twenty-four pairs of foxes were moved to the Nieman farm at Cedarburg, which is two hundred and fifty miles south of Hamburg. This change seemed to work magic with the foxes. Every fox their produced litters of maximum size.

This high productivity continued in 1921 and proved to the satisfaction of the partners that Cedarburg was much more ideal as a breeding place than was Hamburg. All breeding pens were moved to the southern locality, and the number of foxes grew into the hundreds and thousands. Four additional farms were added there. However, if the foxes were left at Cedarburg in the late summer and fall, the warm sun burned the coats of the growing animals and rendered the fur harsh and coarse. It proved profitable to establish two divisions in the business—the breeding division at Cedarburg and its vicinity, and the fur division at Hamburg, where the mild autumns developed thick and silky coats on the foxes.

BETWEEN 1922 and 1928 the Fromm-Nieman holdings increased from a few hundred foxes to over sixteen thousand. In this period the partners abandoned breeding live foxes for sale and decided to devote themselves exclusively to raising foxes for furs. A number of fine Prince Edward Island animals were introduced, and these increased the size of the foxes and improved the quality of their coats. Gross receipts exceeded the half-million mark in 1926; by 1927 they were beyond the one hundred thousand dollars; and in 1928 came the record check of more than a million dollars. Indications point to an even greater return this year.

I asked Ed Fromm what the highest price is that they have ever received for a single silver fox pelt. He said it was $1,020, in 1927, prices having started at about $250 a pelt. Each year their average price has increased, as they have steadily improved the quality of the furs offered. It is the Fromms' belief that the day will come when all furs will be produced on farms and add materially to the income of the farmer.

"Why not?" inquired Edward Fromm. He added: "I have one warning to the individual who thinks of going into the business, and that is, not to be fooled by boosters into believing that it is an easy business. Silver fox prices continue high because the fox is difficult to raise and because the hazards in the business are so great."

Friends! Free treat,

Just tell me where to mail the cigars

THE quickest way to settle this question of whether I can give you cigar satisfaction better'n anybody else can, is to have you try ten *free*, first of all. Two or three ain't enough. Ten makes a good test. After that we either do business or cry quits, and no hard feelin's on either side.

Now please don't go lookin' down through the print huntin' for the "catch" in this offer. 'Cause there ain't no "catch."

I'm an old timer

You know me. I've been makin' cigars here in Philadelphia, and so was my dad before me, for more'n 25 years. Our little factory is one of the lightest, airiest and cleanest in the country. I sell cigars direct to smokers on a try-before-you-buy basis. The customer pays nothin' if the cigars don't come up to expectation. Friends tell me I save 'em upwards of 5c a cigar. That's 'cause I sell at a price that represents only one cost of handlin' and one profit.

Send the coupon— I'll do the rest

Now all *you* do is sign and mail the coupon, soon as you finish readin' this ad. When I get it, then I personally see that you get a box of freshly made full-flavored cigars, size and shape as pictured, postage paid by me.

This cigar you see pictured is my famous Panatela, a full, five-inch cigar. Sellin' 'em by the thousands, for years! Genuine Cuban-grown clear Havana filler gives it richness and rare flavor. The fine Sumatra leaf wrapper makes it burn even and leave a long white ash. This cigar, men, is just about "heavy" enough to satisfy your cravin' for a *real* smoke, yet light enough to please fellers accustomed to cigarettes. Strictly handmade, of course.

Now get busy and mail that coupon. Soon as it comes in, I'll send you a box of 50 selected, cool-burnin' cigars. Then you smoke ten, at your leisure. If after you smoke ten, the box doesn't seem worth $3.50, return the forty unsmoked cigars within ten days. No explanation necessary. No "forms" to fill out. Just shoot 'em back at my expense.

Order now and enjoy the cigars at once

In orderin' please use your business letterhead, or the coupon, fillin' in the line marked "Reference."

Or, if you don't wanta bother givin' a reference, just drop me a post card and you can pay the postman $3.50 when the cigars are delivered. I pay the postage.

You take no risk. Remember, the cigars won't cost you a penny if you don't like 'em.

Mail the coupon to me, personally.

NELSON B. SHIVERS, Pres.

Actual Size and Shape

This coupon entitles you to a FREE TRIAL of my cigars

HERBERT D. SHIVERS, INC.
30 Bank Street, Philadelphia, Pa.

Please send me a box of 50 Panatela cigars. If, after smoking 10, I decide the box is worth $3.50, I agree to send you that amount. If I decide it isn't worth that amount, I agree to return the 40 unsmoked cigars within ten days with no obligation.

Galahad

(*Continued from page 13*)

horror, she realized what Thacker was doing. Not thirty feet beyond the panic-scourged woman, the car and the bull came together, head on.

Many cattle have lost their lives, or have been maimed, by collision with careless motorists. But now, for the first time in the motor's hectic history, an automobilist was risking his life and wantonly destroying his car for the sake of stopping the charge of a maniac bull.

Together in mid-road crashed the speeding giants.

Instinctively, Roy Thacker shut his eyes and bent his head, and braced his lithe body, a moment before the head-on collision.

Then some invisible and tricksy force wafted him aloft, through a rain of glass-flinders, high in air. Tiring of the tossing prank, the same mischief force deposited him in the exact center of a thick clump of witch-elm bushes and wild blackberries at the edge of the road.

Roy crouched there, for a moment, dazed and sick, while the twigs and briars which had broken his fall revenged themselves for their kindness by ripping his best suit to rags and excoriating his flesh. From his face and head trickled tiny wisps of blood, as tokens of divers glass scratches.

THE world was slowly ceasing to revolve in a drunken ellipse; and breath began to seep back to his tormented lungs. He was at once numb and sore and aching. By a violent effort of memory he recalled what had happened. His gaze strayed vaguely to the road.

The Holstein lay huddled in a position which nature neither provides for nor permits. His giant head was twisted at an impossible angle from the inert bulk of his body. He had quivered all over, for a second or so. But now he was very still.

Just in front of the dead bull, the road was strewn with what looked like the entire dumped contents of three machine shops. It was inconceivable that one smallish car could have been made up of so many scattered and twisted and useless component parts. The new roadster had gone forever out of existence. Here was no job for a wrecking crew, but for the junkman.

Above the dual wreckage stood Miss Vandercook babbling to herself, her old eyes wide, her mouth ajar. Above the bull danced and swore and threatened Lem Hannoth.

Miss Vandercook's blank visage turned slowly and wonderingly toward the copse in whose center squatted Thacker. Then, with spinsterly modesty, she averted her eyes.

A single downward glance at his own rent clothing told Roy the reason for her reversed look. His clothes hung in tatters; some of them from his body, some from the spike-twigs of the copse which had saved him from a fatal tumble. Wriggling free of the clinging thorns, Roy limped hastily to the cover of the pasture bushes, and thence to the friendly shelter of nearby woods. Deaf was he to Lem Hannoth's bawled imprecations. His only desire was to get out of sight and to reach his own room after nightfall—his room, where he could replace his revelatory and scanty rags with more decorous clothing.

AT DAYBREAK, Roy Thacker awok from a merry dream of being kicke by a whole stableful of army mules. H lay for several minutes trying to colle his thoughts and his memories. His mu cular young body was one multiple ach The iodine and arnica wherewith he ha anointed his many cuts and bruises wh he went to bed the night before, stu wholesouledly into the hurts they covere But as reason returned to him, his phy cal pangs seemed puny compared wi those which gripped his mind.

What a double-dyed jackass he h made of himself! And what had he gain thereby? True, he had saved a lumpy a elderly and uninspiring woman from peculiarly repulsive form of death. B in doing it, he had destroyed the whose purchase money represented ye of overtime work and loss of sleep a absence from Maida Barham. In dentally—though that was a minor m ter—he had destroyed his best s

He had broken his appointment take Maida driving. He had ruined first and last and only chance of impr ing her with his beautiful new car. Ye must pass now before he could hope hoard enough overtime money to bu second roadster. Meanwhile, those ot chaps would continue to hold the in track with Maida, by dint of their shi cars. He must continue to take her ing—when she would consent to go Axel Thorje's abominable old rattlet

Worst—he had made himself r ulous, no doubt, in her eyes, as in ev one's, by his smash-up and by his qui ism in jeoparding his life and losing car for the sake of a red-hatted fru If he had dashed, on foot, to the re of some pretty girl, now! But to l tilted at a Holstein bull, in an automo to stave off death from that absurd woman! Why, he would be the laug the county! A woman can endure t a man martyred, for whatever cause; can love him for it. But where is woman who can keep on liking a whom everyone is laughing at?

SLOWLY and gruntingly Roy Tha got into his next best suit and forth to breakfast. The day was Sun No work at the creamery today. plenty of time to think and to want to himself. Plenty of time to keep from Maida, for fear of being laughe Plenty of time to dodge the grins furtive nudges of his acquaintances. most at the entrance to the room house where he lived, he met Miss dercook. Imperiously she stopped as he would have strode glumly past

"Young man," she hailed hin magisterial sternness and without fu salutation, "I have been making inq about you. I was on my way to see I want to ask you a question: Whe

TOOTH DECAY

will never have a chance if you

practice modern mouth hygiene

ıFTER all, it's useless to try to void the issue. The fact remains ıat thousands and thousands of ·ople are eventually attacked by ıoth decay and gum irritations in ite of the most faithful care. nd the question is—*are you willing run the same risk by overlooking a w well-established facts?*

These facts are very simple. ery time you eat, food particles e forced into the pits on the grind- g surfaces of your teeth and into e tiny V-shaped crevices around h tooth formed by the meeting tooth and gum—The Danger ne. These particles ferment. ids are formed which attack the imel and irritate the delicate gum sues. Unless these acids are neu- lized tooth decay and dangerous ections often develop.

Unfortunately mere brushing not reach the acids lodged in se inaccessible spots. That is ere old-fashioned methods fail protect. It is recognized today t your dentifrice must do part the job of guarding your teeth gums. It must penetrate into e places where the tooth-brush not reach. And it must contain ntacid ingredient that is none less effective because it is safe use in the mouth. The best luct known to neutralize acids in the mouth, according to the statements of the dental profession, is Milk of Magnesia.

Squibb's Dental Cream can bring you real protection because it meets the prime fundamental of up-to-date hygiene. It contains more than 50 per cent Squibb's Milk of Magnesia—an amount ample to reach into those tiny pits and crevices on your teeth which are inaccessible to any tooth-brush. After use, particles of Milk of Magnesia remain, neutralizing destructive acids and safeguarding your teeth and gums for a long time after.

Let your dentist inspect your teeth at least twice a year. Between these visits, use Squibb's Dental Cream. These simple but modern precautions will make it practically impossible for tooth decay or gum irritations ever to attack you.

Squibb's Dental Cream cleanses thoroughly. Use it to brush the gums. It soothes them and keeps them healthy. It is pleasant to use and safe because it contains no grit, abrasives or astringents. 40c a generously large tube.

E. R. Squibb & Sons, New York. *Manufacturing Chemists to the Medical Profession since* 1858.

EVERY ROOM'S A STAGE

A glow of color on walls and ceilings. Mello-Gloss in pastel shades . . . the perfect background

THOSE familiar rooms in which you spend so much of your life . . . those rooms which hold so many memories, hopes and dreams . . . they are your stage, the stage on which you enact a large portion of your part in the drama of life.

What backgrounds have you provided for your rooms? Are they in harmony with the decorative schemes? Or are they dull and forbidding?

Bring color into your home. Brighten your walls and ceilings with the soft, pastel shades of Mello-Gloss.

Mello-Gloss is a washable paint made in a wealth of soft, charming shades. It dries quickly to a smooth, semi-gloss finish which does not readily catch or hold dirt. It can be cleaned easily and quickly with soap and water or with Lowe Brothers Cleaner.

Mello-Gloss is but one of the outstanding paint products prepared by Lowe Brothers. It is made primarily to do one specific thing. . . to give beautiful and lasting color to walls and ceilings . . . and it does that one thing superlatively well.

FREE BOOKLET "Color Harmony in the Home" at any Lowe Brothers dealer. Profusely illustrated in colors with valuable information on home decoration. Or mailed direct for 10 cents in stamps.

hit that bull, yesterday, didn't you know t would demolish your car?"

"Yes," he growled. "Of course I did. (ou can't drive a light roadster into a wo-thousand-pound charging bull without icking it somewhere. If it amuses you o know about it, I had just bought the ar too; and I hadn't insured it yet."

He made as though to pass on. But ie would not have it so.

"Then why did you do such a mad iing?" she demanded.

"Because I was a wall-eyed fool," he ade sour answer. "And so that you uld be alive today to ask me such a fool uestion."

He hurried on, leaving her in the middle 'another query. He made his way to his arding-house by back alleys; and thence his room by the same routes. All day stayed in his uninspiring domicile chew- g the cud of self-contempt and of loss.

Next morning, he reported as usual for ty at the creamery. It was one of those ys nobody wants. In the first place, overslept; and he arrived at work late d breakfastless. At the entrance of the amery he was accosted by a spruce le man—the local lawyer's clerk.

"Papers in a two-thousand-dollar mage suit Mr. Lemuel Hannoth has t nstructed us to bring against you the willful slaughter of his prize lstein bull."

"Prize Holstein bull?" raged Thacker. he brute was a three-quarter-breed, best. Besides, he—"

"I serve these papers on you, Mr. cker, in accordance with the law's irements," smugly interrupted the k, moving away.

t noon, one of his fellow employees ched past Roy's desk, pausing to say: Heard the sweet news? There's a er on to sell the creamery. The boss osing with an offer he's just had. That ns the lot of us will be fired, of course. new owner will have his own crowd ork for him. They always do."

f you're trying to cheer me up," ed Thacker, "there are other orders d of yours. My car is a total loss so is all the overtime I've done. y inch of me feels like a sore thumb my twisted ankle makes me walk an accent. Lem Hannoth is suing me wo thousand dollars. And—and I've omething else that's a billion times important than all those things put her. So if you think I can get a kick, s out of the piker prospect of losing g-wage job, too— Oh, what's the I'm going out to eat."

NG the village's single street he mped, heading for his boarding- s uninspired midday meal. From orway of a shop strolled a girl, as ernedly as if she had not been loi- there for nearly an hour. She d to emerge into the hot street y in front of the limping lunch- ll but colliding with him. Roy rick-red from sudden embarrass- Lifting his hat and mumbling ing incoherent, he made as if to at a faster pace. But the girl his way.

ink," she remarked impersonally, k you're the very rudest man I ew, Roy Thacker. Honestly, I st, you promise to take me riding Saturday afternoon, and you never so much as send me word to explain why you broke the appointment. And now you try to walk around me as if I were a mud puddle."

A gust of vexation at Maida's raillery deafened Roy's mental ears to the thread of deeper feeling in the girl's soft voice. Choking back his babyish indignation as best he might, he made glum answer:

"You know very well why I didn't keep our appointment Saturday afternoon. All the county must have known about it, inside of an hour. And all the county must have been guying me by that time. As for sneaking past you, just now—well, there's no great fun in being laughed at. Especially by—by someone who—who— Let it go at that. . . . I'll be late to lunch, as it is. And I didn't have any breakfast. I—"

"YES," she agreed, making no move to step out of his path. "Yes, you'll be late, Roy. Because since you won't come to see me, I'm going to talk to you here You're not only the rudest man I know, but you're the silliest. You did something, Saturday, that everyone in Hampton is praising you for. A splendidly brave thing, Roy. A glorious thing! Most men would be taking advantage of such a deed and basking in hero-worship. Not trying to dodge their friends. I waited for you—and waited—"

"If you're still guying me—"

"I am. I'm nearer being ashamed of you than I ever thought I could be. Are you coming to see me this evening, Roy?"

"No," he blazed, soreness of heart breaking through his hard-held self-control. "No! Not this evening or any time. Why should I? What chance have I got? You know well enough why I've been coming to see you, and why I worked so hard for that car I smashed. They say a woman always knows. Well, the cash is gone and so is the car; and I've qualified as the Village Idiot. Besides, I'm losing my job; and there isn't another man's-sized job open in this one-horse burg of ours. That means I've got to go somewhere else to look for work. So, I—"

"So you're thinking about nothing but yourself!" she retorted. "You never even stop for a moment to consider what it may mean to *me*. You tell me, almost in so many words, that you care for me; and then you tell me in the next breath that you are going away. You don't even give me a chance to say whether it means anything to me to have you drop out of my life; or—or whether it means all the whole big world to me! Oh, you *are* selfish, Roy! I'm—"

"Maida!" sputtered the man, dazed, shaking.

"And I've been waiting nearly all morning for you!" she accused. "Because I had a feeling you'd be too stupid and too proud to—to— Everybody is looking at us," she broke off primly. "We can't stand here like this. Walk back home with me, Roy. And—and then you're coming to see me, this evening and —and lots of evenings. Every evening. For always. Say you are. *Say* it, Roy!"

A full hour late, that afternoon, Roy Thacker strolled mooningly back to his desk at the creamery. Forgotten was his bodily pain; forgotten was his humiliation; forgotten was his sacrificed roadster.

GUARD YOUR THROAT

KEEP IT FREE FROM IRRITATION

Absorbine Jr.

A GARGLE of one part Absorbine, Jr. to nine parts of water brings quick relief. A few drops rubbed on the outside tends to break up congestion. Dampness, dust, exposure, and in a less degree, excess use of voice and smoking are sources of trouble—*guard your throat.*

A diluted solution of Absorbine, Jr. also sweetens the breath and refreshes the mouth. Use it as a mouth wash—preferably daily—particularly when you know you need it. There are many other uses for Absorbine, Jr. in the home and when traveling. Read "Timely Suggestions."

At All Druggists, $1.25

W. F. YOUNG, INC., Springfield, Mass.

He was brought back to workaday earth by word that his employer had sent for him three times during the past hour. Into the chief's private office he drifted.

"Sit down, Thacker," began the overlord, with no hint of reproof at his subordinate's tardiness. "I've got something to tell you. The wife's been at me for more'n a year to sell out here and take a nice long rest, and maybe a trip to California with her. She thinks I've worked enough and saved enough. But you can't sell a business like this in five minutes. And if you give it out that you want to sell, folks think the business must be on the rocks—which this one sure isn't."

"He's wasting a lot of words," thought Roy, uninterestedly, "just to tell me we're closing out."

"Yesterday," the boss was declaiming, with dramatic effect, "yesterday some-one came to my house, right after church, and made me a flat offer for the whole business; goodwill and fixtures and all the rest of it. I thought maybe it was a joke. Then, first thing this morning, a lawyer came along too—being phoned for from New York. And in less'n an hour we'd worked out all the preliminaries. I get a price that I didn't hardly dare to hope I'd get when I named it. Yep. I'm mighty well pleased. So's the wife. Funny how we get to misjudging folks all wrong by the way they dress and the way they live and the way they act! I'd sized her as a down-and-out old pensioner of some-body's, from her bum clothes and—

"Your wife?" asked Thacker, mystified.

"Nope. The creamery's next own. That queer old Miss Vandercook! The lawyer tells me she's one of the New York Vandercooks—*the* Vandercooks, you know. Says she's eccentric-like; but that she has enough cash to buy every creamery east of the Alleghenies, if she was a mind to. She's took a whim to buy mine, glad be!"

THE news was startling enough. But made scant impression on the hearer. Once more his thoughts were retraversing that divine homeward walk with Miss Barham, the walk which had made him an hour late to work. The boss leaned forward and patted him playfully, painfully, on one of his abraded knees.

"But here's the part I sent for you about," he announced. "She's keeping all the old employees on, she says—'on the express stipulation that Mr. Thacker be made manager of the whole plant.' And the salary she named for him is a crime! That woman don't deserve all her oodles of cash, the way she spends it around so reckless. By the way, I never knew you belonged to the Galahad fam'ly. Fact is, I stick so close to business I didn't ever get to hear there was a Galahad fam'ly. But I heard hearing that lawyer of hers you're 'a Galahad.' Most likely, they're relations of the Vandercooks. Anyhow—what do you say?"

For Roy Thacker was babbling aloud:

"I always told Maida her dad ought to have a phone put in his house. I'll have to hobble all the way out to tell her. But—but maybe I can almost of the way!"

From the Ground Up

(*Continued from page 38*)

"At a quarter to ten o'clock, Wednes- morning,' he answered. Allowing him hour and a half to reach the field, that e us but thirty-one hours to reach the ific Coast. The air-mail planes, flying top speed, make the transcontinental in just that time. It meant fast ng.

'I'll tell you what I'll do,' the banker gested. 'If you get me over the con- tion hall at quarter to ten o'clock, I'll double; if you're late, no matter how e, I won't pay a nickel.'

'Okay with us,' we told him. An hour a half later the plane was scurrying tward, over the difficult mountains of tern Pennsylvania, across the plains of West, and ultimately across the kies. The pilot and passenger were fast pursuit ship, capable of one hun- l and sixty miles an hour, and the fairly burned up the airways.

The pilot couldn't resist a bit of s-pocus. Finding that they were a head of their schedule, he throttled n a bit. Almost too much. As the ls of the clock on his dashboard hed the critical point, he dived down, speed of two hundred miles an hour, the convention hall. Right on time. The banker was so gratified that he led to fly back. He was actually one hours in the air, going and re- ng."

MPARATIVELY few people know ow enormously public participation iation has increased during the last ears, Captain Ferguson told me. In Curtiss Flying Service pilots turned 5,000 miles of paid flying; in 1927, 00; in 1928, 500,000. This year they t to double this last figure.

1927, more than three hundred nts enrolled for our flying course Captain Ferguson said, "and in the class numbered almost four ed. Of this latter number, about hundred and thirty were taught h to solo—that is, to take a plane the ground, fly around a bit, and safely. Naturally, no one is per- l to solo until he, or she—for we a number of women students—has a number of flights with an in- or.

ost of our students are young men, ere is no age limit. The seventeen- ld boy who recently flew across the ent was taught to fly here; and we fifty-year-old business man as a not long afterwards. There is no ge limit on learning how to fly; but ds to reason that a person under or one over fifty, hasn't the best to become an expert pilot in time. But always there is the on. The twelve-year-old daughter ealthy New York business man, vns a luxurious flying yacht, has an amazing aptitude in handling trols in flight. Of course, the ship autifully balanced—stabilized— great strength or skill is required it in clear air.

erally speaking, if one's reflexes

Are YOU a Business Coward?

—and—does it show in your pay-check?

"You've *had* your chance!" It was the General Manager speaking. . .

"Two years ago I *warned* you that the only man who could hope to get ahead in this organization was the man with training.

"Merwin was only a bookkeeper then, you remember, but in his spare time he was studying Higher Accountancy. *I* knew what he was doing, and I told you then *to keep your eye on Merwin.*

"He's had three raises since. He has more than doubled his salary—and he earns every dollar I pay him.

"Last week I recommended him for Assistant Treasurer, and the Board elected him without a dissenting vote. We're mighty glad to have him in the group.

"But *you*, Jarvis—I hate to say it—you're a *business coward.* You *knew* what you would have to do to get out of the small-pay class. You were simply afraid to face the kind of effort and responsibility that could get you a substantial salary.

"And now it's too late. We've got to cut our overhead, and you're one of about fifty men that we can get along without. We could replace the lot of you tomorrow.

"For your own sake, Jarvis, take a tip from a man who has been through the mill, and *this* time get busy and learn to do something better than the other fellow.

"Jarvis, there's *no end* of opportunity in business; but the only man who cashes in these days is the man with the courage to get special training. The offices of this country are simply cluttered up with business cowards. It's easy for the man who *trains*—because the business coward is through before he starts."

* * *

Are YOU one of several million routine men who have been drifting along in a "low-pay" job—always *wishing* for more money, never *acting?*

Are YOU a business coward?

Over 640,000 ambitious men have asked themselves this question during the past nineteen years—and replied with a ringing "NO!"

In the quiet of their own homes, without losing an hour from work, these men have mastered the *principles* of business by working out the *actual problems* of business—under the direction of some of the ablest business men in their respective fields in America. Their record of achievement, under the "LaSalle Problem Method," is one of the most thrilling chapters in the romance of business.

These men were able to progress more rapidly by means of the "LaSalle Problem Method" than they could have done in any other way, because in their training they faced continually the very problems they must later face on the bigger job. *They learned by doing.*

Moreover, studying alone under the direct supervision of an expert instructor, they progressed as rapidly as their capacity allowed—and that progress was further speeded by the fact that every day they could see themselves developing. This fact took all the hardship out of study—changed it into a fascinating game, with always the goal ahead of increased opportunity and greater pay.

Whatever attitude you may have taken in the past, resolve today to face the problem of your business future *squarely.*

Within reach of your hand is a LaSalle coupon—and a pen. If the pen isn't handy, a pencil will do just as well. The coupon, checked and signed, will bring you without obligation a complete outline of the training you are interested in, together with full particulars of our *convenient payment plan;* also your free copy of the inspiring book, "Ten Years' Promotion in One."

It costs you nothing to get the facts—except the exercise of business courage. Will you put it off?—*or put it over?* Mail the coupon NOW.

EAT YEAST IN THIS MODERN FORM

Now you can get yeast in the form you've always wanted. *No* disagreeable taste . . . just flavorful little tablets that everyone likes. Handy, easy to swallow or nice to chew; they keep. They don't cause gas.

Eat this modern yeast for constipation, indigestion, skin disorders and general run-down conditions.

The Vitamin potency of Yeast Foam Tablets is extremely high; it is uniform. That is why this yeast is recognized as the standard for Vitamin studies by the leading universities and by the U. S. Government *This* is your guarantee.

Get Yeast Foam Tablets from your druggist. Six tablets in the glassine envelope for 5c or the 10-day bottle for 50c. Northwestern Yeast Co., 1750 N. Ashland Ave., Chicago, Ill.

are normally quick, if one's eyesight, hearing, and control are normal, one can become a pilot, a good pilot, with proper instruction. Not three per cent of the four hundred persons who took our course in 1928 would have failed to solo, I dare say, if they had kept up the course. But often they find they cannot spare the time, or the money, and they drop out.

"About thirty per cent of our students have the makings of Grade A pilots—pilots properly qualified to handle all sorts of ships, under all sorts of conditions. But such pilots cannot be trained overnight. It is one thing to fly a training ship around the field in still air; and another thing to handle a huge transport, filled with passengers, in rain, and fog, and snow, over a strange terrain. That is why the big transport operators will engage as pilots only men who have spent something like five hundred to two thousand hours in the air. Figure it out for yourself: a man—or a woman—would have to fly five hours every day for a year to get the experience a commercial operator deems necessary to insure the safety of his ship and passengers.

"Still, that's hardly a fair comparison for the average man or woman who wants to learn how to fly—not to become a skilled pilot, but to become adept enough to handle a plane over short distances. Very well, we've now standardized and improved our instruction to the point where our students are generally able to make a solo flight after six hours of dual—that is, instruction with a pilot. Not long ago we often hesitated at ten hours. The women are generally given fifteen hours of instruction before they are told to take up the plane alone. I've often suspected that it isn't because women are slower to learn; rather that our pilots are more cautious where women are concerned. Out of the thirty-five women who took our course last year, twenty-eight soloed.

"Consider, then, the progress made in instruction since the war. During those terrible days, young men at training schools were rattled through four hours of instruction, and if they couldn't learn in four hours, they went out on their ears. Never shall I forget some of the sights I saw—young men who were able to get their machines off the ground all right, but were afraid to land them, and yet facing the awful certainty, as they grazed hangars and tree tops, that fuel exhaustion must sooner or later force them down.

AS a matter of fact, the Curtiss Flying Service is now undertaking a nation-wide program of instruction, probably the most important step ever taken by a single concern in that direction. We are now opening thirty schools in as many cities, where we shall teach people how to fly safely, in new machines, under the tutelage of skilled pilots and in accordance with the very strict regulations of the Department of Commerce.

"Our first schools will be at Portland, Maine; Bridgeport, Connecticut; Miami and Palm Beach, Florida; Columbus, Ohio; and Detroit, Michigan. We have already ordered one hundred and fifty Curtiss Fledglings, a training ship which was recently awarded first prize in a national competition. What we plan to do is really to put flying on a competent basis—standardize it—and, believe me, it is about time.

"As I have said, the average person ca learn enough in ten hours of instruction t fly around a field. That costs about thre hundred dollars. Before he—or she—ca expect to receive a limited pilot's license the student must spend from one hundre and fifty to two hundred hours in the ai If the student does not own a ship, it cost him about twenty-five dollars an hour t rent one. But at the close of this perio the pilot is competent enough to unde take a cross-country flight, fly by map a instrument, and generally handle himse and plane reliably."

"TELL me more about passengers," said. "Are they afraid to fly?"

"Sometimes they are—the first ti up," Ferguson said, "but they soon l their nervousness. With a good machi and a good pilot, there is no reason anybody to be afraid. With barnstor ers and joy-riders, it's a different propo tion.

"I'm not saying there are no g pilots and good machines engaged in ba storming; that is, hopping around country and taking up folks on sh hops. That's the way Lindbergh start But you can't be sure of your plane pilot unless both are licensed by Department of Commerce. There is a lot of hay-wire—old planes sold by government as military surplus—fly around that should have been jun years ago.

"Of course, some of the best pilots h had accidents, or what the newspa call 'crashes.' But it is a significant that, out of the three hundred and f crashes that occurred during the firs months of 1928, more than eighty-five cent involved unlicensed planes."

"How about comfort in flying asked. "Do many people suffer airsickness?"

"Not unless the air is bumpy," guson replied.

"But is it likely to be bumpy?"

"That depends. The air is much bumpy in summer than in winter, be different kinds of ground surfaces—w roads, plowed fields, and so on—ser air currents of varying temperature hot rising current strikes a cold laye creates waves in the air; and a plane up and down these waves pretty mu a canoe does on the waves of a sea in the case of the airplane the bumps with greater shock.

"There is no such thing as a pocket. When a plane drops sudde is not because it strikes a vacuum because it slips off the top of one cu and banks into a descending cold cu Big planes, with huge wing spread through these conditions with no visual manifestation than a graceful ping and rising of the wing tips.

"Storms, of course, aggravat bumpiness of air. A line squall tra in front of a thunderstorm churns t so violently that a plane may be like a canoe in a seaway. Flying ov English Channel I've seen as ma seven line squalls linked in one great of black blots across the horizon conflict of eddies is sometimes i enough to fling a plane on its back the modern plane is so stanchly bui there is no danger of this.

"Of course, such a stormy tri

Digitized by Google Original from UNIVERSITY OF IOWA

prove distressing to an unseasoned traveler. Nowadays, we rarely run into a long stretch of extremely bad weather. Before we undertake a flight, we obtain up-to-the-minute weather reports of conditions along our path, and either ride over or around the storm."

"How do passengers behave in an airplane?" I asked. "Are women more nervous than men?"

"On the contrary," Ferguson said, "more men than women are timid about flying. I've seen a man cry from fright and heard his wife and daughter shout with delight on the next trip. Indeed, I know of one famous business man who buried his head under the cockpit the moment the plane left the ground, and didn't dare lift it until the machine landed. Such cases are unusual. Most people enjoy flying.

"Certainly Gene Tunney must have found a restfulness in flight, for he flew from his training camp to his first fight with Dempsey and to his last fight, with Tom Heeney; and if ever a man had reason to be disturbed it was he. Bill Winston piloted him from Speculator, New York, to the Hudson River on the last trip, the afternoon before the fight, and they ran into a lot of nasty weather.

"There was a terrible outcry when Tunney made the first flight. Boxing critics and such insisted that it was a dangerous thing to do, not only because it might make him so sick as to destroy the effects of his training, but also because it represented a terrific risk. Suppose anything happened, with hundreds of thousands of dollars invested in his state of mind.

"Well, the answer to that is: look what Tunney did to Dempsey and to Heeney. Winston says that Tunney wanted to fly to avoid the boredom of a train ride. He got repose in the air, and it was an experience exciting enough to take his mind off the fight. He sat up forward in the cockpit and watched, as it were, the wheels go round. Not that I blame him any. To watch Bill Winston fly is to see something approaching art.

PEOPLE really are surprised when they find that they have no feeling of dizziness while flying. Men who don't dare look down from a fourth-story window go through all sorts of bewildering maneuvers without a tremor. In fact, I know a lot, one of the best in the country, whose most vivid childhood recollection is the fright that came from falling from a high-chair. Now he scrambles about the top of the sky and thinks it is the best thing in the world. But he's afraid of leaning backwards in a chair."

Animals, according to Mr. Ferguson, take to the air with perfunctory calmness. Probably the most famous instance is that of Leo, the Flying Lion. A movie company chartered a plane, piloted by a well-known flyer, to transport Leo from the Pacific Coast to Curtiss Field, non-stop. A special cage was built into the fuselage, and Leo was securely chained inside.

The plane took off, flew through the afternoon and into the night. The next day it was lost. No cities reported its passage. Immediately dreadful conjectures were advanced; perhaps the plane had a forced landing, crashed, and the cage was split open. Imaginations pic-

Chapped hands look years older!

—but Hinds Cream smooths them to petal-softness again

HANDS red and chapped? Then smooth in Hinds Honey & Almond Cream. Its softening touch banishes chapping—immediately. Makes your hands soft, lovably smooth and white once more.

And it isn't just chapping that reddens the hands and makes them look old. It's dishwater, terribly hard on hands—careless drying of the hands before going out into the cold—dusting—a dozen and one things weather the hands. And it's weathering that ages—not the years.

To keep your hands young, you must protect them from the harsh effects of work, sports and exposure. You can do it easily—with Hinds Cream. Smooth it in at the first sign of roughness, dryness or chapping. It'll make them petal-soft again.

Keep Hinds Cream in several places—it's always handy then when you need it. Keep it in the kitchen—on the bathroom shelf—on your dressing table. And then use it often. It'll keep your hands so soft, so smooth, so altogether lovely, they'll never have a chance to roughen.

If you send us your name and address on the coupon below, we'll gladly mail you a generous sample bottle.

This illustrates the sensible 90 DAY RULE in using Toothbrushes

Teeth whiten if you observe it

MOST toothbrushes are kept in service long after honest wear has impaired the cleansing and polishing qualities. Dentists say: *get a new toothbrush at least each 90 days.*

Your present toothbrush probably needs replacing—unless it looks like the one shown.

Dr. West's Toothbrushes are the choice of millions. Of correct small size and shape, they clean with thoroughness—and quickly make teeth brighter.

Your dealer has them. Each sterilized, sealed, fully guaranteed. Try them.

See how it reaches teeth far back; how it penetrates and sweeps clean all crevices

Dr. West's

new TOOTHBRUSH

—polishes teeth amazingly white

tured a fierce lion smacking his lips amid the wreckage of an airplane, with the most delectable portions of a good pilot inside him.

But the press agents, it developed, had overrated the fierceness of Leo, who was not young, but old, and calm in the fortitude of his venerable years. The pilot landed safely in the middle of a desert, and then left on foot for the nearest habitation. When he returned the next day, Leo was snoozing in the plane, thoroughly content at this unexpected opportunity to catch up on lost sleep.

Blooded cattle and crack race horses are regularly transported over the European airways.

"MORE and more," Ferguson said, "people are realizing the comfort of riding in an airplane. The old picture, of cranky ships afraid to fly because a bit of wind stirred the field, is passing. Even night flying no longer holds terrors.

"Why, here in New York it has become quite the swanky thing to organize an after-theater flight across Manhattan, and follow the Gay White Way two miles above Broadway. A party, say, of four, opera hats, evening wraps, and all, motors to the field, arriving about midnight, and takes off for a spin through the clouds. New York is a gorgeous spectacle at night, and the flight is more exciting than a night-club—and less expensive.

"Finally, planes are comfortable. The modern passenger plane is luxuriously appointed. It has spacious seats and plenty of leg room; and one can smoke, for the oil and gasoline fumes do not penetrate the cabin. Nor are these planes noisy. A special insulation has been invented that reduces engine noises to a minimum and permits easy conversation. Indeed, some of the modern transcontinental passenger planes will be equipped with sleeping berths."

"Do passengers generally pay in advance?" I asked.

"They certainly do. Don't you, for that matter, buy your railway and steamship tickets in advance?"

"What is the largest number of passengers ever carried on a single trip?"

"Well, that's a hard one. I remember that one big plane lifted sixty-three passengers at Lake Constance, Switzerland, some time back, but that was only a stunt. The plane did not possess accommodations to carry that number of persons comfortably. Then, in a test in this country, a plane carried fifty-one persons, all crammed in the fuselage. And, finally, Rumpler, the German builder, has already begun the construction of huge liners that will carry one hundred passengers, with sleeping berths and all. They will be housed inside the wing.

"But today this sort of thing is spectacular, although it may be the routine of tomorrow. The average passenger plane in use in European and American commercial services will seat anywhere from twelve to twenty-four passengers comfortably.

"This load—passengers average about one hundred and thirty pounds each—leaves a plentiful margin for petrol and oil, baggage and reserve power, not to mention incidentals.

"Naturally," said Ferguson, "we have no bars aboard American planes, but we have other improvements, such as toilets, dome lights, cigarette lighters, and vanity cases fitted into the walls, folding card-tables, crash-proof glass, and up-to-the-minute kitchenettes. Why, some manufacturers promise an upholstery to match milady's frock."

"Do passengers wear parachutes?"

"No, they really aren't necessary in a big ship, flying at a safe altitude. So much progress has been made in building intermediate air stations that it is now possible for a ship, if motor trouble develops, to glide to a safe landing. You see, ships are approaching an aërodynamic perfection; because of improved wing design, the gliding angle is flattened, and more control and greater safety is afforded all around. The chances of destruction in air—by fire or collision or breaking of the wing—are so small, in a modern and licensed ship, as to be negligible.

"The chief dangers in flying, after all, lie in the use of old planes, incompetent pilots, and bad weather. The Department of Commerce is driving out the first two hazards, and the third is being overcome by the development of a country-wide meteorological observation and report system. Don't be misled by statements that motor failure causes nearly every crash. As a matter of fact, good airplane motors rarely fail. Lindbergh has flown hundreds of thousands of miles without a single forced landing caused by motor trouble. So have other pilots who take care of their planes."

"HOW much baggage is a passenger allowed to carry?" I asked.

"As a rule, the companies allow from twenty to thirty pounds without extra charge. If you have more than that, you pay for excess weight. The Stout line between Detroit and Cleveland, allows twenty pounds of baggage free, and charges twenty cents a pound for anything above that weight. The Pan-American lines, which are building up a service between Cuba and Central America allow thirty pounds free and charge thirty cents a pound for excess weight.

"Most companies weigh every passenger and all baggage before the plane leaves the field. They do this because they know that the plane can carry a certain load with an assured efficiency the amount of load depending, naturally upon the type of plane and the type and number of motors used. By such precautions the operator allows his plane a high margin of safety, for a heavily loaded plane—or rather I should say, an overloaded plane—cannot climb so quickly out of a storm, nor maneuver so easily as a plane with a liberal reserve of power. This is what is technically known as power loading.

"With aviation becoming more and more popular, insurance companies naturally have become interested in the element of risk. After all, here is a new industry, with an annual turnover of $150,000,000, representing a splendid investment field. It is still difficult to get insurance covering joy-riding or sightseeing, and there is a general disinclination to insure a private owner flying his own plane. The reason for this is obvious. But insurance companies have no such fear about the big companies, which use licensed pilots and licensed ships and

Digitized by Google Original from UNIVERSITY OF IOWA

operate an efficient and regular service.

"Flying is really safe, when the proper safeguards are taken. Isn't that true of almost anything else?

"As for speed, the contrast between lying and any other means of transportation is incredible. It takes twenty hours o go to Chicago from New York by fast rain; by plane it is possible to travel that distance in nine hours. Indeed, the new nodels of high-powered commercial ships vill be able to do it in six hours. That's vhy business men travel more frequently y plane nowadays; why national organiations are buying planes to transport oods to all corners of the country. Time what we try to save more than anything lse.

"And you should have been here last unday. We took up more than five hunred passengers. Some whole families—ather, mother, and children—went up ogether. Then they would ask if they ight be allowed to line up beside the lane and have their picture taken. I ppose they're mighty proud of those ictures now. But in ten years flying will e an old story with a good many of these lks."

S THE GREAT WAR recedes and ecomes history, more and more facts bout the part that America played it come to light. Next month, in How We Kept Tabs on the German rmy," you will learn about the inde workings of our Secret Service ring the stupendous conflict. A scinating article with all the lure of detective or mystery story!

Seven Minutes in Eternity

(*Continued from page 9*)

I have seen and talked intelligently with nds whom I had looked down upon as wax in caskets.

But that is not all. There is plenty of ermath. To describe the effects of the erience, however, it is necessary to inde a few personal confidences, none of ich I am eager to make.

brought something back with me n that Ecstatic Interlude—something t had interpenetrated my physical self which suddenly began to function in nge powers of perception.

was born the only son of an itinerant thodist preacher. Soon after my birth parents began that old-fashioned ssey of traveling from "call" to "call" he northern Massachusetts back hills. rthodox Protestant theology, as it was y years ago, was far more plentiful in father's household than bread, butc lothes, and fuel. Camp meetings and erly conferences, the higher criticism, stination, free will and election, indamnation, hell fire, and the day gment constituted the household se in my young and "tender" years. rly shaped up to me as a weird ation of heavenly Moloch and subOverseer of the Poor.

h poverty forced my father from istry, but with grim New England

A woman *solves a problem that has burdened* millions of men

"HAVE *you ever lain awake night after night, half awake and half asleep, listening to the clock tick away the age-long hours? Then, in the morning, have you dragged yourself from your bed and forced yourself, a big bundle of nerves, to move through another exhausting day?*

"That's what I did for five months and I don't exaggerate when I say another three months of it would have driven me insane. Fortunately, about this time, a friend suggested Postum with my meals, in place of caffein.

"That was four weeks ago. Now I sleep from the moment I hit the pillow; I eat heartily; I haven't been cross for days; I'm 100% happier. Even my casual acquaintances have noticed the change!"

Miss Irene Anders,
2727 Hemphill Street, Fort Worth, Texas

You may have charged your sleepless hours to overwork, or worries. Don't be too sure! Caffein, the seemingly harmless stimulant you take with your meals, has probably caused more hours of wakefulness than any other one thing in the world. This "innocent" habit may be *your* trouble.

You can find out easily—this way! Eliminate caffein from your diet for thirty days—drink Postum with your meals instead. Then see how soundly you sleep!

For Postum contains no caffein—nothing to repel sleep, to attack nerves and heart, or affect digestion. Postum is made of roasted whole wheat and bran. A distinctive drink with a rich, full-bodied flavor that millions prefer!

Postum costs much less than other mealtime drinks—only one-half cent a cup. Order from your grocer. Or mail the coupon—we will send you one week's supply free, as a start on your 30-day test. Please indicate whether you wish Instant Postum, prepared instantly in the cup, or Postum Cereal, the kind you boil.

© 1929, P. Co., Inc.

Postum is one of the Post Food Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes, and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

MAIL THIS COUPON NOW!

rigor he saw to it that his relinquishment of a pulpit did not lessen my surfeit of conventional theology. Three times to church on the Sabbath day and twice during the week—Tuesday evening class meeting and Thursday evening prayer meeting—left me small opportunity to forget my Maker and the gratitude I owed Him. Just what this gratitude was owed Him *for* troubled my small soul exceedingly in those far-off years, because I found myself created a perpetually hungry, shabbily dressed, and none-too-happy youngster who had to start his life labor at fourteen years of age and stay with it thereafter, even to the present.

IN THE years between fourteen and twenty-two I became a smoldering young Bolshevik against every kind of authority—particularly against religious authority which had apparently sanctioned these injustices against me—and by picking up the rudiments of a denied education through promiscuous reading, I went far afield from accredited Christianity.

No need to clutter up this article with a list of the books I read, but at twenty-two, in a little town in northern New York, I was publishing a brochure magazine of heretical leanings. I had discovered myself possessed of a certain facility with iconoclastic language, and the courage of my ignorance. Fresh from a wry, lonely, misunderstood childhood, cluttered up psychologically with the worst sort of New England inhibitions, revengeful that I had been denied social and academic advantages for which my hunger was instinctive, I proceeded to play a lone hand and make things hot for several godly people whose only indictment was that they represented Authority as aforesaid—and especially spiritual.

On maturer perspective I see that I should have been spanked—or educated—but all the theological misfits in forty-eight states and a couple of foreign countries were soon buying my magazine, and my twaddle was piling up to give me much heartache later when I came to see that I took out on God what I should have taken out on an inhibited environment.

The Almighty stood the onslaught pretty well, however. I got into newspaper work, and marriage, and fatherhood, and more poverty, and that was the last of the heretical magazine, though not of its owner's theological complexes. I shopped around in my religions. I read still queerer books. And inevitably the day came when immature intelligence couldn't stand this food, and instead of digesting it, I ejected it *à la mal de mer*. . . . For ten years I was one of the worst agnostics that ever had books come to his post-office box in plain wrappers from freak publishing houses.

I had brains enough to see that my life had been started all wrong and was "getting no better fast," but had not the academic or social equipment to alter existence and start myself about-face.

Those were cruel, cruel years—looking back on them now. A couple of my business projects went to whack. So did my marriage. With each additional snarl I got more and more vindictive. The death of my first daughter mellowed me somewhat for a time. I wrote a couple of novels in which love of human nature was largely a reflex from the fearful storm of hatred and despair that was waging inside me. I knew my life was a ghastly mess, that I was cynical and caustic, that the so-called "friends" whom I could trust could be counted on the fingers of one hand—and most of those would stand watching—that we got nothing in this world unless we fought for it with the ferocity of a Siberian wolf-dog and that without a doubt *Death ended everything*.

America's entry into the World War found me in the Orient, not at all a healthy place for one striving to escape the biological premise for human existence. I went with the Japanese forces to Siberia, acted as Red Triangle man, consular courier and war correspondent through the Bolshevik-Czech compaign, and came back to the United States to face a newspaper business in ruins. The swarming millions of Asia had not confirmed my faith in the conventional Almighty's goodness and wisdom—had made me only more skeptical, in fact—though I never had anything but remorseful tenderness in my heart for the memory of the Man of Sorrows and what He epitomized in the human scheme of things.

To save my newspaper creditors from loss, I went to Hollywood and labored among the Flesh Pots. I made a score of motion pictures, most of them flops because I had a most uncanny facility for roiling the very persons whom I should have made my friends. I wrote a couple of books which my publishers refused. I fought with them in consequence, still taking life by strong-arm methods. I wrote many stories that editors rejected. I fought with them too.

When an editor wouldn't buy a certain story I sat down to my typewriter and contrived to tell him that I thought him an ass. I even told the editor of THE AMERICAN MAGAZINE that he was an ass—in spite of which he showed his calibre by taking my opinion as painlessly as possible and going right along buying and publishing my better submissions. It hurt worse than if he had fought with me. You see, I had the unfortunate complex that the attainment of success meant a knock-down-and-drag-out scrap. It made me a lone wolf at life, getting the least mangy as I reached my forties.

Time after time I tried sincerely to correct my psychology and get back certain religious (not theological) cues I had lost with the passing of boyhood. I plunged deeper than ever into elevenpound volumes on all sorts of race theory and behaviorism. I was a walking exception of how a man may reach middle age and be the worst internal mess that ever got into "Who's Who." . . .

IN VIEW of such an autobiographical summary, can you see the significance of my nocturnal experience?

I went about my bungalow in the days that followed as if I were still in a somnambulistic trance—which verily I was. Days of work with a queer unrest galvanizing me, a feeling that I was on the verge of something, that out of my weird Self-Preservation onto another plane of existence I had brought something that was working within me like yeast.

Then came experience number two, not quite so theatric and therefore harder to describe.

One night while still imbued with

Digitized by Google Original from UNIVERSITY OF IOWA

'feeling" of my fourth dimensional ad-
venture, I took down a volume of Emer-
on and opened it by chance at his essay
n the Over-Soul. In the middle of it,
hough not reading any specific line,
pigram, paragraph, or page, I had a
ueer moment of confusion, a sort of cere-
ral vertigo, then a strange physical sen-
ition at the very top of my head as if a
eam of pure white light had poured down
om above and bored a shaft straight
ito my skull. In that instant a vast
eight went out of my whole physical
nsemble. A veil was torn away.

I saw no "vision," but something had
ppened and was continuing to happen.
cascade of pure, cool, wonderful *peace*
as falling down from somewhere above
e and cleansing me. My book fell from
y fingers to the rug and stayed there.
sat there staring into space.

*I was not the same man I had been a mo-
ent before!*

I mean this physically, mentally, spir-
ually. I knew that somehow I had
quired senses and perceptions that I
uld never hope to describe to any second
rson, and yet they were as real to me as
e shape of my wrists. For a time I
ondered if "much learning had driven
e mad," but then I recalled that really
ad people never question whether or not
ey're mad. Next, I was aware of some-
ing new and strange and different from
ything in my whole experience—

There was someone in that darkening
om with me besides Laska, my dog. In
t, I was aware that several living, vi-
ant personalities were with me in that
om. Laska sat up, cocked her head
m side to side, and wagged her tail at
ne of them—at *nothing*—apparently—
of them, in particular, standing by my
k at the north end of the room. And
I was not in the slightest afraid. Why
afraid of our friends? . . .

ALL of my life up to that time I had
ever seen a ghost, never had more than
academic interest in psychic phenom-
. I had not invited any of these ex-
ences that I knew of. They had
ply *come* to me.

hat really had happened was, *I had
cked hidden powers within myself that I
v every human being possesses, and had
mented my five physical senses with
senses just as* bona fide, *legitimate,
natural as touch, taste, smell, sight,
hearing.* That I had help in unlock-
those hidden powers I do not deny.
ertheless, nothing had happened to
hat has not happened to hundreds of
r people, but only very rarely do
talk about it.

hat those hidden powers are, and why
intain that they are *bona fide*, legi-
te, and natural I shall have to leave.
they had suddenly shown me that
s not at all the ordinary, humdrum,
-meals-a-day thing that I had always
ted. Its essence or its meaning is
ist and fine and high and beautiful
it overwhelmed me, and a recogni-
f it performed a sort of *re*-creation in
at made me feel I was actually *not*
me fellow I had been just before.

desire to explain what I mean by
s almost an ache within me at this
nt. But, for some uncanny reason,
are not the medium to convey
hought doesn't convey it. Feeling

Pitifully Scalded—

It may be your child tomorrow

In the midst of play, a heart-rending cry! A child's body hideously burned . . . pitiful hours of pain. And always—the danger of frightful scars.

Grim menace of childhood! No other single cause of injury and death takes so heavy a toll . . .

Be ready to heal burns instantly. Unguentine is the *antiseptic* surgical dressing 8 out of 10 hospitals use for all burns, cuts and bruises. It soothes pain, checks danger of infection. Clean healing starts almost at once. And almost certainly—*no scars!*

Buy Unguentine today. At your druggist's—50¢. Send for free household manual, "What To Do," by M. W. Stofer, M. D. The Norwich Pharmacal Co., Dept. A-3, Norwich, N. Y. Canadian address, 193 Spadina Ave., Toronto.

Norwich
MAKERS OF UNGUENTINE

". . . and no scars left at all"

"Last Christmas my 3-year-old son climbed up to smell a pan of hot soup on the stove. The chair slipped and down he came, scalding soup and all . . . I applied Unguentine freely . . . The doctor said, 'You couldn't have done better.'"

* *

"The boys had lit a bonfire, when suddenly Sidney, the youngest, fell. A passer-by rolled him in his overcoat, saving his life. We used Unguentine freely . . . his left side was horribly burned. Now there is not even a scar."

Now—Unguentine Soap, too. **Bland and soothing. It rapidly clears up the blemished complexion—particularly when burns, cuts or bruises have left the skin irritated and sensitive.**

DISTINGUISHED FOR SAFEGUARDING INVESTMENT FUNDS SINCE 1885

HOLD FAST

in this new age to an old, old principle

THIS is an age of change. Nevertheless one principle endures, unchanged and *changeless*. It is the law of accumulation:

If you would accumulate, *invest* sanely and safely; invest primarily for *sure income* from your principal. Invest to make *interest* your profit, and you will always have a profit.

To do that, make certain of the experience, integrity, record, and financial responsibility of the investment firm with whom you deal.

We submit here the qualifications of this institution. It was founded, back in the eighties, to *select investments* in America for a group of British, Scotch and Dutch trust funds. Today it continues to serve a long list of American, Scotch, Dutch and British Banking Institutions and in addition, provides sound securities and comprehensive service to thousands of conservative individual investors.

As a step to gain a more complete picture of this institution, we suggest that you mail the coupon for literature describing particularly attractive current offerings which are broadly diversified as to type, maturity and geographic location.

GEORGE M. FORMAN & COMPANY

Investment Bonds Since 1885

112 West Adams Street Chicago — 120 Broadway New York

Dept. 73: Please send me, without obligation, descriptive literature on attractive current offerings.

G. & C. Merriam Co. Springfield, Mass.

doesn't convey it. The "me" that is the Bill-Pelley identity can convey it only by *being*, and the fact that I *am* gets it to you.

Is that last a nonsensical statement? Well, I hope I'm not cracked. All I can say is, that I *know* by experience that there is a great, overpowering existence outside of what we call Life—that I have been in it and *felt* it—that having been in it has endowed me with certain capacities that have transformed my whole concept of the universe and, some of my friends are kind enough to add, have transformed me—physically as well as mentally and spiritually.

MY FIRST dramatic physical reaction was a sudden change in the components of my body. I discovered that miraculously I had lost my "nerves."

Ever since childhood I had lived under such a tremendous nervous tension that it had kept me under weight, put lines in my face and an edge on my voice, shattered me psychologically so that opposition of any kind infuriated me and made me want to crash through it like an army tank flattening out a breastworks. Attacks of nervous indigestion were so common that I no longer gave them thought.

Suddenly all this had departed.

I was peaceful inside.

And the change soon began to manifest itself in concrete form. One day in my office I took a package of cigarettes from my desk. About to apply a light to one of them, *I heard a voice say as gently as any worried mother might caution a careless son*, "Oh, Bill, give up your cigarettes!" And even before it had occurred to me that no one was present in the flesh to address me thus audibly, I answered: "All right!" and tossed the package into the near-by wastebasket. I went all that day without smoking. Next morning, again, I reached for my tobacco tin across on my desk to load up my corncob. *It was knocked from my hands with a slap that tossed it upward in the air and deposited it bottom upward at my feet with the tobacco spilled out.* No cautioning this time. But I knew!

I haven't smoked tobacco in any form from that day to the present—this after twenty years of smoking a dozen cigars a day, lighting one from the butt of the other. Moreover, I haven't had the slightest ill effect nor did I go through the agonizing torture of "breaking off." I just didn't smoke any more—didn't have the nervous urge—didn't even give tobacco a thought.

The same strange prohibition seemed to shut down on coffee, tea, alcohol, and meats. I endured not the slightest distress in giving these items up. They simply ceased to exist for me. And, inversely, a strange new sensation began to manifest itself in my muscles and organs.

I had the glorious feeling of physical detachment from the handicaps of bodily matter. No form of bodily exercise seemed to take energy that I had consciously to supply. I had always been slightly stoop-shouldered. Without any unusual exercise, my spine straightened of itself, so to speak.

Along with this physical phenomenon went the unexplainable faculty of withstanding fatigue. If I wearied myself by prolonged physical labor, it was the healthy weariness of boyhood that overtook me, and a sound night's sleep wrought complete readjustment. On the other hand, I found I could sit at my typewriter twelve hours at a stretch, if necessary, with hardly a muscle protesting. I had suffered consistently from insomnia ever since a period in my twenties when I worked as police reporter on a morning newspaper. Now I went to bed and to sleep.

With this physical alteration came a different feeling toward those around me. This perhaps was the most astounding aftermath of the whole adventure. Certainly it appeared to have convinced my friends that some extraordinary thing had occurred, since it dramatized my rejuvenation, so to speak, and gave them something to perceive with their senses.

I discovered, for instance, that I couldn't show any more nervous bellicosity to those with whom I came daily in contact. I recall specifically that just before my strange experience I had made an unfortunate investment in a chain of western restaurants. I was striving to withdraw with minimum loss. Local banks and bankers had refused to come to my assistance in order to lubricate the situation and help hold the proposition together till a purchaser more competent in the food business than myself should be procured. I submit that I had every chance to be incensed at them for not assisting me, for my bank account had run into thousands upon thousands of dollars and the conventional banking advice and aid at the right moment would have made the whole commercial ordeal only a passing incident.

SIX months before I would have been so fighting mad that my hatred of that sort of treatment and my loathing of "bloated capitalists who showed themselves only fair-weather friends" would have made me physically ill. In fact I formerly prided myself on being a good hater. But somehow, worried though I was, I hadn't the slightest ill will toward these banking people, and I went ahead and pulled my proposition out of the fire without their financial aid.

And, inversely, when the situation came to the surface and others heard of the fight I was making, I was overwhelmed by their manifestations of good will and their practical assistance. For the first time in my experience people were going out of their way to perform services for me, to counsel me, to seek my society, to make me and my problems share with themselves—yes, even to offer me unsolicited loans. I think this amazed me more than the strangeness of my physical rebirth. At first I thought it might have something to do with a resentment toward persons held toward the bankers who had abandoned me just the moment a crisis showed on my horizon. I thought they might be acting in a sort of sympathy for nursing their own barked knuckles. *I became aware that some of them had heard of my predicament*, and that stated me. What on earth had gotten into them that they were so interested in me and my activities?

I came through to New York a few weeks later to mend literary fences and renew some sagging editorial acquaintances. I was not at all prepared for the attention I got. It had never happened

Digitized by Google — Original from UNIVERSITY OF IOWA

ne before. I was utterly at a loss. I dis-
overed that some sort of invisible wall
etween me and the rest of the world had
een razed.

It is embarrassing to dilate on this
tate of affairs and the altered social
elations maintaining now with friends
ho were formerly only acquaintances.

And yet—deep down underneath it all
—from the very first I have had instinc-
ve understanding. And that under-
anding has been growing in clarity
very day and hour since that epochal
ight in the bungalow.

I must concede that it increasingly
mprises many factors and revelations
hich I am constrained from reporting.
till, there are conclusions and equations
may draw that have a universality of
pplication.

WHAT is this thing which happened
to me, and why did it happen?

First, I believe my subconscious hun-
er after what the Bible terms "the things
the Spirit"—that is, the sincere desire
penetrate behind the mediocrity of
ree-meals-a-day living and ascertain
hat mystery lies behind this Golgotha
Existence—attracted to me spiritual
rces of a very high and altruistic order,
ho aided me in making a hyperdimen-
onal visitation. I believe such hunger
ill always attract such forces.

Second, it goes without saying that
ving made such a visitation and hav-
g had certain questions concretely an-
ered by those I confronted in that
mension, my subconscious (or for that
atter conscious) knowledge of what the
urth Dimension is, and means, and
at can be done within its area, under-
k to operate first upon my physical
dy and to bring about the rejuvenation
ich subsequently came to me. And
I can no more explain the Fourth
mension with *words* than I can convey
a man blind from birth the redness of
color red. I know what it is myself,
know what redness is. I can see how
interpenetrates Matter, constituting
"inside" of it, so to speak, and how
jections from it must come out the re-
se of what we know them on the physi-
plane. But I can no more make it
lligible to the average reader than
stein can explain Relativity to a group
nen in a smoking car, all of them
amiliar with advanced mathematics.

hird, these experiences immediately
aled to me that there is a world of
liminal or spiritual existence, inter-
etrating the ordinary world in which
t of us exist as ordinary two-legged
ericans full of aches and worries, *and*
this subliminal world is the real world—
world of "stern reality" if you will;
it is waiting for the race to learn of it
"tap" its beneficent resources, with-
waiting for what we call physical
h; that our "dead" dear ones are ex-
t in it—alive, happy, conscious, and
ng for us to join them, either at
hor any time we reach that stage of
tuality where we can make contact
them.

have seen my own there and have
ed with them!

nderstand thoroughly—I am not a
ualist, an Occultist, or a Psychic
rcher in the ordinary meaning of
erms. I am not trying to convert

In this swift age

save yourself investment time and worry this way

An airplane rushing a busy executive to an emergency engagement is but an outward indication of the fast tempo at which we live today. In other ways—less dramatic, perhaps — you try to make every working hour count for more. But possibly you haven't realized how much time and worry you can save in the all-important matter of investing your money. The National City Company, for instance, maintains offices in over 50 American cities to furnish quick investment contact with busy men. At any of these offices our representatives will gladly help you check over your present holdings or select additional investments. Their recommendations are backed by over 115 years of National City experience and all that this implies in the way of financial knowledge and sound judgment.

THE NATIONAL CITY COMPANY NATIONAL CITY BANK BUILDING NEW YORK

anyone to anything. I'm simply telling you that something happened to me which was not consciously self-invited; that my friends attest to an even greater alteration's having taken place in my personality than I am capable of feeling from within.

THERE is in every human heart a hunger and thirst for the things of the spirit, but in many of them this desire has been so embalmed with the poisons of worry, doubt, fleshly desire, struggle to attain the wherewithal for physical survival, that for all practical purposes it no longer exists.

But the day is coming in the evolution of the race when spirituality is going to be the whole essence of life, instead of the world's present materialism. Here and there have always been those who, by their unusual visions, self-invited or otherwise, might be called monitors for the rest of us—showing us what we all may attain if we so order our lives and thinking as to be susceptible to such revelations.

I believe that Nature—God—Universal Spirit—give the Great Cause any name you will—is taking this method of conferring unusual experiences upon these "monitors," to give the whole race an inspiration by which it may quicken its spiritual pace. There is nothing any more prohibitive, morally or ethically, to exploration of these new great Fields of *Real* Reality than to exploration of the fields of radio or atomic energy. In fact, the Great Cause *intends* that we shall explore them.

At any rate, whether I am right or wrong, I know that for a limited time one night last year out in California my spiritual entity left my body and went somewhere—a concrete place where I could talk, walk about, feel, and see; where answers were returned to questions addressed to physically dead people, which have checked up in the waking world and clarified for me the riddle of earthly existence.

I know there is no Death because, in a manner of speaking, I went through the process of dying, came back into my body and took up the burden of earthly living again. I know that the experience has metamorphosed the cantankerous Vermont Yankee that was once Bill Pelley and launched him into a wholly different universe that seems filled with naught but love, harmony, health, good humor and prosperity.

What's the answer to *that?*

There is no answer, except that it must be accepted as inevitably as I am forced to accept the awareness of my own entity. I *know* because I *experienced.*

Further deponent sayeth not!

DO YOU KNOW HOW to apply for a job? Can you write a letter of application that will get results? Do you know how to make the best of yourself if an interview is granted? These and many other questions pertinent to the always interesting subject of getting a job are covered next month in an article by Albert Edward Wiggam. Every year more than one million young folks are ready to make their first venture in self-support. Here's something to help them; here's something, too, to help the older folks who are looking for bigger chances

Can You Say "No"?

(*Continued from page 57*)

following week another alumnus recommended me to the secretary of the Merchants' Association, and with that my career as a bright and promising New Yorker was started.

"I looked over the city carefully before choosing my apartment, and selected a part of town inhabited by the rich and influential. I attended a successful church, and put my name up for membership in the University Club. At election time I got out and worked. I spoke from soap boxes (there is always a dearth of speakers) and rang doorbells. I started at the bottom of the organization and did the dirty work; and when I had served three years I thought I was entitled to recognition, so I braced the district leader for the nomination to the Assembly, and he let me have it."

He paused and looked at me quizzically.

"I suppose that when you write interviews with successful men they are not usually as frank as this," he said.

"Not often," I answered. "They don't usually take the public quite so far behind the scenes, or show quite as much of the machinery."

"I don't want you to think that I was a bluffer or merely a self-advertiser, or a snob," he said earnestly. "I did go out deliberately to make the right sort of friends, and I did beat the tom-tom in f of my tent whenever occasion offe But I worked. Lord, how I worked t first ten years! And the work had it ward. At forty I was a partner in a l class firm. I had a beautiful wife and splendid children, a house in the cou and a house in town. I was an ex-me of the State Senate, entitled to be dressed as 'Senator' the rest of my And I was a well-known figure in York. Who could possibly ask for m Where was the weak spot in my situa How could such a nice jar of oint possibly hold a fly?"

"That's exactly what I'd like to kn I said. "You seemed to have every in the world, and suddenly you u left. Where *was* the fly?"

HE WAS silent for several minutes ing hard on his cigar. Then he g and walked over to the bookcase and down a big book. He laid it out o table, and I saw it was a sort of con tion diary and scrapbook—big filled with notes, typewritten memo invitations, programs, and so on.

"The fly was just this," he said: " started something that I couldn't s was like that fellow who built a m out of bones and so forth from a c

ard—Frankenstein, wasn't he called?—hich promptly turned around and chased s builder to death. I had gone out deperately to build a wide acquaintance, nd my acquaintances gave me no peace. had planned to get myself invited everyhere, and the invitations nearly smothed me. I had become popular through ing all sorts of favors for all sorts of ople, and it had become so much secondture with me that I had actually lost e power to say 'No.'

"Look here," he exclaimed, opening the g book. "Here is the bad news for just e week. Look at the invitations."

I glanced at the pages. There were four vitations from luncheon clubs, three to iblic dinners, and five to private homes. here were five notices of meetings of ards of directors: some of them business ganizations, some of them charitable. here was an urgent request that he be esent at a church supper, and a letter m the leader of the Republican organition complaining because he had not owed up at headquarters for a month.

"Here is my secretary's record of the ephone calls," he said, turning a page. I picked out a few at random.

Mr. Smithers asks if he may call and present etter of introduction from Mr. Cameron. I never met Cameron but once in my life," d my friend, "and he sends Smithers to me ask me to serve on the board of a hospital.")

Mr. Duncanson has resigned his position and nts to know if you can introduce him to anyly in the American Can Company.

Mr. Hunt says business is purely personal l that he must see you. Suspect a request a loan.

Mr. Saunders has a good thing he wants to you in on. Will take $1,200.

Mrs. Price, of the Women's Society for Proting Children Against Comic Strips in the wspapers. Very indignant when I told her were too busy to see her this week.

Dr. Hotchkiss, your dentist. Asks if you k Consolidated Gas is a good buy.

ive different young men who want to get this law office.

LOSED the book and pushed it back o him.

A tough life," I said.

That isn't the half of it," he answered. hose were some of the troubles that e to the office. My greatest troubles e waiting for me when I got home.

One evening my wife came into the ry after supper (it was one of those rare evenings when we happened, by e stroke of fortune, to be dining alone) laid down a list of names.

I've been looking over our records for past winter,' she said, in a tired voice, I am sorry to tell you, John, that we ly must give some dinner parties. situation is terrible. We owe dinners rty-seven people!'

My face must have showed great iness," my friend continued, "for she on very sympathetically. But, rtheless, she *did* go on.

You look absolutely tired out,' she 'and I feel just the same way. I hate uble you with things of this sort when have so many bothers downtown, honestly, we are falling behind in thing. Doctor Burnham, our pastor, here today and said he hadn't seen t church for six weeks. I tried to exhow busy you have been, and he said thing about the danger of letting the re of modern life crowd out the finer

Hotels Need Hundreds of Trained Men and Women

Will you accept one of these big paying positions in America's 3rd Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

WRITING

pays . . . learn to write!

Palmer trained students are successful: *"I've sold two stories lately, one for $110. The other, for which I received $160, has been accepted by the same magazine."*

Another student writes: "Today is the happiest day of my life. Received a check for my first story this morning."

Still another tells us: "My sales will reach $1,000 by the end of the year."

More than 125 stories and articles by Palmer students have been purchased by editors in the last few weeks. Learn to write. It will pay you in cash. You have a fund of story material. If you also have the urge to write, Palmer training, under the sympathetic criticism of experenced writers, will prove of invaluable help to you.

The coupon will bring you full information about Palmer Courses and other Palmer successes.

things. Mrs. Simmons wanted me to ask you if you had time to fix up those legal papers for her social settlement, and—'

"I held up my hands in futile protest.

"'Just one thing more,' she added. 'The children, John. They said that last year when the circus came to town you were too busy to go with them, but you promised to go this year. Tomorrow is the last day. It seems to me it is an awfully bad example when we don't keep our promises to the children. And you hardly see them at all any more. You are so tired in the morning that they get away to school before you come down, and in the evening they see you only for a minute when you are changing your clothes. Mr. Perkins at the school says it would help Junior ever so much if you could spend a little time with him on his Latin. And Dorothy is growing so fast—you really ought to be with her once in a while, or she will be a grown woman and away from us before you know it.'"

My friend made a wry little attempt at a smile, but it was not very successful.

"THAT is why I left New York," he said. "That, plus health. With all my other worries I had managed to acquire the successful man's disease that keeps all the rich doctors on Park Avenue going. It is the baffling, indefinable kind of illness that attacks no particular organ but makes you feel generally rotten. That night, when it seemed as if everything had piled up at once, my wife and I sat down and made a comprehensive audit of our lives. We started out with this question: 'What are the things worth having in life? What is it all about?' We put down the answers under various headings:

"MONEY: We have enough to live on. Not a great fortune, but enough so that we shall never be in want. To double it or quadruple it would add nothing to our happiness.

"HEALTH: We are both so tired that we are really getting no satisfaction out of living. We are going to burn up in fifty years the energy that was intended to carry us cheerfully through seventy.

"LOVE: Fortunately, we love each other even more than when we started twenty years ago. At least we have saved ourselves from the modern disease of imagining that jaded nerves and appetites can be cured by new loves.

"CHILDREN: Our children are being raised by high-priced servants and private schools. Perhaps they will turn out all right. They seem to be healthy, honest, and right-minded. But how can we be sure when we see so little of them? How do we really know what is going on in their minds? Suppose that one of them should be a moral failure, and that we, looking back, should discover that it was because we let the press of circumstances crowd them out of our lives?

"LEISURE: The more successful we are, the less leisure we have. Our friends in the country say to us:

"'What a privilege to live in New York. You have all the good music, the fine lectures, the museums, the theaters.' But it would amaze them to know that we never hear any music; that we haven't been inside the Metropolitan Museum in five years; and that they, on their annual visit to New York, see more good shows in a week than we see all winter.

"FRIENDS: Our lives are so filled with acquaintances that we have no time for our friends. How about the couples we used to see when we were poor and happy? What is their verdict of us?

"We had a long talk that night," he continued, "the first of several talks. We thought perhaps we could correct the situation by cutting out all the nonessentials. We agreed that we should accept only the most important invitations, and that I should hire a secretary to stand like a stone wall between me and the world. It was a good idea, but it didn't work. I had established my reputation, and there was no getting away from it. People who were turned down by my secretary went away to report that I had become suddenly 'high hat,' which was not good for the business.

"Our days were harassed by reproaches and crowded with fibs and explanations that never seemed to satisfy anybody.

"Finally, we just decided to chuck it and begin all over again in the simplest way. I consulted my partners, who thought I was making a great mistake, of course, but were too loyal to stand in my way. We let the word get around that we were going off for a year of travel, taking the children with us. And then one day we quietly sold our house, packed up the furniture, and moved to this quiet city.

"I had some connections here which gave me a small immediate practice, and it has grown gradually, until I now have about a third of the income we used to have in New York. Our expenses are much lower, so that the annual net is just about the same. But, what is the most important item, I work only eight months of the year. It is understood by all my clients that two months in the winter are my own, and two months in the summer when the children are out of school. I join no boards, participate in no committees, never go out in the evening except with a few friends. My contributions to charities are larger than they were in New York, for I have decided that, with my life insurance, I have all the money that my children ought to inherit, and after our expenses are paid I give the balance away. But the great thing is that I have time to read; time to keep healthy; time to enjoy the fast-fleeting years with my children; time, really, to *live*.

"That's why I died publicly five years ago."

I KNOW another man in New York, a president of the largest business of its kind in the world, whose experience has been quite different. I was sitting one day in his office. Mail came in, but, with the exception of one letter, a secretary handled it. The phone rang, and another secretary answered it. Not a single paper was on his desk; my curiosity was stirred.

"Just what does your job consist in?" I asked. "In a great industry so well organized as this, what is the president supposed to do?"

"I'll tell you," he answered. "My job is principally to sit here all day and say 'No.' That may sound easy, but it is not, as is indicated by the fact that there are so many men who can do the other things and so few who can handle the job at the top. The sales manager comes in, and wants to spend another million dollars in advertising, to 'break down resistance

his salesmen. I say, 'No, let them break down their own resistance. We're helping them so much already that we're taking their initiative away.'

"At least fifty people a year come in with fifty different products which they want us to add to our line. Again, in almost every case, I say 'No.' I have cut the line from two hundred and ten items to forty-seven since I have been president. The profits are quadrupled.

"I have two secretaries here saying 'No' all day long to all sorts of propositions aimed to scatter my attention and strength over a dozen different organizations or movements. I long ago picked out the three charities in which I believe I can render most service, and I concentrate on them. At home, by considerable struggle and not without some criticism, I have got our friends to accept the fact that I will go out one evening in the week, namely, Friday; but that it is no use to invite me on any other night, because I just won't go.

"Sounds as if I were a pretty hard-boiled egg, doesn't it?" he asked, with a laugh. "As a matter of fact, you know me pretty well, and you probably realize the truth, which is that I am naturally good-natured, that I like to do the agreeable thing, and that my emotions lie so close to the surface that they would wreck me if I didn't build up a wall of protection. It's the price of my living and doing business in New York," he said; and then he added: "I tell you more men have been ruined by their inability to say that little word 'No' than by almost anything else."

History is full of evidence to support this man's assertion.

JULIUS CÆSAR thrice refused a kingly crown, but he did it in such a hedging way that his opponents were not at all convinced that he meant it, and so they murdered him. Judas Iscariot could not say "No" to the chance to make a little easy money. Benedict Arnold could not say "No" to his pretty wife's extravagance and, hard up, took a bribe and left his name as the most despised name in American history.

I know many men who can never say "No" to social demands and engagements. I remember hearing a very successful New York banker rail against his hard lot: "How I hate these dinners," he exclaimed. "I go home tired from the day's work, and I must hurry into my other clothes and get downtown again. Then I eat too much, smoke too much, and listen to too much bad oratory. The result is when I do finally get to bed I can't sleep a wink."

He died twenty years before his time, and there is no doubt it was his inability to say "No" that killed him.

Life is more complex than ever it was. The difficulties of making fair adjustment between the demands of one's work and one's family, the multitude of social invitations and of obligations to good causes—all are vastly enlarged by the modern intricacies of communication, transportation, and social organization. No man can live successfully in such an age unless he makes a program of the things that are most important, and then—against the multitude of distracting, though often attractive diversions—writes down a resolute "No."

GRAY HAIR

VANISHES

THERE is a marvelous way to bring back color to gray hair — to restore faded streaks to youthful color—to regain gleaming brilliance.

It's clean and colorless as water. You simply comb it through the hair. It will not wash nor rub off. It's called Mary T. Goldman's Hair Color Restorer.

Make amazing test. See for yourself what it will do. Few cents' worth gives complete restoration. Get full-size bottle from druggist. He will return every penny if not delighted.

Or write for free test supply **(give color of hair)** to Mary T. Goldman Co., St. Paul, Minn.

MARY T. GOLDMAN'S

Hair Color Restorer

"Every Silver Mine Has Got Its Cloudy Linin'—"

(*Continued from page 53*)

Johnny Bones excitedly. "Now what?"

"Looks like we didn't act quick enough," Scattergood said ruefully. "He's after Will Pratt's tracts."

"Nothing else," Johnny said. "And Will's out of town. Won't be back before ten, either. Driving up from Higgins Bridge. . . . Hush! Here's Hines now."

A tall, finely dressed gentleman entered the dining-room and looked about, saw the senator and Scattergood, and bowed before he walked over to their table.

"Good evening, Senator. Good evening, Mr. Baines. Glad to see you. May I sit at your table? Haven't seen you to talk to for a year."

"More'n that," Scattergood said. "You don't git to Coldriver often, and I don't git no'eres else. Jest drivin' through?"

"No. I ran up on a little matter of business. Thought I might as well get it out of the way."

"Anythin' I kin help you with?"

"Oh, I think not. No. . . . I'll clean it up in a few minutes tomorrow."

They sat for half an hour discussing politics and business, and Mr. Hank Beemis lingered, also, over his meal. When they arose he followed them out. Scattergood and Johnny said good night to Mr. Hines and went down the street; but Hank heard Johnny say in guarded tones, "I'll pick you up in my car at the bank in an hour. We can meet him on the road. He'll take your check, won't he?"

"Calc'late so," said Scattergood.

HANK BEEMIS sat down in one of the big wooden rockers on the porch and considered matters. While he was so considering he saw Lawyer Norton mount the steps and shake hands with Mr. Hines, and they found seats just inside the window. Hank moved closer very softly.

"Got the deed, Mr. Norton?"

"All ready for his signature," said the lawyer. "But he's not in town. Drove down to Higgins Bridge."

"Confound it! I wanted this thing closed up tonight. Can't let any grass grow under your feet when you're pulling off a deal in Scattergood Baines's neighborhood. I sha'n't feel easy until I've that deed signed and in my pocket."

"Nothing has leaked, has it?"

"One never knows. Baines has all sorts of wires out. If ever he got onto this we'd have to pay through the nose. He'd see the situation at a glance." Mr. Hines breathed deeply. "The whole thing depends upon that piece. It's the key."

"Pratt may smell a mouse if you show any anxiety."

"Can't help it. He won't do more than suspect something and jack the price a little. But Baines—Oh, man! This would be right up his street. I'm willing to let Pratt get away with something, and prepared for it. Brought a hundred and fifty thousand along in case of necessity. Ought to get the land for seventy-five; but this is not the time to haggle over chicken feed."

Mr. Hank Beemis permitted his jaw to drop. He was not accustomed to hear seventy-five thousand dollars referred to as chicken feed.

"Can't we get a car," Hines said, "and meet Pratt on his way home?"

"It'll cost you money."

"It may cost me more if I let an hour slide."

"Very well, I'll have a car here in twenty minutes."

AT THAT Mr. Hank Beemis arose very softly and hastened up to his room. From a very secret place he withdrew a roll of bills, not enormous in girth, but when one perceived that each one was of the thousand-dollar denomination, it was a sizable fortune. Hank favored thousand-dollar bills. One could carry a number of them in a constricted space. To the end of easy transportation he had, every few days, run down to the city with such sums as he had obtained from Kittleman and Lumley and the rest, and had changed them into the larger bills he doted upon.

He counted his possessions. There were a hundred and one of them. Seventy-six he had acquired in Coldriver; the rest was his nest egg, his reserve fund, his war chest. The whole he stuffed carefully into an inside pocket, then he went down the stairs and across the road to the garage.

"I want a car for the evenin'," he said. "Hustle it up."

He stood anxiously looking up the street as he waited, and saw with pleasure a car driven by Senator Bo[illegible] saw it stop at the bank.

"Hustle!" he called sharply, and [illegible] sprang into a little car as it backed [illegible] "I'll drive. Back in a few hours."

Down the road he sped, but not b[illegible] he had seen Lawyer Norton drive [illegible] the hotel in his motor vehicle.

Beemis set his teeth. "Anyhow," [illegible] said, "I've got a bit of a start." An[illegible] drove with might and main. He [illegible] driving for fifty thousand dollars—[illegible] easiest fifty thousand he ever had pi[illegible] up, and an honest fifty thousand, [illegible] Nothing to it, just to pass over m[illegible] to one man and to take it back [illegible] fifty per cent profit from another. [illegible] was such a piece of luck.

From the hill he looked back. Tw[illegible] were following at breakneck speed. [illegible] let out another notch. Apparently [illegible] cars containing Scattergood and [illegible] Hines did not gain, for he drov[illegible] twenty minutes without sighting or [illegible] ing either of them. . . . Another [illegible] minutes, and ahead of him he s[illegible] small, rickety car approaching. [illegible] narrow road he slowed down to [illegible] nize its occupant, and recognized [illegible] Pratt.

He stopped and called. Mr. [illegible] brought his car to a standstill in [illegible] astonishment.

"Well," said Hank, "this is a su[illegible] Didn't expect to meet you dow[illegible] way."

"Drove down this mornin'," sai[illegible]

"I was comin' to see you tomo[illegible] said Hank; "but I always believe [illegible]

ting down to business when a chance comes along."

"What business?" Will asked.

"Here, let's pull up to the side so's we don't block the road. Huh. . . . There's a house up there. Don't happen to know the folks, do you?"

"One of the Levins twins lives there."

"Wonder if they'd let us sit in the kitchen and talk a while."

"Don't see no reason for sich a sweat," said Will; "but I calc'late they will."

Hank hurried Will off the road, for it was reaching the danger point. One or both of those pursuing cars might flash into sight at any minute. They climbed the lane and knocked at the door. Will explained their presence, and a huge young man showed them into the dining-room, where he left them alone.

"I aim to settle up here some day," said Hank, "and I want some land. Mebbe put up a sawmill. Now, you got a piece of timber and a site for a dam. Them Checkerberry Rip pieces of yourn."

"I got 'em," said Will.

"Be they for sale?"

"Anythin' I own's for sale," said Will.

"How much?"

"Seems like the's consid'able int'rest in that land," Will said reflectively. "Dunno why; but I hain't got no objection. Cash money?"

"Right into your hand," said Hank, "if the price is right."

"Hundred and twenty-five thousand," said Will.

Hank shook his head, and then the dickering began. Apprehensively Hank listened for sounds of approach, but none disturbed him, and he reached the conclusion that Scattergood and Hines had failed to recognize Pratt's car and had driven on toward Higgins Bridge. So he settled down to business. It required an hour before they came to terms.

"Seventy-six thousand," Will said, "and that's my last and final word."

"Done," said Hank. "Kin we borrow writin' fixin's?"

They could, and Hank, who seemed able to turn his hand to many things, wrote out a very creditable deed by which Will Pratt did bargain, sell, remise, release, alien, and confirm unto Henry Beemis all those certain pieces or parcels of land described as follows. And so forth. And this document Will Pratt signed, while Levins and his hired man were called in to witness the signatures. . . . In return for seventy-six thousand-dollar bills the deed was delivered. Hank shook hands and departed. Will did not depart, but announced he would stay where he was until daylight, sitting up with the Levins shotgun in his hand to guard the money.

HANK drove back to Coldriver and went to bed. In the morning he arose jubilant, prepared to seek out Mr. Hines, who, he imagined, must be in a state of great perturbation. Of the proprietor he inquired for that gentleman, and was informed he had driven away early on the preceding evening, but had not returned. Doubtless, Hank thought, still searching for Will Pratt.

But the morning passed without Mr. Hines's appearance. Will Pratt was about the post office as usual. Scattergood Baines sat placidly in his strong chair be-

Your Mistakes in English STAND OUT!

YOU can not hide your mistakes in English—they stand out sharply, giving others an unfortunate impression of you. You may not make such glaring errors as "He don't," "You was," "I ain't." But perhaps you may make other mistakes which offend the ears of cultured people, and cause them to judge you unfairly.

"Can't hardly"
"He don't"
"You was"
"I ain't"

No one will correct your mistakes in English. People are too polite. They fear you will feel insulted, and unconsciously you keep on making the same mistakes. And, though you may think your English is good, it may be dotted with errors which *others* notice, and which destroy many of your opportunities for advancement.

What Can You Do?

For many years Sherwin Cody studied the problem of creating *the habit* of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day.

Under old methods rules are memorized, but correct habits are not formed. Soon the rules themselves are forgotten. The new Sherwin Cody method provides, on the contrary, *for the formation of correct habits* by constantly calling attention only to the *mistakes you make*—and then showing you the right way, so that correct English soon becomes "second nature." Already over 50,000 people have used this method with the most marked results.

FREE Book on English

A command of polished and effective English denotes education and culture. It wins friends and favorably impresses those with whom you come in contact. Now, in only 15 minutes a day—in your own home—you can actually see yourself improve by using Mr. Cody's "100% Self-Correcting Method."

A new book explaining Mr. Cody's invention is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if your vocabulary is limited, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 93 Searle Building, Rochester, N. Y.

Increased His Income "Many, Many Times"

—thanks to Higher Accountancy

"I'm not going to put off specialized training another day!" So said G. Roy Eshelman to himself—and what a profitable decision it turned out to be!

At that time he was earning $16 a week—as clerk in the purchasing department of a big manufacturing concern.

Today, thanks to his home-study training with LaSalle, he heads his own firm of Public Accountants, at Decatur, Illinois, and in a letter to LaSalle he adds, "It is sufficient to say that my present income is many, many times greater than when I enrolled."

Mr. Eshelman's advancement came about in the most natural way you could imagine.

First, he became *really interested* in Accountancy—stayed after hours to watch the auditor at his work. Result: he was soon placed in the Auditing Department and given a 50 per cent increase in salary. Shortly afterward, as he progressed with his training, came another "raise"—of 40 per cent.

"My studies rapidly equipped me to strike out for myself," writes Mr. Eshelman. "At present I have an extensive practice as a Public Accountant and employ several accountants, all of whom have secured training by home-study methods."

"I am writing this letter," states Mr. Eshelman, "believing that many of the clerks and bookkeepers of today are asleep to the opportunities existing for trained accountants. I believe also every business man and banker should avail himself of the information in LaSalle Higher Accountancy training."

Send for Free Book—"Accountancy, the Profession that Pays"

Why not investigate the opportunities in this highly profitable profession—find out how thousands of LaSalle-trained accountants have advanced themselves to positions paying $3,000—$5,000—$7,500—$10,000 a year, and even better?

Two books placed G. Roy Eshelman on the path to greater earning power. They are "Ten Years' Promotion in One" and "Accountancy, the Profession that Pays." LaSalle will send them to you FREE.

Your biggest opportunity is as near you as the point of your pencil. If you are determined to make progress, clip and mail the coupon NOW!

fore his hardware store, and Johnny Bones was reported off fishing Cold River for trout. Hank doubted this until he saw the senator return that evening with a full creel. But still, no Mr. Hines. . . . Hank began to perspire slightly.

A singular placidity rested upon Coldriver, and Hank failed to understand it. Not with such a deal as he had just put through in the air. Somebody ought to be running around in circles. Somebody ought to be excited. Somebody ought to be approaching him—but nobody did. Nor did Mr. Hines reappear.

At last he asked questions of the hotel proprietor.

"Any word from Mr. Hines?" he inquired.

"No call to have none. Paid his bill and left."

"Where to?"

"Didn't say."

"Where's he live?"

"No idee. Never see hide nor hair of him till last night."

Hank went outside and pondered this, and then, reluctantly, but driven by necessity, he walked the short distance to where Scattergood Baines sat.

"GOOD evenin', Mr. Baines," he said pleasantly.

"How be ye?" Scattergood responded.

"Business good?"

"Fust class. How's yourn? In the minin' line, I hear tell. Silver minin'!"

"No complaint," said Hank. "Er—by the way, I want to git in touch with that Mr. Hines you et supper with last night."

"Him! He wouldn't be int'rested in minin'," said Scattergood.

"Can you tell me where I can reach him?"

"Didn't say. Let on to me he was jest passin' through, and was goin' on a kind of an automobile tour. No idee where he went."

"Represents a power company, don't he?"

"Who? Hines? Not as I know of."

"I know better'n that. Er—Mr. Baines, I've come by some information, and I guess you got it too. And I hustled out and beat you and this man Hines to them tracts on Checkerberry Rips."

"Which ones you mean?"

"Both sides of the jaws."

"That cut-over stuff, you mean? Sure I know it. Logged it personal. Took a sight of spruce offen that land."

"I bought it last night."

"What fur, I'd like to know? Hain't no timber and won't raise white beans."

"I bought it, and you know it, because the power company's got to have it."

"They have, eh? Hope you got it cheap."

"Cheap enough. The power company'll pay a hundred and fifty thousand for it."

"They must 'a' took leave of their senses," said Scattergood. "I bought the whole dum thing thutty year back for ten thousand. Yes, sir, I done jest that. And logged it off coverin' a period of years, and done satisfactory. Ketched Will Pratt when he wa'n't feelin' spry and sold it to him for fifty cents an acre."

"But the's a thousand acres of it."

"More'n that, and the more the' is of it the more wuthless it is. So the power company wants it, eh? What power company?"

Hank paused. What power company? He had to confess to himself he didn't know.

"I'll tell you," he said, "I'm no hawg. I'll split the profits with you and go half 'n' half."

"Fust show me some profits," said Scattergood. "No; guess I hain't int'rested. I own all the power companies the' is in this locality, and I know I hain't got no use for Checkerberry Rips."

"But I heard—I tell you I heard what you and the senator said, and I heard what Hines said."

"Private conversations, wa'n't they? Wa'n't asked to listen?"

"No, but—"

"Hadn't ought to listen to folks' conversations," Scattergood said reprovingly. "Apt to be expensive. . . . Now I hope you didn't pay attention to Johnny Bones's jokin', and go pay money for that land."

"Jokin'?"

"The senator's a great joker. Greatest town for jokin'. Everybody makes 'em, and everybody takes 'em. Beats all how we kin see the p'int of a joke, even when it's on us. Uh-huh. Silver-mine jokes and all. That one come high though."

"Eh? What's that?"

"Got seventy-six thousand out of the silver-mine joke, didn't ye? Seems as I counted up that much. Worked it real slick too. Even fooled Sam Kittman, and Sam's a hard one to fool. Kind of hurt his feelin's, too. But he's feelin' better this mornin'."

"Is he?" asked Hank, now more at sea than ever, but rapidly growing more uncomfortable in spirit.

"A sight better. Drop in and see him and he'll tell you he's much obleeged."

"For what?"

"To you—for sendin' his money back to him, every cent of it. Uh-huh. Jest deposited it in the bank."

HANK'S jaw dropped, more from astonishment than from alarm, and he made queer sounds in his throat.

"So's Lumley obleeged, and the Lumley con, and every one of 'em. . . . Turned out all right, though I do say a feller carries a joke too fur when he runs it up nigh a hundred thousand dollars. Seein' nobody's damaged, I calc'late no harm."

"Them men—all of 'em, you say—their money back?"

"Every last one," said Scattergood. "You sent back seventy-six thousand to distribute, didn't ye?"

"I— Say, what you talkin' about?"

"Jest tellin' the story like I got it. Uh-huh. So each man got what was coming to him. Supprised 'em all some."

Hank turned a wonderful brick and his eyes bulged. "Say, what's this here? What's the idee?"

"W-al," said Scattergood, "it seemed like I got to stir around lively now and again to save other folks' bacon. Kind of like to do it, jest for the exercise. And the feller remembers it longer if made to disgorge so it's kind of pain and astonishin'. Jest to teach him not play no tricks on folks in Coldriver."

Hank was staring hard at Scatter

Digitized by Google Original from UNIVERSITY OF IOWA

who returned his gaze with benevolent placidity. No one can say what Hank meditated in his heart—but he did not set about accomplishing it, for Scattergood pointed down the street.

"See that feller?" he asked.

"Yes."

"That's Sheriff Watts. Comin' to keep you comp'ny. Train leaves in half an hour, and Ulysses is takin' the trouble to walk to the station with ye. Uh-huh. And he told me private he'd be waitin' on the platform if ever you was to come back."

Hank made further distressed sounds.

"It seems," said Scattergood, "like you ain't appreciated in Coldriver—not your kind of jokin'. . . . Still and all, you hain't been onprofitable to some. . . ."

Sheriff Watts stopped and smiled contentedly upon Hank. "Well, mister," he said, "we'll be moggin' along. Mustn't miss our train."

"Be you runnin' me out of town?" Hank demanded belligerently.

"By no manner of means," Scattergood said. "Just escortin' you out and vertectin' you. Mebbe you got some left, and it don't look like you was smart enough to hold your own, not with us hossbacks. G'-by, Mr. Beemis, and tell your folks we're all much obleeged."

He turned to Sheriff Watts and wagled his head. "The Bible readin' today," he said, "is this here chapter and verse: Every silver mine has got its cloudy lin'. . . . G'-by, Beemis!"

The Greatest Guessing Game in the World

(*Continued from page 43*)

urself; but can it be possible that the l of your dreams ever looked so funny th her picture hat and those absurd erries, the blouse tapering into the wasp ist, and the voluminous skirt which ng to her shoe tops?

It is all true, but unless you have a more id memory than mine, you will need photograph to convince you.

HE World War brought more sweeping changes in women's fashions than r occurred before in the same period of e. The reason is found in the fact that embattled nations, in their zeal for mul extermination, enlisted their women the holy cause to almost the same ent as their men. The millions of girls went forth to drive motor wagons, p military stores, and do a hundred one miscellaneous jobs behind the ting lines found out that, for them, lebone corsets and long skirts were ut as suitable as mail armor would e been for their brothers and lovers in trenches. In any event, the new fashwas decided for them by the military orities, who were much too busy with r matters to bother about Victorian s of modesty. The long dress was ned and there is not the slightest intion of a resurrection.

was thus that the greatest single lution since fig-leaf aprons was ef-d. But, of course, World Wars do occur every year, and the question

COLT .. The Dependence of Great National Institutions

Vaults of the First National Bank of Chicago . . A Colt-protected institution

From a Huge Bank Vault to a Tiny Jewel Case

LOCKS and bolts have never proven adequate safeguards for valuables—great or small. A Colt Revolver or Automatic Pistol fits somewhere into every successful protective scheme.

Each Colt, whether destined for institutional or individual guardianship, must first successfully pass the 200 or more gauge and visual inspections which insure Colt dependability, accuracy, and safety.

Colt's Service Department will help solve shooting problems; suggest the Arm best suited to your needs; assist you in forming or joining a Revolver Club.

Colt's new Catalog No. 27 is the most complete Fire Arms Manual ever issued. Write for it; also for your copy of "Makers of History," the thrilling story of Colt accomplishments.

The Colt Police Positive Special .38 caliber Revolver shown here is no exception.

Alert experience follows every bar of steel from the mills through each of the thousand steps of forging, machining, finishing, assembly fitting and test until the complete Arm proves its precision in the Colt's Shooting Gallery. The Colt Positive Lock, embodied in Colt Revolvers, makes accidental discharge impossible.

It is because this careful craftsmanship has been unflagging for 93 years that Colts are the unquestioned selection of those who know Fire Arm requirements.

Frankness need not be indelicate . . . *read*

"The Newer Knowledge of Feminine Hygiene"

THERE are certain subjects so intimate that the woman of refinement often finds difficulty in discussing them with anybody. Sensitive and discriminating, she is the very type that values absolute physical daintiness. And it is for her "The Newer Knowledge of Feminine Hygiene" has been written.

Zonite removes objections

Physicians most assuredly recommend the practice of feminine hygiene. However, they *do* object to the caustic and poisonous antiseptics so many women use. They know the dangers of these poisons—dangers to the woman and all her family.

Zonite absolutely removes these objections. There is no skull-and-crossbones on this bottle. Safe with little children in the home. Safe to use for oral hygiene. Yet Zonite is a *powerful germ-killing antiseptic.* Actually far stronger than any dilution of carbolic acid that can be allowed on the body.

Authoritative book—free

Send coupon for frank scientific booklet. Covers the whole matter of feminine hygiene. Zonite Products Corporation, 250 Park Avenue, New York, N. Y.

Use Zonite Ointment for burns, abrasions, skin infections or chapped skin. Also as a powerful deodorant in greaseless cream form. Large tubes, 50c.

In bottles: 30c, 60c, $1

Both in U. S. A. and Canada

still remains as to the cause of the bewildering fashion changes which come and go with a speed that is extremely painful to the pocketbooks of the paying sex.

Paris!

At last we come to the magic word. Paris, the naughty city where all geese are swans and the incredible is the usual. There is a general but vague idea that all fashions originate in Paris, where mysterious individuals, armed with equally mysterious powers, decide from time to time what is style and what is not.

There is a certain amount of truth in the idea. Fashions do originate in Paris in the sense that in line, design, and color the great French *couturiers* are the world's acknowledged masters, but these masters of artistry are far indeed from being dictators of style. They are all engaged in a guessing game which would drive the average American business man into a lunatic asylum. The best guessers win fortunes and the unlucky ones go to work for the winners.

The great game is in progress all the year round, but the big prizes are awarded every spring and fall. In February and August are the "openings" at which the "guesses" are paraded after six months' feverish and deeply secretive labor. During all that time of preparation designers have been toiling in the locked and guarded *ateliers*, working out costumes on ideas painfully gleaned from a hundred sources. The glorious riches of the museums of Paris are ransacked. Bit by bit, the design is built up from the fragments of a dozen civilizations, the color harmonies of long dead and nameless artists.

Hundreds of such designs are thus created, and every one of them is a guess. When they are completed, the prettiest and shapeliest mannikins of France will don them and parade through the showrooms of Paris, the racetracks of Auteuil and Longchamp, the esplanades of Cannes, Biarritz, Deauville, and Monte Carlo. Their creators will await anxiously the verdict—acceptance and fortune, rejection and possible ruin.

Of course, the guessers do not pin all their hopes on a single entry. Each house prepares scores of models, for if even eighteen out of twenty fail, two may sweep the boards.

WHO decides? If anyone could answer the question definitely the G would be taken out of gamble.

There are a handful of well-known society leaders, all of whom have varying influence, but every one of them might select a model without more than moderate results in general popularity. They are important but they do not hold the key to the mystery.

Then there are other ladies, ladies who rule over a society preponderantly male, but whose influence is often far greater than that of their more orthodox sisters, and who embody a very great, if not very respectable, tradition. Time was when the Court of France and all the fashionable society of Europe waited breathlessly to find out what the King's mistress wore at the last state ball. Time was when a Madame de Pompadour could introduce a new word into the dictionaries of the world by changing the style of her hairdressing, or a Louise de la Vallière could apparel all the virtuous maidens of Europe in clinging robes. The kings have departed, but the courtesans remain.

It may be shocking, but it is nevertheless true, that the naughty ladies of Paris come closer to being the arbiters of fashion than any other influence that could be named.

THE guessers in the *ateliers* of the *couturiers* try their best to make their wishes come true by giving their creations to professional beauties and stage stars and by sending their charming mannikins to parade among the fashionable crowds at the races and the fashionable resorts but their success is moderate at best.

"Dresses must come down" has been the slogan of the Paris manufacturers for at least two years now, but start counting knees on Fifth Avenue and you will need a calculating machine.

The anxiety for flounces, flares, and knee covering is based on something considerably more practical than the old fashioned idea that Miladi's figure should be a secret between herself and her Maker. The *couturiers* of Paris have no overwhelming concern with such an outmoded virtue as modesty, but they are deeply interested in the silk and cotton fabric industries. Some unknown maker of epigrams once remarked that "an inch off a Chinaman's shirt or added to a woman's dress meant the difference between ruin and prosperity to the textile industry." Short skirts have not exactly ruined the textile industry, but certainly they have played havoc with its prosperity. Nevertheless, in spite of the valiant efforts of the Paris *couturiers*, there is no indication that dresses are coming down.

Automobiles were largely responsible for small hats, but aviation gave them the shape of the aviator's helmet. When every newspaper was carrying front-page pictures of heroes and heroines of the air, the vogue for the helmet hat might have been predictable; but who could have foretold that the opening of King Tut's tomb would have sent a craze for Egyptian colors around the world and that women who thought Egypt vanished with Joseph would clamor for the color and ornaments of Potiphar's wife?

The individual who starts a fashion is far rarer than a great event like a war or the sudden development of automobiles or airplanes; and—something for philosophers to meditate upon—the individuals who are most successful in creating a new style are generally noted for far different qualities than piety.

When Evelyn Nesbit Thaw took the stand at the trial of her husband for the killing of Stanford White, her astute lawyers took special pains to dress her for the part as the innocent, guileless child who had been victimized by a ruthless roué. Her hair, parted in the middle, school-girl fashion, hung low over a broad, white Eton collar which topped her simple middy blouse. In a few weeks millions of women of spotless reputation were trying to look and dress as much as possible like the woman principal in that sordid drama, and blouse makers and other manufacturers were reaping fortunes.

A society queen, a celebrated demimondaine, or the central figure in a sensational murder or divorce case can start a fashion

Digitized by Google Original from UNIVERSITY OF IOWA

but it may also come from the whim of some unknown and obscure individual.

Who started the Deauville scarf? A few years ago millions of these vivid-hued bits of finery were flaunting to the breeze from the shoulders of as many flappers and their grandmothers. They came as suddenly as they went, with the usual story, as far as manufacturers and retailers were concerned, of a pot of gold found beneath the rainbow for those who were lucky enough to catch the tide, and disaster for those who started too late.

But where did the Deauville scarf come from? The story runs that it was born of a sunburn on a pretty shoulder. The owner of the shoulder is said to have numbered among her admirers the King of Spain, who was at that time keeping the gossips busy with stories of his extravagances at the great French seaside resort. Unhappily, the lady stayed too long in the sun one day and her pretty shoulder was marred with an ugly red blotch. The scarf was the inspiration of a moment, but it set a style which ran from Vancouver to Constantinople.

The Deauville scarf or its sisters has had somewhat of a rebirth this summer, but no sunburned bathing beauty has yet been found to take responsibility. Why the girls have resurrected these bits of silk and cotton nobody knows, but it is unlikely they will reach their former popularity.

A little while back I raised the question as to what had become of Miladi's garter. The answer to that question is fairly easy. It is around Miladi's leg. That neat little roll of silk, which, of course, no perfect gentleman ever scrutinizes, is just camouflage. The garter is underneath, although it is an article very different from the amazing piece of harness which existed in the whalebone-steel-corset days. That complicated machine has gone for the very good reason that there is nothing to anchor it to. However, we are now skating on such thin ice that I had better skate back to shore.

THE ever-changing vogue for color is perhaps subject to even more inexplicable causes than design or line. Fabric and garment manufacturers spend huge sums every year in efforts to determine what will be the popular colors for each advancing season, but all their calculations are likely to be upset by some relatively trivial event.

A few years before her death Sarah Bernhardt unexpectedly appeared in the bois de Boulogne dressed completely in white, in sharp contrast to the vivid hues the great actress usually favored. That single appearance started a tremendous white season and the dyers and fabric houses lost millions.

When President Harding was inaugurated, Mrs. Harding wore a dress of a shade unusual shade of blue, and for a time, at least, "Harding Blue" was supreme in America.

More recently Lanvin paraded all her models at a season's "opening" in a particular shade of green, and "Lanvin Green" swept the boards. Again, "Chanel Red" scored a decisive triumph; but the result in any one of these instances was just as certain as naming a Derby winner or predicting whether blonds or brunets will predominate in the year's baby crop.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition, it's time for Phillips Milk of Magnesia. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose.

Phillips is the genuine, prescriptional product physicians endorse for general use. The name Phillips is important; don't buy a less perfect product and expect it to have the same perfect results.

Demand PHILLIPS Milk of Magnesia

"Milk of Magnesia" has been the U. S. Registered Trade Mark of the Charles H. Phillips Chemical Company and its predecessor Charles H. Phillips since 1875.

Now Comes The New Shorthand

No Signs or Symbols to Learn—
You Write It in the Ordinary A-B-C's

FOR years there has been a crying need for a really modern, scientific shorthand that could be written RAPIDLY—that would be more ACCURATE—more PRACTICAL and could be learned more EASILY and QUICKLY than ordinary shorthand.

Now at last it is here—the new shorthand. Business and professional men and women everywhere have hailed it with enthusiasm. Experienced stenographers as well as beginners are adopting it.

Speedwriting
The NATURAL SHORTHAND

Right this minute you know the principle of this amazing new method—you use the same "A B-C's"—as you do in your daily speech. No need to spend long, tedious months memorizing a "foreign language" of dots and dashes, hooks and curves. You start using Speedwriting in a few hours and in a few weeks you can acquire all the speed and proficiency necessary for practical work.

Speedwriting was originated by Miss Emma B. Dearborn, who has taught practically all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College, and the University of California.

Details Free

Let us tell you more about Speedwriting—why experienced stenographers and beginners alike are adopting it—how both executives and students everywhere are increasing their efficiency through its use. Send for Free Booklet—now—it shows what Speedwriting can do for YOU!

One of the most disastrous upsets in the color field, from the point of view of the dyeing and fabric industries, was the vogue for black at the close of the World War. It might possibly have been foreseen, but the custom of wearing mourning has passed so largely in the United States and in many parts of Europe that the manufacturers forgot that it still holds general sway in France. With nearly every woman in France suffering the loss of some male relative, the whole country was submerged in somber hues and, ironically enough, black became the fashion for the world.

A fashionable wedding may set a style, but there are scores of fashionable weddings in a year and not one in a hundred, or perhaps a thousand, will strike that mysterious nerve which sets the world of fashion pulsating.

In a general sense it is entirely true that Paris is the dictator of fashions, and has been since the days when Catherine de' Medici created a steel corset and doomed twenty generations of her sisters to distorted figures and a dozen maladies. But Paris today does her dictating with one eye on America. The French designer is more concerned with what will appeal to Mademoiselle Columbia than to her cousin Marianne. The reason is the soundly practical one that more American dollars are spent in Paris every year than French centimes, and it takes a bushel of centimes to make a dollar in these days.

Thousands of American buyers, representing every important department store in the United States, sail for Paris three or four times a year to attend the openings of the big *couturiers*. Their purchases run into many millions of dollars, but a point that is little understood is that they buy models, not stocks.

THE curious anomaly exists that while French taste in design and line governs the world of women, French taste in the costume itself differs sharply from American taste. Very few French garments are sold in American stores. They are imported solely as models from which the American garment manufacturers work. A dozen Paris creations may contribute to an American composite. A sleeve is taken from this dress, a bit of embroidery from that, a neck line from a third, and so on. The general type of garment that will be the season's vogue is determined by Paris, but the individual costume is produced in America.

Even more curious is the fact that while Paris sets the style in shoes, American women cannot wear French shoes. Far be it from me to hazard any opinion as to whether American women's feet are smaller, larger, more beautiful, or more ugly than those of Mademoiselle from Armentières, but it is an undoubted fact that there is a difference. American women who visit Paris complain loudly that French coffee and French shoes alike give them a pain.

But if the French foot is different, French style remains supreme, and every new French design in shoes is quickly copied in America. The fashion sleuths who haunt the cafés, race courses, and resorts of France keep as keen an eye on Mademoiselle's feet as they do on her upperworks.

PERIODICALLY outcries are raised, not only in America, but in England, Germany, and other European countries, against French domination in fashions; but they are about as effective as protests against the public's preferring musical comedy to Shakespeare. After the war, both England and Germany made strenuous and organized efforts to divert to London and Berlin the flood of American gold which fashion supremacy draws but these campaigns were futile. The Germans, in particular, were desperately eager to attract American buyers across the Rhine. They failed, and the extent of their failure can be judged by the fact that many German manufacturers today especially novelty manufacturers, are shipping goods to Paris, where they are resold under French labels. The Germans are not alone in that little dodge. I recently saw a pair of shoes which an expert identified as the product of a Czechoslovakian factory, but which bore in gold letters the magic words "Paris, France." The omission of the words "made in" would never have been noticed by the average purchaser.

The simple truth is that artistry in line and color is an essential part of French genius. It is not a question of the occasional production of great painters, sculptors, musicians, or other masters of art, but of a racial gift which is evidence to an astonishing degree in nearly every son and daughter of *La Belle France*.

"Mr. Chairman, Ladies and Gentlemen"

(*Continued from page 17*)

insisted that he come up front to talk. Finally, the man walked up to the platform, said, 'I second the motion,' and sat down amid laughter at my expense.

"I find that women are usually harder to report than men, because they talk more rapidly and less distinctly. Stage fright is more common with women than with men, as women are not so accustomed to speaking in public.

"'Billy' Sunday is about the hardest person I ever had to report. Not only is he an unusually rapid speaker, but sometimes he will crouch in a corner, and the next minute jump on a chair without warning, or take other unconventional positions. Often I record the gestures of speakers as well as their words, and include them in the transcript. I was stumped when it came to 'Billy' Sunday. I considered myself fortunate to get down what I heard.

"On the other hand, the five President I have reported have been very easy to take," Mrs. Sweeney continued in a matter-of-fact tone. "Practically all of Presidents when speaking in public have their remarks prepared in advance. Even though they may speak without notes before them, they already have the matter written and well arranged. This is true of many men in public life.

Digitized by Google
Original from UNIVERSITY OF IOWA

"The late President Wilson was very holarly, and his enunciation was perct. He was an excellent speaker to ike.

"I reported Mr. Roosevelt shortly bere his death, almost the last time he peared in public.

"A very fascinating thing about Mr. aft is his laugh. When he starts to tell funny story he gives warning with a culiar little sound that is a cross beeen a chuckle and a squeal. That gets u in the mood to laugh whether the ke is funny or not.

"The late President Harding also was ry genial; he talked in a slow, smooth, liberate fashion. President Coolidge, o, talks with deliberation, but his prounced Yankee twang makes him a tle more difficult at times to report than e others.

"You never can tell how people are ing to talk by looking at them. Often ose who don't seem at all intellectual ll speak with an eloquence that is eath-taking. A single speaker in a owded half-hour may pour forth the acmulated knowledge of a lifetime.

"Some speakers will give the same adess over and over again, at times witht variation. I have extra copies of any such speeches in my files, and when e of these is scheduled on the program, merely go through the motions of taking it down.

"Naturally, when a man is speaking he es all sorts of expressive pantomime to lp make his meaning clear, or to get his int across. Sometimes a shrug of the oulders or a lift of the eyebrow will say re than could be packed into a lengthy ragraph. Often I have to supply the ssing verbs and phrases that are imed by gestures. I try to enter into the rit of each speaker and not be merely a chine to record words. The organizan seldom wants a verbatim report like irt testimony, with every error in gramr included, but one that gives a comte picture of the convention, with the mishes removed. Such a report should y along smoothly, in good English, and retain the imprint of each speaker's sonality.

CONVENTION reporter early develops an 'ear for words' or he is thless. In time he becomes an expert ord derivation and syllabic structure. 'Trichoepithelioma' strikes his ear. doesn't need to know medical terms to rd correctly 'trik-o-ep-ith-e-le-o-ma.' gets it exactly as it sounds. Then n he transcribes his notes he consults proper reference book, to insure corspelling.

Proper names are hard to deal with. ple are annoyed when their names are rrectly spelled, or their initials are ng, even if they mumble so that henson' sounds like 'Steenson.' In halls where there is no registration nd I do not know the speakers, I have carry numbered cards so that they be filled in with the speakers' names connections. Some organizations furmembership rosters and this helps at deal.

he recent general use of microphones rge halls has been a godsend to rers. Many after-dinner and banquet hes are now broadcast. This re-

Campbell's Electric Exerciser

Made in 2 Models —Floor Model and Portable Model

Are You Troubled with Overweight?

Would you like to keep in good physical condition without heavy exercise? Here is the practical solution to your problem. Without physical exertion you can still keep legs and arms supple—keep the entire body system toned up in glorious health. The Campbell Electric Exerciser

Massages—Vibrates—Keeps Weight Down

Floor model, mounted on rubber feet—stands securely without permanently attaching to floor. Portable model, easily and simply attached to window sill or may be placed on any table top and securely held in place. Both models are quiet, safe and have all moving parts enclosed.

POPULAR PRICE. Write and let us quote you our SPECIAL OFFER which brings you either model at surprisingly low cost.

THE WILLIAM CAMPBELL COMPANY
413 Union Avenue Alliance, Ohio

quires that the speaker stay in one spot and talk distinctly into the microphone, which makes it vastly easier for the reporter.

"Defective speech is hard to record, but I don't have to contend with that a great deal. One man had great difficulty in speaking at a certain meeting. He struggled along for a while and then announced that he had just bought a set of false teeth and didn't feel at home with them. He calmly removed them and proceeded unabashed until he finished what he had to say.

"Distinguished foreigners cause us a lot of agony. Their English is good, but they give their native inflection to our words, which makes them almost unrecognizable. In unusually difficult cases, an interpreter sometimes comes to their rescue, fortunately for us. Otherwise we have to use our intuition on the English words, and a French or German dictionary on the foreign words sandwiched in between."

MRS. SWEENEY is more than a star reporter of conventions. She organized and is president of the Master Reporting Company, a large convention-reporting bureau. During one year her force of twenty-five reporters has recorded more than eleven hundred separate conventions and meetings. One assignment was a conference lasting four weeks. Another required the full-time services of twenty reporters for five consecutive days. On the other hand, many meetings were for short periods, several being after-luncheon sessions of a half hour's duration.

The morning mail may bring to her offices in New York, Cleveland, and Chicago requests to report just around the corner or across the continent. A single day's work may find her reporters in Los Angeles, St. Louis, New Orleans, and Toronto. In short, wherever a group meets to talk about itself, you are likely to find Fanny Sweeney or one of her force present as the official recorder of proceedings.

Outside of her reporting work, Mrs. Sweeney's endeavors are directed largely to personnel matters. She has been very successful in training other reporters.

"It is an expensive procedure to train a person for convention reporting," she explained, "so I use judgment in my selection. I frankly tell an applicant at the first interview that unless he feels reasonably sure he is going to train intensively for a year, I am not interested in adding him to our staff.

"A convention reporter must have good health, first of all, or he will be unable to withstand the nervous tension he is subjected to under the uncertain hours of work. Of course, a high degree of technical skill is the prime requisite.

"After that, I look for adaptability. I feel that the reporter should be versatile enough and have sufficient human interest to lose his identity for the time being and vicariously become a member of the group that he is covering.

"Needless to say, failure to report on time is the unforgivable sin in convention reporting work. Obstacles bob up, but I count on the ingenuity of the reporter to get around them.

"One of our Chicago staff was sent for a convention of the National Retail Hardware Association in Indianapolis. Being unusually busy, she arranged

No More Razor Blades to Buy!

AMAZING New Invention guarantees you 365 slick shaves a year—makes old blades keener than new! KRISS-KROSS marks such a radical advance in new shaving comfort and economy that it deserves to be called much more than a stropper. Rather it is a super-stropper—a blade rejuvenator! Almost literally, it makes a new blade out of an old one every day and makes hundreds of keen, quick shaves blossom where only one grew before.

KRISS-KROSS strops your blade (any make) on the diagonal just like a master barber. Eight "lucky leather grooves" do the trick in 11 seconds. Automatic flip-flop action. Pressure decreases automatically every stroke. Nickel jig flies up to notify you when your blade is ready with the *keenest cutting edge that steel can take!*

AGENTS!

Make big money as KRISS-KROSS representative. J. C. Kellogg made $200 in 7 days. H. King earned $66 in one day.
Spare-time workers, office and factory men make $5-$10 extra a day just showing KRISS-KROSS to friends. Wonderful new "Permanent Income Plan." Check bottom of coupon and mail at once!

Unusual Offer

Right now—to introduce KRISS-KROSS stropper, I will give you a surprising new kind of razor without exra charge. Really 3 razors in one. Instantly adjustable to any shaving position. A flip of the finger makes it (1) T-shape; (2) straight (old style) or (3) diagonal (new way). Gives a *sliding* instead of *pulling* stroke. Simply zips through the toughest crop of whiskers. Made of *rustless* metal. Comes with 5 special-process blades and is entirely unlike anything you ever saw before.

Get Details!

This astonishing offer is limited. Send the coupon for information on amazing KRISS-KROSS inventions to-day. They are sold only through authorized representatives—(or direct from the factory)—and are even more remarkable than I can tell you here. Clip the coupon today for full details. No obligation.

ROSE TREE

ONE TREE $1.00
3 for $2.50
PREPAID

The ROSE TREE OF CHINA (Prunus Triloba) is the most beautiful and showy of all small trees. It begins to bloom before the leaves appear in the spring, being literally covered with very double rose-like pink flowers. As an ornament from early spring until late fall it has few equals. This symmetrically formed, graceful little tree grows usually to a height of but 8 feet, and is attractive as a specimen or when planted in groups or shrub border. It is hardy and easily grown, and no lawn is so small that room can not be found for at least one of these wonderful trees. Many who have seen it declare it to be the most beautiful tree they have ever seen. The rose-like blossoms make fine cut flowers.

Choice trees for **$1.00 each; 3 for $2.50,** by parcel post, postpaid.

SPECIAL For **50c** extra we will include three small **TULIP TREES**—fine ornamental shade trees with tulip-like flowers.

Our stock of trees will not last long at these low prices. Order now, and state when you want trees shipped. CATALOG FREE. **BURGESS SEED & PLANT CO., 342 T. R., GALESBURG, MICH.**

in what was going on. It really seemed a shame to have such an elaborate dinner when Mr. Edison drank only a glass of milk.

"I believe that he talks the least of any big man in America. Everyone waited expectantly for him to speak over the radio at a meeting of the National Electric Light Association. He finally consented, arose, and said, 'I thank you.'

"Several years ago on National Defense Day we were employed to make a test of the telephone system of the country for the American Telephone and Telegraph Company. We heard conversations from San Francisco, Chicago, and other points. They were conveyed to a loud speaker so that we could take them. General Pershing was one of the many speakers who took part.

"Then we have reported auction sales, burlesque shows, and amateur theatricals to record how the jokes actually sounded and how they got over. One rather unusual meeting we regularly report is that of the John Moore Association, which is composed of the descendants of John Moore, who settled in this country during Revolutionary times.

"We have taken speeches direct at broadcasting stations as well as those transmitted over the radio itself. If there is any form of convention or meeting we haven't covered, I'd like to know what it is.

"HOW did I happen to organize a reporting company? It didn't just 'happen.' It developed in a gradual sort of way. In the fall of 1914, after winning the gold medal of the National Shorthand Reporters' Association, I decided to try my wings at reporting lectures and sermons, and in that way capitalize the speed and accuracy I had acquired. The next step was to tackle a convention; the next, to hire assistants; finally, to incorporate in order to handle the financial end more efficiently.

"You see, I had been a stenographer for two years prior to studying machine shorthand, holding several rather mediocre positions here in New York. At seventeen I was earning twelve dollars a week as a secretary, and that twelve dollars represented a substantial percentage of the family income.

"Then, one day, the head of the business school I attended asked me to w ness the demonstration of a new sho hand machine which made notes in a co of letters instead of hooks, dots, a curves. Here was a way to increase speed, I thought. Hypnotized by newness of the idea, and by the glow speech of the salesman, I came out of daze to find myself bound by contract purchase one of the little machines had signed on the dotted line.

"'Ten dollars every month for whole months!' I thought. 'Sha ever live long enough to get it paid fo

Fanny Sweeney did live long eno as we know.

BUT before the ten months were good many things had happened the first place, as soon as her new ma arrived, she began practicing desper to get speed. At the end of three or months, she had attained such high s that the manufacturers of her ma employed her to demonstrate it in pl So well did she acquit herself as a de strator that her employers proceed give her ten months' intensive tra under an expert teacher of shorthan typewriting. The result was tha won international honors and estab several world records for accuracy contest held by the National Shor Writers' Association.

Fortified by the laurels she had wo by a growing faith in herself, the woman lost no time in launching an prise which would enable her to ca her reputation and her skill. She few hundred dollars saved up. Wi she rented desk space in the heart York's office district and hung o shingle, or what amounted to tha

As her assignments increased, she ally built up a hand-picked staff she trained in her methods. Wh New York organization justifi move, she opened a branch in Cl and later one in Chicago. Her c has grown, under Mrs. Sweeney getic direction, from a struggling ual enterprise to a thriving corp

Lost Your Pep?

(*Continued from page 39*)

Anemic people can indulge in almost all forms of *moderate* exercise (note that I say moderate, not strenuous), provided they go about it gradually and rest frequently between periods of physical activity.

However, when a person is much emaciated and under-weight, and the hemoglobin is below seventy-five, I think it is best to begin the cure of anemia by taking a complete rest. Such people should, as a general rule, go to bed for from four to six weeks while they fatten up on a rich milk and orange juice diet, taken, of course, in connection with such other treatment as their physician might suggest. They are then in better physical condition to start an active outdoor life. But there is no earthly reason why the rest cure shouldn't be taken out of doors. Beds are movable objects.

I should like to tell you how got cured of her anemia.

She was thirty-five, highly depressed, and extremely anemic. her hemoglobin was down to six her cure was effected in three wee middle of the winter, and right in of Chicago.

Twice a week she had intrav jections of iron, and she was ex ultra-violet rays, by means of th light, three times a week. Her diet one pound of pecan kernels and tw of dates or figs weekly. She dr one quart of milk, to which was a pint of cream. These were the tening foods that she required b her emaciated condition, and t given in addition to her regul However, these extra foods w

how they're kept free from corns

NAOMI JOHNSON'S
Famous Feet

"Every one has to work 'under pressure' now and then. But why work under the pressure of a corn . . . with Blue-jay so handy?" . . . asks Naomi Johnson, lovely "Vanities" girl.

• • •

Ending a corn with Blue-jay is gentle and sure. No danger of infection, as with self-paring. No guessing how much to use. Each Blue-jay has just the right amount of the soothing medicant to remove the corn. Relief is instant . . . for the cushiony pad stops shoe-pressure and pain at once. And shortly, the corn makes its adieu. Standard for 29 years; improved and finer than ever today. At all drug stores. *For calluses and bunions, ask for the larger size Blue-jay.*

Blue-jay

THE SAFE AND GENTLE WAY TO END A CORN

AGENTS New Fast Seller Pays Big Profits

Here is a most amazing little device for the home. It sweeps floors, dusts walls, scrubs, mops floors, and washes and dries windows. Cleans autos. Looks like $20 outfit but doesn't cost one-fourth that much. Pays over half profit. Mr. Paul, Fla., sold 101 devices in one week. Mrs. Wright, Ga., sold 22 in one day. Our plan furnishes sample without any cash deposit.

New Kind Of Can Opener

WORKS LIKE MAGIC

LOOK! Smooth Slick Clean

No hacking or stabbing with Speedo. No sharp edges. You can't cut yourself. No danger of infection. All food pours right out of can. Speedo is truly a wonder-worker!

AT LAST! An automatic, simple little can opening machine for the home! This revolutionary invention in only a few short months has banished old can openers from over 200,000 kitchens. And no wonder! Imagine an amazing lifetime device that holds the can, cuts the top out like a "lid" inside the rim, flips up the lid so you can grab it, then hands you back the can without a drop spilled, without a single sharp edge or corner to snag your fingers . . . and does all this in a few seconds at a mere twist of the wrist.

So . . . No Wonder Agents Make Big Money

No wonder many agents, both men and women, are making $6 to $12 in an hour, full or part time. You get worthwhile commissions on every sale. Exclusive Territories. Sales training. Wonderful complete selling outfit. And real money-making plans either taking C. O. D. orders or selling and delivering.

So if interested in agent's money-making proposition write at once for Free Outfit and Free Test Offers. (Those wanting one only for their own homes simply ask for limited special advertising offer.) Write today.

forms. It is very dangerous to take an iron solution, as it injures the enamel of the teeth. But it can be taken in pill form, and, generally speaking, I have found this form very helpful in cases of chlorosis. But it has been my observation that iron is valuable when given directly into the vein (intravenous injection).

In the first part of this article I mentioned pernicious anemia. Little is known about this disorder, which is an anemia of middle life. It is generally believed to be the result of chronic infection of some sort.

While this form of anemia is rare, and is supposed to be incurable, I have seen cases get well.

In pernicious anemia there is seldom loss of weight, but the face has a peculiar pallor, a waxy, stuffy appearance. And the curious part of it is that the weight may remain good even when the disease advances to the point where there is great weakness and considerable prostration.

In pernicious anemia the color of the red blood cells may appear to be normal. The trouble is in the diminished number of the cells and in their abnormality.

Our attention in recent years has been called to the fact that people who suffer from pernicious anemia later in life are known to have had deficient hydrochloric acid in the stomach in their earlier years. I am beginning to incline to the view that the absence of this acid in the stomach has something to do with producing pernicious anemia. Hydrochloric acid is a great disinfectant, helping to keep the intestinal microbes away from the region of the stomach. Its absence allows infection gradually to ascend higher and higher in the digestive canal, and the resultant poisons, circulating in the blood over a long period of years, gradually produce a demoralization of the blood-making mechanism of the body.

If repeated examination of the stomach proves that hydrochloric acid is absent or deficient, dilute hydrochloric acid should be given in connection with each meal.

IT SEEMS to me that the thing for everyone to bear in mind is the *prevention* of anemia by careful selection of diet and by living as much as possible out of doors. Just because you think anemia of the secondary type is nothing much to worry about, do not let it get a grip on you. Look out for the early earmarks.

The object of this article is merely to make you more intelligent on the subject. As I have already said, I cannot prescribe for you individually, or tell you the particular cause of your anemia (if you happen to be in an anemic condition). That's up to your doctor. After all, prevention is better than cure, and who wants to "enjoy poor health"?

WHAT'S THE GREATEST MIRACLE of modern times? According to W. O. Saunders, it's the rejuvenation of the middle-aged woman. Time was when a woman of forty was settled down; nowadays she is just beginning to step out. In "Boob Husbands" Saunders discourses most amusingly on the peppiness of middle-aged wives and the hardships endured by husbands who try to keep pace with them.

The Bishop Murder Case

(*Continued from page 48*)

of terror arising from these strange murders had reached such proportions that he could not, in view of the duty he owed to the community, refrain from saying that he believed the case to be closed. Thus, while no open accusation of guilt was made against Pardee, the Bishop murders were no longer regarded as a source of menace to the city, and a sigh of relief went up from all quarters.

In the Manhattan Chess Club there was probably less discussion of the case than anywhere else in New York. The members felt perhaps that the club's honor was in some way involved. Or there may have been a sense of loyalty toward a man who had done as much for chess as Pardee. But, whatever the cause of the club's avoidance of the subject, the fact remained that its members attended, almost to a man, Pardee's funeral. I could not help admiring this tribute to a fellow chess-player; for, whatever his personal acts, he had been one of the great sustaining patrons of the royal and ancient game to which they were devoted.*

MARKHAM'S first official act on the day after Pardee's death was to secure Sperling's release. The same afternoon the Police Department moved all its records of the Bishop murders to the file marked "Shelved cases," and withdrew the guards from the Dillard house. Vance protested mildly against this latter step; but, in view of the fact that the Medical Examiner's post-mortem report had substantiated in every particular the theory of suicide, there was little that Markham could do in the matter. Furthermore, he was thoroughly convinced that the death of Pardee had terminated the case; and he scoffed at Vance's wavering doubts.

During the week following the finding of Pardee's body, Vance was restive and more *distrait* than usual. He attempted to interest himself in various matters, but without any marked success. He showed signs of irritability; and his almost miraculous equanimity seemed to have deserted him. I got the impression that he was waiting for something to happen. His manner was not exactly expectant, but there was a watchfulness in his attitude amounting at times almost to apprehension.

On the day following the Drukker funeral Vance called on Arnesson, and on Friday night accompanied him to a performance of Ibsen's "Ghosts"—a play which, I happened to know, he disliked. He learned that Belle Dillard had gone away for a month's visit to the home of a relative in Albany. As Arnesson explained, she had begun to show the effects of all she had been through, and needed a change of scene. The man was plainly unhappy over her absence, and confided to Vance that they had planned to be married in June. Vance also learned from him that Mrs. Drukker's will had left everything to Belle Dillard and the Professor in

***Pardee left in his will a large sum for the furtherance of chess; and in the autumn of that same year, it will be remembered, the Pardee Memorial Tournament was held at Cambridge Springs.**

How to have Lovely, Lustrous Hair—*always!*

Does your hair ever seem dull to you—drab, lifeless? Have you not wished for something that would keep it looking prettier—richer in tone?

The secret lies in proper shampooing! Not just soap-and-water "washings", but regular use of a shampoo that really *beautifies*—one that was created especially to improve dull hair and add that little something extra so often lacking.

If you really wish to make your hair bewitchingly lovely—just one Golden Glint Shampoo will show you the way! No other shampoo, anywhere, like it! Does more than merely *cleanse*. It gives your hair a "tiny-tint"—*a wee little bit*—not much—hardly perceptible. But what a difference it makes in one's appearance; that exquisite softness of tone that everyone admires! Millions use regularly! You'll like it! There's a youth-imparting touch—a beauty specialist's secret in its formula. At your dealers', 25c, or send for free sample.

the event of her son's death—a fact which appeared to interest Vance unduly.

Had I known, or even suspected, what astounding and terrible things were hanging over us that week, I doubt if I could have stood the strain. For the Bishop murder case was not ended. The climactic horror was still to come; but even that horror, terrific and staggering as it proved, was only a shadow of what it might have been had not Vance reasoned the case out to two separate conclusions, only one of which had been disposed of by Pardee's death. It was this other possibility, as I learned later, that had kept him in New York, vigilant and mentally alert.

MONDAY, April 25, was the beginning of the end. We were to dine with Markham at the Bankers' Club. I noticed that when we met Markham in the rotunda of the Equitable Building he seemed troubled; and we were no more than seated in the club grill when he told us of a 'phone call he had received from Professor Dillard that afternoon.

"He asked me particularly to come to see him tonight," Markham explained; "and when I tried to get out of it, he became urgent. He made a point of the fact that Arnesson would be away the entire evening, and said that a similar opportunity might not present itself until it was too late. I asked him what he meant by that; but he refused to explain, and insisted that I come to his house after dinner. I told him I'd let him know if I could make it."

Vance had listened with the intensest interest.

"We must go there, Markham. I've been rather expecting a call of this kind. It's possible we may at last find the key to the truth."

"The truth about what?"

"Pardee's guilt."

Markham said no more, and we ate our dinner in silence.

At half past eight we rang the bell of the Dillard house, and were taken by Pyne direct to the library.

The old Professor greeted us with nervous reserve.

"It's good of you to come, Markham," he said, without rising. "Take a chair and light a cigar. I want to talk to you—and I want to take my time about it. It's very difficult. . . ." His voice trailed off as he began filling his pipe.

We settled ourselves and waited. A sense of expectancy invaded me for no apparent reason, except perhaps that I caught some of the radiation of the Professor's obviously distraught mood.

"I don't know just how to broach the subject," he began, "for it has to do, not with physical facts, but with the invisible human consciousness. I've struggled all week with certain vague ideas that have been forcing themselves upon me; and I see no way to rid myself of them but by talking with you. . . ."

He looked up hesitantly.

"I preferred to discuss these ideas with you when Sigurd was not present, and as he has gone tonight to see Ibsen's 'Pretenders'—his favorite play, by the way—I took the opportunity to ask you here."

"What do these ideas concern?" asked Markham.

"Nothing specifically. As I have said, they're very vague; but they have never-

State

theless grown fairly insistent. . . . So insistent, in fact," he added, "that I thought it best to send Belle away for a while. It's true that she was in a tortured state of mind as a result of all these tragedies; but my real reason for shipping her north was that I was beset by intangible doubts."

"Doubts?" Markham leaned forward. "What sort of doubts?"

Professor Dillard did not reply at once.

"Let me answer that question by asking another," he countered presently. "Are you wholly satisfied in your mind that the situation in regard to Pardee is exactly as it appears?"

"You mean the authenticity of his suicide?"

"That and his presumptive culpability."

Markham settled back contemplatively.

"Are *you* not wholly satisfied?" he asked.

"I can't answer that question." Professor Dillard spoke almost curtly. "You have no right to ask me. I merely wanted to be sure that the authorities, having all the data in their hands, were convinced that this terrible affair was a closed book." A look of deep concern came over his face. "If I knew that to be a fact, it would help me to repulse the vague misgivings that have haunted me day and night for the past week."

"And if I were to say that I am not satisfied?"

THE old Professor's eyes took on a distant, distressed look. His head fell slightly forward, as if some burden of sorrow had suddenly weighted him down. After several moments he lifted his shoulders and drew a deep breath.

"The most difficult thing in this world," he said, "is to know where one's duty lies; for duty is a mechanism of the mind, and the heart is forever stepping in and playing havoc with one's resolutions. Perhaps I did wrong to ask you here; for, after all, I have only misty suspicions and nebulous ideas to go on. But there was the possibility that my mental uneasiness was based on some deep, hidden foundation of whose existence I was unaware. . . . Do you see what I mean?" Evasive as were his words, there was no doubt as to the disturbing mien of the shadowy image that lurked at the back of his mind.

Markham nodded sympathetically.

"There is no reason whatever to question the findings of the Medical Examiner." He made the statement in a forced, matter-of-fact voice. "I can understand how the proximity of these tragedies might have created an atmosphere conducive to doubts. But I think you need have no further misgivings."

"I sincerely hope you're right," the professor murmured; but it was clear he was not satisfied. "Suppose, Markham—" he began, and then stopped. "Yes, I hope you're right," he repeated.

Vance had sat through this unsatisfactory discussion smoking placidly; but he had been listening with unwonted concentration, and now he spoke:

"Tell me, Professor Dillard, if there has been anything—no matter how indefinite—that may have given birth to your uncertainty."

"No—nothing." The answer came

DANDRUFF

A Sure Way to End It

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need.

This simple remedy has never been known to fail.

SUCCESS THROUGH LAW

"I find that nearly all positions commanding a salary of $10,000.00 a year or more are filled by men who have studied law," writes a prominent Eastern manufacturer. Whether you ever intend to practice law or not, spend your spare time at home training your mind to deal with problems from the sound, practical standpoint of the trained attorney. *The lawyer is a leader of men*—in and out of business. Standard Oil of Indiana, U. S. Steel Corp., Packard Motor Car Co., hundreds of corporations are headed by legally trained men. Law is the basis of all business—large or small. A full law course leading to the degree of LL. B. or shorter business law course under LaSalle guidance is available for your home study. Full and up-to-date texts and modern law library. Cost low—terms easy. Write today for our free but valuable books "Law Guide" and "Evidence." Act Now.

quickly and with a show of spirit. "I have merely been wondering—testing every possibility. I dared not be too sanguine without some assurance. Pure logic is all very well for principles that do not touch us personally. But where one's own safety is concerned the imperfect human mind demands visual evidence."

"Ah, yes." Vance looked up, and I thought I detected a flash of understanding between these two disparate men.

Markham rose to make his adieu; but Professor Dillard urged him to remain a while.

"Sigurd will be here before long. He'd enjoy seeing you again. As I said, he's at 'The Pretenders,' but I'm sure he will come straight home. . . . By the way, Mr. Vance," he went on, turning from Markham, "Sigurd tells me you accompanied him to 'Ghosts' last week. Do you share his enthusiasm for Ibsen?"

A slight lift of Vance's eyebrows told me that he was somewhat puzzled by this question; but when he answered there was no hint of perplexity in his voice.

"I have read Ibsen a great deal; and there can be little doubt that he was a creative genius of a high order, although I've failed to find in him either the esthetic form or the philosophic depth that characterizes Goethe's 'Faust,' for instance."

"I can see that you and Sigurd would have a permanent basis of disagreement."

Markham declined the invitation to stay longer, and a few minutes later we were walking down West End Avenue in the brisk April air.

"You will please take note, Markham, old dear," observed Vance, with a touch of waggishness, as we turned into Seventy-second Street and headed for the park, "that there are others than your modest collaborator who are hag-ridden with doubts as to the volition of Pardee's taking-off. And I might add that the Professor is not in the least satisfied with your assurances."

"His suspicious state of mind is quite understandable," submitted Markham. "These murders have touched his house pretty closely."

"THAT'S not the explanation. The old gentleman has fears. And he knows something which he will not tell us. It was as if he were trying to convey some suggestion to us without actually putting it into words. We were supposed to guess. Yes! That was why he insisted that you visit him when Arnesson was safely away at an Ibsen revival—"

Vance ceased speaking abruptly and stood stock-still. A startled look came in his eyes.

"Oh, my aunt! Oh, my precious aunt! So that was why he asked me about Ibsen! . . . My word! How unutterably dull I've been!" He stared at Markham, and the muscles of his jaw tightened. "The truth at last!" he said, with impressive softness. "And it is neither you nor the police nor I who has solved this case: it is a Norwegian dramatist who has been dead for twenty years. In Ibsen is the key to the mystery."

Markham regarded him as though he had suddenly gone out of his mind; but before he could speak Vance hailed a taxicab.

"I'll show you what I mean when we reach home," he said, as we rode east through Central Park. "It's unbelievable, but it's true. And I should have guessed it long ago; but the connotation of the signature on those notes was too clouded with other possible meanings. . . ."

"If it were midsummer instead of spring," commented Markham wrathfully, "I'd suggest that the heat had affected you."

"I KNEW from the first there were three possible guilty persons," continued Vance. "Each was psychologically capable of the murders, provided the impact of his emotions had upset his mental equilibrium. So there was nothing to do but to wait for some indication that would focus suspicion. Drukker was one of my three suspects, but he was murdered; and that left two. Then Pardee to all appearances committed suicide, and I'll admit that his death made reasonable the assumption that he had been the guilty one. But there was an eroding doubt in my mind. His death was not conclusive; and that house of cards troubled me. We were stalemated. So again I waited, and watched my third possibility. Now I know that Pardee was innocent, and that he did not shoot himself. He was murdered—just as were Robin and Sprigg and Drukker. His death was another grim joke—he was a victim thrown to the police in the spirit of diabolical jest. And the murderer has been chuckling at our gullibility ever since."

"By what reasoning do you arrive at so fantastic a conclusion?"

"It's no longer a question of reasoning. At last I have the explanation for the crimes; and I know the meaning of the 'Bishop' signature to the notes. I'll show you a piece of amazing and incontrovertible evidence very soon."

A few minutes later we reached his apartment, and he led us straight to the library.

"The evidence has been here within arm's reach all the time."

He went to the shelves where he kept his dramas, and took down Volume II of the collected words of Henrik Ibsen.* Turning to "The Pretenders," he found the page where the *dramatis personæ* were given, and laid the book on the table before Markham.

"Read the cast of characters of Arnesson's favorite play," he directed.

Markham, silent and puzzled, drew the volume toward him; and I looked over his shoulder. This is what we saw:

HÅKON HÅKONSSON, *the King elected by the Birchlegs*
INGA OF VARTEIG, *his mother*
EARL SKULE
LADY RAGNHILD, *his wife*
SIGRID, *his sister*
MARGRETE, *his daughter*

900% Increase

C. W. Birmingham of Dayton, Ohio, was formerly a clerk in a shop, earning $15 a week. Within a short time he has increased his earnings 900% so that, today he is making $7500 a year. The book—"The Secrets of Modern Dynamic Salesmanship"—proved the first rung in his ladder to Success!

Raised His Pay

From $1200 to over $7200 a year, was the experience of F. J. Walsh (Springfield, Massachusetts), who gives N. S. T. A. full credit.

And They Started By Reading This Amazing Book!

Where Shall We Send Your Copy FREE!

A BOOK! Just seven ounces of paper and printer's ink—but it reveals facts and secrets that have led hundreds of men to success beyond their fondest expectations!

This vital book—"The Secrets of Modern Dynamic Salesmanship"—contains some surprising and little-known information about the highest paid profession in the world. And not only that—it outlines a simple plan that will enable almost any man to master scientific salesmanship without spending years on the road—without losing a day or dollar from his present position.

The men who have increased their earning capacities as a direct result of reading this remarkable book are numbered in the thousands. For example there is E. G. Kinze of Michigan. "The Secrets of Modern Dynamic Salesmanship" opened his eyes and he quickly raised his salary from $8 to $100 a week. And F. L. Real of West Virginia, a former cigar maker, stepped into a position that pays him $4600 a year drawing account alone.

Big Demand for Trained Salesmen

Salesmanship is just like any other profession. It has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet. And through an exclusive feature of N. S. T. A. training—you can acquire the equivalent of actual experience while studying.

City and traveling positions are open in hundreds of lines and for years thousands of employers have called on us to supply them with salesmen. Employment service is free to both employers and members, and thousands have secured positions through this Service.

Free to Every Man

If we were asking two or three dollars a copy for "The Secrets of Modern Dynamic Salesmanship" you might hesitate. But it is now FREE. See for yourself what it can do for you, too. No matter what your opinion is now, "The Secrets of Modern Dynamic Salesmanship" will give you a new insight into this fascinating and highly-paid profession. Mail the coupon now!

PETER, *her son, a young priest*
SIRA VILIAN, *Bishop Nicholas's chaplain*
MASTER SIGURD OF BRABANT, *a physician*
JATGEIR SKALD, *an Icelander*
BÅRD BRATTE, *a chieftain from the Trondhjem district*

But I doubt if either of us read beyond the line:

NICHOLAS ARNESSON, *Bishop of Oslo*

My eyes became riveted on that name with a set and horrified fascination. And then I remembered. . . . *Bishop Arnesson* was one of the most diabolical villains in all literature—a cynical, sneering monster who twisted all the sane values of life into hideous buffooneries.

XXIV

THE LAST ACT

(*Tuesday, April 26th; 9 a. m.*)

WITH this astounding revelation the Bishop murder case entered its final and most terrible phase. Heath had been informed of Vance's discovery; and it was arranged that we should meet in the District Attorney's office early the following day for a counsel of war.

Markham, when he took leave of us that night, was more troubled and despondent than I had ever seen him.

"I don't know what can be done," he said hopelessly. "There's no legal evidence against the man. But we may be able to devise some course of action that will give us the upper hand. . . . I never believed in torture, but I almost wish we had access today to the thumbscrew and the rack."

Vance and I arrived at his office a few minutes after nine the next morning. Swacker intercepted us and asked us to wait in the reception-room for a little while. Markham, he explained, was engaged for the moment. We had no more than seated ourselves when Heath appeared, grim, pugnacious, and sullen.

"I gotta hand it to you, Mr. Vance," he proclaimed. "You sure got a line on the situation. But what good it's going to do us I don't see. We can't arrest a guy because his name's in a book."

"We may be able to force the issue some way," Vance rejoined. "In any event, we now know where we stand."

Ten minutes later Swacker beckoned to us and indicated that Markham was free.

"Sorry to have kept you waiting," Markham apologized. "I had an unexpected visitor." His voice had a despairing ring. "More trouble. And, curiously enough, it's connected with the very section of Riverside Park where Drukker was killed. However, there's nothing I can do about it. . . ." He drew some papers before him. "Now to business."

"What's the new trouble in Riverside Park?" asked Vance casually.

Markham frowned.

"Nothing that need bother us now. A kidnaping, in all likelihood. There's a brief account of it in the morning papers. A child disappeared from the playground yesterday after talking with an unknown man. Her father came here to solicit my help. But it's a job for the Bureau of Missing Persons; and I told him so. —Now, if your curiosity is appeased—"

"Oh, but it isn't," persisted Vance. "I simply must hear the details. That section of the park fascinates me strangely."

Markham shot him a questioning glance through lowered lids.

"Very well," he acquiesced. "A five-year-old girl, named Madeleine Moffat, was playing with a group of children at about half past five last evening. She crawled up on a high mound near the retaining wall, and a little later, when her governess went to get her, thinking she had descended the other side, the child was nowhere to be found. The only suggestive fact is that two of the other children say they saw a man talking to her shortly before she disappeared; but, of course, they can give no description of him. The police were notified, and are investigating. And that's all there is to the case so far."

"'Madeleine.'" Vance repeated the name, musingly. "I say, Markham; do you know if this child knew Drukker?"

"Yes!" Markham sat up a little straighter. "Her father mentioned that she often went to parties at his house. . . ."

"I've seen the child." Vance rose and stood, hands in pockets, gazing down at the floor. "An adorable little creature . . . golden curls. She brought a handful of flowers for Drukker the morning of his funeral. . . . And now she has disappeared after having been seen talking with a strange man. . . ."

"What's going on in your mind?" demanded Markham sharply.

Vance appeared not to have heard the question.

"Why should her father appeal to you?"

"I've known Moffat slightly for years—he was at one time connected with the city administration. He's frantic—grasping at every straw. The proximity of the affair to the Bishop murders has made him morbidly apprehensive. . . . But see here, Vance; we didn't come here to discuss the Moffat child's disappearance. . . ."

VANCE lifted his head: there was a look of startled horror on his face.

"Don't speak—oh, don't speak. . . ." He began pacing up and down, while Markham and Heath watched him in mute amazement. "Yes—yes; that would be it," he murmured to himself. "The time is right . . . it all fits. . . ."

He swung about and, going to Markham, seized his arm.

"Come—quickly! It's our only chance—we can't wait another minute." He fairly dragged Markham to his feet and led him toward the door. "I've been feeling something like this all week—"

Markham wrenched his arm free from the other's grip.

"I won't move from this office, Vance, until you explain."

"It's another act in the play—the last act! Oh, take my word for it." There was a look in Vance's eyes I had never seen before. "It's 'Little Miss Muffet' now. The name isn't identical, but that does not matter. It's near enough for the Bishop jest; he'll explain it all to the press. I probably beckoned the child to the tuffet and sat down beside her. And now she's gone—frightened away. . . ."

Markham moved forward in a sort

Digitized by Google Original from UNIVERSITY OF IOWA

aze; and Heath, his eyes bulging, leaped o the door. I have often wondered what ent on in their minds during those few conds of Vance's importunate urgings. id they believe in his interpretation of e episode? Or were they merely afraid ot to investigate, in view of the remote ssibility that another hideous joke had en perpetrated by the Bishop? Whatver their convictions or doubts, they acpted the situation as Vance saw it; and moment later we were in the hall, hasning toward the elevator. At Vance's ggestion we picked up Detective Tracy om the branch office of the Detective ureau in the Criminall Courts Building. "This affair is serious," he explained. Anything may happen."

WE EMERGED through the Franklin Street entrance, and in a few mines were on our way uptown in the Dict Attorney's car, breaking speed regutions and ignoring traffic signals. arcely a word was spoken on that mentous ride; but as we swung through e tortuous roads of Central Park, Vance id:

"I may be wrong, but we shall have to k it. If we wait to see whether the pars get a note, it'll be too late. We're not pposed to know yet; and that's our one ance. . . ."

"What do you expect to find?" Markm's tone was husky and a little uncern.

Vance shook his head despondently.

"Oh, I don't know. But it'll be someng devilish."

When the car drew up with a lurch in nt of the Dillard house Vance leaped out l ran up the steps ahead of us. Pyne wered his insistent ring.

"Where's Mr. Arnesson?" he dended.

"At the university, sir," the old butler lied; and I imagined there was fright his eyes. "But he'll be home for an y lunch."

"Then take us at once to Professor Dil-"

"I'm sorry, sir," Pyne told him, "but Professor is also out. He went to the ic Library—"

"Are you alone here?"

"Yes, sir. Beedle's gone to market."

"So much the better." Vance took hold he butler and turned him toward the stairs. "We're going to search the e, Pyne. You lead the way."

arkham came forward.

"But, Vance, we can't do that!"

nce wheeled round.

"I'm not interested in what you can do an't do. *I'm* going to search this e. . . Sergeant, are you with me?"

e was a strange look on his face.

"You bet your sweet life!" (I never Heath as much as at that moment.)

e search was begun in the basement. y hallway, every closet, every cupl and waste space was inspected. completely cowed by Heath's vineness, acted as guide. He brought and opened doors for us, and even sted places we might otherwise have ooked. The Sergeant had thrown lf into the hunt with energy, though sure he had only a vague idea as to ject. Markham followed us disapngly; but he, too, had been caught in veep of Vance's dynamic purposeful-

"I light a Lucky and go light on the sweets

That's how I keep in good shape and always feel peppy."

Al Jolson

Al Jolson,
Famous comedian and star of song.

Al Jolson as he appears in Warner Bros. Vitaphone success, "The Singing Fool"

Reach for a Lucky instead of a sweet.

Something sensible. "Better to light a Lucky whenever you crave fattening sweets." It brings to men the health and vigor that come with avoiding overweight. To women it offers a slender, fashionable figure.

20,679 physicians have stated that Lucky Strike is less irritating to the throat than other cigarettes. Very likely this is due to toasting which removes impurities. This same process, toasting, improves and develops the flavor of the world's finest tobaccos. This means that there is a flavor in Luckies which is a delightful alternative for the things that make you fat. That's why "It's Toasted" is your assurance that there's real health in Luckies—*they're good for you!*

Keep fit—reach for a Lucky instead of a fattening sweet. That's what many men have been doing for years. They know the evidence of prominent athletes whose favorite cigarette is Lucky Strike and who say Luckies steady their nerves and do not impair their physical condition.

A reasonable proportion of sugar in the diet is recommended, but the authorities are overwhelming that too many fattening sweets are harmful and that too many such are eaten by the American people. So, for moderation's sake we say:—

"REACH FOR A LUCKY INSTEAD OF A SWEET."

"It's toasted"

No Throat Irritation-No Cough.

Bridge at Avignon built about the year 1180

HOW COULD IT BE BETTER?

COULD a grave vault have a better record than that of giving unfailing satisfaction over a quarter of a century?

Could a vault, to insure protection, have as its basic principle of construction anything better than an immutable law of Nature (the diving bell principle)?

Could there be a better material for a grave vault than metal, which is not porous?

Could higher quality, more rust-resisting material be used than 12 gauge Keystone Copper Steel or Armco Ingot Iron (both being specially processed for Clark) and Solid Copper?

Could there be greater care in workmanship than as shown by the double-welding of seams, oxy-acetylene on the outside and electric on the inside, thus flowing the edges into solid metal, needing no putty or filler?

Could the integrity of manufacture be better demonstrated than by the submersion test of every Clark Vault under 5000 pounds of water?

Supreme quality alone has built the leadership of the Clark Grave Vault. Supreme quality alone is continuing it. That is why leading funeral directors recommend the Clark and give a 50-year guaranty with each one.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT COMPANY
Columbus, Ohio
Western Office and Warehouse, Kansas City, Mo.

CLARK

GRAVE VAULT

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

ness; and he must have realized that Vance had some tremendous justification for his rash conduct.

Gradually we worked our way upward through the house. The library and Arnesson's room were gone over carefully. Belle Dillard's apartment was scrutinized, and close attention was given to the unused rooms on the third floor. Even the servants' quarters on the fourth floor were overhauled. But nothing suspicious was discovered. Though Vance suppressed his eagerness, I could tell what a nervous strain he was under by the tireless haste with which he pushed the search.

Eventually we came to a locked door at the rear of the upper hall.

"Where does that lead?" Vance asked Pyne.

"To a little attic room, sir. But it's never used—"

"Unlock it."

The man fumbled for several moments with his bunch of keys. "I don't seem to find the key, sir. It's supposed to be here. . . ."

"When did you have it last?"

"I couldn't say, sir. To my knowledge, no one's been in the attic for years."

Vance stepped back and crouched.

"Stand aside, Pyne."

When the butler had moved out of the way Vance hurled himself against the door with terrific force. There was a creaking and straining of wood; but the lock held.

Markham rushed forward and caught him round the shoulders.

"Are you mad!" he exclaimed. "You're breaking the law."

"The law!" There was scathing irony in Vance's retort. "We're dealing with a monster who sneers at all law. You may coddle him if you care to, but I'm going to search that attic if it means spending the rest of my life in jail.—Sergeant, open that door!"

Again I experienced a thrill of liking for Heath. Without a moment's hesitation he poised himself on his toes and sent his shoulders crashing against the door's panel just above the knob. There was a splintering of wood as the lock's bolt tore through the molding. The door swung inward.

Vance, freeing himself from Markham's hold, ran stumbling up the steps with the rest of us at his heels. There was no light in the attic, and we paused for a moment at the head of the stairs to accustom our eyes to the darkness. Then Vance struck a match and, groping forward, sent up the window shade with a clatter. The sunlight poured in, revealing a small room, scarcely ten feet square, cluttered with all manner of discarded odds and ends. A thick coating of dust lay over everything.

VANCE looked quickly about him, and an expression of disappointment came over his face.

"This is the only place left," he remarked, with the calmness of desperation.

After a more careful scrutiny of the room, he stepped to the corner by the little window and peered down at a battered suitcase which lay on its side against the wall. I noticed that it was unlatched and that its straps hung free. Leaning over, he threw the cover back.

"Ah! Here, at least, is something for you, Markham."

We crowded about him. In the suitcase was an old Corona typewriter. A sheet of paper was in the carriage; and on it had already been typed, in pale-blue élite characters, the two lines:

Little Miss Muffet
Sat on a tuffet

At this point the typist had evidently been interrupted, or for some other reason had not completed the Mother-Goose rhyme.

"The new Bishop note for the press," observed Vance. Then, reaching into the suitcase he lifted out a pile of blank paper and envelopes. At the bottom, beside the machine, lay a red leather note-book with thin, yellow leaves. He handed it to Markham, with the terse announcement:

"Drukker's calculations on the quantum theory."

BUT there was still a look of defeat in his eyes; and again he began inspecting the room. Presently he went to an old dressing-table which stood against the wall opposite to the window. As he bent over to peer behind it he suddenly drew back and, lifting his head, sniffed several times. At the same moment he caught sight of something on the floor at his feet, and kicked it toward the center of the room. We looked down at it with astonishment. It was a gas mask of the kind used by chemists.

"Stand back, you chaps!" he ordered; and holding one hand to his nose and mouth he swung the dressing-table away from the wall. Directly behind it was a small cupboard door about three feet high, set into the wall. He wrenched it open and looked inside, then slammed it shut immediately.

Brief as was my view of the interior of the cupboard, I was able to glimpse its contents clearly. It was fitted with two shelves. On the lower one were several books lying open. On the upper shelf stood an Erlenmeyer flask clamped to an iron support, a spirit-lamp, a condenser tube, a glass beaker, and two small bottles.

Vance turned and gave us a despairing look.

"We may as well go: there's nothing more here."

We returned to the drawing-room, leaving Tracy to guard the door to the attic.

"Perhaps, after all, you were justified in your search," acknowledged Markham, studying Vance gravely. "I don't like such methods, however. If we had found the typewriter—"

"Oh, that!" Vance, preoccupied and restless, went to the window overlooking the archery range. "I wasn't hunting for the typewriter—or the note-book, either. What do they matter?" His chin fell forward on his breast, and his eyes closed in a kind of lethargy of defeat. "Everything's gone wrong—my logic has failed. We're too late."

"I don't pretend to know what you're grumbling about," said Markham. "But at least you've supplied me evidence of a sort. I'll now be able to arrest Arnesson when he returns from the university."

"Yes, yes; of course. But I was thinking of Arnesson, or the arrest of the culprit, or the triumph of the District Attorney's office. I was hoping—"

He broke off and stiffened.

Digitized by Google
Original from UNIVERSITY OF IOWA

"We're *not* too late! I didn't think far enough. . . ." He went swiftly to the archway. "It's the Drukker house we must search. . . . Hurry!" He was already half-running down the hall, Heath behind him, and Markham and I bringing up the rear.

We followed him down the rear stairs, across the archery-room, and out on the range. We did not know what was in his mind; but some of his inner excitation had been communicated to us, and we realized that only a vital urgency could have shaken him so completely out of his usual attitude of disinterest and calm.

When we came to the screen-porch of the Drukker house he reached through the broken wire netting and released the latch. The kitchen door, to my astonishment, was unlocked; but Vance seemed to expect this, for he unhesitatingly turned the knob and threw it open.

"Wait!" he directed, pausing in the little rear hallway. "There's no need to search the entire house. The most likely place. . . . Yes! Come along . . . upstairs . . . somewhere in the center of the house . . . a closet most likely . . . where no one could hear. . . ." As he spoke, he led the way up the rear stairs, past Mrs. Drukker's room and the study, and thence to the third floor. There were but two doors on this upper hall—one at the extreme end, and a smaller door set midway in the right wall.

VANCE went straight to the latter. There was a key protruding from the lock, and, turning it, he drew open the door. Only a shadowy blackness met our eyes. Vance was on his knees in a second, groping inside.

"Quick, Sergeant. Your flashlight." Almost before he had uttered the words, a luminous circle fell on the floor of the closet. What I saw sent a chill of horror over me. A choked exclamation burst from Markham; and a soft whistle told me that Heath too was appalled by the sight. Before us on the floor, in a limp, pathetic heap, lay the little girl who had bought flowers to her broken Humpty Dumpty on the morning of his funeral. Her golden hair was disheveled; her face was deathly pale, and there were streaks down her cheeks where the futile tears had welled forth and dried.

Vance bent over and put his ear to her heart. Then he gathered her tenderly in his arms.

"Poor Little Miss Muffet," he whispered, and, rising, went toward the front stairs. In the main lower hall he paused. "Unbolt the door, Sergeant."

Heath obeyed with alacrity, and Vance stepped out on the sidewalk.

"Go to the Dillards' and wait for me there," he flung back over his shoulder. And with the child clasped closely to his breast he started diagonally across Seventy-sixth Street to a house on which I could make out a doctor's name plate.

XXV

THE CURTAIN FALLS

(Tuesday, April 26; 11 a. m.)

TWENTY minutes later Vance rejoined us in the Dillard drawing-room.

"She's going to be all right," he announced, sinking into a chair and light-

THE *BUSINESS LEADERS* OF TODAY *are the* I. C. S. *students of yesterday*

W. H. Forse, Jr. *Former president, American Railway Accountants Association.* President, *Forse Manufacturing Company.* President, *Spinaway Manufacturing Company.*

If ever a man had to fight for success it was W. H. Forse, Jr. He started as an office boy at $5 a week and for eight long years after that tried vainly to find the work for which he was best suited.

He clerked in a dry goods store . . . he sold rope and woodenware . . . he tried conducting a retail grocery in a small town.

At the age of twenty-four, he decided to start over—to take up a course with the International Correspondence Schools and get into the one field that had always fascinated him . . . *accounting!*

As a result of this training Mr. Forse secured a position as clerk with the Union Traction Company of Anderson, Indiana. He soon showed such mastery of his work that he was made chief bookkeeper, then acting auditor, auditor, assistant treasurer, and then secretary-treasurer of the Union Traction Company and its subsidiaries.

Today W. H. Forse, Jr., is president of the Forse Manufacturing Company and of the Spinaway Manufacturing Company.

Thousands of other prominent executives pay tribute to the training they received from the International Correspondence Schools. The list includes Jesse G. Vincent, vice-president of the Packard Motor Car Company; Walter P. Chrysler, Chairman of the Board of the Chrysler Corporation; Frank E. Fehlman, former vice-president of Lord & Thomas, now vice-president of the Dorland Advertising Agency; Walter C. Allen, president of the Yale & Towne Lock Co., and others.

These men have found, as you will find, that the service of the International Correspondence Schools goes beyond the enrolment of students. The interest of the I. C. S. is the interest of a friend.

Our texts must be the best we can produce; our service prompt; our viewpoint ever forward-looking.

We want no student to stop. We want all students to finish their courses so that they may secure the practical reward that follows increased knowledge, and the satisfaction and strength that come of having mastered something worth while.

For that purpose the International Correspondence Schools were founded thirty-eight years ago. That is our mission today.

~ ~ because it can be relieved, easily and quickly with Sergeant's for the Hair. Every day—rub it into the scalp. Feel it glow. Every day, comb your hair with it. Avoid dry scalp and dry brittle hair. Avoid dandruff.

For fifty years, Sergeant's Mange Medicine has proven an effective treatment for dandruff and other hair and scalp complaints. After many years of research, Sergeant's chemists have refined this product so that it retains all the therapeutic qualities of mange medicine, but none of the disadvantages.

Ask your dealer for Sergeant's for the Hair—75c. Use it daily. Comb your hair with it. Use it weekly—rub it in. Keep handy bottle in a convenient place. Write for free booklet on treatment of hair. Polk Miller Products Corp., 2308 W. Broad Street, Richmond, Va.

Sergeant's for the HAIR

ing a cigarette. "She was only unconscious, had fainted from shock and fright; and she was half suffocated." His face darkened. "There were bruises on her little wrist. She probably struggled in that empty house when she failed to find Humpty Dumpty; and then the beast forced her into the closet and locked the door. No time to kill her, d' ye see. Furthermore, killing wasn't in the book. 'Little Miss Muffet' wasn't killed; merely frightened away. She'd have died, though, from lack of air. And *he* was safe: no one could hear her crying. . . ."

Markham's eyes rested on Vance affectionately.

"I'm sorry I tried to hold you back," he said simply. (For all his conventionally legal instincts, there was a fundamental bigness to his nature.) "You were right in forcing the issue, Vance. . . . And you too, Sergeant. We owe a great deal to your determination and faith."

Heath was embarrassed.

"Oh, that's all right, sir. You see, Mr. Vance had me all worked up about the kid. And I like kids, sir."

Markham turned an inquisitive look on Vance.

"You expected to find the child alive?"

"Yes; but drugged or stunned perhaps. I didn't think of her as dead, for that would have contravened the Bishop's joke."

Heath had been pondering some troublous point.

"What I can't get through my head," he said, "is why this Bishop, who's been so darn careful about everything else, should leave the door of the Drukker house unlocked."

"We were expected to find the child," Vance told him. "Everything was made easy for us. Very considerate of the Bishop, what? But, we weren't supposed to find her till tomorrow—after the papers had received the Little-Miss-Muffet notes. They were to have been our clue. But we anticipated the gentleman."

"But why weren't the notes sent yesterday?"

"It was no doubt the Bishop's original intention to post his poetry last night; but I imagined he decided it was best for his purpose to let the child's disappearance attract public attention first. Otherwise, the relationship between Madeleine Moffat and Little Miss Muffet might have been obscured."

"Yeh!" snarled Heath through his teeth. "And by tomorrow the kid woulda been dead. No chance then of her identifying him."

Markham looked at his watch and rose with determination.

"THERE'S no point in waiting for Arnesson's return. The sooner we arrest him the better." He was about to give Heath an order, when Vance intervened.

"Don't force the issue, Markham. You haven't any real evidence against the man. It's too delicate a situation for aggression. We must go carefully, or we'll fail."

"I realize that the finding of the typewriter and the note-book is not conclusive," concurred Markham. "But the identification by the child—"

"Oh, my dear fellow! What weight would a jury attach to a frightened five-year-old girl's identification without powerful contribut'ry evidence! A clever lawyer could nullify it in five minutes. And even assuming you could make the identification hold, what would it boot you? It wouldn't connect Arnesson in any way with the Bishop murders. You could only prosecute him for attempted kidnaping—the child's unharmed, remember. And if you should, through a legal miracle, get a doubtful conviction, Arnesson would receive at most a few years in the bastille. That wouldn't end this horror. . . . No, no. You mustn't be precipitate."

Reluctantly Markham resumed his seat. He saw the force of Vance's argument.

"But we can't let this thing go on," he declared ferociously. "We must stop this maniac some way."

"Some way—yes." Vance began pacing the room restlessly. "We may be able to wangle the truth out of him by subterfuge: he doesn't know yet that we've found the child. . . . It's possible Professor Dillard could assist us—" He halted and stood looking down at the floor. "Yes! That's our one chance. We must confront Arnesson with what we know when the Professor is present. The situation is sure to force an issue of some kind. The Professor now will do all in his power to help convict Arnesson."

"You believe he knows more than he has told us?"

"Undoubtedly. I've told you so from the first. And when he hears of the Little-Miss-Muffet episode, it's not unlikely he'll supply us with the evidence we need."

"It's a long chance." Markham was pessimistic. "But it can do no harm to try. In any event, I shall arrest Arnesson before I leave here, and hope for the best."

A FEW moments later the front door opened and Professor Dillard appeared in the hall opposite the archway. He scarcely acknowledged Markham's greeting—was scanning our faces, as if trying to read the meaning of our unexpected visit. Finally he put a question:

"You have, perhaps, thought over what I said last night?"

"Not only have we thought it over," said Markham, "but Mr. Vance has found the thing that was disturbing you. As we left here he showed me a copy of 'The Pretenders.'"

"Ah!" The exclamation was like a sigh of relief. "For days that play has been in my mind, poisoning every thought. . . ." He looked up fearfully. "What does it mean?"

Vance answered the question.

"It means, sir, that you've led us to the truth. We're waiting now for Mr. Arnesson.—And I think it would be well if we had a talk with you in the meantime. You may be able to help us."

The old man hesitated.

"I had hoped not to be made an instrument in the boy's conviction." His voice held a tragic paternal note. But presently his features hardened; a vindictive light shone in his eyes; and his hand tightened over the knob of his stick. "How can I can't consider my own feelings. Come; I will do what I can."

On reaching the library he paused at the sideboard and poured himself a glass of port. When he had drunk it he turned

Digitized by Google Original from UNIVERSITY OF IOWA

to Markham with a look of apology.

"Forgive me. I'm not quite myself." He drew forward the little chess table and placed glasses on it for all of us. "Please overlook my discourtesy." He filled the glasses and sat down.

We drew up chairs. There was none of us, I think, who did not feel the need of a glass of wine after the harrowing events we had just passed through.

When we had settled ourselves the Professor lifted heavy eyes to Vance, who had taken a seat opposite him.

"Tell me everything," he said. "Don't try to spare me."

Vance drew out his cigarette-case.

"First, let me ask you a question. Where was Mr. Arnesson between five and six yesterday afternoon?"

"I—don't know." There was reluctance in the words. "He had tea here in the library; but he went out about half past four, and I didn't see him again until dinner time."

VANCE regarded the other sympathetically for a moment, then he said:

"We've found the typewriter on which the Bishop notes were printed. It was in an old suitcase hidden in the attic of this house."

The Professor showed no sign of being startled.

"You were able to identify it?"

"Beyond any doubt. Yesterday, a little girl named Madeleine Moffat disappeared from the playground in the park. There was a sheet of paper in the machine, and on it had already been typed: 'Little Miss Muffet sat on a tuffet.'"

Professor Dillard's head sank forward on his chest.

"Another insane atrocity! If only I hadn't waited till last night to warn you—!"

"No great harm has been done," Vance hastened to inform him. "We found the child in time: she's out of danger by now."

"Ah!"

"She had been locked in the hall closet on the top floor of the Drukker house. We had thought she was here somewhere—which is how we came to search your attic."

There was a silence; then the Professor asked:

"What more have you to tell me?"

"Drukker's note-book containing his recent quantum researches was stolen from his room the night of his death. We found his note-book in the attic with the typewriter."

"He stooped even to that!" It was not a question, but an exclamation of incredibility. "Are you sure of your conclusions? Perhaps if I had made no suggestion last night—had not sowed the seed of suspicion. . . ."

"There can be no doubt," declared Vance softly. "Mr. Markham intends to arrest Mr. Arnesson when he returns from the university. But to be frank with you, sir: we have practically no legal evidence, and it is a question in Mr. Markham's mind whether or not the law can actually hold him. The most that we can hope for is a conviction for attempted escaping through the child's identification."

"Ah, yes . . . the child would know." Bitterness crept into the old man's eyes.

Bad breath is a warning from a poisoned system!

Don't "cover it up" Get at its cause

THINK over the business man's average menu! A superabundance of proteins and very little roughage! Then take into account his day's work—stooped over his desk all day! Lastly, judge of the exercise he takes—or rather doesn't take!

Is it any wonder doctors say that practically every one of us suffers from constipation; and from its attendant train of ills—tired digestion, headaches, bad breath?

And the trouble is that so many of us turn for relief to drastic cathartics or to drugs whose use may create undesirable habits. . . .

There is, however, an ever-increasing group of people who are combating constipation with more natural means—fresh air, a balanced diet, plenty of water—and complement these by the regular use of ENO, the gentle yet thorough saline laxative.

Try this famous saline for one week, morning or evening. You'll use it regularly once you have tried it. You'll like its delightful sparkling taste and you'll appreciate its gentle cleansing . . . its freedom from griping.

Unpleasant breath . . . and the condition of intestinal poisoning that usually causes it . . . is just as inexcusable hygienically as it is socially. It is a symptom of importance—a warning of intestinal toxicity. Try ENO—at all druggists, 75c and $1.25 a bottle.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

ENO — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of ENO. Taking this sparkling, delightful saline regularly will help to keep you fit and eager through the hardest day.

For a business headache, nothing is better than a glass of ENO. You can get it at the better soda fountains everywhere.

"Still, there should be some means of obtaining justice for the other crimes."

Vance sat smoking pensively, his eyes on the wall beyond. At last he spoke with quiet gravity:

"If Mr. Arnesson were convinced that our case against him was a strong one, he might choose suicide as a way out. That perhaps would be the most humane solution for everyone."

Markham was about to make an indignant protest, but Vance anticipated him.

"Suicide is not an indefensible act *per se*. The Bible, for instance, contains many accounts of heroic suicide. What finer example of courage than Rhazis', when he threw himself from the tower to escape the yoke of Demetrius?* There was gallantry, too, in the death of Saul's sword bearer, and in the self-hanging of Ahithophel. And surely the suicides of Samson and Judas Iscariot had virtue. History is filled with notable suicides—Brutus and Cato of Utica, Hannibal, Lucretia, Cleopatra, Seneca. . . . Nero killed himself lest he fall into the hands of Otho and the Pretorian Guards. In Greece we have the famous self-destruction of Demosthenes; and Empedocles threw himself in the crater of Etna. Aristotle was the first great thinker to advance the dictum that suicide is an anti-social act, but, according to tradition, he himself took poison after the death of Alexander. And in modern times let us not forget the sublime gesture of Baron Nogi. . . ."

"All that is no justification of the act," Markham retorted. "The law—"

"Ah, yes—the law. In Chinese law every criminal condemned to death has the option of suicide. The Codex adopted by the French National Assembly at the end of the eighteenth century abolished all punishments for suicide; and in the Sachsenspiegel—the principal foundation of Teuton law—it is plainly stated that suicide is not a punishable act. Moreover, among the Donatists, Circumcellions, and Patricians suicide was considered pleasing to the gods. And even in More's Utopia there was a synod to pass on the right of the individual to take his own life. . . . Law, Markham, is for the protection of society. What of a suicide that makes possible that protection? Are we to invoke a legal technicality, when, by so doing, we actually lay society open to continued danger? Is there no law higher than those on the statute books?"

MARKHAM was sorely troubled. He rose and walked the length of the room and back, his face dark with anxiety. When he sat down again, he looked at Vance a long while, his fingers drumming with nervous indecision on the table.

"The innocent of course must be considered," he said in a voice of discouragement. "As morally wrong as suicide is, I can see your point that at times it may be theoretically justified." (Knowing Markham as I did, I realized what this concession had cost him; and I realized, too, for the first time, how utterly hopeless he felt in the face of the scourge of horror which it was his duty to wipe out.)

The old Professor nodded understandingly.

*I admit that the name of Rhazis was unfamiliar to me; and when I looked it up later I found that the episode to which Vance referred does not appear in the Anglican Bible, but in the second book of Maccabees in the Apocrypha.

"Yes, there are some secrets so hideous that it is well for the world not to know them. A higher justice may often be achieved without the law taking its toll."

As he spoke the door opened, and Arnesson stepped into the room.

"Well, well! Another conference, eh?" He gave us a quizzical leer, and threw himself into a chair beside the Professor. "I thought the case had been adjudicated, so to speak. Didn't Pardee's suicide put *finis* to the affair?"

Vance looked straight into the man's eyes.

"We've found Little Miss Muffet, Mr. Arnesson."

The other's eyebrows went up with sardonic amusement.

"Sounds like a charade. What am I supposed to answer: 'How's Little Jack Horner's thumb?' Or, should I inquire into the health of Jack Sprat?"

Vance did not relax his steady gaze.

"We found her in the Drukker house, locked in a closet," he amplified, in a low even tone.

Arnesson became serious, and an involuntary frown gathered on his forehead. But this slackening of pose was only transient. Slowly his mouth twisted into a smirk.

"You policemen are so efficient. Fancy finding Little Miss Muffet so soon. Remarkable." He wagged his head in mock admiration. "However, sooner or later it was to be expected.—And what, may I ask, is to be the next move?"

"We also found the typewriter," pursued Vance, ignoring the question. "And Drukker's stolen note-book."

ARNESSON was at once on his guard. "Did you really?" He gave Vance a canny look. "Where were these tell-tale objects?"

"Upstairs—in the attic."

"Aha! Housebreaking?"

"Something like that."

"Withal," Arnesson scoffed, "I can see that you have a cast-iron case against anyone. A typewriter is not like a suit of clothes that fits only one person. Who can say how Drukker's note-book found its way into our attic?—You can do better than that, Mr. Vance."

"There is, of course, the factor of opportunity. The Bishop is a person who could have been on hand at the time of each murder."

"That is the flimsiest of contributory evidence," the man countered. "It would not help much toward a conviction."

"We might be able to show why the murderer chose the sobriquet of Bishop."

"Ah! That unquestionably would help." A cloud settled on Arnesson's face, and his eyes became reminiscent. "I thought of that, too."

"Oh, had you, now?" Vance watched him closely. "And there's another piece of evidence I haven't mentioned. Little Miss Muffet will be able to identify the man who led her to the Drukker house and forced her into the closet."

"So! The patient has recovered?"

"Oh, quite. Doing nicely, in fact. We found her, d' ye see, twenty-four hours before the Bishop intended us to."

Arnesson was silent. He was staring down at his hands, which, though folded, were working nervously. Finally he s

Extra Dollars

What They Meant to a School-teacher; and Just How She Earned Them

SHE is in her early twenties, this little friend of mine, one of a big jolly family.

Her parents had struggled for years to give her and all those younger brothers and sisters a good education. And when Doris started her duties as a school-teacher, they just naturally looked to her for help in the matter of buying new strong shoes for little Billy and warm clothing for Janet, the youngest.

So you can see that there was not much left of her slender income, especially since she also had to pay her weekly board and dress herself.

She told me quite frankly, in her first letter to me, that she just couldn't keep on denying herself.

"What can I do?" She'd ask herself this question day by day.

Well, to make a long story short, she found, when reading her American Magazine that morning, the very chance she was looking for. And now she is a happy member of our Club. She writes:—

"My first month as a Club member has just ended and I have been counting up my earnings which I made record of in my little bank book. I have $50.85 to my credit. Isn't that just marvelous? And I'll be expecting my Interest Check which amounts to $10.17. I can't thank you enough for what you have done for me. You know I told you how my earnings as a school-teacher are needed in the bringing up of my younger brothers and sisters. Club money will now buy me all the things I've longed for—thanks to you!"

YOU see how worth-while membership in The Pin Money Club is! I'd like to "initiate" you into the secrets of our friendly money-making Club—the most beautiful secrets you can imagine. So do write to me today.

Margaret Clarke

Secretary, Pin Money Club
The American Magazine
Department C
250 Park Avenue New York City

"And if, in spite of everything, you were wrong. . . ."

"I assure you, Mr. Arnesson," said Vance quietly, "that I *know* who is guilty."

"You positively frighten me!" The man had got a grip on himself, and he retorted with biting irony: "If, by any chance, I myself were the Bishop, I'd be inclined to admit defeat. . . . Still, it's quite obvious that it was the Bishop who took the chessman to Mrs. Drukker at midnight; and I didn't return home with Belle until half past twelve that night."

"So you informed her. As I recall, you looked at your watch and told her what time it was.—Come, now; what time was it?"

"That's correct—half past twelve."

Vance sighed and tapped the ash from his cigarette.

"I say, Mr. Arnesson; how good a chemist are you?"

"One of the best," the man grinned. "Majored in it.—What then?"

"When I was searching the attic this morning I discovered a little wall closet in which someone had been distilling hydrocyanic acid from potassium ferrocyanide. There was a chemist's gas mask on hand, and all the paraphernalia. Bitter-almond odor still lurking in the vicinity."

"Quite a treasure-trove, our attic. A sort of haunt of Loki, it would seem."

"It was just that," returned Vance gravely, "—the den of an evil spirit."

"Or else the laboratory of a modern Doctor Faustus. . . . But why the cyanide, do you think?"

"Precaution, I'd say. In case of trouble, the Bishop could step out of the picture painlessly. Everything in readiness, don't y' know."

Arnesson nodded.

"Quite a correct attitude on his part. Really decent of him, in fact. No use putting people to unnecessary bother if you're cornered. Yes, very correct."

Professor Dillard had sat during this sinister dialogue with one hand pressed to his eyes, as though in pain. Now he turned sorrowfully to the man he had fathered for so many years.

"Many great men, Sigurd, have justified suicide—" he began; but Arnesson cut him short with a cynical laugh.

"FAUGH! Suicide needs no justification. Nietzsche laid the bugaboo of voluntary death. '*Auf eine stolze Art sterben, wenn es nicht mehr möglich ist, auf eine stolze Art zu leben. Der Tod unter den verächtlichsten Bedingungen, ein unfreier Tod, ein Tod zur unrechten Zeit ist ein Feiglings-Tod. Wir haben es nicht in der Hand, zu verhindern, geboren zu werden: aber wir können diesen Fehler—denn bisweilen ist es ein Fehler—wieder gut machen. Wenn man sich abschafft, tut man die achtungswürdigste Sache, die es giebt: man verdient beinahe damit, zu leben.*'*—Memorized that passage from 'Götzen-Dämmerung' in my youth. Never forgot it. A sound doctrine."

"Nietzsche had many famous predecessors who also upheld suicide," supplemented Vance. "Zeno the Stoic left passionate dithyramb defending vo tary death. And Tacitus, Epictetus, cus Aurelius, Cato, Kant, Fichte, Did Voltaire, and Rousseau, all wrote logias for suicide. Schopenhauer tested bitterly against the fact that cide was regarded as a crime in Eng . . . And yet, I wonder if the sui can be formulated. Somehow, I feel it's too personal a matter for acad discussion."

The Professor agreed sadly.

"No one can know what goes on in human heart in that last dark hour."

DURING this discussion Markham been growing impatient and une and Heath, though at first rigid and wa ful, had begun to unbend. I could no that Vance had made the slightest p ress; and I was driven to the conclu that he had failed signally in accomp ing his purpose of ensnaring Ame However, he did not appear in the perturbed. I even got the impression he was satisfied with the way things going. But I did notice that, despit outer calm, he was intently alert. Hi were drawn back and poised; and e muscle in his body was taut. I bega wonder what the outcome of this te conference would be.

The end came swiftly. A short si followed the Professor's remark. Arnesson spoke:

"You say you know who the Bish Mr. Vance. That being the case, wh this palaver?"

"There was no great haste." was almost casual. "And there wa hope of tying up a few loose ends— juries are so unsatisfact'ry, don't y' . . . Then again, this port is excel

"The port? . . . Ah, yes." Arn glanced at our glasses, and turned jured look on the Professor. "Since have I been a teetotaler, sir?"

The other gave a start, hesitated rose.

"I'm sorry, Sigurd. It didn't oc me . . . you never drink in the noon." He went to the sideboard filling another glass, placed it, with steady hand, before Arnesson. Th refilled the other glasses.

No sooner had he resumed his sea Vance uttered an exclamation of su He had half risen and was leanin ward, his hands resting on the edge table, his eyes fixed with astonishm the mantel at the end of the room.

"My word! I never noticed th fore. . . . Extr'ordin'ry!"

So unexpected and startling ha his action, and so tense was the phere, that involuntarily we swung and looked in the direction of his nated gaze.

"A Cellini plaque!" he excl "The Nymph of Fontainebleau! son told me it was destroyed in the teenth century. I've seen its com piece in the Louvre. . . ."

A red flush of angry indignation m to Markham's cheeks; and for m must say, that, familiar as I wa Vance's idiosyncrasies and inte passion for rare antiques, I had ne fore known him to exhibit such i sible bad taste. It seemed unbel that he would have let himself

*"One should die proudly when it is no longer possible to live proudly. The death which takes place in the most contemptible circumstances, the death that is not free, the death which occurs at the wrong time, is the death of a coward. We have not the power to prevent ourselves from being born; but this error—for sometimes it is an error—can be rectified if we choose. The man who does away with himself, performs the most estimable of deeds: he almost deserves to live for having done so."

BYRD ANTARCTIC EXPEDITION

P. F. Collier & Son Company,
New York.

Gentlemen:

In fitting out the Byrd Antarctic Expedition for a two year scientific research of the Antarctic, members of the expedition have suggested that we include in our library Dr. Eliot's Five-Foot Shelf of Books.

Books will play an important part in the contentment of the personnel, particularly when the expedition winters on the ice barrier through the six months of total darkness during the Antarctic Night.

We should like to carry into the Antarctic, along with your good wishes for the success of the expedition, a set of the Harvard Classics.

You can appreciate too, aside from the indorsement value of our including the Harvard Classics in a library necessarily restricted in size, that the sixty men who will accompany Commander Byrd on this expedition will while away many hours of enjoyment and profit immensely by the fund of information contained in your volumes.

Trusting that we may have your cooperation.

Yours very truly,

BYRD ANTARCTIC EXPEDITION

Richard G. Brophy

Richard G. Brophy,
Business Manager

RGB-L/

Byrd Expedition —chooses these books

MMANDER BYRD and his men go into the unknown regions of the South Pole for a ossibly two. The stupendous has been planned with the of care and foresight. Durlong period these men will be the known world, conquering unconquered expanse in the of science and progress.

en who prepared for this hiking expedition knew that ng more than food, warmth ntific equipment must be pro- They also anticipated the end- r night when active, intelligent be confined to ship or camp.

tter shown on this page was o P. F. Collier and Son Com- the Manager of the Expedi- ing that the Harvard Classics to their very limited library. lishers were pleased to serve der Byrd and his men.

lection of Dr. Eliot's Five- lf of Books is typical of the h which the whole voyage has nned. Men of the highest type best possible reading recreation, Harvard Classics have brought in- and pleasure to hundreds of thou- readers.

the ice floes of the Antarctic need be no more remote than the people in our civilized urban world, so far as their reading is concerned. Although the explorer is limited to the few books he can take with him, we of the busy world may be so hopelessly lost in the millions of books around us that we miss the truly great ones.

The explorer *must* choose. And the Byrd Expedition has chosen the Harvard Classics.

Because Dr. Eliot, forty years President of Harvard University, recognized the need for easy access to the best books, he assembled in one convenient set the works which have everlasting value, the books that stimulate, inspire, and advise. In these volumes are included the writings of 302 immortal authors.

Through Dr. Eliot's Five-Foot Shelf, people have found that the classics are not dull, but intensely stirring; not beautiful antiques, but lively, stimulating modern thought with vital application to everyday life.

P. F. Collier and Son Company has published good books since 1875. By the famous Collier plan, you can pay for these books while you read and enjoy them.

Before you spend another penny for books, get a copy of "Fifteen Minutes a Day"—the booklet that tells how to turn precious spare time into profitable entertainment, growth and increased power. It's ready and waiting for you. Sending for it does not obligate you in any way.

95 cents at any drug store

tracted by an *objet d'art* in such a tragic hour.

Professor Dillard frowned at him with consternation.

"You've chosen a strange time, sir, to indulge your enthusiasm for art," was his scathing comment.

Vance appeared abashed and chagrined. He sank back in his seat, avoiding our eyes, and began turning the stem of his glass between his fingers.

"You are quite right, sir," he murmured. "I owe you an apology."

"The plaque, incidentally," the Professor added, by way of mitigating the severity of his rebuke, "is merely a copy of the Louvre piece."

VANCE, as if to hide his confusion, raised his wine to his lips. It was a highly unpleasant moment: everyone's nerves were on edge; and, in automatic imitation of his action, we lifted our glasses too.

Vance gave a swift glance across the table and, rising, went to the front window, where he stood, his back to the room. So unaccountable was his hasty departure that I turned and watched him wonderingly. Almost at the same moment, the edge of the table was thrust violently against my side, and simultaneously there came a crash of glassware.

I leaped to my feet and gazed down with horror at the inert body sprawled forward in the chair opposite, one arm and shoulder flung across the table. A short silence of dismay and bewilderment followed. Each of us seemed momentarily paralyzed. Markham stood like a graven image, his eyes fastened on the table; and Heath, staring and speechless, clung rigidly to the back of his chair.

"Good God!"

It was Arnesson's astonished ejaculation that snapped the tension.

Markham went quickly round the table and bent over Professor Dillard's body.

"Call a doctor, Arnesson," he ordered.

Vance turned wearily from the window and sank into a chair.

"Nothing can be done for him," he said, with a deep sigh of fatigue. "He prepared for a swift and painless death when he distilled his cyanide.—The Bishop case is over."

Markham was glaring at him with dazed incomprehension.

"Oh, I've half-suspected the truth ever since Pardee's death," Vance went on, in answer to the other's unspoken question. "But I wasn't sure of it until last night, when he went out of his way to hang the guilt on Mr. Arnesson."

"Eh? What's that?" Arnesson turned from the telephone.

"Oh, yes," nodded Vance. "You were to pay the penalty. You'd been chosen from the first as the victim. He even suggested the possibility of your guilt to us."

Arnesson did not seem as surprised as one would have expected.

"I knew the Professor hated me," he said. "He was intensely jealous of my interest in Belle. And he was losing his intellectual grip—I've seen that for months. I've done all the work on his new book, and he's resented every academic honor paid me. I've had an idea he was back of all this deviltry; but I wasn't sure. I didn't think, though, he'd try to send me to the electric chair."

Vance got up and, going to Arnes held out his hand.

"There was no danger of that.—A want to apologize for the way I've tre you this past half-hour. Merely a ma of tactics. Y' see, we hadn't any real dence, and I was hopin' to force his ha

Arnesson grinned somberly.

"No apology necessary, old son knew you didn't have your eye on When you began riding me I saw it only technique. Didn't know what were after, but I followed your cue best I could. Hope I didn't bungl job."

"No, no. You turned the trick."

"Did I?" Arnesson frowned with perplexity. "But what I don't u stand is why he should have taken cyanide when he thought it was I yo pected."

"That particular point we'll know," said Vance. "Maybe he f the girl's identification. Or he may seen through my deception. Perha suddenly revolted at the idea of sho ing you with the onus. . . . As he self said, no one knows what goes on human heart during the last dark h

Arnesson did not move. He was ing straight into Vance's eyes with trating shrewdness.

"Oh, well," he said at length let it go at that. . . . Anyway, tha

Kit Carson knew the "four great routes"

This pioneer chose frequently to "go one way, return another, see the whole Pacific Coast"

LAKE TAHOE
6200 feet high, near the Sierra Nevada summit, is accessible by Overland Route.

TODAY—EVERY DETAIL OF FINE TRAIN SERVICE

KIT CARSON! Back and forth over a stage 1500 miles square, routing Indians, leading Fremont through the mountains, crawling barefoot over cactus needles to save Kearny's army in the conquest of California, spiking Spanish cannon at San Francisco, and dashing away again over Arizona and New Mexico to honeymoon with Josefa Jaramillo, his dark-eyed bride — here was a man who knew the West and all its trails!

Kit Carson passed from the scene just as the first overland railroad (Central Pacific, forerunner of Southern Pacific) built eastward from the western ocean in 1867. The rails of Southern Pacific's OVERLAND ROUTE today follow close to the path made by Kit Carson to California.

SUNSET, GOLDEN STATE and SHASTA ROUTES also follow many a league of Kit Carson's gallopings. At Klamath Lake, in Oregon, Carson and Fremont fought a famous Indian battle near where the Siskiyou and Cascade lines or Shasta Route divide to embrace Crater Lake.

Southern Pacific's four routes to California are pioneer western lines, and inheritors of the best natural routes as found by early-day frontiersmen. These four routes give you a splendid chance to see the epic West and the whole Pacific Coast.

Only Southern Pacific offers four routes. You can go one way, return another. Stop over anywhere.

Be sure to send your name and address to E. W. CLAPP, traffic manager, 310 South Michigan Boulevard, Chicago, for free travel book with illustrations, entitled "*How Best to See the Pacific Coast*".

looking about for a means to destroy Arnesson, he hit upon the diabolical jest of the Bishop murders. These murders gave relief to his repressions: they met his psychic need for violent expression; and at the same time they answered the dark question in his mind how he could dispose of Arnesson and keep Belle Dillard for himself."

"BUT why," Markham asked, "didn't he merely murder Arnesson and have done with it?"

"You overlook the psychological aspects of the situation. The Professor's mind had disintegrated through long, intense repression. Nature was demanding an outlet. And it was his passionate hatred of Arnesson that brought the pressure to an explosion point. The two impulses were thus combined. In committing the murders, he was not only relieving his inhibitions, but he was also venting his wrath against Arnesson, for Arnesson, d' ye see, was to pay the penalty. Such a revenge was more potent, and hence more satisfying, than the mere killing of the man would have been—it was the great, grim joke behind the lesser jokes of the murders themselves. . . .

"However, this fiendish scheme had one great disadvantage, though the Professor did not see it. It laid the affair open to psychological analysis; and at the outset I was able to postulate a mathematician as the criminal agent. The difficulty of naming the murderer lay in the fact that nearly every possible suspect was a mathematician. The only one I knew to be innocent was Arnesson, for he was the only one who consistently maintained a psychic balance—that is, who constantly discharged the emotions arising from his protracted abstruse speculations.

"A general sadistic and cynical attitude that is volubly expressed and a violent homicidal outburst are psychologically equivalent. Giving full rein to one's cynicism as one goes along produces a normal outlet and maintains an emotional equilibrium. Cynical, scoffing men are always safe, for they are farthest removed from sporadic physical outbreaks; whereas the man who represses his sadism and accumulates his cynicism beneath a grave and stoical exterior, is always liable to dangerous fulminations. This is why I knew Arnesson was incapable of the Bishop murders, and why I suggested your letting him help us with the investigation. As he admitted, he suspected the Professor; and his request to assist us was, I believe, actuated by a desire to keep posted, so that he could better protect Belle Dillard and himself in case his suspicions should prove correct."

"That sounds reasonable," acceded Markham. "But where did Dillard get his fantastic ideas for the murders?"

"The Mother-Goose motif was probably suggested to him when he heard Arnesson jestingly tell Robin to beware of an arrow from Sperling's bow. He saw in that remark a means of venting his hatred against the man who had made it; and he bided his time. The opportunity to stage the crimes came shortly after. When he saw Sperling pass up the street that morning, he knew that Robin was alone in the archery-room. So he went below, engaged Robin in conversation, struck him over the head, drove a shaft into his heart, and shoved him out on the range. He then wiped up the blood, destroyed the cloth, posted his notes at the corner, put one in the house letter box, returned to the library, and called up this office. One unforeseen factor cropped up, however:—Pyne was in Arnesson's room when the Professor said he went out on the balcony. But no harm came of it, for though Pyne knew something was amiss when he caught the Professor lying, he didn't suspect the old gentleman of being a murderer. The crime was a decided success."

"Still and all," put in Heath, "you guessed that Robin hadn't been shot with a bow and arrow."

"Yes. I saw from the battered condition of the nock of the arrow that it had been hammered into Robin's body; and I concluded therefore that the chap had been killed indoors, after having first been stunned with a blow on the head. That was why I assumed that the bow had been thrown to the range from the window—I didn't know then that the Professor was guilty. The bow, of course, was never on the range.—But the evidence on which I based my deductions cannot be held as an error or oversight on the Professor's part. As long as his Mother-Goose joke was accomplished, the rest didn't matter to him."

"WHAT instrument do you think he used?" Markham put the question.

"His walking stick, most likely. You may have noticed it has an enormous gold knob, perfectly constructed as a lethal weapon.* Incidentally, I'm inclined to think he exaggerated his gout, to attract sympathy and to shunt any possible suspicion from himself."

"And the suggestion for the Sprigg murder?"

"After Robin's death he may have deliberately looked about for Mother-Goose material for another crime. In any event, Sprigg visited the house the Thursday night preceding the shooting; and it was at that time, I imagine, that the idea was born. On the day chosen for the gruesome business he rose early and dressed, waited for Pyne's knock at half past seven, answered it, and then went to the park—probably through the archery-room and by way of the alley. Sprigg's habit of taking daily morning walks may have been casually mentioned by Arnesson, or even by the lad himself."

"But how do you explain the tensor formula?"

"The Professor had heard Arnesson talking to Sprigg about it a few nights before; and I think he placed it under the body to call attention—through association—to Arnesson. Moreover, that particular formula subtly expressed the psychological impulse beneath the crimes. The Riemann-Christoffel tensor is a statement of the infinity of space—the negation of infinitesimal human life on this earth; and subconsciously it no doubt satisfied the Professor's perverted sense of humor, giving added homogeneity to his monstrous conception. The moment I saw it I sensed its sinister significance; and it substantiated my theory that Bishop murders were the acts of a mat matician whose symbols had become stract and incommensurable."

Vance paused to light another cigare and after a moment's thoughtful sile continued:

"We come now to the midnight visi the Drukker house. That was a g *entr'acte* forced on the murderer by the port of Mrs. Drukker's scream. He fea the woman had seen Robin's body thro to the range; and when, on the morning Sprigg's murder, she had been in the y and met him returning from the kill was more worried than ever that would put two and two together. wonder he tried to prevent our quest ing her! And at the earliest opportu he attempted to silence her for all t He took the key from Belle Dillard's ha bag before the theatre that night, and placed it the next morning. He sent and Beedle to bed early; and at half ten Drukker complained of fatigue went home. At midnight, he figured the coast was clear for his grisly visit taking the black bishop as a sym signature to the contemplated murde probably suggested by the chess cussion between Pardee and Dru Then again, it was Arnesson's chess and I even suspect him of telling us chess discussion to call attention t nesson's chess set in case the black b should fall into our hands."

"Do you think he had any idea volving Pardee at that time?"

"Oh, no. He was genuinely sur when Arnesson's analysis of the P Rubinstein game revealed the fac the bishop had long been Pardee's sis. . . . And you were undou right about Pardee's reaction to my tion of the black bishop the next day poor chap thought I was deliberate iculing him as a result of his def Rubinstein's hands. . . ."

Vance leaned over and tapped the from his cigarette.

"TOO bad," he murmured regre "I owe him an apology, do know." He shrugged his shoulders sl and, settling back in his chair, took narrative. "The Professor got hi for Drukker's murder from Mrs. D herself. She expressed her imag fears to Belle Dillard, who repeate at dinner that night; and the pla shape. There were no complicat its execution. After dinner he wen attic and typed the notes. Later gested a walk to Drukker, knowing wouldn't remain long with Arnesso when he saw Pardee on the bridle p of course knew Arnesson was alon soon as Pardee had walked awa struck Drukker and tipped him ov wall. Immediately he took the littl to the Drive, crossed to Seventy Street, and went to Drukker's roo turning by the same route. The episode couldn't have occupied mor ten minutes. Then he calmly walke Emery and went home, with Dru note-book under his coat. . . ."

"But why," interposed Markha you were sure that Arnesson was inn did you make such a point of locati key to the alley door? Only Ar could have used the alley on the n

*It was discovered later that the large, weighted gold handle, which was nearly eight inches long, was loose and could be easily removed from the stick. The handle weighed over two pounds, and, as Vance had observed, constituted a highly efficient "blackjack." Whether or not it had been loosened and weighted for the purpose to which it was put is, of course, wholly a matter of conjecture.

You Are Cordially Invited to

Visit Yellowstone Park This Summer

A REGION in the heart of the Rocky Mountains, known throughout the world for its strange sights and wild beauty, has been set aside by your government for you to enjoy. Every year people from foreign lands and all parts of the United States find recreation, inspiration and memorable experience in this great wilderness.

Here are wild animals—funny bears that seem almost human when they stand up to beg for candy—baby cubs, soft and fluffy—the cutest little animals alive!

Here are geysers—hot water volcanoes, hot springs and terraces. Here is the Grand Canyon of the Yellowstone with walls carved in rainbow colors by a foaming river that plunges far below in a waterfall higher than Niagara.

Accommodations have been provided in Yellowstone to suit every taste—comfortable transportation, fine hotels, informal lodges. Rangers are stationed in the Park to aid you in every possible way. We of the National Park Service will do all within our power to help you to get the full measure of enjoyment out of your visit to Yellowstone. We hope you will come this summer.

Drukker's death. Dillard and Pardee both went out by the front door."

"I wasn't interested in the key from the standpoint of Arnesson's guilt. But if the key was gone, d' ye see, it would have meant that someone had taken it in order to throw suspicion on Arnesson. How simple it would have been for Arnesson to slip down the alley after Pardee had gone, cross the Drive to the little path, and attack Drukker after the Professor had left him. . . . And, Markham, that is what we were supposed to think. It was, in fact, the obvious explanation of Drukker's murder."

"What I can't get through my head, though," complained Heath, "is why the old gent should have killed Pardee. That didn't throw any suspicion on Arnesson, and it made it look like Pardee was guilty and had got disgusted and croaked himself."

"That spurious suicide, Sergeant, was the professor's most fantastic joke. It was at once ironical and contemptuous; for all during that comic interlude plans were being made for Arnesson's destruction. And, of course, the fact that we possessed a plausible culprit had the great advantage of relaxing our watchfulness, and causing the guards to be removed from the house. The murder, I imagine, was conceived rather spontaneously. The professor invented some excuse to accompany Pardee to the archery-room, where he had already closed the windows and drawn the shades. Then, perhaps pointing out an article in a magazine, he shot his unsuspecting guest through the temple, placed the gun in his hand, and, as a bit of sardonic humor, built the house of cards. On returning to the library he set up the chessmen to give the impression that Pardee had been brooding over the black bishop. . . .

"BUT, as I say, this piece of grim grotesquerie was only a side issue. The Little-Miss-Muffet episode was to be the *dénouement;* and it was carefully planned so as to bring the heavens crashing down on Arnesson. The Professor was at the Drukker house the morning of the funeral when Madeleine Moffat brought the flowers for Humpty Dumpty; and he undoubtedly knew the child by name—she was Drukker's favorite and had been to the house on numerous occasions. The Mother-Goose idea being now firmly implanted in his mind, like a homicidal obsession, he very naturally associated the name Moffat with Muffet. Indeed, it's not unlikely that Drukker or Mrs. Drukker had called the child 'Little Miss Moffat' in his presence. It was easy for him to attract her attention and summon her to the mound by the wall yesterday afternoon. He probably told her that Humpty Dumpty wanted to see her; and she came with him eagerly, following him under the trees by the bridle path, thence across the Drive, and through the alley between the apartment houses. No one would have noticed them, for the Drive is teeming with children at that hour. Then last night he planted in us the seed of suspicion against Arnesson, believing that when the Little-Miss-Muffet notes reached the press we would look for the child and find her, dead from the lack of air, in the Drukker house. . . . A clever, devilish plan!"

"But did he expect us to search the attic of his own home?"

"Oh, yes; but not until tomorrow. By then he would have cleaned out the closet and put the typewriter in a more conspicious place. And he would have removed the note-book, for there's little doubt that he intended to appropriate Drukker's quantum researches. But we came a day too soon, and upset his calculations."

Markham smoked moodily for a time.

"You say you were convinced of Dillard's guilt last night when you remembered the character of Bishop Arnesson. . . ."

"Yes—ch, yes. That gave me the motive. At that moment I realized that the Professor's object was to shoulder Arnesson with the guilt, and that the signature to the notes had been chosen for that purpose."

"He waited a long time before he called our attention to 'The Pretenders,'" commented Markham.

"The fact is, he didn't expect to have to do it at all. He thought we'd discover the name for ourselves. But we were duller than he anticipated; and at last, in desperation, he sent for you and beat cleverly round the bush, accentuating 'The Pretenders.'"

Markham did not speak for several moments. He sat frowning reproachfully, his fingers tapping a tattoo on the blotter.

"WHY," he asked at length, "did you not tell us last night that the Professor and not Arnesson was the Bishop? You let us think—"

"My dear Markham! What else could I do? In the first place, you wouldn't have believed me, and would most likely have suggested another ocean trip, what? Furthermore, it was essential to let the Professor think we suspected Arnesson. Otherwise, we'd have had no chance to force the issue as we did. Subterfuge was our only hope; and I knew that if you and the Sergeant suspected him you'd be sure to give the game away. As it was, you didn't have to dissemble; and, lo! it all worked out beautifully."

The Sergeant, I noticed, had, for the past half-hour, been regarding Vance from time to time with a look of perplexed uncertainty; but for some reason he had seemed reluctant to give voice to his troubled thoughts. Now, however, he shifted his position uneasily and, taking his cigar slowly from his mouth, asked a startling question:

"I ain't complaining about your not putting us wise last night, Mr. Vance, but what I would like to know is: Why, when you hopped up and pointed at that plate on the mantel, did you switch Arnesson's and the old gent's glasses?"

Vance sighed deeply and gave a hopeless wag of the head.

"I might have known that nothing could escape your eagle eye, Sergeant."

Markham thrust himself forward over the desk, and glared at Vance with angry bewilderment.

"What's this?" he sputtered, his usual self-restraint deserting him. "You changed the glasses? You deliberately—"

"Oh, I say!" pleaded Vance. "Let not your wrathful passions rise." He turned to Heath with mock reproach. "Behold what you've got me in for, Sergeant."

"This is no time for evasion." Mar ham's voice was cold and inexorable. want an explanation."

Vance made a resigned gesture.

"Oh, well. Attend. My idea, as I explained to you, was to fall in with Professor's plan and appear to suspect nesson. This morning I purposely let h see that we had no evidence, and th even if we arrested Arnesson, it was dou ful if we could hold him. I knew that the circumstances, he would take so action—that he would try to meet situation in some heroic way—for the object of the murders was to destroy nesson utterly. That he would com some overt act and give his hand awa was confident. What it would be I di know. But we'd be watching him clo . . . Then the wine gave me an i ration. Knowing he had cyanide in possession, I brought up the subject o cide, and thus planted the idea in his m He fell into the trap, and attempte poison Arnesson and make it appear suicide. I saw him surreptitiously em small phial of colorless fluid into A son's glass at the sideboard when he po the wine. My first intention was to the murder and have the wine anal We could have searched him and f the phial, and I could have testified t fact that I saw him poison the wine. evidence, in addition to the identific by the child, might have answere purpose. But at the last moment, af had refilled all our glasses, I decide simpler course—"

"And so you diverted our attentio switched the glasses!"

"Yes, yes. Of course. I figured man should be willing to drink the w pours for another."

"You took the law in your own ha

My Stock Market Operations

(*Continued from page 55*)

I've been the answer to a tipster's prayer.

The only consolation I have rests in the thought that there must be fifty million others like me.

Strange as it may seem in the light of my present financial status, my first ventures into the market were in the securities of some of America's strongest corporations. But I didn't know enough to keep them. These first stocks were American Telephone and Telegraph, Consolidated Gas, and Atchison, Topeka and Santa Fe. I sold the telephone stock on a few points' advance and before the big split-up. I bought Consolidated Gas early in Coolidge's term for $65, sold it, too, after a little rise—and then saw it declare a big stock dividend, the new stock soaring above 110.

Mine is an instinct for doing the wrong thing at the wrong time. Also, I'm short on patience and have been slow to realize that the securities of a Grade A corporation are investments and not samples of Paine's fireworks.

I ought to have had enough horse sense to know this. But the temptation to dabble loosely in the market these past few years has been great. It is not easy to dismiss the stock market as a mere skinning and trimming emporium when every day you hear shopgirls, policemen, Turkish bath rubbers, cellists, poets, merchants, college professors, all telling of what they made in the 35-point jump in an airplane stock, and of the impending 200-point rise in the shares of the Alaskan Snowshoe Corporation, now selling at $1.98.

ABOUT eighteen months ago I got a tip on a stock called Texas Gulf Sulphur. From what my informant said I assumed it would begin soaring as soon as my order got in, and I made my first plunge, buying one hundred shares without having the slightest idea whether the corporation made parlor matches, patent medicine, or fly poison. It was my first deal on margin. For a time I couldn't sleep nights. I lay awake wondering whether there was any such corporation, whether the brokerage firm might not skip town overnight, and what would happen if the market broke some day when I was in the deep woods of a golf club looking for my ball.

Well, I sold it, impatiently, on a three-point rise. And inside of a few weeks it went to 82. Six months later it dropped to 72 and I bought it again at that price on a tip it was being pooled for a big jump. Almost immediately it dropped to 62. Feeling like a shorn lamb, and probably looking like one, I bought the stock outright. After a week or so it climbed back around 70, but it wouldn't go back to 72 and let me out without a loss. The exasperating thing about that stock was that from June until October, when the market was boiling and many securities were making new high records, it never moved more than a point either way.

Every evening we had the Texas Gulf Hour in our home. I would get the market edition, read the headline "Stocks Leap To Record Heights," and turn hopefully to the stock table to see how much leaping Texas Gulf had done. It was a non-leaper.

Finally, one day in November it started moving and I sold at 75, making a total profit of less than $300. I wouldn't have spent that much time and worry for $3,000. The day after I sold the stock it got very kittenish and went to 82. Now that I am out of it I suppose it will go to 100 or more.

MY FINEST performance in gumming up the works was in my modest dealings in a stock called Columbia Graphophone.

"Buy yourself some Columbia," a friend whispered one spring morning.

"Columbia, the Gem of the Ocean?" I asked.

"No; Columbia Graphophone," he replied impressively. "It's on the curb. There's a pool in it. It is around 45 and is going to 100."

"You wouldn't fool me?"

"I got this from a man who is on the inside."

I thought it over and didn't buy any at that time. A few months later my friend came in and said, "Well, you made a nice profit, didn't you?"

"In what?"

"Columbia," he replied. "It's 73."

"What of it?"

"Didn't you buy it?"

"I did not."

"Well, don't be a sap all your life. Get aboard now. It's still good for 25 points."

I bought one hundred shares and paid 73½. It dropped back into the sixties and gave me the shivers for weeks. Finally, I bought it outright and held it for five months before it got active. Then it suddenly moved to 80 and I sold.

The very next evening the papers told of a reaction in the market. "I guess I used good headwork in selling that Columbia," I ventured, with an air of sagacity.

Then I turned to the stock pages, gave vent to a queer, choking sound and slid slowly out of my chair onto the floor.

"What's the matter?" asked an eyewitness.

"Ecxjkluythrgezxwolipewicz," I gurgled, or words to that effect, as I pointed to this headline:

COLUMBIA GRAPHOPHONE
DECLARES 100 P. C. DIVIDEND

Kind friends put me to bed, still gurgling, and applied cold packs to my head. "And after I had held onto the darned stuff all summer!" I kept moaning.

But the worst was yet to come. A few weeks later my friend came to me again with advice to buy Columbia. "Buy it back," he urged when I told him I had sold. It was around $79 a share then. I was just starting on a week's cruise. On the water I decided to buy in again, and from shore that night phoned Mrs. Phillips to put in an order the next morning.

"Buy at the market," I instructed her, as the stock had been quite stationary for some days.

We had a radio on the boat, and the aërial reports of market prices showed that Columbia was hot stuff. It climbed a few points every day and I spent the evenings with pad and pencil figuring my profits. When it reached 88 I rowed ashore and phoned home to show proper elation over my acumen as a Wall Street wizard.

"Well, what do you think of that jump in Columbia?" I greeted Mrs. Phillips.

"Dear, I've got some awful news for you," she replied, in tones that indicated something was wrong.

"What's happened?"

"I don't want to tell you over the phone. Wait until you come home."

"Why not tell me now?" I demanded, very much alarmed. "What's it about?"

"It's about that Columbia Graphophone."

"Woman, what about it? Speak. I cannot bear this suspense. You got it somewhere around 80, didn't you? It didn't go higher than that the day I told you to buy at the market."

Then came the bad news.

"I had to pay $89 a share for it," she said.

"Why, it only reached $88 yesterday. We should be ahead a lot of money."

"But it's a long story. I'm too upset to tell you."

"Tell me the worst!"

"Well, there was a misunderstanding over the phone when I put in the order and the broker bought more Texas Gulf Sulphur by mistake. I didn't know that until I got the report the next day. Then I was a whole day arguing with him and getting him to sell Texas Gulf Sulphur without a loss. I didn't get things straightened out to buy Columbia until this morning, an hour ago, and when I ordered it at the market I got word back I had paid $89 for it."

I TOTTERED from the telephone booth muttering to myself. The paper profits of the week were so much confetti now.

In the next two days Columbia went up a point and a half and I, timid soul, sold hardly making commissions. Inside of the subsequent three weeks it went up points! Plenty of my friends made money in Columbia Graphophone, but about I got was a pain in the neck.

I once took a flyer in United States Steel, Common, paying $146 a share for and my idea at the time was to hold it for the long pull. But in those months of sky rocket performances I soon came to regard four or five weeks as constituting a long pull. In about two weeks there was a sudden move and it went to $153. "Don't sell; it's going to $200 in a month," a taxi cab driver, or somebody, told me. I did and in the following three days it dropped to $147. Then I got nervous and sold a net profit of something like $50! In next few months it reached $170.

What makes me peeved is that I gum things up when I get reliable information, backed up by facts and figures. September, 1927, a conservative business man suggested that I buy Kennecott Copper as an investment. It was then a share and paying about 6 per cent at price. I asked for an analysis from

To be truly modern—Heating Equipment must include this Heat Saver

WILL you put a good boiler and good radiators into that house you are building or re-modeling—*and stop there*—losing a third or more of the costly heat by leakage through the walls and roof?

Or will you make your heating equipment *complete*—and your home really modern—with a thick *flexible* blanket of Balsam-Wool?

Even in an old home a blanket of Balsam-Wool in the attic will go a long way toward making the heating equipment modern and complete, add to your comfort and save a fifth or more of your fuel bill.

Balsam-Wool is an essential part of modern heating equipment. Soft and effective as sheep's wool, it lines the roof and walls, tucks into every nook and cranny—keeps costly heat indoors where it belongs.

Balsam-Wool will cost you almost nothing. The saving you make by installing a smaller boiler and smaller radiators pays all or at least a large part of its cost. The fuel you save ever after is clear gain.

Balsam-Wool—flexible, a full inch thick—is made for *heat saving*. It is not a substitute for anything else in the house.

Whether you are building a new house—or would like to make your present one more modern and livable—you should know more about Balsam-Wool. It is sold through lumber dealers. Send the coupon for free sample and booklet.

WOOD CONVERSION COMPANY
CLOQUET, MINNESOTA

Makers of Balsam-Wool, the Flexible Insulating Blanket. Also makers of Nu-Wood, the All Wood *Insulating Wall Board and Lath*

Sales Offices in Principal Cities

Balsam-Wool is a guaranteed Weyerhaeuser product—a blanket of fluffy wood fibre that looks and acts like sheep's wool. It is TRUE Insulation—keeping the house warm in winter and cool in summer—because it is—

FLEXIBLE-THICK
EFFICIENT
WINDPROOF
WATERPROOF
FIRE RESISTANT
VERMIN PROOF
LIGHT WEIGHT
PERMANENT

WOOD CONVERSION COMPANY M-9-A
Dept. 83, Cloquet, Minn.

Gentlemen: Please send free sample of Balsam-Wool and booklet "House Comfort that Pays for Itself." I am interested in insulation for

bank and received a favorable report. Every investment house with which I talked said it was safe. But did I buy any at that price? No. And why not? Because the stock was okayed by bankers instead of by barbers.

It soon climbed to 86 and I decided to get aboard. But thinking it smart, I put in my order to buy when it reacted to 85. It never reacted and went on to 100 and ultimately to 140.

Oil stocks, of course, were my special weakness. Not the *good* oil stocks, but the ones that are here today and gone tomorrow. For the past few years all that was necessary to sell me a stock was to tell me that it was selling at $2.79 a share and was going to $1,000 by the first of the year.

I was advised to buy Radio around 130, American Linseed at 50, and Chicago Pneumatic Tool at 111. Radio went above 400, Linseed went to $180 in less than a year, and Pneumatic Tool went to $150 inside of three months. But the men who gave me these tips seemed like conservatives who knew what they were talking about. They didn't talk insanely enough. The bigger they sound, the harder I fall.

STILL, I got a lot of diversion figuring what I might have made "IF." I am a talented paper-profit rapid calculator, an able table-cover mathematician, and one of the world's best desk-blotter and scratch-pad analysts. Until very recently I got a real kick out of sitting around figuring up how many million dollars I would have *if* I had bought every fast-moving stock at the bottom and sold at the peak. That's a great national pastime these days and nights. By ignoring what I really did buy and sell, and doing pen-and-ink tricks with the ones I never touched, I was able to fancy myself on the blue Mediterranean on my Diesel-driven yacht, showing unconcern when the engineer scratched matches on the highly polished rosewood cabin.

"Look what I would have if I had bought General Motors five years ago when it was around $25 a share, and held onto it ever since through all the split-ups!" is an appeal I have made to Mrs. Phillips so often that she now threatens to leave me.

I've stopped trying to beat the stock market, however, because it cost me too much money and too many sleepless nights.

I'm not saying there isn't money to be made in the stock market. There's a lot of it there, including mine.

But *I'm* through. I've gone back to working for a living and I've resumed relations with the savings banks. National banks aren't very exciting institutions. The atmosphere isn't dazzling and you won't find any loud and animated conversationalists there. You won't hear any bedtime stories, fairy tales, or prophecies. None of the officials will greet you with the latest crop of merger rumors. Your little hundred dollars won't turn into a thousand in six weeks. But neither will it shrink to sixty-nine cents overnight. A little bit of something is better than lots of nothing at all.

That's my verdict. Maybe I'm wrong, but just the same you can pass that red-hot, straight, inside, absolutely reliable tip to someone else. My back is to the Wall Street.

THE FAMILY'S PROBLEMS

I Work, My Husband Works, And Our Children Are Not Neglected

MRS. N. S. R.'s plea for help in the January AMERICAN made me feel like a direct answer to prayer! Our circumstances are so similar as almost to challenge belief. Take a look at the facts, and you will see what I mean:

Like her, I am thirty-two years old; like her, I am married, have two children, and live in a small Southern town. Unlike her—and here comes the answer to prayer!—I have a job outside my home. And I can assure you, Mrs. N. S. R., that in my town nobody looks upon me as a freak, or upon my husband as a slacker!

My two children, a girl and a boy, are eleven and eight. I have had only a high-school education plus a three-months' business course. My salary is now two hundred dollars a month. In a town of less than five thousand, this is a good income—even for a man. Will makes forty dollars more a month than I do.

And I want to make it plain that in spite of sundry neighborly prophecies, my husband has not "laid down on the job" because he has a wife who can earn money—and does. On the contrary, he humped himself hard to keep his pay envelope a notch or two ahead of mine. The truth is, Will is proud of my modest success and brags about it when he can get anybody to listen. But it was not always thus!

Thirteen years ago, when we were married, he was just as "sot" in his ideas as to what a man's wife may and may not do, with propriety, as Mrs. N. S. R.'s Jim is now. Not only that, but he was backed up by my entire family, who tried to throw the fear of God into my soul, with all the regulation bugaboos, such as, "What will people say?" and "Don't you know a man wants to do the providing for his family?"

THE only person who stood up for me was my mother-in-law, who insisted that I be given a chance to try out my plan, which, briefly stated, was to keep on with my twenty-a-week job after we were married. Will finally gave in; chiefly, I think, because he was so sure that I would soon tire of my "wild notion" and chuck it of my own accord.

But I stuck.

You see, I saw what Will didn't: that it was going to take two shoulders against our particular wheel to make a go of things. At the time we were married, Will was making twenty-five dollars a week. He had practically nothing saved up.

Once he had agreed to give my plan a try-out, nobody could have shown more thorough-going coöperation than Will did. We both got up early, and we did the housework—what little there was to do in a couple of rented rooms—together.

From the beginning, we lived on what Will made and banked every cent of my salary. At the end of the first year, we were able to make a down payment of a thousand dollars on a nice little six-room house on a two-acre lot, so we had plenty of space for flowers and vegetables.

In the meantime, I had been raised to twenty-five dollars a week and Will to thirty. Half of my salary went for payments on the house. The other half was divided between our building and loan membership and a savings account.

AT THE end of the first two years, our first baby—a daughter—arrived. I was perfectly well, so I went right on with my work until two months before the baby came. Then I got a three-months' leave of absence. When my little son arrived three years later, I followed the same program.

Of course, after the babies came, I had to have help. The middle-aged colored woman who had been doing my weekly cleaning was a good general servant and thoroughly dependable into the bargain. I arranged with her to give me full time.

In my work, I have gradually advanced until now I have charge of the work of twenty young women who comprise the clerical force at the headquarters in our town of a large automobile agency.

Each of the children has an endowment policy which will take care of college when the time comes. We are already planning to sell our small six-room house and build a ten-room brick colonial. Will and I each carry a ten-thousand-dollar life insurance policy.

Now, at this point, somebody is going to speak up and say, "But don't you pay a fearful price for all this material prosperity? Haven't you sacrificed to it companionship with your children?"

My answer is "No" to both questions. On the contrary, I am sure that I see a great deal more of my children than the women who spend half their waking hours running from bridge parties to club meetings. And I certainly see a great deal more of my children than do some of my neighbors who cannot afford help, and who are so tired and cross all the time that neither they nor the children get any fun out of companionship.

My children are sturdy and independent. From the very beginning, they have been taught to do things for themselves.

Yes, I am sometimes tired when the day is over. But so are most of the other women I know. And I defy any family to be healthier or happier than mine. That, after all, is the answer! MRS. W. A. L.

If your heart is set on having a colorful kitchen~

GREEN holds sway in many kitchens today! And in step with the times as always, Congoleum designers have created the lovely new "PALMETTO" design, Rug 604, shown at the right. Here is a rug with an air of sparkling cleanliness sure to delight the modern housewife's heart.

"PALMETTO" *for the gay green kitchen now so much in vogue*

A COMPLETE new kitchen with all the up-to-date equipment shown here would, of course, be lovely. But if your budget won't permit it, don't be discouraged—you needn't give up the enjoyment of having your "workshop" gay with happy color.

For with the vogue of color have come easy and inexpensive ways to bring its magic into your home. Quick-drying paints you can apply yourself . . . inexpensive, bright-hued curtains . . . and then to complete the whole scheme a cheery labor-saving Congoleum Rug. It's truly amazing what a delightful effect even such a few changes as these can make.

Throughout the house, whatever the room, or the color scheme, you can find in Congoleum Rugs a wide variety of suitable patterns.

But it's not alone the charm of their lovely colorings that makes Congoleum Rugs so popular with the modern housewife. Just as important are their work-savin time- and money-saving virtue Designs of exceptional beau —a smooth, waterproof surfa that is a joy to clean—wear-resis ance that is unequaled—a liber money-back guarantee . . . the things have made Congoleum Ru *America's Most Popular Floc Covering*. And prices today a lower than ever before! All t popular sizes up to 9 x 15 feet.

MORE THAN 2,200,000 CIRCULATION

THE DRIFT Fence

ZANE GREY'S *Smashing New Serial*

MOLLY DUNN sat waiting on the rickety old porch of Enoch Summers' store in the village of West Fork. For once she was oblivious of the oach of the lean-faced, long-legged ig backwoodsmen who lounged there their elders.

olly was almost eighteen, and on the of a great adventure. She had been ed to ride to Flagerstown with the She had been there only once, some before, and the memory had haunted In her pocket she had money to buy stockings and shoes, which compen- somewhat for the fact that she now o keep her feet and ankles carefully n under the bench. She wore her good dress and bonnet, and though not satisfied with them, she was not ashamed.

Andy Stoneham, a tall youth with sallow face and fuzzy beard, edged over closer and closer.

"Reckon you're most orful stuck-up this mawnin'," he drawled.

Molly looked at the bullet holes in the wall of the old store. She had seen them before, and long ago, when she was ten, she had stuck her finger in them and wondered about the battle that had been fought there once.

"Goin' up o Flag, huh?"

"Do you think I'd dress up like this for West Fork?"

Enoch," said the rider, "you now thet drift fence we been earin' aboot for the last year. . . . Wal, it's more'n talk now"

Digitized by Google

Original from UNIVERSITY OF IOWA

inquired Molly loftily, eyes scornful.

"Wal, you used to, didn't you? You shore look purty. But I can't see you've any call to get uppish. I've seen you in thet rig before, haven't I?"

"I don't remember, Andy."

"Then you've got a darn short memory," replied Andy bluntly. "Didn't I take you to the last dance in thet dress?"

"Did you?"

"Wal, I shore did. An' didn't I hug you in it?"

"Did you?" queried Molly flippantly.

"You bet I did."

"I've forgotten. But I've heard it said you're so big an' awkward you have to hold on to a girl when you dance. Else you'd fall down."

"Wal, how aboot kissin' you, too? Drivin' home frum the dance?"

"Oh, did you!" retorted Molly, her face hot; Andy's voice carried rather far. "An' what did I do?"

"Wal, I figger thet you kissed me back an' then slapped my face."

"Andy Stoneham, you're a liar about that first!"

"Haw! haw! . . . Say, Molly, there's goin' to be a dance next week at Hall's Mill. Come on an' go."

"ANDY, I don't like that place," returned Molly regretfully. "Besides, I wouldn't go with you, anyway."

"Wal, you shore air gettin' stuck-up. An' why not?"

"Because of what you said—about kissin' me."

"What of thet? I did an' you liked it. Aw, you're funny. Haven't all the boys done the same?"

"They have not!" declared Molly. "Who ever said such a thing?"

"I heerd Sam Wise say it. An' Bill Smith laughed, though he didn't say nothin'."

"So that's the kind of fellows you are! And you let them talk that way aboot me?"

"Wal, why should I care? You've shore been mean to me."

"Why should you, indeed?" replied Molly coldly, and she turned away.

At that juncture a horseman rode up, and his advent not only interrupted the argument, but had a decidedly quieting effect upon the other occupants of the porch. The newcomer was a lean range rider, neither young nor old, and he suited the hard country. His tired horse showed the dust and strain of long, hard travel.

"Howdy, Seth," said old Enoch Summers, rubbing his bristled chin and stepping out. "'Pears like you been humpin' it along. Whar you come from?"

"Me an' Arch Dunn just rode over from the Diamond," replied the other.

Molly's attention quickened to interest at the mention of her brother. This Seth Haverly was his boon companion, and they had been up to something.

"Wal, thar's news stickin' out all over you," drawled Summers. "Git down an' come in. Mebbe a drink wouldn't go bad."

"Nope. I'm goin' home an' get a snack of grub."

One by one the men on the porch joined Summers. The fact that Seth Haverly did not want a drink interested them as much as his arrival.

Haverly had a still, brown face and intent, light eyes.

"Enoch, you know thet drift fence we been hearin' aboot for the last year?" he asked.

"Reckon I heerd the talk."

"Wal, it's more'n talk now. Me a Arch rode along it, for ten miles, I figg Straight as a bee line. New three-wi fence, an' barbed at thet!"

"What you say? Barbed!"

"You bet."

Silence greeted Seth's nonchalant a firmative.

"ARCH had a hunch aboot this fen goin' up," went on Haverly. "An' Flag we found it was a fact."

"Wal, who's buildin' it?"

"Traft."

"Ahuh. He could afford it. W what's his idee?"

"It ain't very flatterin' to West Forl drawled Seth, with a grin. "We hee some things thet'd be hard for you cattle nesters to swaller, if they're tr But me an' Arch only had the word some cow-punchers. We couldn't get a satisfaction from Traft's outfit. N foreman. Nephew from Missouri, heerd. Tenderfoot, but I agree with Ar who said he was no fool. Anyway, asked him, polite-like: 'Say, Mist

"What'd you do if you were just about licked?" he queried suddenly. . . . "I—I'd get up an' fight some more," declared Molly

hat's the idee of this drift fence?'—An' e looked me an' Arch over an' said: What do you suppose the idee is?'"

"Short an' sweet!" ejaculated a man anding beside Summers. "Wal, you o-bit, free-range cattlemen can put thet your pipes an' smoke it."

"Me an' Arch was sure curious aboot is fence," continued Seth. "We rode t of Flag an' started in where the fence gins. It strikes south into the timber at aft's line, an' closes up every draw ar to the Diamond. At Limestone we into Traft's outfit. They've got the half done an' by the time the snow s thet drift fence will run clear from g to Black Butte."

"Ha! A hundred miles of drift fence!" laimed someone.

"Ahuh," nodded Summers sagely. "An' the cattle will drift along to Black tte an' then drift back again."

Haverly swung his spurred boot back his stirrup and without another word e away.

Molly watched the departing rider as ughtfully as any of the others on Summers' porch. This drift fence must be going to have a profound significance for the few inhabitants along the West Fork of the Cibeque.

THEN down the road from the other direction appeared the See buckboard, sight of which brought Molly bouncing to her feet.

"Hop up, Molly," called See gayly. "We're late an' it ain't no fault of yours."

"Good mawnin'," returned Molly brightly, as she climbed to the seat beside Mrs. See.

"Mornin', lass," replied the rancher's wife. "You look like you could fly as well as hop."

"Oh, I'm on pins," cried Molly. "I'll never be able to thank you enough!"

"Howdy, Caleb," spoke up Summers. "Reckon you've got time to come inside a minute?"

"Hello, Enoch," replied See, and his nod included the others present. "I'm in a hurry."

"Wal, come in anyhow," returned Summers bluntly, and he went into the store.

See grumbled a little, as he wound the reins around the brake-handle and laboriously got down. He was a heavy man, no longer young. All the loungers on the porch followed him into the store, but Andy Stoneham remained in the door, watching Molly.

"That lout's makin' sheep eyes at you, Molly," said Mrs. See.

The girl did not look. "He just said some hateful things to me," she confided. "And then he asked me to go to a dance at Hall's Mill!"

"Molly, you're growin' up an' it's time you got some sensible notions," said Mrs. See seriously.

"I'm goin' to Flag," trilled Molly, as if that momentous adventure were all that mattered.

"Lass, you're a bad combination. You're too pretty an' too crazy. I reckon it's time to get you a husband."

Molly laughed and blushed. "That's what Ma says. But it's funny. I have to work hard enough *now*."

Caleb See came stamping out of the store, wiping his beard, sober of face where he had been merry. Without a word he stepped into the buckboard, making it lurch, and drove away. Molly was reminded of the news about the drift fence.

"Mrs. See," she said, "while I was waitin' for you Seth Haverly rode up. He'd just come in from the Diamond with my brother Arch. They'd been to Flag. An' he was tellin' old Enoch Summers about a fence that was bein' built, down across the country. A drift fence, he called What's a drift fence?"

While Mrs. See pondered over query, Caleb answered:

"Wal, lass, it's no wonder you seein' we don't have no fences in country. On a free range cattle trav over, accordin' to water an' grass. No drift fence is somethin' that chang free range. It ain't free no more. rough country this side of the Diam All the draws head up on top an' run into the West Fork, an' into the Cib Water runs down these draws, an' f good. Wal, a drift fence built on to runnin' from Flag down country will the cattle on top. They'll drift alon water down on the other side. they'll drift back."

"Why were they so serious abou

Molly curiously. "Isn't a drift good thing?"

:kon it is, for Traft an' Blodgett, big cattlemen up Flag way. But olks, who live off the Diamond, it good."

st of us couldn't live much worse," Molly thoughtfully.

ı bet you could, lass. Haven't you had milk an' beefsteak, an' shoes ?"

it always, but not always. Just bare toes are showin'," said the h a giggle. "If I hadn't saved up enough to buy new stockings an' d never have come."

ly, you're goin' to have a new o," declared Mrs. See. "I didn't we're goin' to a picnic. Goin' to ime in Flag on Saturday; all kinds of excitement, most like the Fourth."

"Oh, heavenly!" exclaimed Molly rapturously. "An' to think I almost didn't come! . . . Mrs. See, you're awfully kind."

Mr. See went on with something still in his mind. "No, Molly, we've been fair to middlin' prosperous down here in the valley. But this drift fence will make a difference."

"Caleb, isn't the land owned by the government? Couldn't any man homestead it?" his wife asked.

"Shore. An' there's the rub. Traft has no right to fence this free range. But he's a

How
We Kept Tabs on the
German Army

An inside story of the American Secret Service in the World War

By

THOMAS M. JOHNSON

"Frisking Fritz." Doughboys searching a German prisoner. Letters, notebooks, and diaries were a valuable source of information about conditions at the front and at home

IT WAS G-2 that saved the lives of thousands of American doughboys that dark, rainy September morning nearly ten years ago, when they wiped out the St. Mihiel salient in the first independent American attack of the World War. But for G-2, the United States forces would have attacked without the terrific preliminary artillery bombardment that blasted a path through German barbed wire, trenches, and concrete dugouts, smothering German artillery and machine guns.

Without that mighty prelude, they would have been struck by such a storm of German bullets and shells that their losses in killed and wounded would have been not light, but heavy; gold stars at home not few, but many. Yet that also, if it had happened, would have been because of G-2.

It came about in this way: The artillery preparation had been planned far ahead. Three thousand cannon, great and small, were assembled to fire a million shells before a single doughboy jumped off. But for a time on the day before the battle, General Pershing considered seriously giving up the preliminary bombardment, firing only a rolling barrage as the infantry advanced. The reason was simple—it looked as if the Germans had evacuated the salient.

There were signs of it; among many, the statement of a German soldier, captured three days earlier, that the Germans were tearing up narrow-gauge railroad tracks and moving them rearward. That very morning of September 11, Allied aviators flying low over German front-line trenches had not been fired upon. Perhaps there were no Germans there. Why fire a million shells into empty trenches? G-2 had reported these signs—now General Pershing told G-2 to check up on them.

Late in the afternoon, just a few hours before the bombardment was to start, G-2 reported: "The Germans have not withdrawn. They are still there." General Pershing turned to the telephone.

"Orders for the artillery preparation stand," he said.

At one o'clock in the morning, three thousand guns crashed. At five o'clock, after four thunderous hours, whistles shrilled along the forty-mile line and 200,000 infantry scrambled over the top. A few hours later G-2 laid upon General Pershing's desk a captured order marked "*Streng Geheim*," showing that

Brigadier General Ralph H. Van Deman, "Father of American Military Intelligence"

when our artillery preparat fell the German infantry w still in their trenches.

Expert American radio m listening day and night to German wireless stations talk to one another behind their fr had reported at four o'clock preceding afternoon: "All (man divisional wireless stat still working from same places." That gave G-2 a check, for it had studied Ger wireless habits for over a yea

No matter what prisoner aviators said, the Germans still in the salient. To at without artillery preparation not safe. G-2 is Army talk for telligence," which means fin out what the other fellow is u one of the most fascinatin military arts. This hitherto told story of St. Mihiel is one of many that serve to illus its workings and the vital part it played in winning A. E. F.'s battles, for, really, the A. E. F. was pretty good

THE Germans were quite befuddled sometimes, for A. Intelligence not only found out what they were up t often fooled them about what we were up to.

Some people protest to this day that "we didn't do secret stuff in Europe." Well, they don't know, or preten don't, which is fashionable in the Army sometimes. W our espionage and counter-espionage, our agents and co agents, and some surprising, gripping things can be t them now, after ten years and more. They were part of G-2B, in fact. But there were also A and C and D, all bu useful divisions of the service that did Intelligence work interesting, exciting, and important, as their story will In fact, in the World War, "spy stuff" was only one many ramifications of G-2, which was a highly organiz very modern enterprise that went far beyond the d spyglass and false whiskers. So expert is a good n

Digitized by Google

UNIVERSITY OF IOWA

ıtelligence service that someone at the Army /ar College remarked recently that in the ext war—if any—we may know more about ıe enemy than he knows about himself.

Without what we called G-2, no nation can into battle with assurance. Without a good telligence Service, Heaven help those who y it. There were some striking examples in e World War showing the results of a lack the right kind of service, and the well press- ented German Intelligence furnished a good ny. Germany was acclaimed as having a ır organization of superhuman efficiency, yet elligence blunders probably lost her the r in its early stages. Her entry into war at appears to have resulted from blunders in *elligence* as well as intelligence.

HE German General Staff anticipated quick victory in a short war. Yet their elligence Service failed to estimate cor- tly how long it would take Russia to bilize. When they found the Russians in st Prussia long before they were supposed be, there was a panic at German General adquarters and two corps were taken from famous von Kluck's Army marching upon is, to save East Prussia from the invader. d they stayed with von Kluck, Paris would y probably have fallen, with what further lt can only be guessed. And to complete list of errors, it is doubtful whether the corps were actually needed in East Prussia after all. many had filled Russia with spies to find out just such gs.

A splendid piece of stupidity made the German spies in land, twenty-one in all, utterly useless. They used so le a means of sending their reports that on the day Great ain entered the war every one was gobbled up by the ish Intelligence. So the Germans had no news of the sailing he first British expeditionary force for France. Their lligence estimates were off again in regard to Great Britain, they seem to have d to consider seriously ossibility of a long war economic blockade by Navy.

gain, German Intelli- e blundered in not ing that they could broken the French ss front with their great Skoda guns instead of using them in Belgium—so avoiding the violation of a neutral nation that shocked the world and brought in Great Britain. When the Germans used the great guns at Liege, they showed their hand and warned the French.

Testing letters for invisible writing

It was through Intelligence that the British Navy knew in advance of the German plans before the Battle of Jutland. For some days before the German fleet made its attack, the British had known through their secret service that something was up. Then at five o'clock in the afternoon of May 30, 1916, the German Admiralty sent by radio, in code, an order to all units of the fleet to carry out the plan already agreed upon. The British radio stations intercepted the message, and although they could not decode it, recognized it at once for what it was. In fifteen minutes the Grand Fleet was directed to proceed to sea "prepared for eventualities."

THE Germans had slipped in sending so important an order by radio, but they evened up by the same means. They stationed at the mouth of the River Jade a guard ship with powerful radio apparatus. Using the call letter of the German flagship, it sent out fake messages addressed to the other ships of the German fleet, which, meantime, kept radio silence. The British intercepted these messages and figured out their point of origin. If the German flagship was still at the mouth of the Jade, they thought, the battle fleet had not yet sailed. So the British believed, even on May 31, that the Germans were ready to dash forth at any moment but had not yet done so—believed it, in fact, until they almost ran into the Germans. And the Germans had not known that the British knew they were coming out. So Intelligence and counter-Intelligence made a

UNIVERSITY OF IOWA

game of blindman's buff, a new game that America had largely to learn when we came into the war.

For in April, 1917, American military intelligence was a joke. In Washington, it consisted of two officers and one part-time clerk; abroad, of a few military attachés working largely on their own. The Army stepped into the baleful glare of the World War—blind. The officer who, in peace, had tried most earnestly to give it eyes to see was Brigadier General Ralph H. Van Deman, the first American Intelligence Officer. On America's entering the war, he remained at home for a while to help conquer German espionage, and then went to France.

GENERAL PERSHING sailed for France May 27, taking with him three Intelligence officers, about all there were in the country. At the height of our effort, sixteen months later, there were in France alone 287 American "headquarters" Intelligence officers, besides thousands of officers and men attached to units. G-2 had grown from the days of General Pershing's crossing aboard the Baltic, when he studied data on French and British services brought over by the Joffre and Balfour missions, and decided tentatively to adopt the British method because the British were working in a foreign country as we must. To head our Intelligence, he chose General Dennis E. Nolan, then a Major, a General Staff officer who had been with him in the Philippines.

In June and July, 1917, General Nolan and his assistants went up and down the Western Front, getting advanced instruction in the fascinating science whose rudiments alone had been practiced at home. At French G. H. Q. they learned much; then General Charteris, Chief of British Intelligence in France, invited them to see the wheels go 'round at the opening of the Flanders offensive of 1917. For the Americans this was laboratory work in Intelligence.

Amid the stress of a great battle, they saw the whole system at work, prisoners questioned, captured papers and maps examined, wireless intercepted and decoded, airplane photographs analyzed, and espionage reports from Belgium studied. So American Intelligence in France had a British basis—the regulations of the Second British Army, with some added American improvements.

At Chaumont, the provincial Lorraine small town just made American G. H. Q., in the drafty French barracks converted into American office buildings, grew the somewhat mysterious organization called G-2, G. H. Q., A. E. F.—meaning Second Section, General Staff, General Headquarters, American Expeditionary Forces, France. The first section handled administration; the third, operations; the fourth, supply; and the fifth, training.

Upon heavy oaken doors painted black—probably by chance—appeared little signs bearing cabalistic figures—"G-2-A," or simply "S. S." (popularly translated "Sh! Sh!"), and an earnest and capable lot of officers, mostly with new, shiny shoulder insignia, began putting in an eight-hour day before dinner and a four-hour evening after. They were hand-picked, personally recommended to General Nolan; former college professors, linguists, globe trotters, geographers, detectives, newspaper men, international and criminal lawyers, code experts, radio men, draftsmen, printers. G-2 had a hole to fit every peg.

THEY banded together to find out all about Germany—military, economic, political—about the *feldgrau* at the front and the *hausfrau* at home, how the Allied blockade was working, and what was happening in the Reichstag; and what it all really meant to the A. E. F. and the Allies in winning the war. They used every aid science had thought of, and invented new ones. They learned to train pigeons, to fly toy balloons, to get Germans who were tired of *ersatz* food to desert and come over, to arrange matters so that certain harmless-looking persons might hear and see many things the Germans didn't want them to hear and see, to run an extensive printing and publishing business, and to lure from captured Germans, by means disarmingly frank, confusingly subtle, or crassly alimentary, information to be utilized in making uncomfortable their late friends on the wrong side of the line.

At the same time, the Intelligence studies for the battle of St. Mihiel began—a year before the battle took place. That was a secret closely guarded, but Major Kerr T. Riggs, directed by Colonel Arthur L. Conger, commenced then learning by heart all the German arrangements in the famous salient, every twist and turn of trench, every battery position, every rest camp. He even knew about the officers' bathtubs atop Montsec. That started almost before we had any troops on any part of the front. Later the southern face of the salient, assiduously camouflaged by censorship as "the sector northwest of Toul," became the proving ground of G-2, the back lot that developed its big-leaguers. Here they experimented, sometimes amusingly, and learned and grew, keeping up with the newest tricks made in Germany, and with the fast-growing A. E. F. as well. Intelligence officers got little rest.

They slaved to placate the Juggernaut of G-2, the great wall map of the order of battle that was called the riskiest map in France. It was hidden by a sliding panel in the wall of Colonel Conger's office at G. H. Q., guarded at night by a sergeant with a Colt automatic. It was the only single map in France that showed continuously and at a glance the whereabouts at any time of every German and every Allied division on the Western Front.

G-2 had many tasks, but the most important was to keep this bird's-eye view clear, accurate, complete, and up to date day and night. If we knew where the Germans were, and what shape they were in, and knew it right, we could beat them. If we didn't—who could tell? Our best information about that usually came from the Germans themselves!

German prisoners, and papers, maps, diaries, and letters taken from them, were the best authorities A. E. F. Intelligence had; better and more reliable than spies and agents, better even than intercepted radio.

IN THE last few months of the war, man power was probably Germany's biggest problem. The losses in the spring offensives had been terrible, and they were the German Army's picked men, its *Stosstruppen*. The Allies were reinvigorated by two million fresh Americans. How long could the Germans stand the strain, and how soon must they throw in prematurely the striplings who were their last reserve?

The Americans were fighting the Meuse-Argonne, our greatest battle. After a good initial advance, we were stopped, and on October 4 attacked again. The veteran First Division struck head-on one of the great shock divisions of the old German Army, the First Guard. Prisoners taken were hurried to experienced interrogating officers working at the front. Shaken and weakened, the captured Germans talked. They were receiving young replacements, they said—too young. When trouble started, these youths ran away. That was the information we wanted.

A LITTLE earlier, in the tense summer of 1918, during the Germans' last superhuman effort to win before the Americans could intervene decisively, the importance of prisoners in the complicated scheme of G-2 things was illustrated by this hitherto untold tale:

In April and May all the Allied Intelligence Services were trying to find out where the Germans would attack next. Marshal Foch believed it would be toward Amiens, and French reserves were assembled there. But on April 23, Colonel Stanley D. Embick, of General Bliss's staff with the Supreme War Council in Paris, prepared, with the help of American G-2, an estimate indicating that the Germans would attack, not toward Amiens, but toward Paris, on the Chemin des Dames front between Soissons and Rheims, a considerable distance from Amiens. General Bliss and the entire American section of the War Council approved this paper and gave it to Marshal Foch in May. Although the British, too, were a bit uneasy, French Intelligence reported, not the Chemin des Dames, but Amiens as the danger spot, and there the French reserves remained.

On May 25, the Intelligence Service of the VI French Army on the Chemin des Dames asserted: "In our opinion there are no indications that the enemy has made preparations which would enable him to attack tomorrow." Early next morning they captured two German officers and a private soldier, and questioned them separately. The officer said there would be no attack, the soldier said there would be a big attack next morning. What a situation, said the French; which of them shall we believe? They accused the officer of lying, and gave him a "special interrogation," in other words, a course of sprouts. He changed his story, and then, at dusk, French observers saw large bodies of German troops moving behind the front.

French and British, in this "quiet sector" to rest, were ordered to their battle positions. But it was too late. The warning had been too brief, and, after terrible artillery fire, the Germans attacked at half past four next morning. The defense was insufficiently prepared, and in less than a week the Germans had flowed over the Aisne, the Vesle, the Ourcq, to the Marne, where Chateau-Thierry became part of American history. Almost the same day, the French Intelligence received from an undercover

Digitized by Google Original from UNIVERSITY OF IOWA

erman headquarters this essage: "Germans will at- ck May 27 on Chemin des mes." The message was ten ys old. It had taken the ret service too long to it through Switzerland.

HE last great German at- tack of all, the *Friedens- rm*, the "Peace Drive," to the war, came July 15, and time French Intelligence ked well, and so did Ameri- . Observation posts along front, from Château- erry to the Champagne, tted the Germans assem- g guns, shells, supplies. American Third Division ng the Marne even saw n preparing pontoons up- which to cross. Early in , Colonel Conger showed erican correspondents the plicated tabulation of man rested and tired di- ons and their whereabouts, predicted that the next ck would come within two ks.

xpectancy was tense. e prisoners had told of e rumors of an attack, French and Americans been alert July 4 and ther times. On July 14 a picked ch raiding party got into the German in Champagne and brought back a prisoners, but enough. They wore uniforms and had heavy equipment, ing iron rations. Yes, they admitted, was to be an attack early next ing, and they were to be in it. All the front the word flashed, and then Allied guns. When the Germans nced, it was to their worst repulse of They never attacked again.

man prisoners usually talked, and the prisoners of most armies, in- g the American. To be sure, two g heroes of the First Division, ed on the head and dragged "over ermany" the night before our ny attack, did not talk, and so the was a surprise and a success. But were others who forgot the exhorta- n a card that Colonel Walter H. ey, controlling censorship, sent doughboy: "If you are captured, forget as much as possible."

oners, freshly caught, nerve-shaken fed, were G-2's meat. Just out of l of battle, they must be iron men ould not answer questions, if only a cigarette and something to eat rhaps, a sleep. Most of the officers old-style Prussian non-coms were customers. But the rest would succumb to the wiles of G-2 and presently be telling all they knew, ot realizing that it had any im- e.

ners were really the German heel, for they had in their army s with no fondness for Germany— Lorrainers, Danes, and Poles— hers with little fondness for —Saxons and some of the South s. The first thing some Intelli- ficers did was to walk down a line ners asking each, "*Bist du Pole?*"

(Above) A suspect being questioned by a Belgian police officer and American Army officers. (At right) Looking for spy letters in the Army mail

All the Poles were examined immediately and told more than Germans. The French handled Alsace-Lorrainers cleverly, and many deserted to them. They deserted to us too, and a few days before our St. Mihiel attack, General Fuchs, the German Commander, ordered relief of the 77th Reserve Division because so many had walked across No Man's Land that he considered the division unreliable. Of course, deserters would talk.

So would troops just from the Eastern front, brought back since Russia went Bolshevik, to turn the man-power scale and make possible the German spring offensive. They did almost more harm than good. They had been exposed to Bolshevism, and many had caught it. Their morale was rotten. Many would not fight, surrendered readily, and told their examiners everything they knew.

IN ANOTHER way prisoners unintentionally gave information—they talked among themselves. When they were brought back from the fighting, they were questioned quickly about conditions on the immediate front, in their own units, then filtered rapidly through Division and Corps Intelligence to Army Intelligence. Here, they were assembled in large, wired stockades and winnowed carefully and expertly for every grain of news about Germany and its army. Even when they were seemingly alone in the cages, they were not safe from G-2.

In German uniforms, filthy as the rest, German-speaking Intelligence officers mingled with the crowd, listening to what they said to one another. Some Germans, usually because they wished a republic in Germany, joined up with G-2. One German university graduate who must be nameless, working for Captain Sanford Griffith, disguised himself as an officer, entered officers' prison pens, and picked up much valuable information. In return for such help, G-2 escorted two Germans to this country after the war and helped them lose themselves. Even a Republican Germany, it turned out, would have been uncomfortable for them.

One German officer was shamed on a certain occasion into telling the truth. Colonel Willey Howell, Chief of Intelligence of the First Army, told officer-prisoners they need not talk if they did not wish, but if they talked they must tell the truth. This officer gave intentionally false information. What he said was checked, of course, and next day Colonel Howell staged a little satirical comedy: the ceremony of degradation, removing the insignia of the officer who, having been treated like a gentleman, had lied. In the middle of it the officer, deeply humiliated, broke down—and talked.

A raiding party (*Continued on page* 77)

The doctor didn't have much to say, but I could see he didn't like the way things were going

Everything Has *its* Price

Dot receives a lot of sympathy—and hands it back!

By FANNIE KILBOURNE

Illustrated by T. K. HANNA

I'VE often wished that I could have stayed dumb. When I said that to Will once, he had to be funny, of course, and say that he didn't think I'd have noticed much difference. But he was just joking; he doesn't really think I'm stupid. People who are born stupid and stay that way, though, certainly have an easy time of it. They go right on all their lives believing everything they're told. And I don't know of another trait that makes life so simple.

Mother Horton, for instance, positively lives on mottoes. Give her a cooky recipe that calls for corn sirup instead of sugar, and she's as skeptical as the next one till she's tried it out herself. But she'll look you right in the eye and tell you that kind hearts are more than coronets; though she's never seen any coronets and hasn't heard half as much about them as she has about corn sirup.

She's always saying that early to bed and early to rise makes a man healthy, wealthy, and wise, though she knows as well as anybody else that the Prince boy, who has to take something for his thyroid and is too dumb to do anything but drive the milk truck for eight dol week, goes to bed and ge earlier than anybody el Montrose.

I used to be somethin that myself. I took it for grante the more the merrier, it's always d just before dawn, a stitch in time nine and you can't keep a goo down. It was a great shock to first time I realized that you can't relax on a motto. Some mottoes right, but there are others that, soon as you really try to rest your on them, go down under you. An doesn't seem to be any way to tel kind are which.

It was the Carstairses that set me really wondering about this business of having children.

Helen was a Chicago girl that Bob Carstairs had married. Bob had lived in Montrose when he was a little boy, and when he came back to be manager of the power and light company's office we were all glad to see him again and crazy to get acquainted with his wife. When we heard that, though they'd been married six or eight years, they didn't have any children, I said, of course, what a pity. I shall never forget the shock I got when I found that the Carstairses pitied all the rest of us.

It came out quite accidentally when Helen and I were talking about the Bartells. Helen had been very tactful; she was lovely to all the babies, always said twins should be in the movies, they were the cutest four-year-olds she'd ever seen in her life, and so on. But when I happened to mention one day that Betty Bartell was at last going to have a baby, Helen said, "Oh, isn't that too bad!"

I said, "Why on earth?"

"Oh, I don't know," said Helen vaguely. "But it seems a shame, when they're getting along so well."

I'd always thought it was when people were getting along well that they should be having their babies.

"If the Bartells don't have a baby now, when Harry's been made assistant manager of the department and Betty's uncle has died and left her three thousand dollars, I don't see when the proper time would ever come," I said. "They'd go on and on, and probably never have any."

Helen didn't say anything; but she shrugged her shoulders in a way that was as good as saying, "Well, what of that?"

"They'd be missing the greatest thing in life," I said firmly. That was one of those mottoes, so to speak, that was supposed to close discussion. But it didn't.

"I'm not so sure," said Helen. "Who's to know it's the greatest thing in life? People who haven't any children can't have seen it, and people who have children usually haven't seen anything else."

"People who don't have any children," I said, "are lonely and unhappy in their old age."

"So are plenty of them who do," said Helen. "Look at Mrs. Wing, and Mrs. Butler, and Mrs. Long, and old Grandpa Holcomb. Talk about lonesome!"

WELL, I knew that was true. When Mrs. Wing's daughter married a missionary and went to India, which must have been fifteen years ago, Mrs. Wing just stopped living for anything except May's letters. And she always cries over them. Mrs. Butler can't talk about a thing in the world but her son in Peoria and her other son in Utica. And the first year that neither of them got back home for Christmas, she nearly died of hurt and loneliness. Mrs. Long's daughter didn't turn out very well, and I'm sure Mrs. Long couldn't be any meaner or more bitter or more alone in the world if she'd never had a child. And as for poor old Mr. Holcomb, whose own grandson cheated him out of his business and put him in the Old Men's Home—!

I had to admit that having children doesn't exactly guarantee a happy old age for you, so I hurried on to another motto.

"Children," I said, "keep you young and draw husband and wife together."

"Oh, do they! Look at Rosie Merton. Do you think she looks young for her age?"

"She looks very young for a mother of four children."

"I thought you said children *kept* you young," said Helen. "Then Rosie ought to look four times as young as though she only had one. And talk about drawing husband and wife together! Just look at her and Howard. Why, six years ago when Bob and I came here for Bob's vacation, the Mertons were just married, and they used to do everything together. Rosie used to go down and help Howard in the office, getting out bills and so on. Then Howard was always knocking off a day, and they'd go off together in their flivver. And camping week-ends and all such things. I thought I'd never seen a couple that had so much fun together. Don't you remember how we used to call them the Siamese twins?"

"Well, my soul, you can't expect a woman to keep house for a family and work in a dentist's office besides, can you?" Someway, I felt quite irritable about defending Howard and Rosie. "And Howard has to make an awful lot more money now than he did then. He can't afford to knock off days. Besides, it's not so easy to be away from home overnight when you've got four babies. It isn't that Howard and Rosie don't like each other just as well as ever; but they've both got something to

Though I asked Will a million times not to stand and watch me when I was driving, he would forget and do it

Digitized by Google Original from UNIVERSITY OF IOWA

do now besides just being Siamese twins."

"That is exactly the point I was making," said Helen, "about babies drawing husband and wife together."

She stopped short and began to get red and embarrassed, and I knew that it was because she'd suddenly remembered that I had two babies of my own. She instantly began talking nervously and tactfully about how darling Jack and Jill were.

SHE was afraid she'd hurt my feelings, but she hadn't. She had set me to thinking, though. And to noticing things.

The Carstairses had the most artistic house in town—everybody said so—and a maid they'd brought from Chicago to take care of it. They'd been abroad once, so they had lots of things you can't buy in this country. They had new books and thirty-five-cent magazines around, like nothing at all, and cut flowers all winter and always a big box of two-dollars-a-pound candy.

I happened to know that Helen was thirty-two years old, and I had to admit that she looked much younger than Rosie, who is only twenty-six. And though she wasn't really half as pretty as Dulcie, she looked prettier. This was because she always had just the right clothes and took such good care of herself. She never considered a thing in buying a dress except whether it was smart and extremely becoming. She wore chiffon stockings with clocks, which made her ankles look very slim, even in the mornings. She had four different shades of powder, and had her hair waved so regularly at Ye New Beauty Shoppe that it always looked better than mine, which is naturally curly.

I don't know how the other girls felt, but what got me the most of all was the way Helen Carstairs never had to worry or plan and scheme about anything. When she went out in the afternoon, all she had to do was to dress herself. By the time I'd got the twins dressed, I'd be so harassed watching them to see that they didn't get dirty again before I was ready, that often enough I wouldn't even look in the mirror when I powdered my nose. When Helen would have company for dinner, all she'd have to do was to set the table, maybe, and fix the flowers. Mercy, by the time I'd pulled off a really fancy company dinner, I'd have had more work and worry than Hoover feeding the flood area.

If the Carstairses had been rich, I wouldn't have thought so much about all this, but Bob and Will got to comparing notes one day, and found that they cleared just about the same amount by the end of a year. Neither were the Carstairses spendthrifts, like the Bartells, putting every cent they had onto their table or their backs. They saved about the same amount we did.

No; the whole difference between us and the Carstairses was our twins. If Will and I hadn't had any children, we could be doing just about the way the Carstairses were. It wasn't, of course, that I was sorry even for a fraction of a second that we had Jack and Jill. I could think of so many moments when just having them seemed enough for a lifetime.

Nearly every winter twilight, after I'd given the twins their supper and had ours well started, I'd sit down beside the front bedroom window with Jill in my lap, and Jack, in his funny little pajamas with feet, hanging to the window-sill, and we'd watch for Daddy. Sometimes, when I'd see Will, tall and big in his winter overcoat, come swinging around the corner under the street light, look up at our window and wave to the children, I'd be so happy that I'd feel a sudden ache, way up in back of my throat.

Oh, I wasn't sorry, of course, that we had the twins. But, nevertheless, the Carstairses set me thinking. Thinking of the price that we paid for having them.

Helen could never get it into her head that I couldn't pick up and do anything I happened to feel like after my actual work was done, that I couldn't even leave the house of an afternoon, unless I took the children with me or else planned ahead to have somebody to leave them with. Sometimes she'd joke about it, hail the twins with, "Hello there, old Ball and Chain," but mostly she was tactful about it.

If there's anything in the world that's poison to me, it's to know that somebody's being tactful to me. Helen had a way of smoothing some things over and pretending not to notice others that got me perfectly wild. She'd start to suggest our doing something, then stop short and turn it off hastily into some gushing compliment about Jack and Jill. I'd have thought maybe I was unduly sensitive about it; but even Will noticed it. When Will notices tact, it must be pretty bad.

If it hadn't been for Helen's tact, I don't imagine that either Will or I would have thought of entering the country club golf tournament.

We were over at the Carstairses' one evening and they were talking about it.

"I think Bob and I'll enter the Married Doubles," Helen said. "The merchants of the three towns are putting up wonderful prizes. The first is a pair of twin beds that I'd adore for our guest-room."

Will and I glanced at each other. All we had in our guest-room was a double cot with a cretonne cover.

"When is this tournament?" Will asked. He had joined the country club for business reasons; but we almost never used it ourselves. The tournament, it seems, was six weeks off. I knew just what Will was thinking. Though we aren't such wonderful golfers, we might have a chance in Married Doubles, because we're fairly even. In most of the couples we knew of, one or the other was poor enough to be a sort of a handicap.

The Carstairses went on talking about the tournament and Will and I said nothing in words, but we kept up a kind of silent conversation with glances. And pretty soon, Will said right out:

"If we could get in some practice every day for six weeks—of course we're rusty as the dickens—"

BEFORE I had a chance to say anything, Helen rushed into the breach.

"Oh, there wouldn't be any use entering unless you got in good form first," she said. "And that would take a lot of practice. I don't imagine the tournament'll be worth the bother."

"Oh, I don't know about that; I think it'll be pretty good," said Bob, who, being a man, has to be reminded to be tactful. His wife's glance was enough to remind anybody.

"Jill did the cunningest thing this morning," she began, changing the subject with a tactful brightness that made me car-sick.

"Let's enter the tournament, Will," I interrupted her, with a kind of reckless desperation. I didn't see how on earth we could manage; but I just felt I couldn't stand one bit more of patronizing pity. And Will must have felt the same, because he said promptly:

"All right, I'm on."

When we were alone at home, we were a bit appalled at what we'd decided; but neither of us wanted to back out.

"If we could just park the kids from five o'clock till seven or so," said Will, "I could duck out of the office an hour early and we could beat it right out to the links."

"Maybe Mother'd take them for supper," I said. "It'll only be for six weeks."

Mother Horton has usually been willing to take the children any time, but she and Father Horton had stayed out in California this summer. However, when I explained the situation to Mother, she rose to the emergency like a good sport and said for us to drop Jack and Jill there each afternoon on our way out to the links and pick them up on our way back.

The Carstairses decided to practice at the same time, so that we could all go out together. The first Monday started out beautifully. Will rushed home from the office and got into his knickers. I had a cute new very light-weight sweater and skirt, and I thought we looked just as well as Bob and Helen. I put on the twins' new brother-and-sister suits and they were adorable.

WE DROPPED them at Mother's and went on out to the club in the rumble seat of the Carstairses' roadster. The clubs stuck up gayly in the front and we were all laughing and singing and foolin' and I flattered myself that Will and I didn't look like parents at all.

We went around in the foursome with Bob and Helen and beat them by eight strokes. I couldn't help gloating a little over Helen's surprise. She'd just taken for granted that we'd be dubs. She was half so pitying and tactful as we strolled back to the clubhouse.

There was just one unfortunate thing. Bob and Helen had taken it for granted that we'd stay and have supper at the club afterward, and of course we couldn't. We were keeping the twins up past their time as it was. As we'd come in the Carstairses' roadster, they had to come home too. They were very nice about it, said it didn't make a bit of difference. It really didn't amount to anything but, mere trifle, it was a little bothering. And Will said after we got home, if we were going to start getting meals at club, we might as well buy the twin beds right.

By the end of the first week, I could see that when we'd decided to be in tournament, we'd taken on something. For one thing, our pleasure in beating the Carstairses didn't last long. Our first afternoon, we happened to see the Bartletts playing. My soul, they were so much better than any of us that it took our breath away. And there was a guest from Verblen that had it all over the Bartletts like a tent.

Will and I said nothing in words, but we kept up a kind of silent conversation with glances

lk about any of us winning the twin , I said, as we were all starting off ird day. "We'll be lucky if we're ned with the also-rans."

, is that so!" said Will and Bob to- . They're both natural-born fighters y remark was like saying rats to a of dogs. From that moment, our e began being a grim business.

two hours a day wasn't half enough. took us fifteen minutes to get out to b and another fifteen to get back. In't feel he could leave the office be- , and, though it was light till after we stayed as late as we could, it not getting the children to bed till lock. Jack's a nervous little fellow baby book says a nervous child ve plenty of sleep.

ng the twins at Mother's wasn't n either. At home I let them play in their overalls, but Mother's neighbor is a very fussy woman er wanted her grandchildren to redit to her. I found that that ractically a clean dress and suit a ich more than doubled my wash- ironing. Then, too, Mother hem so during the time she had it they were twice as hard to take e rest of the time.

care of children is much harder re tired, yourself; and I found that I was tired most of the time. You can't add two hours a day on the golf course in hot weather on top of your regular housework without noticing it. Will didn't help me as much as usual, either. Leaving the office early at night, he felt that he had to rush back at noon, which meant he couldn't help me with the dinner dishes as he had often used to. He didn't wipe the supper dishes, either, because the lawn was getting ahead of him.

And every spare second we had, day or night, he wanted to spend practicing with one club or another. My unfortunate remark about the also-rans had done the work. Will was simply determined that we should win that prize. And when Will gets an idea like that into his head, his ordinary good judgment leaves him entirely. Of course I wanted to win the twin beds too; but Will irritated me just the same, appearing to think I could shell peas with one hand while I practiced mashie shots with the other.

I certainly was doing my best. After the twins were in bed and the supper dishes at last done, it was pitch dark of course, and we would turn the flivver lights on one corner of the lawn and putt till we were ready to drop.

The trouble with trying to play golf when you're tired is that you can't play your best and that makes you cross. The worse you play, the crosser it makes you; and the crosser you are, the worse you play. It's a vicious circle, and by the end of the third week both Will and I were running round and round it, like squirrels in a cage.

And the trouble with playing partners when you're both cross is that you're very likely to blame your playing onto your partner. Whenever Will missed a putt he should have made, he was sure to say that I had talked or moved and made him miss. And though I asked him a million times not to stand and watch me when I was driving—it made me so nervous I'd flub every time—he would forget and do it.

THE fourth week was worse than the third because, the tournament being that much nearer, the situation was becoming more tense. Also, there was an added trifle which rather upset Will. Six months before, Bob had told Will about some stock to buy. It wasn't speculating on a wild tip or anything crazy like that. As Will said, it was a case of getting in on the ground floor, and was so sound that if it weren't for the twins he'd have taken a chance even if it did tie us up. But life with twins is chancy enough already. You can never tell a week ahead what you're going to have to shell out for. If it isn't adenoids, it's shoes.

"Well, I suppose (*Continued on page 172*)

Meet Mr. Sherlock Holmes of the Plant World!

Introducing DR. RODNEY H. TRUE, famous botanist, who has solved the most amazing mysteries of plant life and tracked plant criminals whose depredations were causing huge financial losses

By WILLIAM S. DUTTON

SOME time ago a badly worried builder presented himself at the office of Dr. Rodney H. True, famous botanist of the University of Pennsylvania. In his hand he carried a small parcel wrapped in newspaper.

"Professor," he began, "they tell me you know all there is to know about plants."

"I know something about plants," Doctor True corrected.

"Then maybe you can explain something mighty strange that's happened in my business," the visitor said. "I've the contract to plaster a new building just being finished downtown. A few days ago my men went to work. Yesterday when I inspected what they had done I was so surprised I scarcely could believe my eyes. Vines were growing in the plaster."

"Growing in the plaster?" echoed Doctor True.

"Yes, sir," nodded the builder. "I know it doesn't sound right, but there they were. They grew right out of the new plaster as if we had planted them there, about one to every square foot. I pried them up by the roots and plastered over the holes—and this morning a whole new crop is growing! We can't finish the wall for these plants!"

IN REPLY to Doctor True's questions the builder related how, in view of the importance of the contract, he had used unusual care in selecting his materials and in mixing them. The lime was of the best. The sand had been obtained from a proven source and most carefully screened. He had used the sand in other walls, within that month, with no such fantastic consequences.

And finally, to prove his statement, he opened the parcel he had brought with him. In it were several of the plants. The hard, dry, almost stone-like mate which the roots were imbedded in tably was plaster!

I have described Doctor True as anist. He's more than that. H solver of plant mysteries—a detect shrewd in his work as any Sherlock H in his. Also, he is a plant physi which means that he is both surge doctor in his great world of growing Plants have their ills just as peopl Likewise they have their mysteri the underworld of plantdom th some amazing criminals whose d tions have cost man uncounted th of dollars!

Doctor True got out his microso took a look at those plaster lump his visitor had brought him. The scope revealed a tiny portion o shell clinging to one of the plant r was the smallest kind of clue, but for the experienced scientist to

ne name of the culprit growth. The lant was a species of fenugreek, ative to Asia and the Mediterranean ores, which thrives in the dry alkali il that is often found on the edge of serts.

"Asia? Deserts?" ejaculated the ilder. "But my sand didn't come om any desert! I got it right here Philadelphia!"

Nevertheless, while his bewilder-nt increased, he consented to ch a sample of the sand. It was rally peppered with the seeds of e Asiatic fenugreek!

"Any drug-stores near that sand e?" asked Doctor True.

There were—and in the drug-store sest to his sand heap the builder nd the solution of his mystery. e druggist, in taking inventory of ck, had found some horse medicine which he had received no call in rs. His customers all owned auto-biles. He had dumped the medi-e, the bulk of which had been ugreek seeds, into the vacant lot k of his store. Boys playing in lot had transferred some of the th on which the seed had been nped to the near-by sand pile. hen an odd thing had happened. seeds were many years old. The l pile was damp and the climate . Under such conditions the s were due to die and decay very kly. But along came the builder, sand. He carted it away, mixed er and lime with it, and the lime, ting to the water, had created and also furnished an alkali con-to the soil. Before the plaster, ched out over the walls, had be-e too hard, the seeds, once again eir native element, had burst in-ie.

ANY such mysteries, and others which often involve the conduct eat industries, the future of whole iborhoods, and much capital, are itted to Doctor True in the e of his work. Some of his in-gations, such as that made for uilder, are concluded within a ours; others made by him dur-ne forty years in which he has engaged in his work have re-l months and even years. He raveled tens of thousands of in many parts of this country, study and detection of plant tals.

e 1920, he has been director of otanic Garden and head of the tment of Botany at the Uni-r of Pennsylvania, which is the and one of the most distin-d departments of botany in a. Prior to that, for nineteen he made investigations into ndustry for the United States ment of Agriculture. He also d on botany at Harvard Uni-for a year; was a member of ulty of the University of Wis-for four years; and earlier extensively both in this r and in Europe. He stands front rank of American scien-

If You Ask Me:

"It's tact, not silence, that's golden"

ALPHONSO HIGGINS was one of the "characters" in Our Town. By keeping his mouth shut he had become famous. Words were to him like carrier pigeons—to be released only singly and in some emergency. "'Fon' Higgins can keep still in seven languages," folks used to say of him. And yet when he died he was not greatly mourned. His silence had won him respect but no love.

Henry Halstead was also a marked man. Henry was downright profligate with words. I have known him to take eleven minutes to tell what he thought the weather would be tomorrow. His words were like the eggs of our New England cod. He laid millions of them a year but only a small percentage survived the spawning.

Death came also to Henry Halstead. But no great dent was left in the community life. "I guess that the 'silence of the grave' is hell for Henry," a local humorist remarked.

PERHAPS the most popular man in Our Town was John Whitney. In neither direction was he conversationally conspicuous. But he used his words well. He had a genius for saying the right thing at the right time. If you were sad he knew how to make you feel better. If you were in a temper he could "calm you down." Conversation seemed to seek a curiously high level when John was around.

I remember one talk-fest in which the character of a young woman was being torn to shreds. Appearances were against her. John's face grew dark as the tongues clacked.

"What's the matter, John?" a neighbor asked.

"I just don't like this kind of talk," he said quietly. "After all, we don't *know* that any of these things are true."

AND then he told us the story of a peasant with a troubled conscience who had come to a monk for advice. The peasant had circulated slander about a friend—only to find out later that it wasn't true.

The monk was old and wise. "If you want to make peace with your conscience," he said, "you must fill a bag with chicken down, go to every dooryard in the village, and drop in each of them one fluffy feather."

The peasant did as he was told. Then he came back to the monk and announced that he had done penance for his folly. "Not yet!" said the monk sternly. "Take up your bag, go the rounds again, and gather up every feather that you have dropped!"

"But the wind must have blown them all away."

"Yes, my son," replied the monk. "And so it is with gossip. Words are easily dropped, but no matter how hard you try, you can never get them back again." . . .

The parable was like a shower on a granite walk. It washed away the dirt. The group and the gossip broke up.

John Whitney was a gentleman. Everyone loved and respected him. He left no relatives nearer than a third cousin, but his grave has never lacked flowers.

* * *

Alphonso Higgins and Henry Halstead misused their words through hoarding or waste. John Whitney used *his* words as tools for building beautiful things. And who can question that his was the better part?

As Samuel Butler wisely said: "Silence is not always tact, and it is tact that is golden, not silence."

MARK WOODS *says* . . .

"My Money *is on the* Man *who* Believes *in* Miracles"

And this comes from a man whose amazing activities include chaining rivers to their beds, putting unruly ones back where they belong, and reclaiming acres of land eaten up by cannibalistic currents

By NEIL M. CLARK

IF YOU are like ninety-nine out of every hundred people, you have never heard of Mark W. Woods. Yet he is one of the wealthiest and also one of the most interesting business men west of the Mississippi, and he handles jobs that have excited attention even in Wall Street.

His mark (no pun intended) has been stamped on most of the great rivers of this country. Take an airplane from Omaha to Kansas City, following the Missouri River, and you will look down on no less than forty great projects directly attributable to his genius. He is *not* an engineer. But he discovered a way to tame bandit rivers, make them stay where they belong, and stop stealing millions of dollars' worth of property yearly.

He *is* a banker and business man. Therefore, he organized a company to capitalize his discovery. Today that company has contracts completed, in hand, or in sight totaling many millions of dollars.

This is not all. When rivers are harnessed, land that was worth thousands may become worth millions. In Kansas City, Mark Woods found large tracts adjacent to the river that were undeveloped. He tamed the river and is developing one of the greatest industrial districts of the middle west. That project alone represents millions of dollars.

These are some of the things Mark Woods and his organization are doing. From his youth up, he has done big things. Today, as president of the Woods Brothers Corporation, of Lincoln, Nebraska, he directly or indirectly controls a dozen undertakings, any one of which would be big enough to suit the taste of an ordinary man. He is one of the largest Corn Belt farm operators. His real estate firm has developed, sold, and re-sold a large portion of the land on which Lincoln stands. He sponsored a modern street-railway system when the traction company failed to do so. He and his brothers originated a great telephone company, and they organized a timber company that sells hundreds of thousands of ties annually to western railroads. And the Woods brothers and their associates control one of the largest coal-mining companies in the country.

You might think Mark Woods' career a complicated one. Actually, in all the essentials it is surprisingly simple. Two facts about Mark Woods flash up steadily like signal lights; almost alone, they explain every success in his career. One is his belief in promptness. The other is his profound belief that opportunity is always waiting for the man who goes gunning for it.

"Be on time in life," he says, "in both small and large things. Keep up to date; don't limp into line after everybody else has arrived. Keep your word. Be dependable. Pay every penny the day it is due, even if you have to take the skin off your back.

"A man who does that has character. If he goes into business, he will draw dollars as a magnet draws steel."

And again:

"Many people think everything has been done. They can't 'see' anything new—until it is old. Many doubt that the airplane will ever amount to much in transportation. Seventy years ago they would have said the same of the railroad; forty years ago, of the telephone; ten years ago, of the radio! They just naturally hang back.

"But the fact is, we are making progress at a furious rate. Every day brings something new. The biggest jobs are ahead. *My* money is on the fellow who believes that miracles can actually happen, even in 1929!"

VISUALIZE the man Woods. He is built on square, compact, forceful lines. His hair is dark, with scarcely a glimmer of gray. He appears to be in his middle forties, and one would never guess that he is nearly sixty. A first-rate joke delights him hugely. He has been much out of doors, often in rough country among rougher men; rugged self-reliance is stamped on his manner. He will spend millions freely to develop a promising enterprise, but may change hotels at personal inconvenience if he finds that he has been willfully overcharged a few cents!

Mark Woods started as poor as any boy can when he has nothing but ambition and energy. He was immensely fortunate in his parents. They were of long-lived vigorous, high-principled stock. His mother, past eighty, still lives. His father almost eighty-four, died only a few months ago.

"The finest parents boys ever had," Mark Woods says.

The boys, in turn, reflected credit on the parents. It would be hard to find four brothers who have all done big things consistently as they. Albert, the eldest, former university president, is now head of the Bureau of Scientific Research of the Department of Agriculture at Washington, D. C. Frank, lawyer and business man, is president of several large companies and has been closely associated with Mark in business. Mark and George have been partners for three and a half decades.

COLONEL FRED M. WOODS, father, was, in his day, the country's best-known live-stock auctioneer. At the time of Mark's birth, in 1870, the Colonel was a land appraiser and loan officer for the Illinois Trust and Savings Bank of Chicago. Through him, from the first Mark was thrown in contact with interesting men.

"Besides having these other duties," Mark Woods explained, "my father was superintendent of a thousand-acre farm at Downers Grove, Illinois, owned by General Alexander A. C. Ducat, a famous Chicago insurance man. There I spent most of my early boyhood.

"General Ducat often brought friends to the farm to hunt. It was my job to drive them around. One day I was driving General Ducat and Marshall Field, the merchant, over some rough ground. Like a boy would, I let my head flop back and forth at every bump.

"'Young man,' Mr. Field growled, 'if you don't keep a stiff neck, you're going to lose your head!'

"Marshall Field was not a man to make jokes. I took him in deadly earnest and for the rest of that day kept my head back as stiff as a poker. Several times in tough corners, later, I thought of what he said, and considered it excellent advice."

Mark Woods

MARK WOODS, of Lincoln, Nebraska, directly or indirectly controls a dozen large organizations, any one of which would satisfy an ordinary executive. These interests range from a great construction company to banking, real estate, public utilities, timber and coal companies, and an airport. When the Missouri River started eating chunks of land out of Mr. Woods farm, he got the idea of river bank protection. In ten years his construction company has saved billions of dollars' worth of property, and has done, and is planning, big, vital work on practically every important riverside in the country affected by erosion.

Dorothy Canfield

DOROTHY CANFIELD is one of America's leading and most beloved novelists. Included in her books, which usually stand high up among the best sellers, are "The Bent Twig," "The Brimming Cup," and "Her Son's Wife." Also, she has written many popular short stories. In the non-fiction field her translation of Papini's "Christ" brought her wide recognition. Her latest non-fiction book is "Why Stop Learning?" For three years, during the World War, Dorothy Canfield served her country and humanity in France. She was born in Lawrence, Kansas, fifty years ago. In private life she is Mrs. John Redwood Fisher, of Arlington, Vermont.

"Middle Age is a very pleasant change from being Young"

"WHEN you make the middle-aged discovery that the stars do not reel every time you have made a fool of yourself," says Dorothy Canfield, "you can see that there are some compensations for stiffening joints and gray hairs. There are simply no words which can do justice to the relief which comes when you stop caring so terrifically about always appearing well to others. And yet this new freedom is only a minute part of the enormous widening of life which comes when time enables you (nothing else BUT time can do it) to make a faint guess that you are not the most important person in the world. Like Pilgrim's burden, at least half your unhappiness rolls from your bent shoulders when this great truth begins to penetrate your aging mind."

I am Fifty—

And it Doesn't Hurt a Bit!

By DOROTHY CANFIELD

O YOU remember the little girl who asked her mother if you didn't feel queer for a few days after you grew up? I think of her when people ask me how I bout being middle-aged. The answer th cases is, "You don't feel anything tional. You just go on living." Such nswer probably wouldn't have satis- he little girl, nor shaken her convic- hat the enormously advanced age of y-one must be ushered in by comets, quakes, and other astrological por- And I don't suppose it will satisfy der, but equally naïve, people who ne that somewhere between forty and here comes a solemn moment when man folds her hands and thinks: h is past; old age is just ahead."

the honest truth is that there is g dramatic about the passing of the You go on living, working as usual esperate hurry to keep from being ed by all the details of life, and one g you look at the calendar and say, it's my birthday! And I'm just Aunt Ellen was when she moved to wn." Then, with a smile, "Gracious! eemed as old as Moses' wife to me! t is it I have on my mind for today? ne see. I must order a couple of tons al and go to the Children's Aid com- e meeting and get my skates sharp- and . . . there was something else oh, yes, I promised to write an article ing middle-aged."

least that's the way my birthdays me in this period of my life. I me you don't believe me. People a thirst for emotional crises. They to take lamentations at their face as sincere outpourings of the heart. it is what you want, lay down this and make your choice among a great many screeds on the direful subject of advancing years, written by young people.

But, as far as I am concerned, I had been so little aware of the drama and pathos of my situation that, until the request to write this article fixed my attention on my age, my state of mind could have been summed up by these short phrases: "Nearly fifty? So I am. What of it?"

And now comes the reminder: "But I'll *be* fifty before the piece gets into print." So I shall; but what of it?"

OF COURSE, the moment I did stop to take thought I realized that I am no exception to the laws which make all women around fifty very different from what they were at twenty. I, too, am very different. How did it happen, I asked myself, that I had insensibly passed through those years which had looked so portentous to my twenty-year-old eyes? To take, first of all, the most obvious change: the one which during all the generations of man has been the theme of melancholy poems and (so in my naïveté I had supposed) of embittered hearts—the inexorable passing from the smooth-skinned, bright-haired radiance of youth to the wrinkles and gray hair of maturity plus. Why was it that I had been so little affected by this change, traditionally devastating to women, as scarcely to notice it? I realized that mine was not the correct attitude at all. Years ago—let alone right now when my attention is called to it—I should have devoted many hours per day to tears, or at least to besieging the beauty parlors in that futile search for prolonged youth which makes such easily available copy for any writer with a turn for ironic pathos. What was the matter with me?

Consideration brought to mind several things the matter with me, along with other women of my generation who are cheerfully enjoying the middle years of life. They seem, those energetic, life-loving, work-enjoying contemporaries of mine, all to have learned somewhere a lesson which it took the war to teach me.

I SPENT a good part of the duration of the war in France, in contact with the direst needs. We, who were doing what we could to help, felt like the garrison of a besieged fort. We desperately needed reinforcements. To be of any use to us, our reinforcements must be capable of endurance, firmness of purpose, responsibility, perseverance, and self-forgetfulness. You will not, perhaps, find it hard to believe that we soon lost any enthusiasm we might have had about youth *per se*, or its physical attributes. Bright eyes, smooth faces, gleaming young hair—we came to distrust them on sight.

In our minds these pretty signs of physical youth became associated with childishness, fickleness, irresponsibility, lack of conscience. In other jobs, we admitted, young people might leap into danger more recklessly than their elders, but the inability of youth to stand things it doesn't like made them tragically exasperating to us. We could not always provide them with danger, or the "something exciting" which they required as their daily dose of stimulant; and without it they would not stick at a long, tiresome job till it was done, no matter how tragically it was needed. Would not? Apparently they could not.

Perhaps it was in those days that I got over rating fresh complexions and natural dimples at their surface value; learned to welcome with joy (*Continued on page 84*)

UNIVERSITY OF IOWA

NICHOLAS came into the house and called softly up the stairway: "Hoo-hoo, Nancy!" There was the sound of a gently closing door and then: "All righty; be down in a few minutes."

"Listen, dear," said Nicholas. "I brought Perry, the poor fish, home to supper." The poor fish O. K.'d this good news with, "Hello, Sis."

"Glad to have you, Perry, but don't come up. If Babsy sees you it will be all off." Nancy added a postscript: "Show him the agriculture, Nick."

All these remarks were in stage whispers as if dark deeds were brewing in the little green house on Elm Street. The two young men walked with a guilty tread through the dining-room, which showed no signs of impending dining, and out into the back yard. There Perry Deyce found it possible to speak aloud.

"See here, Nick, I'd better not stay for supper. Nance seems to have her hands full." He consulted a wrist watch. "I've got time to get to the boarding-house. I'll come some other night."

If Nicholas Folger could have foreseen what the evening would bring forth he would have accepted his brother-in-law's resignation, but he had a special reason for wanting Perry to stay this evening, so he said:

"Forget it, kid. Nancy would be sore if you ran off. There'll be something doing soon—probably Barbara delayed the game. Have a look at the garden?"

Nicholas was five years older than Nancy's brother, five inches taller, and fifty pounds heavier. He was shaggy-haired and careless in his dress, whereas Perry was neat and fastidious, with the brown hair and regular features of his good-looking sister. Nicholas was a lawyer; Perry was a teller in the Evergreen Bank. Nicholas was easy-going and good-natured; Perry full of nervous energy. Nicholas was inclined to reticence; but Perry would burst into oratory at the slightest encouragement. They disagreed on a hundred matters of minor importance, but they were united in one belief, which they never discussed, that Nancy Deyce Folger was Nature's noblest work.

Nicholas shed clothing as he walked; he left his hat in the dining-room, his coat on the back porch, his necktie on the pump handle, and his collar on a gooseberry bush. By the time he reached the little vegetable patch he was stripped for action. He rolled up his sleeves, demolished a few miscellaneous weeds, and pulled some radishes for supper. He called Perry's attention to the carrots, spoke highly of the turnips, and gave honorable mention to the spinach.

"Some garden, kid?"

"Pretty good." Perry shed no enthusiasm nor clothes and refused to soil his hands with agriculture. He stood aloof in his banking suit, and if he threw cold water on Nick's garden it was only in a metaphorical sense. All of this was an economic waste, he held. "You can buy vegetables at the market for less than it costs you to grow them, if you count your time at all. Farmers can raise better garden truck than lawyers can, anyhow."

"Yes, but you've got to consider Barbara. Spinach and stuff should be fresh out of the garden for babies. Vegetables lose vitamins or something if they get stale. Nancy can give you an earful on that. Come and look at Bessie."

The little corporal of finance thoughtfully studied this cow and vetoed her. It seemed that Bessie, too, was an economic waste. Her overhead was too much. Nicholas admitted that Bessie came high, but claimed that the baby's robust health was largely due to strictly fresh milk.

When Nancy came down she gave out one wifely and one sisterly kiss. She had brightened herself up for her men folks, but there were tired circles about her brown eyes.

"It won't be long now till liver and bacon and garden sass," she said. "Babsy nearly finished her poor old bobbed-haired mother today. I was defeated on every front."

"Can we help any?" asked Nicholas.

"No, you fellows sit out on the front porch and quarrel about farm relief."

This evening meal was good, but perhaps not hearty enough for Perry after the delay. Supper was enlivened by ta of the misdeeds of the infant Barbara, w had made a nuisance of herself in ma charming ways and rendered life a burd and a joy to her mother.

"She's big enough now to run and and bump herself. She can pull thi

n her head, too. I can't trust her my sight a minute."

olas listened with fond attention to inating tale of how his art-loving r had tried to eat the comic sup- of the Sunday paper and had when not allowed to decorate her with colored ink.

was just too cunning for words," ncy.

achelor brother stirred uneasily in , but the infatuated parents did these warning signals.

," asked the attorney, "is the tooth getting along?"

n, folks, I want to tell you some- Perry's words dropped into the tion like a bomb and his young tense with earnestness. "It's time e up your minds to look things ace and call a spade a spade."

"My goodness, Perry! What's the matter?" asked Nancy.

"Barbara is what's the matter. She's what's the matter with everything around here." Before the Folgers were aware of their peril their guest had launched into an after-dinner speech.

Many gloomy things have been said about the wild doings of the younger generation, but it is not usual to make charges against a flapper only twenty months old.

Like all good orations, Perry's discourse fell into distinct headings, and his first topic was the economic interpretation of Babsy. It was clear that he had been storing up these grievances for some time and had arranged them in orderly fashion. Nancy and Nicholas, he recalled, had been getting along beautifully up to the time this villainess entered the scene. They had bought this little house and were beginning to pay off the mortgage. They had kept the place in good shape and made some improvements, yet enjoyed the comforts of civilized life. Then along came this bald-headed baby and stopped all progress like four-wheel brakes.

"You've paid nothing on the mortgage and even borrowed more at the bank. You owe bills right and left and you're always in hot water and walking a tight rope." Perry was apt to mix his metaphors when in deadly earnest. Nicholas had not had a new overcoat since he had this daughter, Perry said, and Nancy was getting shabby. They were letting the house run down and the green paint was coming off in flakes and they looked like poor white trash.

"You skimp and save and toil and moil and pour everything into that—that bottomless pit." Perry gestured freely toward the upper regions where the bottomless pit was located. "It's just buy, buy, buy all the time for her."

"She's a buy, buy baby," said Nancy.

"The only money you've saved in the last two years is on Barbara's fund for college, where she will be entered in the class of 1947!"

THE niece-hater further charged that these feeble-minded parents kept a cow when they ought to keep a car; they hired a man to milk in place of a girl to help Nancy with her work or a secretary at the office to help Nick and make him look like an up-and-coming lawyer instead of a failure. Barbara sentenced them to hard labor but did not let them get labor-saving machinery.

"For what you have spent on that young one you could have some high-grade bonds drawing interest and borrow on them in time of need." In short, this infamous infant violated all the economic laws. She was a liability, not an asset. He wrote her down in red ink.

"But money is not everything, you poor fish!" said Nicholas.

Perry, though a banker, admitted this truth.

"I was coming to that. There is the social side of life."

In this, too, it seemed Barbara was a total loss. Before this enemy crept in and ruined their home, Nancy and Nicholas had been the most popular young people in Evergreen. Friends loved to come to their house and they were welcome guests everywhere. There was music and dancing and laughter and song here, but now look at them!

THEY can't invite people in because they might wake up this precious darling. They can't go out evenings because there is nobody in the world good enough to leave with Barbara. Nancy had given up her music and of course they didn't have a radio. They never even went to the movies. Once they had read good books but now they only studied about how to feed babies. Or they sat around and yawned because Barbara had spoiled last night's rest.

"A person comes here after the day's toiling and moiling and craves to have a little intelligent conversation about things that really matter, and what do I hear? All the news about Babsy's tummy and

how many ounces she gained since last Thursday and how her teeth add up. You are losing touch with good friends, and friends bring business. She keeps your nose to the grindstone and paralyzes your career. How in the world is Nick ever going to be a Supreme Court justice if he has to stop to raise a baby and spinach and cows and things?"

The after-dinner speaker was becoming intoxicated by his own oratory.

"Is this a home any more? No, it's a hospital and a laboratory and a dairy lunch. You measure out vitamins and calories and you sterilize everything and weigh the baby every few minutes. Everything has to be just so for her Royal Imperial Majestic Highness. You work yourselves to skin and bones and she is as fat as a pig. You skimp and save on clothes and doll her up in silks and satins. Last Christmas you gave each other nothing but lovey-dovey looks, but you lavished costly toys on her as if you were Mr.

Digitized by Google
Original from UNIVERSITY OF IOWA

and Mrs. Rockefeller."

"Uncle Perry lavished a few himself," said Nancy.

"I didn't see things so clearly then. I'm sure the whole town is talking about you. Of course they wouldn't say much to me, but everybody knows you're feeble-minded on this subject. Is it nice for a young fellow trying to make his way in the world to have folks know I'm related to a couple of nuts? With my own eyes I saw Nick showing Barbara's picture to a prominent business man. Right in our bank that happened!"

"No place is sacred to him." Nancy shook her head at that hopeless case.

"I kind of like her," Nicholas admitted sheepishly.

"You kiss the hand that bites you," said Perry. "She twists you around her fat little finger and you think she's wonderful. We win a war to free the world from autocracy and you two go and get an autocrat right in your own home."

"There are other people who think she's a nice baby," said Nick.

"Don't I know? Didn't you make me wheel her home once?" Uncle Perry's ears grew red with the memory of this outrage. "People stopped and gushed over her. One woman said she looked just like me!"

"Well, anyway," asked Nancy, "what can we do about it? We can't turn her out; she's too young."

LIKE many another able critic, Perry was not so strong on the constructive side. But he issued some fine, large thoughts (with gestures) about our duty to ourselves. We have a right to lead our own lives and express our own personalities and be masters of our own fates and captains of our own souls.

"It's wrong for people to sacrifice themselves to posterity. Society would never get anywhere that way; it would be lucky if it didn't slip back. A baby is a natural barbarian and loves to tear down civilization and destroy culture and make the world a howling wilderness."

The attorney chose to argue the case:

"But where would civilization and culture go if we didn't keep up the population? Tell me that, please."

"Babies are a necessary evil," Perry admitted, "but they should be raised by specialists and so should turnips."

Up to this point in the discourse, Nancy had been amused at her brother's outbreak. Although only four years his senior, she had mothered him since their childhood and he was always a treat to her when he tried to act grown up. But now a puzzled wrinkle came between her eyes. These were not home-grown thoughts. How did Perry get that way?

At last the lecturer exhausted his subject, his vocal cords, and his audience, and arose to go home.

"Good night, Sis," he said, remembering his manners. "I had a lovely time." Thus the economist and sociologist faded into the fragrant darkness of the summer night, leaving the pathetic parents alone with their infamous infant, their house falling to wrack and ruin, their blasted reputation—and their dirty supper dishes.

"Ouch!" cried Nancy, when the door had closed upon their severest critic.

"I never knew parenthood was a crime in this state," said the lawyer. "Let's sneak up there and take a look at the little vampire."

"All right; let's."

The guilty pair tiptoed up the stairway and feasted their eyes upon the enemy to their happiness. Barbarous Barbara had been tucked away with tender care, but she had managed to kick the covers off and had gone to sleep happy in the thought that she had outwitted her silly mother. There were dimples in her fat cheeks, her fat elbows, and her fat knees. To this feeble-minded father and muddle-headed mother she seemed the loveliest slave-driver that ever cracked a whip. They paid silent tribute to her charms, covered her lightly, and went down to do the chores.

"The joke of it is," said Nicholas ruefully, "I was going to touch Perry for another little loan. But it seems that Babsy is not exactly what you'd call good collateral."

"Nancy, that is absolutely the finest infant in circulation!"

As they washed the dishes togeth Nancy expressed the only thought whi had been worrying her.

"I wonder where Perry got those id about leading your own life and not sac ficing yourself to posterity. They ne grew here in Evergreen—that's impor stuff. Somebody has been feeding h that philosophy. Do you know whet he sees much of Dolly Lamport since came home from college?"

"Oh, Dolly wouldn't talk like t She's got too much sense."

"It doesn't sound like her, but can't tell what highfalutin notions might have picked up in that eas school. I've scarcely seen her since came back. Of course, Perry thinks world of her. He's never said so i many words, but I'm sure he'd marry if she'd have him."

"Well, it wouldn't do us any har get Silas Lamport kind of in the fa that way. If he'd give me his legal v things would go better."

DOLLY'S father was a well- owner of real estate and his bus would have been a boon to a rising y lawyer who was not rising fast enou suit his brother-in-law.

"Better use a dry towel for glasses," said Nancy. "Or maybe t somebody else. That boy never cot trusted. He's even worse than hi torious niece."

When that unnatural uncle deno Barbara as a bald-headed baby, he gerated grossly. The hairs of her were numerous enough to form a nimbus which gave her an angeli quite out of keeping with her evil r Her eyes were of a turquoise blue, too gaudy for good taste. They with innocent, girlish happiness th morning at breakfast when she cau adoring father off guard and po spoonful of liquid porridge upon h She cried when forbidden this sport, made the world a howling ness for fifteen minutes, and delay young lawyer's trip toward the s bench.

"You pack your duds and go, Nancy, "and never darken my d again." The giddy flapper blew a with her rosebud lips and tried t her milk. "Go and get yourself ra a specialist." Nancy added: "Ma just a book."

"What's just a book?"

"I mean where Perry got thos thoughts."

"It must be a pretty dippy bool Nicholas.

ur uncle was right," said Nancy. stork came to the wrong address. ake him a bouquet."

ng Barbara's other failings was rank isy. To ignorant outsiders she was led darling with a heart of gold, and ies coming to the house on their occasions fell under her spell. The boy walked like Charlie Chaplin delight, the ice made funny faces, laundry stooped to have his ear A baby can smile and smile and lainess.

AST Nancy got the household work ler control and went out to do a lit- eting and amateur detecting. Her went along, lolling in the gocart, ased with herself, fat and fatuous, g as her just due the homage of ple-minded populace. It restored self-esteem to find her daughter ar after Perry's minority report. nen knew, of course, that she was that old frock do for another sea- Barbara was her jewel and Nancy the Queen of Sheba and a free rade. The baby had a smile and ord for all, the word being some- t sounded very much like "Glue!" was further adorned inch of dahlias which ed in her hand be- ey were not safe in l carriage. Barbara right flowers but hey should be taken . Nancy now turned yard of the widow s and was cordially by her brother's Barbara blew a nd said brightly: ly waddy glue." 'em's darlin' heart!" Mrs. McCombs.

With her knowledge of barbarous tongues Nancy translated:

"She says would Aunty McCombs stay with her a minute while Mother takes nice flowers to Uncle Perry's room."

Nancy's motives in making this visit were mixed. She wanted to show Perry that he was forgiven for last night's inexcusable conduct, to see how his shirts were holding out, and to do a little literary detecting. Examination of her brother's table revealed only the familiar books of a self-improver—some sound works on banking, a course of gymnastics for the will power, and some light fiction for a tired moiler and toiler. No dippy books were visible, nothing to make a man denounce his own flesh and blood.

Could it be Dolly Lamport after all? But that question, too, was to be answered in the negative before Nancy and her dangerous daughter reached home, for they met Dolly herself sailing down Washington Street under her own power. Dolly was of the good-looking, wholesome type, comely rather than pretty. She was most cordial to the Folger ladies.

"Nancy, that is absolutely the finest infant in circulation! I saw a baby show at Selkirk this spring and the winner wasn't in a class with Barbara."

"You're an old peach to say that, Dolly." The finest infant in circulation kicked herself out into the open air and said something nice about glue.

"What perfectly darling feet!" Dolly exclaimed. She stooped and kissed one of the darlingest of these, thus giving that conceited creature a new thrill. Barbara thoughtfully examined the freshly kissed foot.

No, it was not Dolly who had started that antibaby talk. She was no hypocrite. Besides, she asked in parting:

"How's Perry? I haven't seen much of him lately."

"Just fine," said Nancy, "but very busy improving himself."

"So I've heard," laughed Dolly.

THE Empress put out her other foot to be kissed and they started homeward. On their way they were passed by the Matson family car. Flora Matson at the wheel waved sociably, as did also her passengers, with the exception of an unidentified young woman with horn-rimmed glasses who examined Nancy with interest, as if a mother wheeling a baby carriage was a quaint custom of the natives.

"What did she mean by *that?*" thought Nancy, referring not to Miss Matson's nonwaving guest but to Dolly's remark, "So I've heard." What *had* Dolly heard about Perry? "No, no, Babsy!" This interruption to her train of thought was caused by the fact that the gregarious girl was offering a darling foot to an elderly lumber dealer named Mr. Hegglemeyer, who did not know what to do with it.

"Who," Nancy asked her husband at their midday dinner, "is the snooty young lady Flora Matson is hauling around town?"

"It seems to me there was something in the paper about their having a guest from the East—Aw, sweetheart, nix!" This was to his only daughter, who wished to put a spoonful of spinach in his ear. "Why? Is she the one who has been poisoning Perry's mind?"

"Nick, what a perfectly massive intellect! That would make everything clear."

The Hoofing Kid *from* Clare

EVER since I been trying to write (to keep from manual labor) I always did want to write one of those "success" Articles. They have always appealed to me as being the most interesting reading, for we all want to know just how our rich and our well-known people got that way. But I just never could get near enough to anybody that had done anything out of the ordinary to get one of those Stories.

I would pick up this well-known Magazine and read how some fellow used to work in a store and he sold more things for ten cents and five cents than he did for any other amounts, so that gave him the idea of handling nothing but things that sold for five and ten cents. It told how he had worked hard, and took advantage of his oppurtunities, and when success came one night and knocked he already had the door open. Well, you know that made mighty good reading; it inspired the young to be on the lookout if they saw something coming down the road disguised as Oppurtunity.

I forgot to tell you this fellow that grabbed Old Man Oppurtunity by the nap of the neck and pulled him in dident turn out to be a soul but Woolworth. Now he has a tower in New York where for twenty-five cents you can go and see what he done for a dime. Now, you see how those writers can take those happenings and make 'em so interesting. If I had reviewed his career, I would have just said, well, here is a Guy that was smart enough in his youth to see that just about everybody he come in contact with just had a nickle or a dime, and he said to himself, "That's the people I am going to string with till I get their dime."

Then I read where my good friend Charley Schwab just jumped from the Presidency of one corporation to another, and couldent seem to get settled, and he finally made him one of his own where he would be the President and the Board of Directors and everything—then he wouldent have any arguments with anyone but himself. Oh, and just oodles of others that had made a success, I had read about in your magazine. Even Coolidge was in there. It told how he had started with practically no political job at all. But he worked hard to hold it, and finally a better one was offered and he was right there to take advantage of it, and he had just worked himself right up, and always for the same corporation, Politics all the time. He saw that Politics was going to amount to something some day so he persevered, and had a good job for nearly six years.

I wanted to just be one of these fellows that wrote about some man that had got somewhere by "hard work, perseverance, and taking advantage of his oppurtunities."

Well, the other day I am hopping from out around Hollywood, to get away from everybody practicing talking (trying to stay in the picture business). You know, everybody out there is walking around carrying a Dictionary, learning to pronounce words, and getting what they call their "Diction" working right.

Illustration by
DAVID ROBINSON

But this is not about Beverley Hills or Hollywood. This is about Claremore, Oklahoma, a town that reached its enviable position through hard work, perseverance, and water that will cure you of everything but being a Democrat. Well, I dropped in there between gigles at something the Presidential Candidates had said seriously; I was just trying to keep my tongue in my cheek till election. So I do pop in unexpectedly on the old home and what do you think the old County seat town is doing? I see by the newspapers that they had given a big reception to their great runner, Andy Payne, right there in old Claremore, the home of Radium water, which would not only cure you of whatever you had but would enhance your sense of humor. Why, we have had men that come there on a stretcher who had never laughed at a Ford Joke in their lives, and after ten baths, had left in a second-hand one just laughing themselves into an early accident.

The Chamber of Commerce for once had joined with the Lions, Tigers, Apes, Wildcats, Rotarys, Kiawanises, and the young Democrats in giving to Andy a reception befitting one of the old Greek Hoofers in Athens when he had run in 30 or 40 miles to tell them there was a Restaurant site open up around Thermopole. I felt kinder jealoes when I read that someone had supplanted me as the favorite son. Wasent I to Claremore what the Dairy Industry is to young Bob La Follette in Wisconsin? Wasent I the local Borah? Where did Andy come to be running in grabbing my thunder?

WELL, that afternoon I drove out to the farm in the Country where Andy lived. It was about 8 miles from my old ranch place where I was born and raised. Andy's Daddy, Doc Payne, he wasent a Doctor, he was just a cow-puncher there in his early days, and afterwards got him this farm. Well, I was raised with Doc. He lived right near and used to work on our outfit and he and I pretty near learned to ride and work stock together. He is part Cherokee, and this Kid is part Injun.

When I read about some boy Claremore leading the race acros whole United States I dident know Old Doc's boy. These Kids had all up since I left there. I wondered could be, for Doc couldent run acro barn lot. Well, I went out and had visit with 'em. I wanted to see t who had I think won the greate durance test that has ever been during our or anybody else's time.

LET'S get down to what that thi It was a foot race from Los Ang New York—not direct, but around town that would dig up a few h dollars to get them to run thro When they got to St. Louis they by Chicago, to get to New York. you made that roundabout trip train, R. R. officials would think y cuckoo. When they got to Ch somebody had offered Pyle, the M $5,000, he would have had then the way of St. Johns, Newfoundl

Some three hundred left Los and I think about 50 finished. T great Marathon runners from all world entered. The race was ki over the Country as the "Bunion just because it was a freak idea being done by this fellow Pyle, sporting Writers had always tak pleasure in rawhiding. Had Tex put it on and the men run half as took twice as long, it would h down in Sporting annals as "the test of stamina and grit that been performed by man."

But Pyle put it on, so it must or a fake. You can put on a pri a Boxing match for one night a But no fake runs 86 days, with critical audience in the world them every day to see that t catch a ride, or cheat in some w of that, a test of grit that last Any other Athaletic event is ov minutes or an afternoon. sporting writer will his head off over some all player making an rd run. What would if he had to run 80 and do it again the day, sick, sore feet, bad colds, bum cramps, blisters, no time to lay up ure 'em, always had to get out in the ng, rain, snow, sleet, desert heat, al- be there, ready to go? A Marathon hey train for years for is a little over les. Then they come in and faint, owds carry them off. You couldent n this race, nobody to carry you off. t did, you just layed there, maby ar run over you, but that was about t could expect.

INEY, our Champion, would take a r and a half to get ready to fight 30 s, with a minute's rest between hree. What would one of these cers thought of thirty minutes of il work? They even write about a Golf Game, that Stamina won out end." There is not a Golf Player uld have made this trip in a car restoratives. Baseball players t three-bagger and have to sit on ase to rest till somebody knocks a n to bring 'em in. Why, we havent porting writer that could run a catch a street car every morning k without fainting. What I mean, er did give the credit it deserved. ause it wasent popularly managed. hat did that have to do with what or fellows was going through with y? If Coolidge and the Prince of ad managed it, that wouldent de it any easier to run. You had to do the stuff, no matter what kind of publicity it got. So that's what made me think that, Mr. Editor, it might fit in with your scheme of things. It looks like I had found a man that "worked hard, persevered, and took advantage of his oppurtunities," and that's what got him not only where he is today, but from Los Angeles to New York.

He was only 19 years old, he had never raced but very little, run for his little Country High School there at Foyil, but no long-distance races at all. He told me lots about the race. The hardest day was coming into Amarillo, Texas, through the mud; then it hailed on 'em. Willie Kohlemainen, the great Finn runner, started but he dident last till they got outside the Los Angeles City Limits. (Which by the way is some race itself. You enter Los Angeles City Limits just a mile west of Phoenix, Arizona. Bakersfield is the northern boundry; they would have annexed Salt Lake but the state line stopped 'em.)

A Full-blooded Indian started. But they put shoes on him and he couldent run; civilization was too much for him. Salo the Finn that finished second to Payne in New York, Andy thinks is a great runner, and a very fine, square chap. He said they sent Policemen with him when they run into Passaic, on account of his being ahead of Salo. Some thought the people there might do something to put him out of the race. But he said he was never treated better than by the folks there, and Salo's own friends. This Gavussi the Englishman that was leading up to near Cleveland and dropped out, Andy thought he was a great runner. A colored boy, Eddie Gardner, was doing fine but the Ethiopian hospitality along the road loaded him up with too much chicken and Dumplings, and water mellon. He says, "I dont care where I finish, the Black folks will take care of me," and they did. He and Toby, a little "Jig" only 18 years old—the harlem black belt made them up a purse of over a thousand dollars. Toby wanted to run back to see what the ones in Los Angeles would give him.

AN OLD Whiskered Guy was with 'em. He claimed he had been in the Movies. He told along the road that he played Abraham in DeMille's version of the Bible, and that he was Moses in another one of Cecil's plays, by the same Author, Jeanie McPherson. Well, he was getting over big with the ones who dident remember who Theadore Roberts was, and H. B. Warner. Andy said this old Boy did kinder look like some of the pictures of some of the old diciples.

Well, Moses reached as far as Illinois somewhere and somebody spied about a yard of his whiskers sticking out of the tonneau of a charitable Lady's Sedan. He had forgot to tuck 'em all in on his run this day, so he was, as we say in Vaudeville, "Shut," or "Closed." They had suspicioned that he had done some automobiling before. But he had always nestled his spinach in with him, till this day. He claimed that it would be much against him in Pictures, when they found out that Moses had stolen a ride, but that was one of the strict rules, so Moses went back. When he got to the Mississippi it is not recorded if it opened up and let him through. But I guess he went home and shaved and is maby playing in "Our Gang Comedies," maby blacked up and is "Forena's" little brother.

They all told me out around home that the only reason Andy won the race was that his sister sixteen years old was not in. She is better than Andy.

I asked him how he did about his feet. I knew that in a long race like that, keeping their feet in good condition was the great worry. He said, "I dident have any trouble with 'em."

I then asked, "Well, what did you do to keep 'em in shape?"

"I dident do nothing. I just washed 'em every once in awhile."

Now, this old Oklahoma high-school boy outrun all the best runners in the World for an entire summer. He accomplished this by being "alert and taking advantage of his oppurtunities when it come along." But (*Continued on page 175*)

The Lord

By HERBERT

Imperial Eagle

ABOVE the surf-bordered margin of the coast, as far as the eye could see, dark specks moved slowly in circles or wide ellipses under the pale blue sky. These specks were ospreys—large, long-winged, sharp-taloned sea hawks, watching for their prey. They looked down upon a world of ocean and beach and golden-green salt marshes: the marshes and barrier islands of Edisto, between the two rivers of that name, which came down to the Atlantic some ten or twelve miles apart. As the great birds swung slowly to and fro on motionless or languidly moving wings, the arc of their flight carried them out over the blue ocean, then in above the crawling white lines of the surf and the long chain of narrow barrier islands lying between the ocean and the marshes. Still swinging landward and rounding gracefully into the light northeast wind, they saw the marshes directly under them—a level plain of billowy, tall salt grass, through which deep tidal creeks wound like huge, blue serpents writhing across the breast of the world.

I watched the ospreys idly, yet with a certain amount of professional jealousy. They were fishermen, and all that morning I, also, had been fishing, but had caught nothing worth mentioning. Probably the ospreys would have better luck. Yet they did not seem to be distinguishing themselves. Those that were far away appeared merely as specks, but six of them—they were extraordinarily numerous that September morning—were soaring near at hand and I could follow their fortunes.

None of these had made a plunge either in the ocean or in the wide creek flowing past my camp. As they passed over me, I could see every detail of their powerful bodies and their widespread white and gray wings, and could even note the fierce look in their eyes as they scanned the blue, placid waters under them.

Suddenly I heard a shrill whistle directly overhead. High in the air, much higher than the birds that I had been watching, an osprey was circling with a large fish gripped in his talons. I knew the meaning of that whistle and I searched the air in every direction. Far off I saw them coming, the rulers of the sky, the arrogant overlords to whom the ospreys must pay tribute—two splendid bald eagles, one of them some distance ahead of the other, the bright sun gleaming on their snowy heads and tails. They swept on at high speed, their great, dark wings powerfully smiting the air; a fine and stirring sight for anyone to whom the king of birds, in the full exercise of his swiftness, strength, and skill, is always an inspiring spectacle.

To the osprey they were neither splendid nor inspiring. He had worked hard for his fish, and now he knew from bitter experience that he would have to work still harder if he wished to keep it, and that even then the chance of his keeping it was small. He did what most ospreys do in similar circumstances: knowing that in a straightaway race he would be overhauled in short order, he circled upward.

Screaming or whistling at intervals, he spiraled higher and higher as the two eagles came on. Almost directly under him they rounded up into the wind and, in wider spirals, began to climb, their big bodies slanting sharply, their heads and tails appearing sometimes white, sometimes silver. They mounted much faster than the osprey and in a few minutes had reached an altitude equal to his. First one, then the other swooped at him, while the osprey dodged and twisted, screaming shrilly. He was making a plucky fight, but I knew that it was hopeless. Another half-minute and the eagles would claim their booty.

IN THAT half-minute a strange thing happened. At the very moment when I expected to see the two eagles close in and compel the big hawk to surrender his fish, both eagles wheeled in the air and, with strong, swift strokes of their pinions, made off at utmost speed to the northward. So suddenly and so hurried was the flight that instinctively I glanced in the opposite quarter, and there, in an instant, I found the explanation of the puzzle.

From the direction of the ocean a huge bird of somber plumage was rushing toward the scene of action, a bird which to my eye appeared even larger than the two white-headed monarchs who had fled so precipitately at the very instant of triumph. The great wings of this dark newcomer drove him onward at terrific speed; he appeared at that moment irresistible, a veritable Bird of Jove swooping across the heavens. For a short distance he rushed on after the two eagles that had fled; then, swerving in their, he headed straight for the osprey.

Half closing his wings, he plunged toward the screaming sea hawk, passing close to the smaller bird that the eagle seemed to touch. The osprey dodged

ons beating rapidly, but in a moment tyrant swooped upon him again, and time the osprey, with a final scream of air, opened his claws and released his

y eyes followed it as it dropped like a —it was distinctly visible against ale blue sky—yet, as that huge, dark-aged bird shot downward after it, so was the speed of his plunge that the g fish seemed to hang almost motion- Twice the great bird, shooting uely across the line of the fish's de- struck at it in the air and each time issed. It fell into short marsh grass undred yards distant from me across eek, and the big bird, circling slowly to it, picked it up in his talons and d it away.

W, that was an incident which con- ined within itself and revealed within pace of a few crowded minutes a volume of interesting eagle lore. I often seen the eagle exact tribute the osprey; but I would not have this incident for worlds, because, first place, it taught me something did not know about eagles—some- that I had never witnessed before ad never seen recorded anywhere.

Erne, or white-tailed Sea Eagle

Harpy Eagle

The great, dark bird that drove away the two white-headed monarchs and commandeered the booty which they were about to claim was itself an eagle—an eagle of exactly the same kind as the two white-headed birds: that is, a bald eagle, or American eagle, as the species is often called. The bald eagle does not acquire the white plumage of head, neck, and tail, by which it is known, until it is at least three years old. In the meantime, it is of a dark brown (sometimes almost black) or dark gray color from bill to tail-tip, often appearing somewhat mottled or marbled when viewed from beneath. This is the immature plumage, the plumage of the young eagle, which, although of full size and strength, has not yet attained the completely adult estate.

The new thing that I learned that day about eagles was this: that, sometimes at any rate, these young, or immature, eagles are more formidable than the fully adult birds, so much more formidable that a single immature eagle is able to put two adults to flight.

This seems a surprising fact. I had always thought of the white-headed adults as the kings of their kind—stronger, swifter, and more skillful than the raw youngsters not yet invested with that snowy crown. Yet perhaps it is not so surprising as it appears, for, strange to say, the immature bald eagle is in most cases actually larger than the adult. The largest known specimens of the bald eagle are birds in the immature plumage. For many years it was believed by naturalists (and is still generally believed by woodsmen and sportsmen) that these brown or gray eagles were a distinct species. John James Audubon, still the most celebrated of American naturalists, fell into this error, and, in order to do honor to the most eminent American by naming the largest of our eagles after him, called the gray eagle the "Bird of Washington." Unfortunately, Audubon's compliment has fallen rather flat because all of these "Birds of Washington," before they are four years old, develop white heads and tails, shrink a little in size, and turn into bald eagles.

If the most famous of American naturalists could make this mistake about the most famous of American birds, perhaps the rest of us have some excuse for knowing so little about the bird that we have chosen as our national emblem. Certain it is that as a nation we know very little about him, while a considerable part of what we do know about him is not true. It is not true, for instance, that bald eagles are in the habit of carrying off little children; it is not true that they habitually build their nests on inaccessible cliffs and beetling crags; it is not true (except in a few restricted localities) that they are mighty slaughterers of lambs and pigs. There are other popular beliefs about the bald eagle which are as false as these.

BUT before considering what the eagle is not, it will be well, perhaps, to consider what he is; and this seems the more worth while, not only because the bald, or American, eagle is our national bird and should therefore be better known to us, but also because, of all the denizens of the air, the eagle is the most interesting to the average man and woman.

There is a potent magic in his very name. Even people who take no interest whatever in birds in general will rush madly to some vantage point and crane their necks wildly if someone sees an eagle in the distance. So has it been in all ages and in all lands. From the earliest times the eagle has been the inspiration of the

Digitized by Google
Original from UNIVERSITY OF IOWA

poet and the warrior. Always, in the imagination of the ancients, he was the bird of war, the all-powerful ruler of the vast empire of the sky. In him they saw combined, as in no other bird of comparable size (perhaps no other living creature), the most spectacular and impressive of the martial virtues: strength and swiftness, majesty of bearing and haughtiness of aspect, armament more formidable than that of any other inhabitant of the air. His broad-shouldered, steel-sinewed body, the fierce and proud look of him, his trenchant and deadly weapons, the grandeur of his flight when soaring among the clouds, and the irresistible power of his onset—all these things, superb and glorious, made him the very type of triumphant valor, the consummate symbol of victory.

AND so the ancients glorified him. Their poets exalted his splendor; their myth-makers spread round him a glamour of legend; their warriors found in him a potent incentive to daring deeds of arms. How far back into history the eagle goes as a symbol it would be hard to say. Unquestionably he had led great armies into battle centuries before the Persians bore him perched upon their spears at the battle of Cunaxa. He was the emblem of the ancient kings of Babylon and of Syria, of the Ptolemies of Egypt, and of Heliopolis, the famous City of the Sun. His supreme triumph of antiquity came later, with the power and the glory of Rome.

He helped make that power and glory. The eagles of Rome were part, a vital part, of Rome's invincible tradition. They were not merely symbols, standards; they were veritable gods of war. Housed in a chapel in the camp, the eagles of the Roman legion received, with the other deities, the worship of the soldiers; it was more than ignominious, it was impious, to abandon them in the hour of danger. The eagle was not only "the Roman Bird," he was also "the Bird of Jove." He was, of all the living beings of the earth, the one that was indispensable in that extraordinary ceremony, the apotheosis of the Roman emperors. From the topmost point of the blazing funeral pyre, Herodian tells us, as from a pinnacle, an eagle was let loose to soar into the sky and carry the emperor's soul to its abode among the gods.

From Byzantium, and no one knows how much farther east, to the land of the ancient Irish kings the eagle was honored and sung. Charlemagne found in the double-headed eagle, symbolizing the junction of the Roman and Frankish Empires, the most admirable emblem of his sovereignty, and it was this eagle of Charlemagne that provided the idea for the eagles of Russia, Austria, and Prussia. A thousa years later, when a new Charlemagne rul as Emperor of Europe, the eagle becar once more, as in the days of Rome, a vital part of an invincl legend—the legend of Napoleonic France. Nobody knows h many thundering charges triumphed, how many great batt were won, because the Eagles of France were as real, and glorious, to the soldiers who marched under them as, twe centuries earlier, the Eagles of Rome had been to the legions those ancient days.

All this is part of the eagle as we have him with us today—inseparably a part of him as the feathers on his head or the cl upon his feet. It is one reason—undoubtedly the princi reason—why, when someone cries, "Look at the eagle!" eve one rushes to look. The eagle has become much more tha bird. He is himself a legend, almost a demigod of nature; his great past, all that he has symbolized in history, is there our minds when we see him, and it is there whether we are dividually conscious of it or not.

It was present in the minds of the Congress of the Uni States on June 20, 1782. On that date a design for a natio coat of arms was approved by Congress. The device was scribed in heraldic language as follows:

> The Escutcheon placed in the Breast of an American (the b headed) Eagle, displayed proper, holding in his Beak a Scroll, inscr with the Motto, viz., "*E Pluribus Unum*"—and in his dexter Tal Palm or an Olive Branch—in the other a Bundle of 13 Arrows; all pro

Thus the bald eagle became officially the emblem, national bird, of the United States of America; and as such h assuredly entitled in very special degree to the interest an might seem, to the affectionate regard of the people of this g republic.

HE HAS our interest, but he cannot be said to enjoy in practical way our affection. Too often, when an eagle is s he is promptly shot, for no better reason than the fact that h a big bird whose carcass, proudly exhibited, will arouse m wonderment among the neighbors. There is scarcely a man is not thrilled by the sight of an eagle in the sky or at rest u some lofty perch; but this will not save the great bird if we get within gunshot of him; presently he will come whir down, all his stalwart beauty changed to a senseless mas carrion.

Perhaps the trouble is that we do not know enough al him, that to most of us our national bird is a mere figure image. The ancients invested the eagle with an aura of le which magnified his virtues; we, on the other hand, have sp round him a fog of half-truths which tend to magnify his fa

proud. He is a kingly member of a race of kings. We shall understand him better, perhaps, if we know something of that great family of royal birds to which he belongs. There are many kinds of eagles scattered over almost the entire world. Nearly all of them are birds of proud and warlike aspect, magnificent powers of flight, and formidable armament. Most powerful of all is the terrible harpy eagle of South and Central America — a huge, crested warrior of the tropical forests, sometimes called *lobo volante*, or winged wolf. So great is the strength of the harpy that it is said to kill calves and other animals of far greater bulk than itself; while fawns, goats, full-grown foxes, middle-sized pigs, and even the black sapajou monkey are often numbered among its victims. The harpy's powers of flight, however, are limited; being a dweller in forests, its wings are short, while its plumage is somewhat owl-like. The free-ranging eagles are in a truer sense the monarchs of the air. Of these there are many species. Most famous of them, perhaps, is the imperial eagle of southern Europe, central Asia, and northwest Africa, probably the bird that the ancient Romans knew. Another fine species is the black eagle, or "bearcoot" (ergut), of Asia, with which, if the tales of travelers are true, the sport of falconry reached its zenith, these powerful birds have been trained by the Kirghiz to hunt foxes, deer, and even wolves. The tawny eagle and the spotted eagle, the booted eagle of southern Europe, and the "bataleur" eagle of Africa, the serpent eagle of India, which has been known to kill even the deadly cobra, and the strange bird-nesting eagle of Malaysia, which carries away in its talons the nests of the birds upon which it preys, are other notable members of the great eagle family; while one of the handsomest species, and a close relative of the bald eagle, is the gray, white-tailed sea eagle, or erne, of northern Europe, northern Asia, and Greenland.

THESE eagles are all inhabitants of foreign lands. In the United States only two species are known, the bald, or American, eagle and the golden eagle.

Of these two the bald eagle (which, of course, is not really bald) is by far the more abundant. It is found in probably every state of the Union, and it breeds in suitable localities throughout its range. It is distinctively American, being unknown outside of North America, while the golden eagle—which, by the way, is not golden, but dark brown—exists throughout the northern half of the northern hemisphere as well as in the United States, and is as characteristic of Asia and Europe as of America.

Moreover, in this country the golden eagle is confined almost entirely to the mountainous regions of the West—a few still existing in the more rugged parts of the Appalachians—and is practically unknown over much the greater portion of the United States. For these reasons, although the golden eagle is a splendid bird, approaching in some respects nearer than the bald eagle to the ideal conception of the king of the air, Congress probably made no mistake when it preferred the bald eagle as the national emblem.

That choice, nevertheless, has often been criticized. The first and most important of its critics was, of course, Benjamin Franklin, who maintained that the wild turkey would have been a better emblem for the United States than the bald eagle because (*Continued on page 106*)

"Wimmin is funny,"
said Uncle Joe Fodder. "They takes notions
'bout things. One of 'em's love . . ."

The Woman

CONSIDERING the case in six-year retrospect, opinion has it that young Bert Seavers got all he deserved. Entirely aside from the ambiguity of this assertion, six years may seem a cruel time to suffer for one youthful indiscretion. Yet if Youth must be served, it ought to be willing to pay for such service. . . .

He was a good-looking and, in many ways, lovable lad in his twenty-fourth year. His eyes were laughing blue, his nose had an upward tilt, he wore his hats and his clothes with swank. And the town said in jest that he spent as much time in Charley Fisk's barber chair as he did at the table eating his meals.

At a dance in Foresters' Hall shortly after his arrival in Paris, Dorothy Peters declared that if he ever went to England as a double for the Prince of Wales he might fool the royal nurse—if he kept away from horses; which was just commencing to be an international wisecrack at the time and caused the new bank clerk to pay Dot Peters special attention. He did bear a striking resemblance to Britain's popular prince, and he proceeded to go about so much with the girl who first called attention to it that the rumor got out, to be later confirmed that the two were engaged.

She was a plain-faced, even-tempered, willowy girl—Dorothy—with the poise, sense, and carriage of a woman in her thirties. She had come to Paris from Foxboro to attend the local high school. She remained after graduation to take charge of a local boarding-house.

Uncle Joseph Fodder, town liveryman and philsopher, learned of the engagement from Judge Amos Farmer. The two cronies had paused to chat before the bank where Seavers worked. They saw Dorothy come from the boarding-house and start toward the business section.

"Glad t' hear it," declared Uncle Joe. "Dot's hoed a hard row since she lost her folks. She deserves some first-rate feller t' make her happy. What's worryin' me, is Seavers good enough f'r Dot?"

"Remains to be seen," the Judge said curtly. "Seems funny that Jerem Cogswell, shrewd as he is, would turn loose such a howlin' social success behind the wicket of his bank. But I s'pose the boy's bonded and can't do much mischief."

"I reckon Dot'll steady him; but I agree with you 'bout th' social business. I fiddled f'r th' dance t' Wickford, an' he sure knew all th' steps."

Winter passed. Spring mud dried a country roads; arbutus parties came, May baskets; and Memorial Day op the boating season on Lake Hatha Dot's plain face took on a look of happ and serenity that visits a woman but in her life. Then, one golden afterno July, a Saturday afternoon, young vers entered the livery yard. . . .

"CAN I get a rig, Mr. Fodder?" asked. Eyes averted, he pulled a mered-silver cigarette case from his f waistcoat to cover his embarrassmen

"Dot sure must like buggy-rid the hostler remarked, harnessing o his little Morgan mares. "It's th' rig you've had this week. Wonder sh get away fr'm her job t' th' boardin'-h f'r so much of it."

"What? Oh, yes . . . sure, she like

Uncle Joe, however, had not misse swift flush that mounted from the clerk's collar. "*He ain't takin' Dot!*" old man cried blankly, watching the clop out through the alley with after sunlight glinting on the buggy sp "If he's got some other female o string I'd like t' break his neck. M I will!"

"Has she gone buggy-ridin' with Bert?"

"She ain't been buggy-ridin' with Bert to my knowledge since sometime in May. Shush! Here she comes now!"

A girl in a white frock and large, floppy sun hat came through the arbor at the rear of the church. She greeted Uncle Joe and pulled off the hat. As she stood fluffing up dark chestnut tresses, the old man cleared his throat.

"Seen Bert t'day, Dot?" he asked.

THE girl shook her head. "We were going over to Lake Hathaway for a boat ride this lovely afternoon; but he phoned me during noon-hour he might have to work." The girl turned her gaze unconsciously toward the bank over the way. The shutters were drawn on both windows and doors.

"Dot, ain't it occurred t' you mebbe you're takin' perty tall chances, hookin' up with a feller you know so little 'bout?"

The girl's face paled slightly. "What is there about Bert I don't already know?"

"Wal, we hate t' see you get th' short end of it. But . . . Bert ain't treatin' you square. He's been hirin' rigs off me every Saturday afternoon this spring an' sometimes evenin's. Have you been buggy-ridin' with him every Saturday this spring?"

"I'm not saying I haven't," Dorothy retorted.

"You don't need t' defend him that way, Dot. He got his third rig this week off me a half-hour ago, an' headed west when he driv out t' Main Street."

The girl leaned back against the white picket fence. Suddenly, biting lips to keep back tears, she fled toward the house.

Around four-thirty the liveryman reappeared at his stable. He told his helper about the bank clerk's deception.

"Huh!" Jim Pumpton responded. "Why didn't y' ask *me* where he'd gone. He's took to rushin' 'round that yellow-haired dame who's visitin' th' Spragues'. She comes from N' York."

Bert Seavers failed to attend divine service in Calvary Church next morning. For that matter, so did Dorothy Peters. And the two were usually seen there together. . . .

Monday morning at nine o'clock Bert was in his accustomed place at the bank, well-groomed and debonair. In the heart of the noon-hour, about twenty minutes to one, the girl crossed to the bank, and

the episode occurred which changed Seavers' life.

Dorothy knew she would find him alone. President Cogswell went to his lunch at eleven-thirty, and Martha Prentiss, spinster bookkeeper, followed him at twelve. Bank business was always slack during noon-hour; the bank had never had a hold-up. Perhaps Dorothy had waited until then to give Seavers the chance to phone her during the morning and explain. He had not done so. When he glanced up and saw her, he recognized that her presence had nothing to do with money or her account.

"Bert . . . can I see you a minute?"

"Sure, you can see me—*in* a minute." And for the time he kept on counting bills, dropping three on the floor.

The girl came close to the wicket. She was bareheaded; the blood had fanned from her face. She leaned her wrists on the narrow brass shelf.

"Don't try to act, Bert. You know what's wrong."

It was an awkward place to call a lover to account: through the wicket of a bank. Yet the girl had to know "where she stood."

"Dorothy—what's happened?"

"Oh, Bert, stop acting—*please!* If you wanted to take Patricia Carver—"

"Who's told you anything about Patricia Carver?"

"A dozen people have tried to tell me they'd seen you with her while she's been here. I wouldn't believe them. And this morning Portia Gleason phoned me—"

"Well, all right. If it's got around to you finally, I'm telling you I *had* to do it. She was responsible for my getting this job with her uncle, here in the bank."

He failed to meet Dot's eyes, however. They were clear, level eyes—brown as cool trout pools beneath sun-flooded alders. Now tears were brimming in them.

"You never mentioned it before."

"I didn't know how you'd take it, so I kept my mouth shut."

"Have I ever taken anything you've told me, wrongly, Bert?"

"Well, the situation with Pat was peculiar. Oh, hake, Dot, if I've hurt you—"

"Bert, look at me! Don't you love me any more, Bert?"

"Sure, I love you, Dot. But—but—"

"But Patsy Carver, with her smart clothes, her marcelled hair, cigarettes, money—they've dazzled you a bit, haven't they, Bert?"

"Dazzled me?" He stopped. Someone was entering the bank. Abe Albee!

A BONY little man was Albee. His age was indefinite; he might have been in his thirties or his fifties. He had small, beady eyes and skinny fingers. The town knew he was related to one Amos Albee, a well-to-do farmer over toward Foxboro. He had once been an ambulance-chasing lawyer, Abe, but shady practices had wrought his disbarment. Later he had eked a living trading in timber.

But he bothered with no bank account. No matter how sizable the payment he received, he got the check cashed and bore off the currency. Dorothy knew him well. When his wifeless home out on the East Road had been ransacked the third time by hoodlums, the eccentric had taken a room at Mrs. Mason's.

"I left a check here f'r collection last Thursday," Abe announced to Seavers as Dorothy turned down the banking-room. "Your darn bank wouldn't cash it, but said th' money'd be here t'day. I want it. In bank notes."

Seavers turned aside, his emotions chaotic. As he crossed toward the file that kept the record of collections, all he could see was the top of Dot's head through the glass partition. It caused him to look many times through the index. . . .

"You mean you want *twelve thousand dollars* in currency?" he cried in surprise, coming back. He had found the card that affirmed the collection.

Abe's eyes came open, but Bert was too troubled to note.

"I want every cent that's due me, *in cash*," declared the weazened patron. And his tongue protruded as Bert reached for the bills.

THE check had been entered for collection and properly paid. The teller counted out the money. He had to visit the vault to make the total. Abe took the money, stored it away in a faded green wallet, went from the bank, and vanished in the sunshine. Bert stamped "Paid" on the record-card, and steeled himself for a new tilt with Dot.

"It's . . . all right," the girl said finally. "If you're only taking Miss Carver 'round while she's here because you're indebted to her, we'll let it rest there But if you want—your release—I'm willing to step aside. If it means your happiness."

Seavers could scarcely believe his ears.

"But don't forget, Bert, when I said I'd marry you and stand by you always, I meant it. If your blond creditor gets you into any sort of trouble—"

She could say no more. President Cogswell was entering the bank. back from his lunch.

At twenty minutes past three o'clock, Seavers came up white-faced to the president's desk by the window. President Cogswell was a peppery old man with iron-gray hair and granulated eyelids. He looked up sourly at the teller's interruption.

"Mr. Cogswell," began Bert, "I'm not sure . . . I've counted it over and over . . . but . . . it looks like the cash is nearly *eleven thousand short!*"

For a horrid moment the banker's mouth sagged open.

"It—it couldn't be! So much!"

Cogswell leaped up, his chair bumping over. Miss Prentiss had heard. All the currency in the bank that day was spread on the directors' table in the rear, where Bert had carried it. In a ghastly quarter-hour, Jerem counted it personally. He compared it with the records.

"What checks have you paid t'day?" he cackled. "*Big* checks?"

"The biggest check I've cashed was for Abe Albee during noon-hour. Twelve thousand dollars—"

"Twelve thousand for *whom?*" Miss Prentiss exclaimed. "Abe Albee didn't have a check in here for twelve thousand dollars—to be collected—!"

"He certainly did. The records show it."

"Get th' records!" screeched old Jerem.

"It was Abe's cousin Amos who had a check in here for collection—twelve thousand dollars. He'd sold a herd of Holsteins to a Massachusetts stock farm. *Abe* Albee's check he asked us to clear for him was for three hundred and seventy-five dollars. And here are the cards to prove it." Miss Prentiss laid the cards before them.

They looked in cold horror on the records. The card belonging to Amos Albee, not Abe—held the "Paid" stamp Bert had pounded on it.

"Lord!" he gasped weakly. "I paid the wrong man!"

"Didn't you look t' see whether th' card read Amos or Abe?" old Jerem castigated. "Where were your eyes? What was on your mind?"

Bert was about to mumble something about Dorothy's having distracted him But that would make it appear he was thrusting responsibility on a woman, a yellow thing to do.

"But Abe accepted the money without correcting me," was his lame rejoinder

"He would!—th' crooked little coot!"

"He got it by mistake. He'll have to give it back!"

"Great, if you can make him!"

"Of course I'll make him. The money isn't his."

"You can't *make* him do anything o' the sort!" groaned Cogswell. "You blandly handed it out t' him, didn't you? Did he ask f'r twelve thousan' dollars? He took what you handed him. An' there ain't a law fr'm here t' Patagonia can punish a man f'r doin' that. I been through this thing before, though not for such a sum as—"

"You mean Abe Albee can't be made to give that overpayment back?"

"He cannot! There's been several test cases tried in th' courts over just such a blunder—"

"*I'll* make him! He'll give it back or I'll strangle him."

"You'd better hold your horses. You'll only get yourself jailed for assault."

BUT Bert spilled from the bank. Across to the boarding-house he sprinted. Dorothy met him, and panic seized her when he told her in terse, abusive sentences what had happened; abusive, that is, of Abe Albee.

"He's up in his room right now. But . . . oh, Bert . . . be careful!"

Seavers got up the stairs. Abe might have been expecting such reaction, when the teller forced the door a sinister revolver lay handy on the bureau. Moreover, two suitcases lay open on the bed. Bert panted queerly.

"Mr. Albee—I want that money—twelve thousand dollars I paid you by mistake."

Abe backed toward the dresser. Bert steeled himself.

"I don't know what 'tis you're talkin' about. Whatta you mean, bustin' into this int' my room?"

Two strides took Seavers across to the shyster. But before he got his hands around the little man's throat, a leaden steel muzzle was rammed against his stomach. Albee snarled hastily:

"Reckon I ain't done nothin' criminal. *Prove* that you overpaid me my check. *Prove it, I say!* You can't swipe twelve thousand out o' your bank for your own social purposes, then come in here and pin it on me!"

It stopped Bert, that. Yes, how could he prove he had paid the cash to Albee?

"Hope he don't try no flummadiddles on himself," mused the officer anxiously. "He's a good boy at heart. Only terrible thoughtless."

Where Bert Seavers went that night was nobody's business. But the town learned later that he had climbed to the top of Cobb Hill and remained there bareheaded under the stars. . . .

Dorothy was helping Mrs. Mason in the boarding-house kitchen the next forenoon when young Seavers rang the bell. A moment later he was facing the girl in the small side parlor.

"I s'pose Albee's skipped?" he said, awkwardly at first, opening that interview.

"Yes," said Dorothy. "He finished packing his two suitcases and grabbed the four-thirty train."

Silence for a moment. Bert torturing his hat. Then:

"Dorothy—yesterday at the bank—you offered—to release me from our engagement." For the first time in weeks Bert Seavers met her eyes.

With sharp intake of breath, face becoming pale, Dot backed against a table. Her work-roughened hands gripped its edges on each side of her. Yet she kept her eyes level.

"I did, Bert. That is, if—if it meant your happiness."

"I'm here—to ask you—to do it, Dot. And it's not because of Miss Carver. I haven't had much sleep the past night. I've been off by myself, getting things straight. I've faced *facts*, Dorothy. And the biggest fact I've faced is I've got to buckle down and pay off that loss. It'll take me . . . ten years," he added, with a choke.

"Bert!"

"It's one of those hard places in life like you read about in books. Only this isn't a book. I got myself into this mess, and I've got to get myself out. After all, if I'd shot straight with you, you wouldn't have come in the bank yesterday noon. If I hadn't been upset, knowing I was guilty, I'd have paid more attention to those cards of collection. So really it was my yellow streak I showed toward you that's landed me where I am. I have cheated you, Dorothy. Ten years of slaving for a measly ten dollars a week is my medicine. Well, I'll take it. And you know what it means. I can't ask you to wait that long. But I'm here to tell you there'll never be anyone else."

The girl's eyes were growing starry.

"You're going to pay off that loss, Bert Seavers?"

"The Chinese have a proverb: 'The journey of a thousand miles begins with one step.' I'm going on a thousand-mile journey, Dot. And each week will be a step. Not because I'm scared of the bonding company. Because—I had it coming!"

DOROTHY'S eyes were never more level, never more like cool, brown trout pools beneath shimmering alders.

"I think I love you more right now, Bert Seavers, than I ever supposed it possible a woman could love a man."

"Will you release me, Dorothy? It's my fight. I've got to make it alone."

"You think so?"

"Dorothy! For heaven's sake, don't take it that way."

"No, Bert Seavers, I'll not release you. So long as you love me, I'll wait *twenty* years if need be, until you've won out."

He started impulsively toward her. After all, he was only a heartbroken boy with his future a mess. But he stopped before he reached her.

"If you want to wait—of your own accord—I can't stop you, Dorothy. But ten years is ten (*Continued on page 168*)

How Ellery Walter *found out that* People *have* Big Hearts

By MILDRED HARRINGTON

"GEE, I've had all the lucky breaks!"

The boy who said these words to me had swung blithely into my office on crutches. He will have to go on crutches the rest of his life unless he learns to walk on an artificial leg. During the past two years, he has had seventeen operations on his left leg and two on his right one. They saved the right leg, but the left had to be taken off halfway between the ankle and the knee.

Twice the boy went on the table without ether to withstand an operation so painful that I don't dare try to tell you about it. For twelve months, while he was going around the world on his crutches, he cleansed and packed his wound himself. He has never had more money than would barely suffice for his immediate needs. Frequently, he didn't have that much. But every penny that he spent, he earned himself.

Three years ago he was one of the most popular undergraduates of the University of Washington. He was stroke of the freshman crew and president of his class of two thousand. A brilliant student, he was looking forward to a career as a lawyer. He had his life planned for twenty years ahead; he knew just where he wanted to be at each step of the game.

Then came the accident that smashed his splendid dreams into a million fragments and made life itself a thing of exquisite torture over a period of many long months.

And yet, after I had heard Ellery Walter's story from his own lips, I was inclined to agree with him that he is indeed a fortunate mortal!

A boy with an unquenchable spirit, with a genius for inspiring unselfishness, and generosity, and whole-hearted friendliness in others *is* lucky. Tall, and fair, and clear-eyed, he has that indescribable something, that priceless magical quality which endears him to his fellows, however casual the contact that brings them together. Colonel Lindbergh has this quality; President Roosevelt had it. It is more than personality. It transcends brilliancy. Nobody can name it; everybody responds to it.

This is the story of the response Ellery Walter found in the hearts of men ranging from stevedores and beach combers to such notable figures as Lloyd George, Mussolini, and von Hindenburg, in his twelve-month journey around the globe in search of health and a livelihood. It is a story that makes me wonder afresh at the miracle we call human nature.

Since he was fourteen, the boy has had to shift for himself. At that age he was earning his uncertain living hefting five-gallon milk containers in the toughest section of Chicago. He often slept in the nickel "flops" where the dregs of the city's underworld—dead-beats, drunkards, down-and-outers—paid five cents for the privilege of sleeping on a filthy floor in the middle of which stood a huge sheet-iron stove, red-hot halfway up its crooked length of pipe.

For several months he traveled with an ingenious young hobo who had a special talent for winding up in the most convenient jail at night. During a whole summer, he pitched fish in a big Alaskan cannery where neither the manners nor the morals were conducive to high ideals.

But through all this and more the lad wore an invisible armor that kept him clean and sweet in body, mind, and soul. He is twenty-two years old. He doesn't drink or smoke, yet he is a real man's man. Before his accident, he was a husky out-of-door chap, a crack oarsman, a star tennis player, a campus hero.

I ASKED him how it happened that he had escaped the things which most boys pick up as a matter of course. This is what he told me:

"I could see that smoking and drinking, and all the rest of that stuff, slowed a man's speed down to nothing an hour. And I wanted to travel *light and fast*.

"Besides, there was . . . my mother. When I was twelve, she made me promise her that I would live her way until I was twenty-one. 'Then,' she said, 'I want you to choose any way of living that seems good to you.' Mother was wise. She knew that if I could hold on to the things she had taught me until I was of age, I wouldn't be likely to let go of them later. A good habit is as hard to break as a bad one.

"On my twenty-first birthday I signed a little private declaration of independence. I resolved never to do the things that other people did just because they were being done by other people. I made up my mind to *choose* the way of living that seemed good to me as an individual."

A declaration of independence is no novelty in Ellery Walter's family. One of his forefathers, William Ellery, signed a Declaration of Independence in 1776. Nearly a hundred and fifty years later, Ellery Walter's widowed young mother cut loose from relatives and dependency and started out to earn a living for herself and her three small sons.

Until he was ten, Ellery lived the normal life of any boy who has a happy, comfortable home. Then his father died suddenly, leaving practically no estate. His mother, faced with the choice of living on the bounty of kinsfolk or of fending for her boys herself, left her home in Philadelphia and set out for the Northwest to start life anew. She settled in Seattle and went into the real estate business.

At the end of two years she was nicely established. Then, while the boys were away at a summer camp in the mountains she was killed in an automobile accident. Before her sons could reach home, her body had been cremated and sent East for burial.

The children were parceled out among relatives. Ellery was packed off to a young uncle in Detroit. The boy almost died of loneliness and homesickness. The youthful guardian was busy with his work in the daytime and with his friends in the evening.

But worse than the loneliness was the feeling of being a dependent. Ellery stood it for four long, miserable weeks. Then he made up his mind to run away. He knew that it would never do to go straight back to Seattle. First, he would have to throw his uncle off the trail.

"I figured that this would be easy," he explained, "as nobody seemed eager for my company anyway. One morning I went down to the bank and drew out the few dollars remaining of the small sum that had come to me when my mother's effects were sold. I planned to leave that night and go as far away as the money would take me.

"After supper I bundled up my few longings in a battered old suitcase and tiptoed out of the boarding-house. With a heavy hand, I sneaked down to the railroad station and sat around for an hour or so trying to decide where to go. Suddenly my eye was caught by a poster showing a picture of the maple sugar harvest in Maine. Fate had spoken. I walked boldly up to the agent's window and bought a ticket to Bangor.

"UP TO this time," the boy said, "I had no particular plan for the future. But that night, while the train clicked off the miles, I worked out in detail for twenty years ahead. I can remember the time when I hadn't very wanted to be a lawyer. Now I deliberately plotted my life to that end. As soon as I was fairly sure that my uncle had stopped looking for me, I would go back to Seattle, work my way through the last two years of high school and the University of Washington, and then return to the East for my training in law.

"It didn't occur to me that anything could happen to prevent my dream from coming true!

"At the end of the maple sugar harvest I set out for Seattle. But by the time I got to Chicago, (*Continued on page*

Ellery Walter

BY SHEER bravery and a merriness of heart Ellery Walter crowded suffering and disappointment out of his life. When only a child, he was allotted to an uncle, as both of his parents had died. But he relieved the uncle of the responsibility of rearing him by running away, and since then he has been on his own. He was tortured by an infected leg, endured more than twenty operations, and finally lost the leg. But he went gayly on, traveling around the globe, earning his living as he went, and also earning many friends. He is only twenty-two, but has met scores of the world's leaders, and found them all generous, warm-hearted folks. The story of this boy is the kind that strengthens your faith in humanity.

Do You Know How to Get a Job?

By ALBERT EDWARD WIGGAM

N THE course of this year, calculated roughly from statistics based on census returns, 850,000 young men and 400,000 young women will be seeking their first jobs. By this I ot mean temporary or part-time jobs, jobs in which they hope to make suft income to be self-supporting, jobs h hold some sort of future.

fair number of these young people going to have jobs handed to them, he majority will have to *seek* and *find*. ow important it is that they not only the right job and the one suited to training and abilities, but that they know how to present themselves to est advantage. Job-seeking has be- a subject to be studied seriously. ousands of employers are all the hunting for people who want jobs. will buy your services if you have ing in that line to sell them out of they can make money. Your prob- to find the particular employer who the particular kind of work you can d the particular kind of person you

may say that there is no employer ants you, that employers in general want people who want jobs, be- you have tried a dozen of them and been turned down. After applying m you went away downhearted and that they had given you the le heart," the "cold shoulder," and t. Did it ever occur to you that *y you went at the job of applying for n the wrong way?*

HEN I was a young fellow just out of chool, I tramped the streets looking b; and I wore holes in my shoes, ndered where my next meal would om—and sometimes it didn't come of course, I wondered why other got jobs and I did not. If I could d at that time the long talk with Morgan, employment and in- relations expert, that I had the fternoon, concerning the best way bout looking for a job and the mis- hat most people make in this re- t would have been of immense help I had not talked with him very fore I realized that I had made a g mistakes in the way I had gone he job of looking for a job.

Morgan lives at Wynnewood, lvania, and has offices in the Pack- ilding, in Philadelphia, where he s his Consulting Industrial En- g practice. This means that he people about jobs.

Morgan worked in various machine shops and on contracting jobs before he realized that a technical education was necessary if he wished to get farther. So he worked his way through Washington University, training as a civil and mechanical engineer. After finishing his course, he went through a number of mechanical and executive jobs, all the way from the operation of a hoisting machine to the position of plant engineer in a big steel mill at Granite City, Illinois.

In his capacity as foreman, Morgan was compelled not only to select his own men, but also to train them and keep them happily and effectively at work. From this experience, he began, about twenty years ago, to visualize the application of the methods of mechanical engineering to human engineering; that is, to industrial management and the selection and placement of employees.

After trying these methods for about eight years in the steel industry and later in manufacturing, Morgan entered the employ of the Curtis Publishing Company, of Philadelphia, where, for ten years, he was manager of the Employment and Service Department. There he and his assistants talked with a vast number of people and received more than five hundred thousand letters from people applying for jobs. Two years ago he established his own business. It is from this rich experience that Mr. Morgan tells us here a few of the things he has learned about how to apply, and how not to apply, for a job.

The "Shoe-Leather" Plan Doesn't Get *the* Job

"The first mistake that most job-hunters make—and it is made alike by those who have no jobs and by those who are seeking to change jobs—is to use shoe leather instead of brains," says Earl B. Morgan, employment expert. "The shoe-leather plan does not get results. What a jobless man should do, and what an employed man seeking a better job should do, is to make a careful analysis, first, of what he can do best, and then of the employers who are most likely to need the kind of services he can render. Having thought these points over, he should then present a written application, telling definitely what he can do and giving definite reasons why he wants to work for the firm to which he is applying."

QUITE naturally, the first thing I asked Mr. Morgan was, "What would you do if you were out of a job?"

"What I should do," he answered, "would be to write letters to at least a half dozen of the very best firms in my neighborhood, *not firms off in the distance* (unless I could make it clear that I was ready to locate there); and in these letters I'd ask for an interview, so that I might tell personally what I could do. The right kind of letter usually brings a reply.

"You may say you have written forty letters and had no replies. Well, in my judgment, you wrote either to the wrong firms or else the wrong kind of letters. The big, fundamental mistake most people make is that before writing the letter, they omit, first, to do a lot of thinking, and then to analyze themselves and the possible market for their services. Before you write your letter applying for an interview, there are many things you ought to consider, both about analyzing yourself—that is, sizing up what you have to offer—and also about analyzing your market—that is, the employers who are most likely to have work that suits you.

"You must understand, further, that the letter is simply a preparation for the interview which the letter requests. Therefore, the more thinking and self-analyzing you do in planning the letter, the better prepared you will be for the interview. I shall speak more fully, perhaps, about the letter than the interview, although they are both of one piece. The interview is just a friendly talk, with the object of gaining a more intimate personal knowledge.

"Of course, your common sense should tell you that there is no absolute, surefire, foolproof method for everybody and anybody to get a (*Continued on page 126*)

VITAPHONE PICTURES

WE HAD heard so many conflicting reports about the "Talkies" that we decided to get the "lowdown" on this sensational latest comer to the motion picture field. Almost immediately we discovered that Commander Fitzhugh Green was investigating the "Talkies" and writing a book about what he was finding out. So we asked him to tell how the "Talkies" came into being; what they are still up against; whether or not they are here to stay; and why every big movie magnate has jumped on the "Talkie" bandwagon. This is Commander Green's article.—THE EDITOR.

The Bomb *that* Blew *the* MOVIES Upside Down

By

FITZHUGH GREEN

MY FRIENDS, no story ever written for the screen is as dramatic as the story of the screen itself!" exclaimed Will Hays to a thrilled audience on the night of August 6, 1926.

He was speaking of an event that was to convulse America's $8,000,000,000 moving picture industry. For, as one of the movie magnates has since more bluntly put it: "Science was about to explode a bomb under the most prosperous business our country has ever known!" The bomb was the Talking Motion Picture.

On that night a drama was being shown on the screen of the New York movie theater in which Mr. Hays spoke. On that same night, and still in that same Broadway theater, another drama was taking place, actually, in the lives of three men who sat well back in the audience.

Before the screen drama was ended the terrific problem that faced this little group of men would also have been solved. Whether they would be rich or bankrupt, wise men or fools, successes or failures, was being decided by the large public jury who sat about them.

One of the men wiped his mouth nervously with his hand. "Maybe we'll win," he muttered.

The other two only gripped the arms of their seats more tightly and in grim silence awaited the verdict.

The men were Harry Warner and his associates in a film firm known as Warner Brothers, who make "Vitaphone" pictures. They had sunk over $500,000 in this one picture. They had invested nearly $10,000,000 in a gigantic gamble that the American public would like moving pictures that *talked*.

If they won, they would revolutionize moving pictures. If they won, a new art would be launched. If they won, a vast population of 50,000,000 movie fans would have to be reëducated. If they won—and this they did not dare even discuss with one another—they might pull the entire industry down upon the heads of those who had so patiently built it.

They had struggled for twenty years that this night might be a success. They had fought with other film firms for their own firm's very existence. One of the brothers, Sam Warner, had given his life that they might succeed.

They knew that America was too big to win by halfway measures. Stars of the Metropolitan Opera Company of New York had been recorded for this m mentous night. $1,000 a week—$52,00 year!—had been paid for just the right *ask* the star to sing. Whether the Warn paid $5,000 or $50,000 to each star taking up this right, I am not permitted reveal; but the fee in each case was st gering. Martinelli sang just twice a received $25,000.

THE "gamblers" had to pay anot company $104,000 for permission use the music that the stars would s the period of such singing being limi to one year.

At the cost of a king's ransom they hired the orchestra of the New York P harmonic Society to provide the m which was to be mechanically proje with the films.

They had persuaded, with money cajolery, the noted Mischa Elman to them "can" the ethereal tones of violin.

And now they tensely sat and wai Literally they could be made damned on the opening night by verdict of this single New York audie And practically every expert in Am had called the effort to put talking pic across a kind of pitiable insanity.

The theater was filled; every seat

l—and occupied. It was a ious, speculative audience, more pared to be amused by a new ntific miracle than to be enter- ed by anything artistic.

t 8:30 P. M. the lights dimmed. ces hushed. A white beam shot head and splashed upon the en. A single brief title showed; the image of a man. The man was Will Hays—walked for- d—*began to speak.*

he hush before him seemed to en.

The suspense was pretty tight, l you," laughed a friend of mine was present that night—and nothing of the human drama g on behind him. "We all felt something was bound to go g. The machinery would break n—a crash of some sort sud- y spoil it all."

t it didn't.

HE "shadow" of Will Hays nished his "shadow speech." audience applauded. As the ping died away, sweet music from the direction of the screen. iptly the motion picture of an estra appeared thereon. And nce the audience saw it was orchestra making *that* music. e-ups of famous opera singers wed. Each was *seen* and *heard.* illusion was complete.

hen the lights went up for the mission, the audience cheered, gave way to a concentrated of excitement. History was made and they were there to he event.

e second half was a conven- l screen drama—also with the talking-picture attachment.

The sound-proof camera booth is seen on the opposite page. This is part of the apparatus used in making synchronizations for Vitaphone presentations.

(Above) This photograph shows the operator's booth in a motion picture theater. (Below) The electrical apparatus used in the recording-room of a talkie studio is a marvel of delicacy and accuracy. The electrical expert in the picture is examining the surface of a record with a microscope to make sure of faithful duplication of the work of the recording artist

But before its stirring plot was done, the little group of three who sat tensely waiting, received their verdict. The uncontrollable enthusiasm of the audience gave it:

"*You win!*"

It was the first great triumph for the "Talkies," as the public instantly named the new synchronized pictures. It was a glorious tribute to the vision of the men who had backed them. It made the biggest producers in the movies sit up and rub their eyes. This thing that they had one and all condemned—all except the little group we have named—was rising like one of Aladdin's genii from the lamp of a single small company and bewitching the public.

The Talkie boom was on!

HOLLYWOOD was thrown into a turmoil. If an airship had landed from Mars there could not have been more excitement. Stars tottered on their thrones. Long-term contracts became scraps of paper. Studios were shut down.

An army of extras became a howling mob of hopefuls. Maybe they could talk! Maybe their voices were better than their looks! Perhaps the new art would seize the unknown just as in its infancy the old art had! Their ages ranged from fifteen to eighty. But perhaps age didn't matter in the Talkies! None knew. Not even the directors knew!

And nobody knows today.

One superbly beautiful girl who had been making $4,000 a week for three years lost her temper completely before the casting director.

"You (*Continued on page 118*)

THE MARK on the Window

A STORY

By MELVILLE DAVISSON POST

I SHALL always remember this case, for it was one of the most remarkable that ever happened in Virginia. It turned on a tragedy that outraged the dignity of the state, and it presented a problem that we could not solve.

Judge Benton Woods had been shot down before a window in the courthouse.

It was a ruthless, cold-blooded murder, with no reason for it either in interest or passion that the world could see. The man was an irreproachable public servant; just and honorable, in the evening of his life, and at the very close of his career—for his successor had been elected and he was bringing his term to an end with the adjournment of his court.

It was night when the judge was killed.

It was his custom to remain in the courthouse in the evening and work on his chancery cases. There was a little chamber on the second floor, adjoining the great court-room, in which he kept his books. It was before the open window of this room at night, with his big oil lamp on the table behind him, that he had met his death.

He had been shot from the street as he stood speaking to the people from this window.

The lead bullet from one of the long deer rifles of the time had gone entirely through his body and lodged in the wood of a poplar panel behind him. He was dead before anyone could reach the chamber, lying motionless on the oak floor.

Nor was there any mystery about the assassin.

It was clearly one of the crowd below, who had come in with their rifles and were firing in that riot. The final word of this sentence is descriptive. The demonstration in the street before the courthouse could be called nothing less than a form of riot. It was intended, by its very aspect of violence, to raise the country, if its persuasive effect on Judge Woods should fail. But it was not intended, in any manner, as a personal threat against the judge, for the people, without exception, held him in high regard.

This fundamental fact was established beyond doubt.

The persons taking part in this assembly were all known to one another. The identity of each one was established. He could be pointed out and named. And the persons to bear arms had been selected and their precise part in the demonstration laid out in advance.

There was no hothead and no doubtful character in that company of armed men who had marched in from the land along the Ohio to make this demonstration.

They were of the pioneer stock of Virginia, fearless, determined men, deeply moved by a continuing outrage; but they did not go about in the night to do a murder. And, besides, this demonstration, with its unforeseen tragic sequel, had been considered and planned out, after counsel with some of the best men of the county. Even the officers of the court were cognizant of it. The clerk himself had been an instigator of it. The settlers along the water front of the Ohio had supported him at the polls, and he had been in sympathy with their position. He was not impressed that the demonstration would move the judge to any corrective act, nor, in reality, that Judge Woods could effect any corrective act, if he wished. But he thought the demonstration, if it had the aspect of violence, would force the Government to take a hand in the matter.

IT WAS an old feud that had developed into this violence. The river was the great highway on which the steamboats from New Orleans traveled to Fort Pitt, and the settlers along the river and these boats were continually at war.

In flood water the boats, keeping toward the shore to avoid the current, overthrew the flooded cabins of the settlers with the wash of their paddle wheels. The settlers fired on the boats, and the boats c presently to barricade their decks an carry sharpshooters; and so, while ginia was at peace, the highway of river was at war.

There was flood water when tragedy occurred.

For a week the valley of the Ohio been inundated from the heavy rains. barricaded boats traveled over the f and the settlers' houses, already de the water, were overthrown.

The intolerable situation could be no longer; and, on a night agreed, men marched into the county se make their demonstration before judge. They had been advised to it the aspect of violence, and so

rowd poured into the courthouse
he stairs into the court-room. But the judge was dead, as I have written, when the crowd came to him—lying prostrate on the oak floor with a bullet through his body.

The tragedy lay like a sinister shadow on this frontier of Virginia, and the authorities sent for Colonel Braxton to sit as a special judge here and bring the murderer to justice.

The reputation of this eccentric lawyer added a new element of interest to the mysterious affair. It came on, ahead, before him, colored with exaggerated and imagined incident, and we looked to see a sort of ogre out of a fairy story land from the river boat; for he traveled on the yellow highway of the river.

But the imagined Goliath, after the manner of such fancies, crumbled before the reality in life.

A big, soft-spoken man with a drawling voice came down the plank from the river boat. His aspect did not greatly impress us, for the governor or any of the large public figures of Virginia might have looked like that. But there was something about the way the man conducted this affair that did impress us. It impressed us with a decidedly unfavorable impression.

He acted like a man in fear.

It seems a severe thing to write down that verdict, for courage on the frontier of Virginia was held to be very nearly at the top of all human excellence. It came to our attention in the man's opening conduct of the case, and it increased in its impression as the proceedings in the case advanced. There could be no doubt about it. He acted like a man in fear!

And he disappointed the people in another manner:

IT WAS supposed that he would make a great speech from the bench, in eulogy of Judge Woods and in condemnation of this outrage. The crowd filled the court-room to the door, to hear him. It applauded as at a public meeting when he came in and, if he had spoken, it would have carried him on a wave of feeling.

But he did not speak.

He did not, in fact, go at that time on the bench.

He called the sheriff and the clerk and went into the chamber where the judge had died. He stood before the open window, where Judge Woods had appeared above the mob, looked at the mark of the bullet on the wall, listened carefully to all the details of the tragedy; ordered the court adjourned, and went down to the tavern.

But he did also a thing that impressed us with his sense of fear:

He directed the sheriff and his son, the deputy, to attend him, and he walked between them to the tavern.

It was a scene that made a bad impression. Did he regard the whole community of us as assassins that he should thus so conspicuously protect himself? And, withal, we began to feel a sort of gathering contempt. The sense of it deepened when he kept secluded in his room and when he went out that evening to walk with the sheriff and the deputy, with all the loitering persons warned away.

Still, the gossips were divided in their verdict.

Here was perhaps only a becoming modesty in a stranger who would presently be the storm center of this affair. It was clever business, this unpretentious entry. Tomorrow he would make his great speech from the bench, and, after Judge Woods' murder, there was some excuse for these precautions.

But this latter was felt to be a lame addenda to the comment.

Fear we could not put up with.

But the people, and even the idle about the tavern, respected Colonel Braxton's wish. And when he went out with the sheriff and his son in the evening, no man loitered on his heels, and the people with-

UNIVERSITY OF IOWA

drew about their affairs. And so we awaited the tomorrow.

There was a great crowd in the court-room on this morning; a greater crowd than on the day before, for the whole county had come in, drawn by the lure of the tragedy and the desire to see this stranger who had been selected to sit as special judge.

But what could he do?

The chimney-corner experts and the loiterers about the taverns had considered that, and they concluded that the mystery was a thing beyond him. He could do nothing but deliver his great speech, set in motion the usual inquisitorial machinery of the law, and take the defeat that awaited him. It was a case for Solomon, these experts said, referring to the only book they knew. And in its puzzling features it seemed a thing no less.

The bullet that had killed Judge Woods had been cut out of the wall and lay on the bench. It was the lead bullet of the deer rifle of the time.

But from what rifle had the deadly thing been fired?

Every man that had come in with a rifle was known, and these weapons, to be found in every house, were all alike, made in Baltimore for the frontier trade, of the same pattern and the same caliber of ball. And beyond these settlers in the demonstration there were a thousand of these rifles on the Ohio, as like in every detail as a handful of peas—the deer rifle of the time, with a long stock, or the stock cut down.

It *was* a case for Solomon.

And there was no Solomon sitting in Virginia, the chimney-corner experts said with pertinent comment, in their summing up.

ONE must realize the profound obscurities of the thing:

A released convict, sentenced by Judge Woods, might have taken a revenge like this; but there was no such person among the settlers who had marched into the county seat. Someone from a river boat might have fired the shot, to put the landsmen in the wrong; but there was no boat tied up on the Ohio and no alien from the river in the place.

The life of the community must be understood:

Every citizen was known, a stranger could not enter unnoticed. Such an hypothesis had to be excluded.

And there was another thing to realize: The demonstration in the street was a deliberate affair, handled calmly for a desired effect. The very officers of the court had been consulted. As I have written, the clerk of the court, Mr. Chapman, had been freely talked with; and he had suggested the aspect of violence, not, as he frankly said, to influence Judge Woods, but to get the matter before the Congress. The Government could not ignore a river war, nor overlook an armed rising, if it appeared that the frontier was determined. But, like other men, the clerk could not imagine this tragic outcome of the thing. It was a result wholly unforeseen, and he deplored it with every manifestation of regret.

It had been undertaken with extreme precaution: There was no ball in any rifle; a powder charge only had been used for this aspect of violence. And yet here was Judge Woods shot down! The loom of the mystery, as one considered it, deepened and became more impenetrable; and beyond this mystery of the act, there lay, also, the mystery of a motive.

And so the puzzling thing turned back on itself.

What could Colonel Braxton do? No man could find a way in this dark *cul-de-sac;* neither Solomon nor any special judge that the authorities of Virginia could send in! And so the people crowded into the court-room to see what this substitute for Solomon could do.

There was a breathless interest when Colonel Braxton entered.

He came in with the sheriff and his son and, passing through the crowd, went on the bench. He put down some articles before him: a bit of paper and a piece of wood about a foot long and some two inches in width. He set the lead bullet on the fragment of paper to hold it down. The court was opened, and the people composed themselves to listen to the great speech that by custom he should now deliver.

But that day was freighted for us with the unexpected.

This inscrutable special judge said nothing.

HE SAT for some time looking at the lead bullet, the bit of paper, and the piece of wood, and then, vaguely, about the court-room: at the sheriff, fingering his hat; at the clerk, writing with three fingers, for the index finger was bound up from some minor injury; at the tall settlers standing behind the crowded benches; at the door to the clerk's office opposite the chamber where Judge Woods had died. And finally he spoke.

But it was to open no oration.

It was to give a direction that at first amazed us, and then, as we understood its intent, lowered our respect.

He ordered the settlers who had come armed in the demonstration before Judge Woods to bring in their rifles, and, as if he feared a further violence, he added that every officer of the court should do the like—come in also with his rifle. And this was not the only precaution of the apparently fearful man. He adjourned the court until the afternoon and, going down from the bench, locked himself into the clerk's office, and set the clerk's assistant to keep watch before the door.

I cannot tell you how astonished the people were.

We went out with a feeling of disgust.

A judge who went about between the sheriff and a deputy, called upon the officers of the court to come into his session armed, and then, while he waited for the security of that guard, locked himself in behind a door was, for all his reputation in Virginia, a poor cowardly creature of no worth.

Besides, of what use was it for the settlers to bring in their rifles? Did he expect the guilty one to go white in his court and confess the crime when he was confronted with the bullet lying on the scrap of paper? Was there, perhaps, a charm of magic scrawled on this bit of paper that our timid Solomon had put down before him when he had come up on the bench! . . . And this piece of wood! Did the man intend to whittle?

The loiterers about the tavern laughed.

We no longer held this Colonel Braxton in our respect; but our curiosity remained. It remained with a consuming interest.

What further absurdity would he be about?

And so the people returned, crowding into the court on this afternoon. But it was a changed and disillusioned concourse. Our high regard elevating this special judge had slipped away. Nevertheless, his directions had been carried out. The settlers were in the court-room with their rifles, and every officer of the court had likewise brought in his weapon from his house. They made, thus, a group of armed men standing opposite across the court-room, as if they opposed one another in some feud, likely, on the moment, to break out.

The settlers were two to one in number over the officials of the court. But the weapons were the same, for this western border of Virginia was a game land and every citizen kept a deer rifle in his house, all of the same caliber and pattern—an octagon iron barrel, half stocked or with the wooden stock extending to the muzzle.

Colonel Braxton went on the bench and ordered the rioters to bring their rifles before him. He would make sure, evidently, that no one among the settlers had his rifle loaded.

How careful for his safety was this imported Solomon!

One could feel about him the undercurrent of contempt. But the dignity the people held. The settlers came forward, and handed up their rifles. Colonel Braxton glanced at each weapon a moment, long enough, we thought, to see it were loaded, and returned it to its owner.

It was like a trivial inspection at muster.

And then, weakly, as it seemed to us, as if he would cover his concern for safety with a show of equal treatment of both sides, he directed the officers of the court, also, to pass before him with their rifles.

They followed when the settlers had gone back to their places by the wall, each one in attendance, from the deputy by the door to the clerk of this circuit court. Colonel Braxton, glancing at the weapons as they were handed up, returned them with no comment.

HE DID not speak and there was no sound but the footfall of each person passing before the bench! What evidence sign could he be seeking? What clue dicatory of the assassin of Judge Woods?

Evidently none, for, as I have said, rifles were all of the same make and pattern. But he could take this precaution against a loaded rifle in the court-room and evidently, from what we have observed about the man, this was his intent.

While the men went back to their places he sat looking at the articles before him: the bit of paper, the bullet on it, and the piece of wood.

Then he spoke, looking down at the clerk. And at his words the sagging interest of the court-room flashed like a fire into life.

"Write out an indictment," he said.

The clerk got on his feet astonished.

"An indictment, Your Honor?" he echoed.

ote on and the silence deepened.

We could hear the scratch of the quill pen on the foolscap, and we could note, as with a sharpened vision, his puzzled features twisting about his face, as if his mind, independent of his writing fingers, labored at this dark enigma. Then the scratch of the pen slackened, went on, and finally ceased. The man stopped. His face had now a certain determination in it. He put down his pen, and looked up at the bench And when he spoke, there was a queer note in his words.

"YOUR Honor," he said, "do you know who killed Judge Woods?"

Colonel Braxton did not seem to regard the man.

He looked instead at the people crowded into the court-room, with their strained, silent, expectant faces; for this thing had taken an immense unexpected swing up into the light, and they were overcome by their amazement.

It was a moment of the highest tension, but Colonel Braxton took no attitude of either tone or manner from it. He spoke in a leisurely voice, as one about a commonplace, with no gesture and no emphatic word.

"I am about as tall as Judge Woods," he said. "I placed myself in his position before the open window. I knew where the fatal shot had entered his body, and where the bullet had lodged in the wall behind me; and it was at once evident, from a line drawn through the wound of entry to the mark on the wall, that the bullet had traveled on a level, and not on a slant, from below. And so it was at once clear that Judge Woods had not been shot from the street. He had been killed by someone who was practically on a level with him."

He paused as in reflection.

"There was another thing; but it was not clear and it could not be taken as decisive. The bullet did not seem to have been fired from directly before the open window. The wound of entry was precisely on the median line of the chest. But, in its exit, the bullet did not strike the spine. When (*Continued on page 80*)

Captain TOM GOOD one of the greatest rivermen the Mississippi has ever known

By LEWIS R. FREEMAN

Fifty Years on the

THERE was a chill at the break of the day and a chill at the end of the day.

Gulfward-bound from the Rockies, alone and in a small boat, I had put the Yellowstone, the Missouri, and half the lower Mississippi behind me. The thunderstorm which had blotted the morning star and tumbled me out of a tentless camp an hour before dawn left a cold drizzle in its wake. Then the drizzle had been strangled by the fog, and the lapping, clinging mists had thickened from fluttering curtains to sodden blankets.

Sight was quenched—drowned. Only sound remained, and not much of that. Not much for a little while, I mean. The whouf-whoufing of a tawny spiral of swirl and the plunkity-plunk of a submerging and emerging snag were all that broke the rhythmic lapping of the wavelets against the thin skin of my steel skiff. I avoided the stab of a swiftly materialized "sawyer" with the quick flip of an oar. ("Sawyer" is the name given by Mississippi River boatmen to a snag so lodged that the upper end of it rises and falls under pressure of the current, like the back of a man sawing wood.)

Rather good sport, drifting in the fog, I told myself. Much preferable to a soggy camp. How quiet it was! How peaceful . . .

Sudden and savage as a thunderbolt came the blast of a whistle. The throb of engines and the hippo-like breathing of exhausts warned of the imminent menace lurking behind the fog-mask. Intending to drift quietly along under the bank, I had been carried by the suck of the channelward current into the steamer path.

Putting all of my two hundred and thirty pounds of bone and beef behind my stroke, I pulled desperately on a right-angling course that would carry me clear of the path of destruction. Leastways, I thought I was floundering into unoccupied water, until a drawling voice, scarcely raised above the tone of ordinary conversation, filtered down to me through the fog.

"If you don't ease down a bit, young man," it cautioned, "you're going to ram one of your Uncle Sam's lighthouse tenders, and that's a serious offense."

I sensed that the owner of that voice was amused. And well he might hav been. For the thinning mists revealed that my frantic rush for safety had bee carrying me straight into the side of th object I was trying to avoid.

Again the voice of the unseen speak oozed down out of the fog:

"Ease round to the sta'bo'd side an the boys 'll give you a hand to the dec Been looking for you two days. Superi tendent in St. Louis suggested I pick yo up for a day or two and let you see he we keep the lights a-burning on the Mississip'."

AND so I came to the United Sta lighthouse tender Oleander and Ca tain Tom Good.

He was ringing up the engines for h speed ahead as I mounted to the p house—a tall, slender, wiry, iron-gray m whose only unrhythmic movement wa whip-snappingly quick re-squaring of muscular sho ders every t they relaxed inch from t wonted poise military alertn

"Great ja you've had d from the Yel stone," he sai he dropped a smeared win "Must have t smart work to from swam that little boat in the m where the Ye stone tumble the back of Rockies. I you weren't a

at the oars the way you kept from caught broadside by that 'sawyer' a inutes ago."

the flicker of a smile twitched the s of the grave mouth at my gulp of shment, but as he went on I sensed the inward grin.

s, I saw you before you saw me. was partly because I was looking and partly because I've been ng through fog close to fifty Just a matter of getting—"

en it's really true," I broke in, rk Twain wrote, that a Mississiver pilot can see in the dark at and in the fog like a—" I for lack of a comparison.

man can see through a thick fog re than he can see through a came the reply to my unquestion; "but in a light fog is one, trained eyes can see than others. If Sam Clemens nething like that, it was nearer in many things he wrote about er. Most of the truth that there said in jest, and I don't believe knew himself just where truth and jest began. Droll fellow, emens, and a lovable one, but of a pilot than—than that old ammy waiting over there for ans. . . . Huh! Pomp Brown drunk again."

ED when the nose of the der and that of its skipper —and saw fog. Then the cuoud-like umbrage of a pecan sheer of a cutting bank, and the rms of a light station all took fore my straining eyes; and he generous bulk of "ol' Carrie," who was as much of Mark Twain!

Mincing in precarious balance down the swaying gangplank, Mammy Carrie waddled aboard to make her official report.

Yeah, her wuthless niggah wuz drunk again, but since de light had been kep' buhnin' she reckoned it wouldn't make no great difruns to Cap'n Tawm, speshly since that light nevah had gone out for nigh on twenty yeah.

Giving a light stand a new coat of white. This form of light is successor to the old lantern hung on a pole

Captain Tom shook his head and looked stern, but deep down somewhere I knew there was an inward grin. True, "4XY" never had been reported out, he admitted; but the light stood in Pomp Brown's name, and that was the second time in a year that Pomp hadn't appeared in person.

If a steamboat came along in the dark some night and missed its bearings for lack of a light, there would be a wreck —and maybe a hundred lives lost. How would Pomp Brown like the responsibility for that on his soul? Now there was Jim Brownslow. He had ten lights and never left one for the tender to move back. Jim had been asking for a couple of more lights, now he had his new launch, and "4XY" would just round him out. If Pomp Brown . . .

Speechless horror at the thought of the hundred dead from the wrecked steamer gave way to vocal anguish at

the threat of the loss of the light. Pomp Brown would be kept on the job if he had to be drug to it by the scruff of the neck. "'Foh Gawd, Cap'n Tawm . . ."

His lesson driven home, Cap'n Tom r-leased the thumbscrews, handed the old negress the new burner and wicks she had asked for, patted the fat shoulders, and sent her back down the plank. With a gesture half weary, half whimsical, he passed a hand over his bronzed forehead before replacing his cap.

"Seven hundred lights between the mouth of the Missouri and New Orleans," he sighed, "and some hundreds of keepers. And every keeper has to be gone at differently to drive home responsibility and keep him up to scratch. Twenty-five years of bucking 'em up and they aren't quite perfect yet. Not quite—but improving all the time. Before I'm through, perhaps . . . But run along and look at your quarters. There is just time for a bath before breakfast."

A STEWARD shepherded me along to the largest stateroom I had ever occupied on a steamer. A gargantuan steel bed and chairs matched the room, but a something less than boy's size bathtub was in ridiculous contrast. I bathed in sections!

"You took so long that we were afraid you got jammed in the bathtub as the first tenant of our guest cabin so nearly did," the Chief Engineer said, as I went in for breakfast. He then explained how the spacious quarters turned over to me had originally been provided to accommodate President Taft on his historic voyage down the Mississippi.

"Make everything as large as possible," had been, in effect, the orders wired from Washington when it had been decided that the Oleander was the most suitable of the available craft for the presidential cruise. The job had to be rushed through in Cairo, Illinois, which was not a rushful town. Knocking the partitions out of two or three cabins had solved the stateroom problem, and finding in a second-hand store the bed and chairs of the fat lady of a defunct side show, solved that of the furniture. The only hitch was over a bathtub. If the giantess had possessed anything of the kind, it had been disposed of elsewhere. None of even an average size was in stock in Cairo, and the one ordered by wire from St. Louis failed to arrive in time. The Lilliputian fount from which I had just emerged was the best that could be provided at the last moment.

There were several versions of what happened to President Taft on the occ sion of his first dip, but all were agre that he made the serious mistake of tryi to bathe the whole of his considerable bu at once. He actually succeeded in getti *into* the tub—but it took Archy Butt, secret service man, and two or three sta governors to overcome the suck of t vacuum beneath and drag him out.

NOSING and sounding for shifting cha nels, moving light stations, repleni ing stores, commending this keeper for zeal, scolding that one for his negle Captain Good had worked the Olean down a score of winding Mississippi mi by the end of the afternoon. Twe lights, across the spinning spokes of t big, double steering wheel, we swapp yarns about the queernesses and cuss nesses of rivers we had known. I am explorer of rivers; my passion is to foll them from their sources to the sea. In parts of the world I have studied rive matched wits with them in my efforts trace a brook through mountain pass then to valleys, and finally, the br having become a river, to ride it out to ocean.

"Funny old bag-o'-tricks, the Mis sip'," said Captain Tom, as his eyes

Centennial Bend, where the river, to the left of Point Scudder, now flows in the direction opposite to its former course. This famous "cut-off" is the place where old-timers tell you a ship going downstream when the break came met itself coming up. The present channel is shown in white; the channel before 1876 in dark gray

A Mississippi River steamer stove in by the ice. This mishap occurred near Memphis in 1917, a year of heavy ice. (Left and right) Keepers of the lights. Captain Good has built up such fine morale among his keepers that not one light was reported missing even at the height of the great flood of 1927—this despite the fact that banks were constantly caving, which required the frequent re-location of lights

forth across the turbulent yellow ing miles wide between the Mis- d Kentucky shores. "You've heard of how it cut off a bend Vicksburg two miles on a shallow er chute; but did you know there stretch, not far above Memphis, you now actually run for miles im where the river used to flow pposite direction? A breaking t two points on a double oxbow ed the trick, but you have to id down on the chart to under- how it happened. The flood he juggling came in '76, so the giv en the name (which it still ent ennial Bend. They used to about how a boat that was river at the time the break self going up!

"Sam Clemens wrote of the way the river used to chuck pieces of Arkansas and Tennessee back and forth at each other, and of how he tried to find a man in the town of Napoleon ten years after that burg had been washed away altogether.

"Sam was slow getting the hang of the river jargon, which was maybe the reason he picked on the simplest of the lot, Mark Twain, for his pen name. 'Riverese' is a queer lingo; a real 'sailor of the sail' is just as baffled by it at the start as a landlubber. But it's easy enough once you get the swing of it. 'Mark Twain' indicates that there's only twelve feet of water covering the rising bottom. A hump of sand under water is a reef; out of water it is a bar. When a bar gets a grassy growth of young willows, it is called a towhead. When cottonwoods choke out the willow, and silt and rotting vegetation form a soil, the one-time reef attains the dignity and name of island.

"A chute is a narrow back-channel on one side of an island. If it carries water enough, a boat may frequently save many miles and much time by using it. Directing a boat 'down the shape of a bar' or 'along the shape of a bank' means that it should run fairly close and follow the contour of bar or bank on a parallel course.

"Of course this all reads about like a cipher telegram until you get the hang of it. A good few of the lights (since they're named from sunk steamboats or plantations) have female names, and these ladies get some funny things said about them every now and again. I've never heard the last of the time I dictated to my clerk that —but I'll show you the note just as it was manifolded and sent out from the Superintendent's office in St. Louis."

On a much-folded-and-fingered sheet of paper I read the following:

From Seven Oak Light to middle of Longwood Bunch, when about two-thirds way over pull down gradually through the opening. This is shaping Fanny Bullitt's Towhead.

"Of course, (*Continued on page 134*)

About the time the poor boob of a husband begins to take an interest in dressing gown and house slippers, the wife is ready to step out

I'm one of those Boob Husbands!

By W. O. SAUNDERS

Illustrated by
H. TEMPEST GRAVES

I AM a horrible example of that modern social calamity—the tired husband. Call me the boob husband if you please. I am one of those tragic domestic figures they used to call the "tired business man." That was a joke; the old boy who was tired was not the business man—it was the husband, for the emancipated wife has got our wind. That's the real truth about it.

When I was married, at the age of twenty, I had a sneaking, sinking feeling in my heart because my wife was twenty-one; I shuddered from an obtrusive notion that I should live to see my wife grow old. And I have lived to face the distressing fact that my wife lives to see me getting old while she persists in getting younger every day.

Time was when the married female of the species was faded at thirty and settled in her ways. But those good old days are gone forever. The modern wife at thirty has only begun to live; by the time she is forty she has begun to display pep and stamina in ways that astound and appall her faltering mate.

Come ten o'clock P. M. and I am ready to go to bed. Come ten o'clock P. M. and the wife has just settled down for a three-hour session with the radio or a popular magazine. Or if there is company I begin to yawn and get fidgety and the wife is too mortified for words. She opines that I might make an effort for politeness' sake and keep my eyes open for a few hours at least one night in a week.

The pumping of a jazz orchestra and the bright lights and laughter of a dance at the country club fortnightly keep me going for only two hours at most. Then I'm ready to flop, and if the wife doesn't watch me I'll be piled up on a settee in a lounge-room, or tilted back in a chair in a dark corner of a veranda farthest from the music.

I did just that, one night not so very long ago. It was one of those card dances and I had filled out the entire twenty-four numbers on the card, slipping in a couple of stags for the seventh and eighth numbers. That released me for those numbers and I sneaked off and settle a divan in a nook in the conservatory the shadows and partly concealed some potted palms. I intended merel relax and get a fresh start for the n number. And bless my soul, I dozed o sleep and didn't wake up until the m mission at the conclusion of the thirte dance. The wife was furious, and couples knew that I was a boob, if didn't secretly suspect that I had take more liquid soothing sirup than I c stand up to.

I CAN'T make my wife or anyone seem to understand that there earthly sense in beginning a dance a P. M. and carrying on until one o o'clock in the morning, when they just as easily start at seven-thirty or and be all set to go home by midnigh have an early dinner and by seven- on the night of the dance I am in m edo and rearing to go, while the wi tles down to a reading of the afte paper, including the installment daily serial and the working out cross-word puzzle.

'Isn't it time for you to dress?" I be- to say to her about nine o'clock. She ps the paper in her lap for an instant, veys me with pitying eyes, and says: Why, my dear, there is plenty of time; wouldn't find anyone but the care- er at the club if you went so early. l you never learn?"

t is the middle-aged married man and the middle-aged wife who is content to le down. About the time the poor b of a husband begins to take an in- st in dressing gown and house slippers wants an easy-chair and a bridge p all his own; about the time he is con- ed that there is no place like home no price too high for good box springs mattress, the wife is beginning to feel oats and is ready to step out. And her dear feminine illusion is shattered n she discovers that the Old Boy can't so fast, so high, and so often as he to.

D so, when I get a chance to get off to the seashore for a rest, I catch a when events conspire to keep the good home. And then, when things shape the good wife can get to the sea- I find a great pressure of business ep me home; because I know the dear n have a better time with the daugh- and their crowd than she could have the Old Man yawning around and ng about going to bed around ten —and the moon not scheduled to until one G. M. They always have to to see that darn old moon rise at the ore.

m convinced, out of my own life, my vations, and my personal intimate views with scores of my fellow mid- ged male sufferers, that the greatest le of modern times is the rejuvena- of the middle-aged female. She can up later nights, dance longer, eat and stay fresher than her younger daughters. She can endure more discomforts of the road and tourist hotels than any old-time commercial traveler or any circus performer.

I planned a great vacation last summer. It was to last for a week and I cut it short after three days. I just had to cut it short. For I am considered something of a celebrity in the frog pond where I make my splash, and the hotel press agents at the seashore where I registered made the most of me.

Every day I would pick up one of the daily papers published near by and find myself written about or quoted by some lively reporter, and the newspaper account would invariably end with the line: "Mr. Saunders is a guest at Atlantic Beach Hotel, accompanied by Mrs. Saunders."

Now, Mrs. Saunders wasn't with me at all, and when this reportorial error occurred, not once, but several times in succession, I became terribly uneasy. For should one of those newspapers get back home and eventually reach Mrs. Saunders, I would have to do some tall explaining. Besides, I was getting tired of vacationing, getting fidgety; my thoughts were on the business back home. And so I cut my vacation short and got back home before the inquisition.

"Served him right," said one of my neighbors who never goes away from home for a vacation and who thought it a pretty howdy-do that I didn't take my wife to the seashore with me. The fact of the matter is, my wife was *at* the seashore —two hundred miles farther up the coast. It took me a full quarter of a century to learn that there is no real vacation for a man who takes his wife on his vacation with him—if that man is of middle age.

It may be all right for fresh young things who have not awakened to a realization of the sad and humiliating truth that youth is not eternal; and it may be all right for old folks who go early to bed and have learned not to expect too much of each other in the way of diversion and entertainment. But the middle-aged husband who is cajoled into taking his wife with him on his vacation, or accompanying the wife on hers, is cutting out trouble for himself and making himself ridiculous in the eyes of his wife and his social world. Make no mistake about it. For women don't wear out today like they used to, but men do.

I SHUDDER to think of an experience last summer when the wife and I were invited to a house party at Cape Henry. The invitation came from Louis and his jolly wife, Bill, and as we hadn't seen either of them for several years, we accepted their invitation with alacrity. What a treat it would be to sit on a screened porch surrounded by sand dunes and scrub oaks, listen to the murmur of the surf, and indulge in reminiscences! And then early to bed, with a window open to the sea, to be lulled to sleep by the breakers and fanned by ocean breezes! Poor simp!

We arrived at Hotashell Lodge on Saturday afternoon, had a dip in the surf, ate a supper of ham and sardines while looking with rapture on an ocean full of seatrout, pigfish, and porgies, and then sat on the screened porch and chatted until about nine P. M. I was hankering for that bed, all dank and smelly of the sea and with windows opening on the beach, when a car drew up in front of the lodge. The motor was stopped, the lights dimmed, doors slammed, and a crowd came laughing up the walk. And then another car, and another—and another. And crowds, crowds, crowds. From out of the night came twelve or sixteen couples and numerous unattached males for an evening with Louis and Bill.

I had eyed (*Continued on page 164*)

The gang kept that infernal machine going until three o'clock in the morning

The Newest and Most Fascinating of All Word Games

Travel Trails

By ARTHUR EBENHACK and LOREN STOUT

Take Pleasant Trips via Travel Trails

See page 151 for solutions to the March Travel Trails and announcement concerning future puzzles

Lake Placid to Baltimore: *The winter wind is blowing when they skate at Placid. If it's snowing, they coast or go skiing or win a relay race.*

Cheyenne to Denver: *She said yes the second ere he branded his herd.*

The clue sentence accompanying each trail contai some of the words for its solution. Use as many wor of the clue sentence as possible. Otherwise, use a word from a standard dictionary. Proper names a not allowed unless included in the clue sentence. T solution of these trails will be published in next montl issue of THE AMERICAN MAGAZINE.

HERE are more pleasure jaunts for you on the "Travel Trail." Stay at home and go places! Or, if you must actually travel, lessen the tedium of the journey with the solving of the "Travel Trails" on this page.

Last month several hundred thousand readers of THE AMERICAN MAGAZINE, with their families and friends, took a "Travel Trail" trip from New York to Palm Beach, and liked it. Next month, you are invited to ride with Paul Revere from Boston to Concord. After that (beginning with the June issue) this page will be devoted to the "Travel Trails" submitted by you readers.

How to Follow a "Travel Trail"

Each word must have the same number of letters as the spaces allotted, and each word must carry down vertically at least three (more where possible) consecutive letters from the word above, as illustrated by this sample:

CANTON

TONNAGE

UMBRAGE

COLUMBUS

TONNAGE carries down *TON* from CANTON. UMBRAGE carries down *AGE* from TONNAGE. COLUMBUS, the destination, carries down *UMB* from UMBRAGE.

Molokai to Hawaii: *As the ship sailed away, a haughty tar sang a maudlin solo in anger.*

The Sin of Angels

A story of the wistful hopes and dreams of youth

By ELISABETH SANXAY HOLDING

Illustrated by JOSEPH SIMONT

In crossing Broadway he had held her arm, and he could not forget how slight and frail it felt

T WAS very quiet in the private office. Outside in the dusk the snow fell steadily, muffling the sounds from the street below. The click of typewriters, the ringing of a tele- bell, voices speaking in the outer were all subdued and remote.

green-shaded lamp glowed on Mr. s desk, illumining his bent, gray outside the bright circle where he e room was almost dark. And in uter darkness stood young Moore- waiting.

ere, Moorehouse!" said Mr. Alden, his head. "Just run over to ell's office with these papers. Tell wa t these corrections initialed. long now! I want 'em back before

s," said Moorehouse, and with an idde d, "sir."

olde the papers and put them into ket, and went into the outer office hat His shabby overcoat he left hanging on its hook; hard as nails, young Moorehouse was, scornful of any weather.

He ran down the one flight of stairs to the lobby, shouldered his way none too gently through the crowd of home-goers and out into the street. The snow was falling thick and dry; the street was a forest of umbrellas, through which he went, lean and impassive, like a brave on the warpath.

But in his heart was a curious trouble and pain:

"Thin slippers and that little coat," he said to himself. "Darn little idiot!"

He had seen her when she was going out to lunch, marching along like a little soldier, so straight and smart in her dark-blue suit. And as if she had somehow known he was there, she had looked back, halfway along the corridor, and smiled at him.

Digitized by Google
Original from UNIVERSITY OF IOWA

"Hello, F. L. Moorehouse!" she had called.

"Hello!" he had answered curtly.

He was very angry with her for going out like that. At intervals, all the afternoon, he had thought of her, had recalled, so vividly, her gay little face, her careless smile, her light, sweet voice. She could be different. He remembered that day, a month ago, when he had met her downstairs in the lobby, had seen her so downcast and subdued.

"It's been an awful day!" she had told him. "*Everything's* gone wrong."

Said that with a tremor in her voice. He had walked to the subway with her that evening; in crossing Broadway he had held her arm, and he could not forget how slight and frail it felt.

He saw her often at her desk in the office next to Mr. Alden's. He had to go in there almost every day to speak to their manager, and he always stopped on his way out to speak to her. At first, he had stopped because she was amusing, but after a while he stopped because he must.

He would stand there; she would talk to him with cheerful impertinence; he would be cool and aloof with her. But ever since their first meeting he had been aware of that queer sympathy between them.

Certainly, they had never spoken to each other with any sort of kindness; she was sometimes a little malicious in her teasing; he was curt and offhand. Yet all the time it was there, that half-bitter understanding, as if they were allies.

WELL, he wanted no ally. He wanted to get on in the world, wanted to get to the top, and that had to be done alone. He had been brought up on a poverty-stricken Maryland farm, the last remnant of a fine old estate. He had been the youngest of three brothers. Nothing had been given to him: he had had to fight for every least advantage. His family was on the down grade; his father had died bitter and discouraged, his mother had been perpetually dejected. But young Moorehouse meant to make a place for himself. He had come to New York five years before, a shabby, silent boy of nineteen, his young mouth already grim. He had met with cold and hunger and uncounted rebuffs, but he had held on and he had done well.

He had sent money home to his mother as long as she lived. She was gone now; he had nobody left with a claim upon him. He was unhampered, free to follow his self-appointed way.

And going to keep himself unhampered and free. Not his business if that girl behaved like a little idiot.

He went with the papers to Wendell's office, got his business done, and set off back to Mr. Alden. The snow was falling faster now.

"She must have been out in bad weather before this," he said to himself, "and it hasn't killed her. Not my business, anyhow."

He ran up the stairs of the building, and he wanted to go by the door of her office without looking in. But he could not. He turned his head, and saw her there, all alone. She raised her head; he saw her face stained with tears, her eyes heavy.

"Hello, F. L. Moorehouse!" she called, in a cheerful voice.

"Hello!" he answered, and stopped in the doorway.

She looked at him steadily and kept on smiling, with desperate defiance.

"Aren't you staying pretty late?" he asked.

"Well, it's the last letter," she answered, still in that cheerful voice. "I'm just finishing up. I'm fired!"

He was silent for a moment, staring at his shoes.

"I'm sorry," he said stiffly.

"Well . . . nobody asked . . . you to be!" she answered.

"I *won't* be a fool!" he said to himself. "It's not my business. I can't do anything."

But he could not leave her. He came into the room, to her desk, stood beside her. For a moment her eyes met his with that valiant defiance, then, abruptly, she laid her head on her folded arms, shaken with sobs.

"I don't really . . . care!" she cried. "I can find another job—a m-much better one."

HIS hand rested on her shoulder; his heart beat so fast, with a sort of fear.

"Have you got . . . people . . . to look after you?" he asked.

"No!" she said, in a muffled but still defiant voice. "And I don't need anyone to look after me."

"Yes, you do!" he said.

His hand tightened on her shoulder; he bent, so that her hair brushed his cheek.

"Poor little kid!"

"I'm not!" she said stoutly. But her hand reached up and caught his sleeve, clung to it, as if that were somehow a comfort to her. And he was shaken to the soul by the strangest pain and pride.

"Look here—!" he began.

Then he saw by her wrist watch that it was six o'clock.

"I've got to go!" he cried, dismayed. "The Chief's waiting for these papers. . . . Look here. How much longer will you be?"

"Oh, about fifteen minutes!" she answered, smiling at him through her tears.

He went back into the private office, handed the papers to Mr. Alden, and stood waiting.

"It can't be . . . love," he said to himself. I don't even know her name. It can't be . . . that."

"Very well, Moorehouse," said Mr. Alden.

"Good night, sir," said young Moorehouse.

He put on his shabby overcoat and his soft hat and hurried out, ran headlong down the stairs to the lobby.

"It can't be—that," he said to himself.

Only, no one else had ever clung to him like that, no one else had ever turned to him in a dark hour.

"I've always liked her," he thought. "Ever since the first time I saw her. But . . . it can't be that. I don't know her."

But he did know her. From the very beginning he had understood her, the valor and loyalty of

Digitized by Google Original from UNIVERSITY OF IOWA

spirit. From the very beginning her gay, mocking face, her careless voice had haunted him. And since he had seen her in tears, he dared not deny the reluctant and half-angry tenderness that filled him.

"Little idiot!" he said to himself. "In weather like this!"

He had noticed, earlier in the day, that one of the shops in the arcade of the building was selling umbrellas at "reasonable prices." And he went in there now.

"For a gentleman or a lady?" asked the girl who came to wait on him.

"A lady," he answered, in his curt way.

But he did not approve of any of the umbrellas made for ladies. They were too small, he thought, too flimsy. He wanted something that would protect every inch of her, so that not one flake of snow should touch her little fair head, or brush her cheek. So he bought a man's umbrella, a sturdy, serviceable umbrella of black silk.

It cost him far more than he could afford. Indeed, he had no money at all to spare. The expenses of his mother's last illness had heavily burdened him, and he had not yet recovered from that. He needed a new overcoat; he needed so many things; he needed, though he did not know that, a really good dinner.

His vigorous young body was poorly fed; he was hungry, not only in body, but in soul, a lonely, gallant, blind young creature, recklessly ready to spend his youth for a chimera.

"What can I do, anyhow?" he thought, in despair. "She wants a lot, a girl like that. And I haven't anything. Not now. Not yet."

He was twenty-four now, and only a junior clerk. But he was going to get on, to get to the top.

"If I don't make a darn fool of myself," he thought.

He stood by the cigar stand, waiting for her to come down. But, in his stubborn young pride, he wished to look as if he were not waiting. He lit a cigarette, and, opening an evening paper, stood as if arrested by some startling news.

"Just this once," he thought. "She'll find a new job somewhere—and I'll never see her again. But it's such a bad night, and she's just lost her job. . . . This once."

This once he would take her to the subway, shield her dear head from the snow, feel her hand on his arm—this once.

"Ah, Moorehouse!" said Mr. Alden, stopping beside him.

Moorehouse folded the paper slowly.

"Where do you live, Moorehouse?"

"Uptown, sir. West Ninety-"

"I'll take you up," said Mr. Alden. "My car's waiting. Come on! Come on!"

And young Moorehouse came.

THE snow drove against the windows of the car with a dry hiss; everything outside was muffled and muffled. And through it now rode young Moorehouse in luxury new to him, and painfully disturbing.

Mr. Alden had offered him a cigar, and he sat back in his corner, smoking it, riding in warmth and softness and mild silence through the snowy dark.

"By heaven, *I'm* going to have this, some day!" he said to himself, and Mr. Alden, glancing at him, saw his young face stubborn and grim.

"Let's see. . . . You've been with us—how long is it, Moorehouse?"

"Three years, sir."

"Three years," repeated Mr. Alden. "You've done well, my boy."

"Thank you, sir," said young Moorehouse, reddening a little.

"You'll get on, Moorehouse."

"I mean to, sir," said young Moorehouse.

Again Mr. Alden glanced at him.

"Well," he said, and fell silent for a time. "The thing is, my boy— Sometimes we think we're 'getting on,' and as a matter of fact, we're going down. Losing something. . . . Paying too dear. . . . Money's an expensive thing to buy. . . . Makes me think, y'know: 'Cromwell, I charge thee, fling away ambition. By that sin fell the angels.' . . . Eh?"

"I'm not much of an angel, sir," said young Moorehouse, with a faint smile.

"You're young," said Mr. Alden.

But Moorehouse did not quite know what he meant by that. He was a little surprised to hear Mr. Alden repeating verses, and a little at a loss. So he said nothing. The snow fell thick outside; around each light he saw it, swirling furiously.

"SHE must be halfway home by this time," he thought. She must have gone alone, in her silly little slippers, with the snow falling on her rakish little hat, falling damp on her flimsy jacket. She had gone home—to what? She said she had nobody.

"What can I do?" he asked himself angrily. "I'd have been a fool not to come—when the Chief asked me. It's important."

Unfortunate, though, that this opportunity should come just on this day, when she had lost her job, when she had cried.

Mr. Alden began to talk again, and the tenor of his talk was unmistakable. He was approaching the subject of that job in Chicago, that job which young Moorehouse had had his eye on for a year.

"No family, Moorehouse? No ties? No?"

"No, sir," said young Moorehouse. "Nobody."

"Tell you what," said Mr. Alden. "I'd like you to come along home to dinner with me, Moorehouse."

Young Moorehouse's plan for the evening had been a meager dinner at a cheap restaurant and an adjournment to his chilly, bare little room to read commercial law.

"Thank you, sir," he said.

"I'd like my wife to see you," said Mr. Alden. "You're just about the age our boy was . . . when he went to France. . . ."

He gave the chauffeur directions through the speaking-tube, and the car turned. They drove on without talking any more until they stopped before a solid old house in the East Seventies, and the chauffeur jumped down to open the door.

Young Moorehouse was not accustomed to having doors opened for him; nor was he accustomed to houses like this. It might have been the very reality of his restless dreams, this bright warmth and color, this dignity and space. He stood in the hall, in his shabby overcoat, his hat and the umbrella in his hand, and from a room at the left came a gray-haired lady.

"Young Moorehouse, from the office, my dear," said Mr. Alden.

She smiled at him kindly.

"Come in!" she said.

But he could not. Suddenly he thought that perhaps that girl would have no dinner at all. Here in his (*Continued on page 160*)

She was still in the empty office, eating a sandwich. "Have a bite?" she asked

Big Yawn Manor

My Little Place Away from it All

Never before had I such an ideal place to work, and never before did I loaf so consistently!

By H. I. PHILLIPS

THERE is a popular notion that if a man has a "little place away from everything" he will do better work—particularly if he is a writer. Quiet is held to be a first aid to concentration! Foliage, flowers, fresh country air, and beautiful sunsets are believed by an incredibly large number of people to produce inspiration, eradicate listlessness, relieve that tired feeling, give one vim, and draw forth testimonials beginning, "Before I went away from it all I didn't accomplish much in life. I just couldn't get going. A friend advised me to buy a little place in the country. I did so, and now look at me!"

Nearly all creative workers subscribe to the theory that they function on all eight cylinders only when in some isolated shack six or ten miles from the nearest delicatessen store, newsstand, butcher shop, or stationery store and where it takes a long-distance telephone call to get the baseball scores.

It's the boloney, if you ask me.

I have a friend who believed for years that what he needed to put himself across in a big way as a writer was the ripple of a brook. I have another who felt he would never be the man he should be, creatively, until he had an old-fashioned well. And I know an artist who sincerely feels that all he lacks is a cow. In fact, nearly all the authors, illustrators, playwrights, actors, and composers of my acquaintance have little places in the country, are about to have 'em, or have just sold 'em. All up-on-their-toes real estate agents know that the way to dispose of "the farm nobody wants" is to take pictures of it and circularize columnists, authors, poets, cartoonists, and magazine artists. They're easy picking.

The big farm agencies in this country have a list of writers as live prospects. They know very well there is something about an artistic life that makes a man or woman unhappy until he or she has purchased a run-down farm at twice its real value, and discovered that it is a liability entirely surrounded by heavy foliage in summer and snowdrifts in winter!

It is impossible to sell many of the deserted farms in my part of the country to farmers or children of farmers—they know better—but a snappy agent can interest a poet, a magazine editor, a story writer, or a dramatist in them without half trying.

Whenever you pass a particularly isolated farmhouse that shows evidence of having been painted, reshingled, and equipped with blue blinds, you can safely assume that it has just been bought by somebody who does things with pen, brush, or typewriter.

The summer house on the rocks at Big Yawn Manor

No longer is it logical to assume, when passing an ancient farmhouse in Connecticut, for instance, that the group standing about the cow are the farmer and a few fellow members of the State Dairymen's League. It is probably made up of a newspaper columnist or play reviewer and some members of The Book of the Month Club!

WHEN a stranger drops in at any farm these days for a quart of milk, a sack of apples, or a dozen fresh country eggs, the chances are better than ever that all the tenant will have to offer will be an engaging triolet, a couple of funny stories, or an article on the decay of the drama!

The question that puzzles me is whether the number of creative people buying farms each spring exceeds the number selling them in the fall.

It is amazing how many otherwise intelligent people are positive that the only reason they have not written the Great American Novel is that they have had to live in a comfortable apartment with all the modern improvements, instead of in an isolated ruin in the deep woods without gas, electricity, or running water.

It is disturbing to realize that the country is full of people who really believe that what has held them back from producing the dramatic knockout of the year is the fact that they have a conveniently located home, rather than a place that can be reached only after a hard struggle.

I had the farm bug for years. I answered hundreds of advertisements and welcomed thousands of photographs and details. Give me the location and dimensions of a farm in my part of America today and I will give you the quoted price within $50 and tell you what you can get it for within $5.75. I have become a sort of farm critic. I know all about what it costs to shingle the place, trim the chimneys, repair the fences, fix the well, make the kitchen livable, and restore those colonial doors.

IT ALL came about in this way: It dawned on me one day that I had not won any of the Pulitzer prizes and had turned out only a few books, none of which ever brought a third statement of royalties. My ambition was to write a great play. It was always a question of doping out the plot tomorrow. One day I sat down and tried to reason out why I had not accomplished much. That I had been lazy, pleasure-loving, or incompetent never seemed to enter my head. I thought it over and came to the conclusion that it was because of the lack of shade trees, well-water, meadow larks, a tin letter box on a white post, creaky stairs, an old-fashioned fireplace, and a kitchen sink with a pump handle to it.

It seemed to me that an old oaken bucket, an artistic weather vane, a pitchfork, a spinning wheel, a leaky roof, some rag carpet, a few pieces of old harness, and plenty of lilac bushes would make a new man of me. I felt that crickets, frogs, the call of Bob White, the purl of a brook, and the rattle of a few particularly loose blinds would do me a lot of good.

In the last three years I probably visited and inspected a hundred farms. You can tell me anything I don't know about colonial fireplaces, kitchens of the General Putnam era, and bedrooms of the type Washington slept in. I can squint at a farm out of one eye now and tell what it will cost to make it comfortable.

Whenever I answered an advertisement and ran up against a farm that even the original Colonial Wars owner was disappointed in, the argument always advan

y the agent was, "I know, but think what ou could do with it for a little money. ook at the fun you would get by carry-g out your own ideas!"

And nearly always there would be this matic punch: "Why, there's Mr. Thing-mbob—you must know him—he bought farm ten miles from here for $5,000. All e walls had fallen in and the roof had en blown away. He spent $350 on it, d last Thursday afternoon he was offered 0,000 and a bonus of $1,000 if he would ve out in ten days."

HAVE had countless narrow escapes from signing up for farms ranging in e from ten acres to one hundred. The sest I came to a deal was when I found ittle place in northern New York. It s the typical "little place away from rything."

The house had a decided list to starboard. had been abandoned years before by a mer who knew when he had had enough, was one of those places that needed a of fixing. But it had a big oak tree in it—the sort of oak I had always wanted my very own. I opened negotiations the place and was about to sign on the ed line, when I motored out one rainy it to give it another look. That settled My advice to every city dweller with rge to buy a farm is to go out and look at a drizzly night. This one in a black npour gave me the creeps. It reminded of the setting for a mystery play. I ed it full of clutching hands, grinning ls, slamming doors, trick panels, eerie s, and green lighting effects. Even ak tree lost its charm. It was getting in the season anyhow and this visit d me toward farms for that particular

ith spring there came the vernal urge . Numerous farm agents had my ss left over from the last season and flooding me with photographs. Then at two weeks in an old pre-Civil-War ouse. It cured me. All my days were pretty much used up driving eight or ten miles over terrible roads on errands to the grocery, pharmacy, or general store, and my nights were spent investigating strange noises.

My impression is that at least once an hour my wife would nudge me and ask in a hoarse whisper, "Was that a shot?" This is a most disconcerting query in the dead of night.

"Was what a shot?" I would ask in an annoyed tone.

"That sharp report. Listen!"

And then I would have to listen for twenty minutes, during which period blinds would rattle, stairs would creak, furniture would snap, and the wind would make most uncanny noises in the treetops. We left that farm flat as soon as possible and returned to the city nervous wrecks. Mrs. Phillips still thinks the place was haunted. She says she didn't tell me at the time, but she heard footsteps in the attic regularly every morning at 4:30.

Anyway, we cooled to the farm idea and last spring I decided that "the little place away from everything" should be at the shore. I have always liked rocks, waves, ships, seagulls, fishermen, wharves, lobster pots, foghorns, and that sort of thing. So we turned our attention to waterfront property and finally located and bought a place in the quaint old town of Milford, Connecticut, two and a half hours by machine from Broadway as the "bull" flies.

IT IS situated on a point of rocks jutting out into Long Island Sound. There is a view straight down the Sound for thirty-five miles. On a clear night the Stratford Shoals Light seems to be blinking so near I could snare it with a quoit. Across the Sound can be seen the sand beaches of the Hamptons, Port Jefferson, and the Sayville wireless towers. There is not a room in the house without a window commanding a water view. Isolated from the main arteries of travel, it is quiet and charming.

It has everything! No better sunrises and sunsets are on tap anywhere. It is extremely restful!

But what of it?

What difference has it made?

Did it give me a rush of bright ideas to the head? Was I stirred by it to bigger things? Did it make me feel full of pep and ambition?

Did I find the swishing of waves, the glory of the sunsets, the breaking of the surf against the rocks, the salt sea air, and the quiet just what I needed to put me in the mood to set new records of endeavor and attainments? Away from the cramped apartment in the noise of the big city, was I able to do more work than ever? Don't be silly!

I never did less work in my life. I moved into this "little place away from everything" in May and remained until October, and during that time I fell so far behind in my work that I am still trying to catch up.

I had heard a lot about "getting into the great outdoors where there's room to stretch and think." I never had any trouble about stretching in the far-away places, but I found I can think faster in a telephone booth. At "Big Yawn Manor" (as I named the place) I didn't think fast; I merely thought longer. My thoughts took more time to pass a given point. Rodin's famous statue, "The Thinker," will always seem to me like that of a man who went into the country to do some great work. He is thinking what a mistake he made.

The author in one of his most unproductive moments

What was wrong about this "little place away from it all"?

Too much scenery.

Too many beautiful sunsets.

Too many moonlight nights.

Too much comfort.

I'm no casual sunset fan. Once a sunset gets me, I am with it to the finish. My motto is, "If your business interferes with your sunset studies, give up your business."

Moons also work havoc with my best intentions. A moon has its moments in the country, but you have to be at the seashore to see one at its best. All of last summer's moons spent most of their time right out in front of my place, and they seemed to be putting on a special benefit performance for me. Sunsets fascinate me, but moons knock me completely geegaw!

I'M CERTAIN that nearly every evening when I firmly resolved to go up to my study and turn out a story, a full, half, or quarter moon came up and spoiled everything. At a conservative estimate, I spent thirty nights doing nothing but sitting in a rocker gazing at moons and moonlight effects on the water.

I don't mean to say that I just lay around all the time and did no manner of work. Any man who has bought a place in the country knows better. I did plenty of work, but it was of the manual order: porch painting, screen fixing, errand running, and all that sort of thing.

We bought the place in the dead of winter, and, of course, it needed a lot of overhauling. They all do. But little did I know how much.

Within ten days of the purchase there were so many carpenters, shinglers, cabinetmakers, painters, floor scrapers, heating experts, awning makers, furniture men, and plumbers (*Continued on page 114*)

The Trail Eater

A story of Love and the Reckless Hardihood of Youth

By BARRETT WILLOUGHBY

Illustrated by GEORGE GIGUÈRE

PART V

DURING the night there came a lull in the blizzard. The day of the Sweepstakes dawned, a strange, ashen-gray day with leaden horizons. In the air was a touch of foreboding, as if some malign presence had but withdrawn to bide its time. Yet, despite the underlying threat of the elements, the judges early sent out word that the race would begin promptly on the scheduled hour of noon.

An hour before the start, the wind came blowing out of the North again, whipping Front Street into a lane of dancing colors. Flags of all nations snapped from lines stretched zigzag overhead. Red, white, and blue bunting billowed from the fronts of business houses. Pennants of green and gold flapped from the arms of telephone poles. And high above the white roofs a score of flagstaffs vibrated to the tug of the Stars and Stripes flinging their vivid challenge against the arctic snows.

Beneath these rainbow flutterings surged the fur-clad crowd, laughing, shouting, singing to the lively music that blared from the saloons along the row. Though there was no grandstand to receive the spectators, eleven o'clock found them packed solid along the ropes that formed a lane from the starting place on the ice of Bering Sea.

In front of the judges' stand, racing drivers were already swinging their teams in—lines of superbly trained, lithe-limbed, thin-flanked dogs, groomed to a hair and stripped to their twelve-ounce racing harnesses. At every new arrival a cheer burst from the watching crowd, a cheer that was both for the dogs and for their tense-faced driver standing behind the handlebars, furred and mukluked, with his starting number showing on two white squares, one sewed on the back and the other on the front of his parka.

The Sweepstakes photographer bawled directions over the hooded top of his camera as he snapped a picture of each team. The official marker hurried about, daubing each racing dog with the color allotted his owner, a precaution which made it impossible to substitute fresh dogs out on the Trail.

The stand reserved for the Queen and her court was still empty; but the other, directly across the tape, was slowly filling with racing officials, officers of the Malamute Club, and newspaper representatives. Band music—movement—color—and a wild, cold wind across the snow! Waving flags against a sky growing darker! And under the carnival clamor, the sinister threat of the North—the cruel something that added a savage tang of danger to the thrill of the race!

Presently, interest was centered on the arrival of Rance Herrington.

Splendidly furred and crimson-sashed, the gold king swung up to the judges' stand behind his champion string of twenty Siberians. With a sweeping gesture he acknowledged the cheers that were for the dogs only, then turned the team over to its driver to be photographed. But the driver was not Slim Carvey, as everyone had expected. The man who took the handlebars was Jake Minton.

A growl of astonishment and incredulity rose. "Hey, Rance! What kind of trick are you trying to put over on us this year?"

The crowd took up the yell indignantly; but Herrington, sullen and flushed already from early drinking, ignored them. He stood with Luce Barton, his head inclined to catch the lawyer's low-voiced remarks.

Ten teams were already drawn up—ten double lines of glossy-furred dogs, with lolling red tongues and white fangs gleaming. Among the three teams stood out, each lead d carrying on his collar the crimson black rosette of the Syndicate kennels.

Time went by. The watchers bega tense to a new interest. Where was Kerry Wayne? Had the Trail Eater backed out at the last minute? They were asking one another these questions, when someone came down and spread the incredible report that Duna was dead—Duna, on whom Kerry had based all his hopes of the race, found hanging over the wall of his stall!

Sympathy swayed the throng. Why, Kerry thought more of that dog than of anything else in the world! Poor old Trail Eater, hoodooed from the start! Fated to go first on a trail already heaped with blown snow. Left without a leader on the day of the race!

Thus the talk was going when he came—a slim, fur-clad figure behind the handlebars of the frailest-looking racing sled Nome had ever seen. His colors, blue and gold, dyed the sash about his waist. But he bore no resemblance to the laughing impudent Kerry Wayne who had joked the Sweepstakes crowd the year before. His eyes were tired and red-rimmed, and above the fur ruff of his parka his lean face showed nearly as white as the square on his breast that carried the unlucky starting numeral, "1."

HIS dogs, eleven crossbreeds and huskies, already blanketed against the impending blizzard, padded softly, as if they too, were subdued by their leader's death.

Kerry swung in before the judges' stand.

Instead of an immediate cheer, something like an awed gasp came from the spectators. At the head of that meager team with the blue-and-go d rosette of the dead leader on his colla stood Tokon of the Broken Tusks, Tokon the Kil'er, Tokon the Quitter, hitched, a spike leader for the first time—and in the A Alaska Sweepstakes!

The sheer gameness of the still-faced young fellow gripped the throats of the sporting crowd. As one man they burst in a mighty cheer, that went rolling on the wild April wind.

Tolovana, dressed in a boy's parka and mukluks, was whacking Kerry on the back. "Go to it, kid!" she pronounced heartily. "I've got an extra thousand, and I'm stringing right on your nose." Then, rising on her toes, she whispered in his ear: "Little Barbee just slipped me her ninety dollars, and asked me to put it on you for first."

Kerry turned to her eagerly. But she had darted back into the crowd, and Barbee herself, in her white furs, came hurrying toward the judges' stand. She paused to look at Kerry's team, then she ran to him, holding out her hand. Her clasp was boyishly hearty. Her violet eyes glowed with admiration. "You glorious gambler!" she exclaimed. "Remember, Kerry: '*I ain't in holdin' a good hand, but in playin' a poor hand well!*' *I know* you're going to win!" she added, and was gone.

The hubbub of excitement was suddenly pierced by the clear peremptory fanfare of trumpets. In the hush every head turned toward Barracks Square. "The Queen!" . . . "Here comes the Queen!" The murmur swelled to an approving roar as the Sweepstakes pageant swept into view.

Swiftly down the alabaster roadway it came, a snow-white processional primitive as that of some ancient Norse goddess: the head, two trumpeters in close-fitting white buckskin; then twenty young men, strong, lithe-stepping, splendidly barbaric in pelts and mounted heads of white arctic wolves. They were

wo and two with bell-hung harnesses that jingled to ting as they drew the royal sleigh draped with polar s. On this moving throne six lily-furred maids of about the feet of the Sweepstakes Queen, a smiling, ly pagan empress of the snows sitting high in her ap. On her blowing red-gold hair was a crown of ry; in her gloved hand an ivory scepter tipped with green and gold.

nd blared, and cheers hit the air, while the jostling, ng crowd parted to clear a passage down which the marched to the vacant stand. The Queen mounted opied throne; her maids grouped themselves about er wolf steeds, transforming themselves into a guard ook their places at her back.

GGGG!

berating on the cold, rushing air came the announce- on. In the judges' stand the starter came to his feet, in one hand, watch in the other. He raised the to his mouth.

minute! *Get on your mark!*"

sp tones fused the spectators into a fiercely wait- K erry's face was alert, anxious. "Steady, boys! " His gaze was fixed on Tokon, up in the spike of rem bling team; Tokon, who stood like a statue, his yes looking straight ahead.

. . . *seconds . . . left!*"

o ched, his chest against the handlebars.

— two—"

ter counted out the last five seconds. Tokon suddenly looked back at his master, then lowered his body like a panther ready to spring.

"*Three . . . Four—GO!*"

Kerry whistled as the Queen's flag dropped. A shove, a kick-off, *and Tokon leaped to a flying start!*

The crowd gasped. Then—bedlam of music, cheers, shouts! Caps in the air and pennants snapping! And, dashing down that human, yelling lane, a sled with a clinging driver behind a swift, blurred string of dogs!

The first entry was off on the frozen trail that led to the Arctic Sea!

THE second start was made amid unabated enthusiasm. The third brought increased excitement—it was Slim Carvey taking out the second Syndicate team—tall, sinewy, supremely confident, behind twenty-two powerful malamutes. "How to bet?" the gamblers asked themselves. It seemed certain that one of the Syndicate teams would win first place. The Siberians had come in for the big prize last year—driven by Slim. But now Slim was driving a new team. Should they bet on the champions of last year, or on the man who drove them?

It was the man, the dare-devil of the Trail, that they cheered into the thinly falling snow.

Slim was followed by Jake Minton. At the starter's call, Jake swung the champion Siberians into line—twenty perfectly matched dogs, with plumes arching, prick ears up, every line of their trained bodies suggesting speed and endurance.

The fifth to start was Harry Dunn, driving the team Rance Herrington should have taken out.

Midas Bernard's team, driven by Hinkey Scott, went sixth.

Digitized by Google
Original from UNIVERSITY OF IOWA

After its departure a few of the spectators ran shivering to their homes; but these were only the frailest of the women and the smaller children. The crowd, the Sweepstakes Queen, and her *entourage* remained in the falling snow, faithful and enthusiastic until the last of the eleven entries was speeding on its course.

Then, through the thickening white, they all bolted back along flag-fluttering Front Street where the arctic blizzard was already ripping down the gay banners.

About the big, red-hot stove in the Golden Sands, men stamped the snow from their clothing and began to make themselves comfortable before the twelve-foot betting board that occupied one end of the main saloon. It was through the figures on these boards that Nome watched the race. Each entrant was allotted a line on the board on which appeared his name, his driver, the number and kind of dogs in his team, the odds for or against him, and a section for each of the twenty-six telephone stations along the Trail, together with the miles between them.

In these sections, as the word came in over the line, the bookmaker chalked up the time, first of the arrival, then of the departure of every team: At the telephone beside the Golden Sands board the bookmaker was already sitting, with the clamps over his ears, awaiting news of the racers now out on the blizzard-torn course. As yet no figures marked the columns. No report had come in. But speculation centered on Kerry Wayne and his outlaw leader.

AS TIME went on and still no report came in, the big room became quieter. Faces took on a strained, listening look. Herrington and Luce Barton sat at a table near the telephone. Rance kept Kelly busy bringing drinks to him, but Barton did not touch a drop of anything.

Time grew leaden in passing, and the telephone bell remained silent. Tension grew. The blizzard increased in velocity. Men paced up and down the big room, pulling out watches, thrusting them back, snatching them out again. Betting ceased. Men left for other saloons, but returned almost at once, snow-plastered, cursing the weather. Never had Nome experienced such a blizzard. . . . Three hours—and no word! What was happening out there on the Trail?

Suddenly the door was flung open and an excited man shouted, "Entry No. 2—running up Steadman Avenue, without a driver!"

Everyone talked at once: "Poor fellow—his dogs got away from him! . . . Turned tail and ran back before the blizzard!" . . . "The Colonel has sent a Fort team out to look for the driver."

When the excitement had died down the crowd once more fell into silence. Herrington, far gone in drink, sat at his table with his head in his hands. Barton sat opposite him, his pale eyes fixed on the bookmaker.

An extraordinarily heavy blast forced smoke from the stove in a pungent cloud. In the midst of it the telephone rang. Every man leaped to his feet and rushed toward the board. The bookmaker held up his hand for silence. He put his lips to the mouthpiece and began writing down the message that came riding through fifteen miles of blizzard.

"Yes—yes! Go on! Yes—I've got it! All right. . . ." He rose and picked up a piece of chalk. Opposite Entry No. 11 he placed a circle under Station Cape Nome. In it he traced: "O-U-T."

He elaborated this on the board below:

"No. 11 arrived Cape Nome, three dogs frozen in flanks, two dead. Has withdrawn from race."

Entries 9 and 10 reported immediately from Safety. Both teams were in bad condition and were resting there until the storm abated.

During the wait that followed, conversation and speculation were renewed. After the third ring the bookmaker turned to the name of Slim Carvey and began to put down figures that told of his arrival at Hanley's Cabin, forty miles from Nome, after nearly five hours bucking the blizzard. Two of his dogs were frozen slightly in the flanks.

A cheer went up. Herrington ordered drinks for the house. Betting became lively, and there was increased speculation as to the fate of the other teams. No. 8 withdrew at Safety with six dogs badly frozen. Where was Jake with the champions? And where was the Trail Eater?

The next telephone message brought the answer: Jake had arrived at Hanley's with three dogs on his sled. The blizzard out there was increasing in violence.

At the bottom of the board the bookmaker added:

"Jake Minton reports tracks running off Seal Bluff. A two-hundred-foot drop here to broken ice of Bering. Kerry Wayne undoubtedly gone over."

* * * * *

When Kerry found the lifeless Duna hanging over the stall wall in the Kashim, grief blotted from his mind everything but the pitiful, furry body of his dog growing cold in his arms. Faithful, sturdy little partner dying in the performance of duty; quelling Cultas, leaping too far over the stall wall, hanging, gasping, crying for help while his master slept.

Fate had dealt Kerry its hardest blow just when he needed every faculty of mind and body for the struggle of the Sweepstakes Trail.

As he thought of this, something happened to him. For the first time, he permitted his intelligence rather than his heart to sit in judgment on past incidents—his intelligence, which had, during all his training, been aware of a sinister undercurrent directed against him. He had been double-crossed in the betting for place and jockeyed into going first on the Trail. He had been "framed," so that Kitty Kramer had learned his time at least for twenty-six miles. The Syndicate had tried, and failed to keep him from getting Wally's dogs. And Fate, first in the form of distemper, then in the form of death, had taken sides with his competitors.

A slow, mounting rage took possession of him. He felt himself standing with his back to the wall, fighting not only the odds and hazards of the Trail, but dishonesty and trickery as well. Then, oddly enough, from all this there emanated, like a current from a battery, something which charged him with a sense of power, a sureness of invisible strength, a ruthless determination not only to go through, but to *win*.

When he drove his team down to the judges' stand this morning, he was only dimly conscious of the reaction of the crowd; he hardly heard the thundering tribute to his sportsmanship. He did not recognize it as a tribute. His mind was on the race—until Tolovana Belle came up and clapped him on the back. Good old Tolovana, to think of her putting up an hundred thousand on him for first, and after she knew Tokon was to be. Her friendship, her confidence, imbued him with a new confidence in himself. And Barbee! With her handclasp, her luminous violet eyes that told of her faith in him!

He was holding her in his thoughts when the starting gun electrified every fiber in him. Challenge pounded through his blood. The fighting forces of his body and spirit rushed to meet the impending issue.

The flag dropped. A blast of music . . . the full-throated roar of the crowd, and Tokon—his crouch, his leap, his great start! Kerry's eyes filled with tears. What a leader! What a thoroughbred! He wanted to shout his triumph and relief to the skies as he left the roaring mob behind him.

"Atta boy, Tokon! You're there, old man! You're a wonder!"

AS THE team cleared the town, Kerry began to steady his leader down to a swinging trot. "Easy there, Tokon, plenty of time. Steady down, old fellow."

Flurries of fine, dry snow blew across his vision. The increasing wind hit him on the quarter, stinging his face, ruffling the exposed hair on his blanketed dogs, flinging them at an angle that kept him shifting his weight to prevent traveling sideways. But now that he was really under way that was daring and reckless in him exulted in the wild joy of the day. He thrilled to the feel of the sled beneath him, slim, racing sled, limber as a whip, strong as steel, that flung him over the rough ice trail. Like a bareback rider on a bareback horse, he rode it through the storm, swinging up on his feet, bending forward, swaying from side to side as the wind tore at him.

He leaned to one side as he whipped around a curve. There lay the Fort, with the wind wrenching black smoke from chimneys thrust above the snow. Beyond the barrack he halted the team and quickly snapped about each dog's flank protectors. He looked at his watch—the first four miles covered in twenty minutes! "Fine, boys! Great work." After patting heads he whistled the team off again and the sled came by him, swung to the runners.

"S-t-e-a-d-y, Tokon. . . . Steady down, boy. It's a long way to Candle, and we don't need to hurry yet. Those fellows behind us'll have to grow wings on their tails to catch us."

Another mile fell behind. The wind hit terrifically from the side now, charged with fine snow. Hoarfrost covered the red-and-gold rosette on Tokon's collar and tipped every hair on the muzzles of his dogs. Tiny particles of ice rimmed the

Digitized by Google Original from UNIVERSITY OF MICHIGAN

Every mile or so, Tokon halted of his own accord and the team dropped in the trail to paw off the accumulation.

They went on. The smoking whiteness grew so thick it blotted out every landmark. Kerry could not see beyond his leader, yet he knew he was passing the Cape Nome Eskimo village; challenging yelps of native dogs came through the storm. Head down, the leader quartered the blizzard, padding steadily through snow-whirling space. Long stakes loomed and passed—lengths of pipe that marked the Trail.

On . . . on . . . down the hidden coast. Tokon disappeared . . . Karluk and Cultas dimmed . . . were gone. Two by two the other dogs vanished, until even the wheelers, Mukluk and Queenie, were blotted out in the fury of the polar hurricane. The sled leaped and lunged onward, apparently of its own volition. A queer, uncanny feeling pricked along his spine. He began to doubt the presence of his dogs. Were they really there drawing him, or—?

HE COULD stand it no longer. He halted the team and, clinging to the side bars, began fumbling his way forward to lay hands on the dogs. So strong was his illusion of aloneness, he was almost surprised when he encountered the crouching Mukluk and Queenie, both rubbing ice from their eyes with their forepaws.

When he reached Tokon, the leader was biting ice from between his toes. Kerry knelt on one knee, sheltering him as he cleared his muzzle. The other racers had at once thrust their heads against him, whimpering their age-old fear of the growing blizzard. But not Tokon. In the lee of Kerry's body he got to his feet, shook himself, and looked steady-eyed at his master.

Though Kerry, blinded in the white thickness of the gale, didn't know exactly where he was, he knew the husky had unerringly found the staked trail. But miles ahead lay Oomiak Lagoon, the place where they must swing inland. They'd be heading straight into the teeth of the storm then. Would Tokon face it—or would he obey the instinct of his kind and run before the wind, taking his team with him?

Alone in the vortex of the storm, Kerry looked into the frost-rimmed eyes of his leader, and suddenly threw his arms about Tokon's neck. "You'll ake me through, old nan," he said.

But he didn't know imself whether his ords were a statement or a question.

He struggled on, icking now with one ot off the runner to elp the dogs along. t last he noted the ind striking more om the front. Tokon was swinging! . He was boring raight into the blast. iddenly something e a cold, rushing ver of powdered ass swept Kerry off s feet. Sled, dogs, d driver went skitring like a wounded armigan across ooth, black ice. miak Lagoon!

Now the blizzard ped upon him with reased venom. It ve charges of frost wder full in his face, ging him like a llion needles. It led him, rammed breath down his oat, drew it back t of his body, ped him this way that. It yanked sled-covering aside packed snow into ty nook and crevice. It was the protean North mocking him—the North, grown diabolically malicious, deadly.

But after a time a new thought edged in on him—the Trail should climb a hill, run along the ridge for a way, then slope down and swing out on the salt-water ice again. He was almost certain now that they should be going downhill. He had an uncomfortably vivid memory of a place where the Trail ran close to Seal Bluff, and the bluff itself fell abruptly to the sea, two hundred feet below. It was here that the wind had combed frozen snow out over the rim in a great downward curl, a treacherous, unstable shelf. If a team were blown too close to that—

If only he could see for a moment! He braced himself on the runners, releasing his hold an instant to rake his mittens across his eyes. But in that instant a roaring, ripping blast tore him from his place; his sled swept the wheelers off their feet and went swinging far out to the right. He threw himself toward the handlebars, caught them—and the snow gave way beneath him!

Blinded, smothering, he clung with one hand to the sled. While the other clawed for the bluff, his (*Continued on page 176*)

Everything was sliding and churning under him. . . . Inch by inch they were slipping. . . .

An artist, an author, and a jolly sailor man—that's "Cliff" Ashley, the world's champion knot tier

Clifford Ashley Has Tied Every Knot Except the Nuptial One

IF YOU were to go into any first-class art gallery in New York City and ask, "Who is Clifford Ashley?" you would be told that he is one of the outstanding painters of the day—a man who has won world-wide fame for his pictures of old whaling vessels and the fast vanishing sailors who manned them.

Ask the same question in almost any book store, and you will get an answer something like this: "Ashley? Oh, he's the chap who wrote 'The Yankee Whaler.' Most authoritative account ever published of the old whaling days on the New England coast."

Go to New Bedford, Massachusetts, the home of the whaling industry since the time of the Pilgrim Fathers, put your query, and you will probably be greeted with open astonishment and even indignation. "Don't know who Cliff Ashley is?" an old salt will exclaim. "Say, that boy can tie more different kinds of knots than anybody else in the world. Why, he *invented* more than half the knots known today. He's just patented a kind of braid that they're going to use in upholstering automobiles and furniture. Folks say he'll make a fortune out of it."

New Bedford is Clifford Ashley's home. He was born there, as were his father and his grandfather before him. And in New Bedford a man who can invent a useful or a beautiful knot is more important than the painter of a prize-winning picture or the author of a dozen best sellers.

Clifford Ashley's remarkable trio of achievements has grown out of his passionate love of the sea. As a stripling of twenty, Ashley sailed on an old square-rigger, tasting for himself the thrill of portless roaming. It was on this voyage that he learned at first hand many of the things that he paints into his pictures and writes into his books. It was also on this trip that he made himself master of every sailor's knot known up to that time.

This is the story of his career as a tier of knots.

As his birthplace indicates, Clifford Ashley comes of blubber-hunting ancestry. Two of his uncles were whalers, captains of their own vessels. It was one of these uncles who started the boy on his career as a knot tier. When the youngster was four years old, this uncle promised him a longed-for boat model if he would learn to tie a reef knot. Now, as any sailor knows, a reef knot is decidedly no knot for a child to sharpen his wits or his fingers on. Nevertheless, young Ashley won the prize before his uncle's promise was a day old.

When the other uncle put into port, he taught the boy how to make sennit—that is, the art of braiding rope. Presently, this uncle was ready to leave on a long whaling voyage. His sea chest was packed and ready to carry down to his ship riding at anchor in the New Bedford harbor. Clifford could not bear to have his lessons interrupted by his uncle's departure. He begged to be taken along. But with his fifth birthday just around the corner, his parents decided that he was a little young to adopt the rough-and-ready life of a sailor.

When they refused his request, the boy disappeared. His uncle could not find him to say good-by. Going upstairs to fetch down his chest, the departing uncle found it unusually heavy. He opened it and discovered his small nephew curled up inside sound asleep! It almost broke the young stowaway's heart when they unpacked him and put him to bed.

When the boy was seven, he needed a canvas for a circus he and some of his friends were working on. His father, a carriage maker, had a number of pieces of tarpaulin which he used for protecting the tops of vehicles awaiting shipment. He agreed to lend the tarpaulin to his son to be used for the "big top." A roping was required around this canvas.

Both uncles were away. The boy went down to the wharves and dogged the footsteps of a certain sailor until he had mastered the art of splicing.

From then on, he shadowed any New Bedford sailor who put into port with a new knot or a novelty in sennit work. The result was that by the time he was fifteen or sixteen, many an old tar was willing to take a lesson in knot tying and rope braiding from young Ashley.

When he was twenty years old, he had already spent three years in Wilmington, Delaware, studying painting under Howard Pyle. He now felt the need

tting away from his brushes and of put-
ng himself more closely in touch with
e life he was so eager to make live
ain on his canvas. He knew that he
uld always want to paint the sea, and
ps, and seafaring men. With both
ries and illustrations already appearing
several leading magazines, he broke
ay and signed up for a year's voyage
the Sunbeam, one of the last of the
alers.

nce at sea, with sailors for his daily
panions, his old interest in knot
g was revived. As luck would have
he skipper of the Sunbeam was a man
ous for his skill in tying knots. Young
ley learned all that his captain could
h him. Presently he began to invent
knots.

hen he got back home and took up his
ting and writing again, he still found
to work out new wrinkles in knots and sennits. Other knot enthusiasts and experts urged him to make a record of his fascinating inventions. This was the beginning of his idea of writing a book on the subject. In the process of assembling his material, he sold to magazines several articles on decorative and useful knots.

Some of the knots and braids that Mr. Ashley has created are so important that they have been patented. Others are so decorative that they are being put out by manufacturers of ornamental cord and braid both for finishing upholstery and for ornamenting women's clothes.

At present, Mr. Ashley can tie more than three thousand knots. So far as is known, nobody else in the world can approach this record. Until very recently, it was thought that a triangular or three-sided sennit could not be braided. Mr. Ashley astonished manufacturers by producing this braid for which they had long been looking. Another of his inventions that has attracted widespread attention is the sennit which is round on one side and flat on the other. This braid is particularly adapted to use in upholstering automobiles and the like.

"It is perfectly natural for a boy to like to tie knots," said Mr. Ashley during a recent exhibition of his pictures in a New York gallery. "Personally, I would rather be without my purse than without a piece of string in my pocket."

The Old Dartmouth Historical Society Museum has always had a collection of sailors' ropes and knots for the benefit of those interested in the rigging of sailing craft. It has begun on a new collection which, when finished, will be the biggest and most complete in the world. And every knot in the new collection is to be tied by Clifford Ashley!

gan her unusual work as a tempo-
stant in the seed laboratory of the
ent of Agriculture in Washing-
ton. In a few months she had dug so deeply into her job that she passed the civil service examination without having had any previous scientific training.

"I had only a high-school education," said Mrs. Pattison, "and it was not until I began to see that in my temporary work at the department I had stumbled upon something big enough, and broad enough, and *alive* enough, to occupy me happily all the rest of my days, that I went to Purdue University for a special course in botany.'

Mrs. Pattison's work in the government laboratories was such a success that when she had been there only two years, she was lent to the State of Virginia to establish a seed laboratory in Richmond. This was shortly after the Virginia Seed Laws went into effect.

State seed laws are very strict. And it is easy to see why this must be so, for one shipment of untested seed might contain enough seeds of a troublesome weed to spoil the crops for every farmer in the country for several seasons. Mrs. Pattison's first work was to educate big seed companies to conform with the state laws, and to show them how to simplify this conformity by establishing testing laboratories of their own.

As an example of how necessary seed testing is, she told me of a big golf club that wished to reseed its greens. The committee selected what they believed to be a good seed for the purpose—and it *was* a good seed. But before planting they brought a sample of it to Mrs. Pattison's laboratory for testing, and thereby saved themselves hundreds of dollars and a great deal of

Digitized by Google
Original from UNIVERSITY OF IOWA

trouble. For what they had bought was eighty-five per cent pure bent, with a germination of eighty-five per cent. But the remaining fifteen per cent happened to be an annoying and prolific weed!

Mrs. Pattison's associations with merchants and users led to the next step of her career. She became an executive in one of the largest seed corporations in the country and, as the only woman in such a position, she carried the laboratory of that corporation to *second place* on a recognized international list of fifty-three outstanding testing laboratories. The work was surpassed only by that of the United States Department of Agriculture.

As further preparation for her commercial work, she took a "vacation" one summer and went to the International Seed Congress at Cambridge, England.

ESTHER MELBOURNE KNOX

A Boy Illustrator Who Illustrated a Boys' Book

Ever since he was three years old Albert Schafenberg has been drawing pictures. It might be said of Albert that he was born with a pencil in his hand

ONE day about a year ago, a fourteen-year-old boy in New York City picked up a book written by another fourteen-year-old boy and thereby probably changed the whole course of his life. The book was written by David Binney Putnam; the boy whose life it so profoundly affected is Albert Schafenberg. This is the story of what happened to Albert.

Ever since Albert was three or four years old, he has been drawing things. To him the most fascinating thing in the world is trying to put down on paper the endless procession of pictures that pass through his mind. As soon as he read David's book, his imagination got busy making pictures of David and of the adventures he describes in his account of the voyage of the good ship Morrissey to the arctic circle. On this voyage, which was headed by David's father, the members of the expedition encountered Eskimos, polar bears, and walruses—all of which David tells about.

Albert saw a picture of David and made a big pencil sketch of it. He also made some drawings of the scenes called up by David's story. It occurred to Albert that David's father might be interested in knowing how much another boy had enjoyed his son's book, so he wrote to Mr. George Palmer Putnam. In the letter, he enclosed the drawings which he had made.

Now, David's father happened also to be his publisher. Mr. Putnam was so well pleased with Albert's sketches that he asked the young artist to call within a week and bring with him a number of his drawings. But although Albert had been drawing all his life, he didn't have a single thing that he could take to the publisher.

"But what had you done with all the pictures you had made up to this time?" I asked him.

"Oh, when I was very little" he told me, "I usually drew on the wall, or the floor, or even on the chairs. Since then, most of my sketches have been made on the margins and covers of my school books. The others I threw away about as fast as I made them. You see, I have never had any lessons in drawing. I just made pictures because making them was good fun."

However, Albert was not in the least daunted by the fact that he had no pictures on hand. He put in a busy week drawing, and by the time appointed to see the publisher, he had about a dozen sketches ready. For the most part, they were studies of photographs of the ship and crew of the expedition which Mr. Putnam was to head to Baffin Land during the summer.

Again Mr. Putnam wa enthusiastic about Albert work. The publisher aske the boy if he wouldn't lik to illustrate the book whic David was writing for pub lication in the fall. C course, Albert was delighte He was even more delighte when Mr. Putnam calle for his secretary and dre up a regular he-man co tract for him to sign.

Albert worked during t summer months while M Putnam and his Morriss expedition were explori the Northlands. Eve photograph of David a of the happenings of t trip that he could lay hands on Albert transfer to his drawing pad.

When David and his ther came home, th brought Albert so m material in photographs stories that he was k busy for weeks drawing illustrations for Dav book which has rece come off the press.

Being an illustrator Albert's chief occupa just at present, but assured me that he is in ested in many other th For example, there are marionettes which he his twin brother, Otto, contrived so that they form very amusingly miniature show. A wrote Tony Sarg, th mous marionette and pu show man, a letter about what he Otto had done. "I was perfectly with Mr. Sarg," Albert said. "I told him that we made the curtain fo stage out of an old silk dress of Moth

Mr. Sarg was so much interested boys that he invited them to his ment and took them to his own p show.

But to his drawing Albert devote his spare moments. Like other boys age, school and books occupy the part of his time. He goes to the school in New York and finds it interesting. He admits that som his lessons bore him, but as a gener he likes them.

This experimental farm was utterly worthless for agricultural purposes before the Fullertons took charge of it

On Long Island's Worst Ten Acres She Runs a Model Farm

NE afternoon in early August, 1905, a woman homesteader on the north shore of Long Island was surprised her husband return from work sev- ours before the usual time.

e man waved a small piece of paper e the eyes of his wife. It was a mes- rom Ralph Peters, President of the Island Railroad, and read as follows:

> l the worst ten acres on the north shore which to establish Experimental Farm

B. Fullerton, then special agent of ilroad, stood with his wife in silent nt on the porch of their little home. ulfillment of the order meant the ng up of old associations and the ing of a rough life in the waste But the woman made the final de- Turning to her husband, she said, n shall we begin, dear?"

h Loring Fullerton, the wife, suc- her husband as Director of Agri- of the Long Island Railroad, when s placed on the pension list re- Her appointment came as a re- om the railroad for having settled loneliest and most desolate spot of sland and made the land yield a d successful crop.

y, Mrs. Fullerton manages two tration farms at Wading River and d, Long Island, where she raises usand varieties of plant growth. In n, she is a college classroom lec- d the author of several books, and y known in agricultural circles.

n I look over the farms today," s. Fullerton, "I wonder how in the e ever did it. Even the United overnment told us crops would ow on sour soil.

ident Peters told us something 'I am told the land is worthless, nt to demonstrate that it is good o be turned into market gardens, hards, vineyards, and dairies. n plete daily records, not only of

Edith Loring Fullerton, who succeeded her husband as Director of Agriculture of the Long Island Railroad

ordinary farm operations, but of details of victory or defeat in the fight with injurious insects and diseases, the quantity of crops gathered, and their packing and shipping, so that I may pass this information on to the public. Grow vegetables native to the temperate zone, and some from China, Japan, and the Southern states, that have never been grown in this latitude. Go to it!'

"Well, several days later, my husband and I started out to find the ten worst acres of land on Long Island. We left our two small children in the care of a kind neighbor, and for one whole week we drove by horse and buggy, tramped, and asked hundreds of questions.

"Finally, the Wading River plot was recommended and, later, purchased. It was a wilderness, a mile and a half from a drink of water, covered with trees, brush, and stumps. On September 1, we started out from our home near Huntington with the efficient aid of but one colored man. We were armed with an ax, bush scythe, whetstone, snath, and, last but not least, the lunch basket.

"While I went around and tied white rags on the trees to be spared the woodman's ax, I gave the site for the house serious consideration. The next day we succeeded in getting four men to help clear the land. More men were added to our gang, and my husband had already arranged to blow up the tree stumps with dynamite.

"As the work of dynamiting the stumps proceeded, the curiosity of the people who lived in the surrounding country increased. When they were asked what all the shooting was about, they would say: 'Aw, they're plantin' dynamite an' raisin' hell, an' that's all they ever will raise!'

"Late in October, the ten acres had been cleared of underbrush. Then, the well was dug, and we had a five-thousand-gallon tank installed, the water being pumped into the tank by a gasoline engine. After exactly seven hundred and ninety-seven stumps had been blown out of the last acre, we sent the following message to President Peters:

> No. 1's ten acres cleared, plowed, disk-harrowed, cross-harrowed with a spring-tooth harrow, and drilled with rye in sixty-four and one-half working days from the start of clearing.

"At the end of November, I heard of a five-room portable house for sale, and we bought it. It arrived like a pack of playing cards; but it was erected in two days. We kept warm with oil stoves.

"When spring arrived, several fires gave us bad scares. Also, deep sea fogs swept in and slowed up the work to some extent; but the place began to take on an air of prosperity.

"By this time the farm began to attract attention. Among the visitors were a United States forester, several members of the Board of Education of the City of

Digitized by Google
Original from
UNIVERSITY OF IOWA

New York, and an assistant United States agrostologist. They could not see how it was possible to grow things on a soil that had been declared sour.

"Among the vegetables grown during the summer were the Japanese *udo*, Bermuda onions, and *pe-tsai*, the Chinese cabbage. We planted seeds from nearly every state in the nation."

Several years later, Experimental Station No. 2 was started at Medford. This was established because the wiseacres said: "Well, Fullerton, maybe you can make things grow on the north shore, but you cannot do it on the sands of the center section. That is burned-over pine, and there isn't two inches of soil."

Again, ten of the worst acres were picked out and another farm was developed in the same manner as the first. During this period, Mrs. Fullerton not only supervised a large part of the operation of both farms, but edited The Agronomist, a small paper which kept the people who had become interested in th farms acquainted with the developments

"Could a man with small means do a well with this land?" I asked Mrs. Fuller ton.

"Of course," she replied, "we accom plished in one year what a man might tak several in doing. But there is nothing from the five-room portable house to th five-thousand-gallon tank, that a man i moderate circumstances cannot have."

ROBERT H. DENEHEY

He Turns Out Crown Jewels by the Bushel

PARAMOUNT PICTURES

Willy Petersen-Fagerstam, of Hollywood, chief jeweler to the movies, fashions gems of every style and period out of glass and paste and solder

WILLY PETERSEN-FAGERSTAM was working on Noah's distaff. It was twined with the emblematic serpents, set with sapphires and rubies. It glittered with gilt paint. The Russian crown jewels were dumped in one corner of the small, dusty workroom, while a snuffbox of Louis XIV sparkled on the table next to a tray of diamond bracelets of genuine Lorelei Lee period.

This is the man to whom half of Hollywood goes when it wants an exact reproduction of the Koh-i-noor as it was when it was presented to Queen Victoria in 1850; or if it wants perfect re-creations of jewelry of any period. He is known as the Paste Gem Man of Hollywood.

Five years ago, he arrived at the center of motion picture activity on foot, weary and with hardly a cent. Today, the pathway to his little two-acre estate in the San Fernando Valley is well worn by seekers of his imitation jewelry. He is arranging to erect a business block in a neighboring small town.

Willy Petersen-Fagerstam is small and Danish, with shy mien and large horn-rimmed glasses. He turns out amazing pieces of brass and glass, of silver and solder, in an incredibly short time. Hours mean nothing to Mr. Fagerstam, and often he works far into the night, with his wife, Gussie, by his side, stringing pearls, handing him implements.

"I order most of my supplies from abroad," he said. "Czechoslovakia gives me the best things, and very cheap, too. I get them by the gross. Paste jewels, mosaics, miniatures."

He picked up an imitation of the Koh-i-noor, an absolute duplicate, even to the faulty cutting that reduced it from nine hundred carats to its two-hundred-odd carats of today. Another pseudo-famous stone bore a tiny, and authentic, crack. He tossed them back into a glittering heap of emeralds, rubies, and sapphires, all spurious.

"But I do more than reproduce snuffboxes and diadems," he went on. "The motion pictures demand novelty. That is what I supply. They like creative things, that smack of the boulevards of Paris. Therefore, I make things like this." He held forth an ebony cigarette holder, a foot long, festooned with silver and rhinestone chains. Mr. Fagerstam created the first anklet, popularly known as "slave bracelet"; also, a jeweled slipper heel which opens, revealing small compartments for powder, rouge, and lipstick, is his creation.

Five years ago Mr. Fagerstam was working in a jewelry store on Hollywood Boulevard. His discoverer was a technical director from one of the film studios who was in search of a man to reproduce, at short notice, the crown jewels of Louis XIV. Mr. Fagerstam made the reproductions, and successfully, with the result that most of the big film studios are now his clients. He rents pieces to them for the length of time it takes to make a picture, at a price of from two dollars to a great deal higher.

Apprenticed from the age of fourteen to a jeweler, and his fath in the craft before hi he worked eleven hour day and five on Sunda until he was nineteen, order to learn the bu ness. He attended t University of Cop hagen in spare tir Having exhausted museums of his nat Denmark in his quest gem lore, he hiked ab Europe in an effort satisfy his overwhelm desire for knowledge. visited museums in (and Stockholm. F them he went w sketchbook and avid to the museums of I don, Vienna, Bet Paris. He has b amply repaid for wageless apprentices

Arriving in New Y he and his wife set forth for the west, via the Twentieth Century Limited, on sturdy feet. It took them four we reach Chicago. Mr. Fagerstam thou San Francisco was the logical place an enterprising jeweler to commenc career. The walk had weakened him, his wife prevailed upon him to take train, which he did. Because of a purse, she preferred to walk the rest o two thousand miles.

He went to Los Angeles, working walking down the coast. There he Mrs. Fagerstam, who had taken ten w to journey by foot from Chicago.

Before long, a real estate salesman persuaded them to buy two acre property in San Fernando Valley. I there that Mr. and Mrs. Fagerstam a small cabin.

Prosperity having touched them, deservedly, eight months ago they st building a bigger house. The work is most important, Mr. Fagerstam sons. After that comes the living-r with its corner fireplace and the mountain stream, natural to the which has been introduced there. I into a shallow cement pool and spark gayly as the artificial gems with whi custodian works.

Children especially need soup rich in healthful vegetable foods!

Why are school children everywhere being taught to "eat their vegetables"? Because in vegetables nature stores the iron, the calcium and other minerals required to build sturdy, active bodies.

When you cook vegetables in water and then throw it away, you lose a valuable amount of the minerals which the water has absorbed. But in soup most of this is saved!

So you see why a well-made vegetable soup is so beneficial for the children. In Campbell's Vegetable Soup they receive the full strength of all the leading garden vegetables — fifteen of them in the one soup.

In addition to this, they enjoy the invigorating qualities of piping-hot soup, which acts as a wholesome stimulant to the appetite and digestion. It's a wise mother who gives her children Campbell's Vegetable Soup regularly and often.

And how they love this soup! No trouble to get them to eat their vegetables this way! It tastes so good that it disappears almost in the wink of an eye! And you know what a comfort that is. For their luncheon or supper here is just the thing—it contains so much real food of the right kind.

Add an equal quantity of water to Campbell's Vegetable Soup, bring to a boil, simmer a few minutes. Then it's all ready for the eager young appetites! 12 cents a can.

FOR US
HE FOUGHT AN ENDLESS BATTLE
WITH DISEASE

On May 21, 1928, Dr. Hideyo Noguchi died in Nigeria, Africa—across the world from his birthplace in flowery Japan. He had landed in Africa only a few weeks previously in an endeavor to find the cause of the African form of yellow fever, and, if possible, to defeat it.

In the pursuit of these researches he fell a victim to the very disease he was combating. But even then he insisted on continuing his self-appointed task until death brought to a glorious close a career which had won him renown throughout the entire world.

For more than 20 years Hideyo Noguchi served a science that safeguards life. In the far places of the world he fought an endless battle with disease. For us, he faced an infinite variety of dangers. But no problem proved too abstruse for his keen, alert mind. No task too difficult for him to undertake. No service too arduous. And his researches, carried on throughout the length and breadth of every continent, have proved a immensely valuable contribution to the growth o preventive medicine.

Doctor Noguchi has added one more name to the great list of heroes who devoted their lives to battlin with disease, with the purpose of finding means for th conservation of health. The medicinal products result ing from such heroic efforts had to be provided by lab oratories commanding all the necessary equipment t meet the latest and most exacting demands of medica science.

It has been for over three-quarters of a century th privilege of E. R. Squibb & Sons to co-operate wit the heroes of medical relief and to make available t the entire medical profession the great discoveries such men as Noguchi. *The Priceless Ingredient of Eve Product is the Honor and Integrity of Its Maker.*

How We Kept Tabs on the German Army

(*Continued from page 19*)

that brought back shoulder straps and papers from dead Germans got from G-2 a passing mark for the evening. From a shoulder strap with a numeral and from a little brown book, the order-of-battle experts could deduce a whole division. They preferred, of course, live prisoners to question, whence the invention of the trench raid, to get some.

Before the St. Mihiel attack, the Germans had shown signs of demoralization, and the question was whether they could stand repeated Allied blows. Intelligence officers turned the salient inside out, as a detective "frisks" a crook, and found an important confidential general order signed by Ludendorff, dated September 4, only eight days previous, including this paragraph:

> It is on the main line of resistance and behind that line that we must hold. There is the place where we must aim straight, without wasting ammunition, and prepare resolutely for the hand-to-hand fight.

That order revealed two important things: The principal German plan of defense against future Allied attacks, the "elastic system," and an ammunition shortage of serious proportions. Later, more orders and papers were captured, stressing the need of saving ammunition and the importance of resting the wearied troops, signs that the great machine was running down.

Other scraps of paper captured at St. Mihiel told the inside story of the German defeat by the British before Amiens, August 8. Hindenburg and Ludendorff had sent General Staff officers to investigate. Their reports of the German weaknesses discovered had been circulated along the front, including the St. Mihiel salient.

Another scrap of paper helped in getting them: A map showing the German fortifications and defenses in the salient, trenches, dugouts, barbed wire. This also was "*Streng Geheim*," not to be taken into front-line trenches, where risk of capture was greater, so a copy says.

G-2 textbook said: "Correspondence between soldiers in the field and family and friends at home constitutes one of the most important sources of information regarding the enemy." So letters were sought everywhere—including the pockets of souvenir-hunting doughboys—and carefully analyzed. German soldiers' letters sometimes, despite censorship, of troop movements, whether our artillery was effective, whether losses had been heavy, and whether they were well fed and felt like fighting. Letters from home dealt mostly with food, or its lack, but often passed on valuable news from mutual friends in other units.

Scraps of paper made trouble for Germany throughout the war.

The Marines owe to a captured German officer's letter their nickname, "Devil Dogs"—translated from "*Teufelhunde*," promptly handed to correspondents by publicity service, like everything else in the Marine Corps, "always faithful."

Historically, probably the most valuable German document captured by Americans is General Fuchs's report to Hindenburg and Ludendorff of how the Americans gave his Army Detachment C such a drubbing at St. Mihiel. G-2 reprinted it in English and circulated it to American generals and staff officers, a select reading public.

G-2 got secrets not only from scraps of paper, but out of the air. Some of its best work was intercepting and decoding German radio. On March 11, 1918, the Germans commenced using a new code that was absolute Greek to the Allies. This looked like the forerunner of the anxiously awaited spring offensive, and French, British, and Americans put their best men at work to solve it.

On March 13 our intercept station heard one German station sending another a message in the new code. Then, to our amazement, the reply came: "We haven't received new code books yet. Please repeat in old code." The sending station repeated the message—in the old code, which we knew like a book. Putting the two together, our experts got not only the meaning of every code group in the first message, but also the system used. We sent what we had learned to the French by telegraph and to the British by airplane. Three days later, all three were reading the new code almost as well as the Germans. When the great offensive finally started on March 21, their messages were being read all along the line.

CODE and cipher reading was so highly developed in the World War that it is doubtful if radio will be used much in the next one. It is too risky.

The British Admiralty was especially clever at deciphering codes and finding out what the German fleet and submarines were up to. "Room 40" did this work very quickly, and little has been said about it. Russian divers got the German code from the stranded cruiser Magdeburg in 1914, and often after that their code-books were fished up from submarines. The American G-2 got from a Zeppelin a code-book that nearly sank all the submarines.

In October, 1917, the last great German Zeppelin raid was a failure, and most of the fleet were brought down or had to come down. One landed at Bourbonne-les-Bains, in the American training area in Lorraine, and the crews were nabbed before they could destroy all the contents of the gondola. By diligent search, Colonel R. H. Williams, later American Chief of Intelligence in occupied Germany, found a map showing the area allotted to each submarine in the North Sea, then a code-book telling how to decipher messages from them and how to send messages to them.

From Chaumont, Lieutenant Colonel N. W. Campanole, head of American espionage, rushed the precious papers and books to London. Admiral Sims, American naval commander, was away, but his aide jumped from a sick bed to take them to Room 40. Then began a drive on German submarines. Obeying orders in their own code, they came to the surface amid destroyers waiting to pounce. Their movements were almost invariably known.

But the Germans intercepted radio too, and found Americans rather good game because inexperience, or something, made them too gossipy—some thought radio was a party line in a country district. During the Meuse-Argonne we captured a German report that gave the Allied order of battle pretty well and apologized for having been unable for a week to identify by radio one of the American divisions.

We played into the German hands once during the race for Sedan at the end of the war. The late Brigadier General J. C. Rhea—then with the Second Division—and his staff established headquarters in a farmhouse just vacated by the German General commanding an opposing and now retreating division, who, before leaving, had promised the French owner and his wife that he would not allow his artillery to shell their farm. So General Rhea and his staff sat down contentedly to supper with the family. Came a whistle and crash, and the farmhouse walls shook. Then another; and another. The Germans were shelling the farm. The party finished supper in the cellar. Then the sergeant in charge of the wireless station appeared, pale and worried.

"Sir," he said, "while I was away that new corporal assistant of mine sent this message to the artillery—in clear."

The message gave, in plain English, the exact location for the night of the new front line and of General Rhea's new post of command, at the farm, which it named. It had been sent only a few minutes before the shelling started.

"Send this message at once," General Rhea said to the sergeant, "also in clear."

He wrote a fake correction of the front line and announced that General Rhea had moved to another farm about two hundred and fifty yards away. Soon afterward shells stopped falling around his farm. Ten minutes later they commenced to fall around the other farm, to the discomfiture of several newly arrived officers who had not been warned. No more messages in plain English went from the Second Division's radio.

G-2 LISTENED in not only in the air, but on the ground. It tapped telephone wires in the German trenches, and heard conversations that way or by microphones. Listeners got to know the voices of Germans who used the telephones, and they tried hard to distinguish new voices that meant a relief and a new division in the trenches. When the Tenth Division, one of the Germans' good ones, entered the line before St. Mihiel, our listeners spotted the voices, and G-2 put down one more indication that the Germans expected trouble.

All along the front, specially trained men spent the day hidden in some high nook, eyes glued to high-power "scissors" glasses, watching the enemy lines for every tiniest movement—the flash of a gun, the appearance of a single truck, even of a

Digitized by Google

Original from UNIVERSITY OF IOWA

squad of men. Every morning they sought for new trenches dug during the night. Always they were looking for something new, for changes in the enemy's arrangements indicating his plans.

In the last two years of the war, the best eyes of the Army were sometimes in the air. Aviators who saw and came back and reported what they saw, or took photographs of it, were of great value. G-2 became expert at pasting together these pictures taken from on high and reading into them the proper meaning. One sort of blur meant an ammunition dump, another sort, a battery position. Trenches and barbed wire were easily recognized.

German newspapers gave G-2 valuable information about moods and tenseness in the surrounded Fatherland, and occasionally they gave military information —this usually came from those published in small towns where the censorship was less astute. About the time that we broke the new radio code of the Germans, before their spring offensive in 1918, one such newspaper gave to us desired information and to advocates of strict press censorship in war a good argument. British and French wanted to know where the Germans' shock divisions were located, for that would indicate their plans. Chief among these were the five Guard divisions. Four of them had been located; everyone sought the fifth. One day G-2, wading through newspapers from all over Germany, came upon this paragraph describing some festival in a small town rather far from the front:

> The occasion was made more enjoyable by the music of the Guards' band.

The censor had probably thought he had done his duty by keeping out the number of the Guard division. He would have, had G-2 had no other sources of information. But Intelligence work is very much like a jig-saw puzzle. You put it together, here a little and there a little, a prisoner's statement, a quotation from a letter, a German censor's slip, an intercepted wireless message—and behold! you have the key to something you want to know—perhaps only the position of a single battery, perhaps a whole plan of battle.

AN ARMY always needs maps, and it was part of G-2's job to furnish them. So Intelligence went into the printing business, and between July 1 and November 11, 1918, alone, turned out over five million maps. They had to be accurate, above all, and detailed, if possible. They were of all sorts and sizes for all purposes, from the microscopic maps that showed every kink in a trench, almost, and every good-sized shell hole, to maps of the whole of France. General Bullard's Second Army alone on the last day of the war was publishing daily 33 periodic maps, from 50 to 4,000 copies of each.

Most of this work was done by the Base Printing Plant at Langres run by the 29th Engineers, who handled that end of the A. E. F.'s publishing business and had frequent scares lest some spy steal their maps. If any tried, none succeeded.

By no means all the information G-2 received, weighed, and dispensed daily could be mapped. G-2 published what were practically four small daily newspapers. First was the secret Summary of Intelligence, for generals and the General Staff only, which gave the most important news of the day about the Germans on all fronts. Then came the Summary of Information that went to all the Divisions and dealt with the Western Front only, and contained translations of captured German documents and all manner of information. A printed review of the world press, German and Allied, was circulated at G. H. Q. only; and last of all was the summary of Air Intelligence, gathered by our aviators.

G-2 not only found out about the Germans, it helped them to find out the wrong things about the A. E. F. Counter-Espionage, part of G-2-B, worked against German spies and agents, but G-2-D, Press, Censorship, and Propaganda, fooled the Germans whenever they could be fooled.

The American official communiqués were news and propaganda blended. A G-2 officer had for his job nothing else than preparing them. Usually General Nolan—sometimes during the Meuse-Argonne, Colonel Howell—checked them; occasionally they went to General Pershing; and once, at the end of the victorious second day at St. Mihiel, General Pershing himself wrote the communiqué, wording it so as to give the Germans, who had it by eleven o'clock that night by radio, the impression that the battle was to go on next day, when actually we were already moving troops away from St. Mihiel to the Meuse-Argonne.

THE A. E. F. was probably the best advertised army in history. Nearly a thousand writers visited it at one time or another, of whom thirty-one were rated "Accredited" and four hundred and eleven "Visiting Correspondents." All were guided by the communiqués to some degree, yet the communiqués seldom told the whole truth. They told our side of it, or so much of it as was good for Germans, Allies, and our own people to know. Propaganda is part of war.

G-2-D's propaganda got better and better, and in the last three war months American material was playing the biggest part in the consummately clever campaign conducted by the late Lord Northcliffe. In that time we dropped three million leaflets behind the German lines from airplanes and from toy balloons, nine feet long, weighing four pounds and having a slow-burning twelve-inch fuse that could be adjusted to drop a load of pamphlets. The French had a special hollow 75-millimeter shell that they filled with leaflets and shot into the German lines.

Much of the propaganda used by British and French as well as Americans was of American origin—for example, the speeches and notes of President Wilson about peace and a democratic government in Germany. We sent over a denial that we killed our prisoners, as rumored, and the Germans countered with the same thing, each to encourage desertion. We got the best results by sending over copies of a General Order signed by General Pershing, directing that German prisoners should get the same food as American doughboys, then describing that food. Many underfed Germans who deserted or surrendered easily, produced that leaflet from their pockets as a sort of meal ticket.

G-2 made the Germans think we would attack in Alsace to reach the Rhine, though actually we were preparing for St. Mihiel. Major General Omar Bundy, commanding the 6th Corps, and his Chief of Staff, Brigadier General Briant H. Wells, were sent with other officers to Belfort, where they established headquarters and drafted plans, while parties from seven American divisions reconnoitered the French trenches. Then Colonel Conger wrote General Pershing a letter outlining the plan, whereof he made a carbon copy. He threw the crumpled carbon paper into the wastebasket of his hotel room in spy-infested Belfort and went out. When he returned, the carbon was gone. The Germans moved three divisions to Alsace and until the end expected an attack there that never came.

Similar tactics confused the Germans before the Meuse-Argonne. Colonel Conger sent wireless messages about a fake "X Army" and contrived fake airplane reconnaissances and tank concentrations indicating converging attack on Metz, at the same time that correspondents' dispatches tried to draw attention to that German fortress.

THAT was one of the outstanding single exploits of G-2 in France, but probably by and large, in steady influence upon the ending of the war, its major accomplishment was the order-of-battle map. G-2 knew the present condition and past history of every division on its front, what sort of fight it might put up, probably what its orders were. More, it knew generally what divisions were coming up behind the front, which is part of the story of G-2-B.

Since the war, G-2 has fallen upon quieter days. Recently a Corps Intelligence officer complained that "all I do now is answer questions from writers." Even the name is less used, for the organization directed now by Colonel Stanley H. Ford is called usually the Military Intelligence Division. As General Churchill has outlined it, M. I. D. is ready to answer the question, "What is the situation today?" regarding any country, and "What is the future situation likely to be?" Its strategic index strives to cover no fewer than 484 points that should be known about each foreign country in case of war. The planning section furnishes the War Plans Division of the General Staff with information to use in deciding what we should do in case of war.

But M. I. D. does little or none of what is popularly termed "secret service work." That ended with the war, and the story—some of it, at least—is another story.

EDITOR'S NOTE: "How America's Secret Agents Caught Germany's Master Spy" is the title of Mr. Johnson's article next month. In it he relates one of the strangest and most exciting dramas of the World War—a drama which took place in Switzerland, the battleground of the spy and his enemy, the counter-spy. The German master deceived the Allies about a great German offensive; he trapped more than a score of the best French spies; baffled the entire Allied intelligence service. Then came his downfall! A great story, told fully for the first time next month.

Wait to Buy

Make this FREE 7-day test first to prove to yourself the supremacy of this unique shaving cream. Mail coupon

GENTLEMEN: Our success has been based on a unique selling olicy—that of *proving* our case at our expense, rather than by ying at once for a sale.

We have urged "Don't buy yet—first let us prove to you the erits of our case, *without risk.*" And our confidence, and the periorities of our product have won 86% of the men who have ade our test.

The coupon is for your convenience. It brings a liberal tube t our expense. Use it seven days. Then, if convinced of what claim, you will want to buy. Many men who never clipped advertising coupon before in their lives, are now the greatest osters of Palmolive Shaving Cream.

5 unique advantages

1000 men were asked what they ight in a shaving preparation. ith their specifications, our huge oratories began. After 129 experiments, success came. These are the five things we achieved, all in one noteworthy shaving cream:

1: Multiplies itself in lather 250 times.
2: Softens the beard in one minute.
3: Maintains its creamy fullness for 10 minutes on the face.
4: Strong bubbles hold the hairs erect for cutting.
5: Fine after-effects due to palm and olive oil content.

Please make the test

You may be happy with your present shaving preparation, still find this one better. You risk nothing in trying. *We* take the chance. So won't you mail the coupon, please?

LIVE RADIO HOUR – Broadcast ednesday night—from 9:30 to 10:30 p.m., ne; 8:30 to 9:30 p.m., central time; 7:30 m., mountain time; 6:30 to 7:30 p.m., le over station WEAF and 39 stations w th The National Broadcasting Co.

The Mark on the Window

(*Continued from page 53*)

I considered how it happened that a bullet fired near the median line of the human body in front did not lodge in the spine, instead of passing entirely through the body, I made some inquiry about the exit wound, and I discovered that while the bullet had entered on the median line, it had come out at the left of the spinal column. Consequently, it seemed at least persuasive evidence that the shot had been fired diagonally from some position to the right of the open window, and not directly in front of that window.

"This could not be precisely certain, as Judge Woods might have turned at this moment. . . . However, it was worth looking into.

"There is a vacant house to the right, diagonally across the street, and I determined to examine it. I did not wish a number of people present who might crowd in and destroy any evidences, so I asked the sheriff and his son to go with me to the tavern, and later to assist in the examination of the house."

THERE was profound silence in the court-room, as we began to understand a thing that had misled us. He went on:

"We found the house closed, with a door at the rear fastened with an iron bolt. This bolt had rusted, and some force had been required to push it back. On the step by this door we picked up a bit of paper with a tiny smear of blood on it. It is here on the table before me."

He indicated the bit of paper under the bullet.

"We entered the house and went to the second floor. Here, in a room facing the courthouse, we found the window raised about four inches, and, on the sill of this window, impressed in the soft wood, which was beginning to rot, we found the mark of a rifle barrel . . . a half-stocked rifle, for the print was the print of the iron barrel, and the iron barrel would not have touched the wood if the stock had extended to the muzzle.

He paused again and indicated the piece of poplar wood beside the other articles on his table. Then he went on:

"We knew now that Judge Woods had been shot from this window, and that the rifle used was a half-stocked deer rifle. This information, however, did not greatly advance us, as half the rifles of this type in Virginia are made thus—with a half stock or cut down to half stock—to reduce the weight of the weapon."

He paused again.

"But there *was* something in this print distinguishing and peculiar. There was a straight mark in the center of the print, parallel with the borders of it, and running entirely across the sill, making a long scratch in the center on the print of the soft poplar wood."

He leaned forward and, taking the piece of wood from his table, held it up for all to see.

It was the sawed-out segment of the poplar sill of a window, soft as if turning to rot, and on it the print of a rifle barrel, with a scratch traversing the center of it clearly visible.

Colonel Braxton went on:

"Here was the indicatory sign by which this rifle could be distinguished from all others. There was evidently something on the under side of the barrel of this rifle near the muzzle that had scratched the wood when the assassin had pushed the barrel across the window sill, something hard and sharp attached, as I have said, to the under side of the iron barrel near the muzzle.

"I came on the bench then and ordered all the deer rifles brought before me, not only those of the settlers who had appeared in the riot before the courthouse, but also all the rifles of the officers of the court, for I had, I thought, a further indicatory clue."

And again he included the bit of paper beside the bullet on the table.

"What did that bit of paper with its slight blood stain indicate. It meant something, lying there beside the door. What did it mean? Evidently, one thing only. The iron bolt fastening this door to the vacant house was as I have said, rusted. It had been difficult to thrust back, and therefore the one endeavoring to thrust it back had used some force and, in consequence, when it broke the rust and went suddenly back, the finger of the hand on the bolt struck the staple of the bolt and was injured. It bled. The one endeavoring to enter had wiped the blood from his finger on this bit of paper."

His voice was now slow and deliberate, like the pronouncement of a Fate:

"To find the assassin of Judge Woods, then, it was necessary only to find the man who had an injured finger and a half-stocked deer rifle with something on the under side of the barrel, near the muzzle, that would make a scratch parallel with the print of its barrel."

COLONEL BRAXTON turned sharply on the bench and, looking down at the clerk at his table, suddenly addressed him:

"Write the name of Horace Chapman into the blank of your indictment."

The whole crowd in the court-room moved as with a common impulse.

We had not before this taken any particular notice of the clerk. But we now saw that he was trembling and that his face was coated over with an oily sweat; and we marked the sheriff and his son on either side of him.

He got on his feet, and we could see his bound-up injured finger. And we could see that his deer rifle, which the sheriff held up before the court-room, had originally been a whole stock; but that the stock had been cut down and that the iron staple near the muzzle, which had held the wood, had been broken off—but not entirely broken off, for a sharp point of it, in the center of the barrel, remained.

The clerk, unsteady on his feet, stuttered before he could get his voice:

"Horace Chapman!" he said; "Horace Chapman . . . that is my name. . . . Why should I kill Judge Woods? What motive could I have to kill Judge Woods?"

COLONEL BRAXTON did not look at the man. He looked at the crowded room.

"I thought about the motive," he said, "and so, while the clerk here went with the others for his rifle, I put his assistant outside, as though to guard the door, and locked myself into his office to see if I could find the motive that had moved the man to kill Judge Woods. . . . And I found it. Judge Woods's term was about to expire. It is a custom for the judges to examine and certify the clerk's accounts correct for their term.

"The clerk here has been robbing the people. His accounts have been falsified. He was on the point of discovery. He knew that Judge Woods would find his dishonest transactions and send him to the penitentiary, when he came to look at the books. He also knew that if Judge Woods were out of the way and his order had showed that his accounts had been examined, and found correct, the new judge would not go behind that record. And so, in a desperate corner, he encouraged this demonstration, and under the cover of it shot Judge Woods and forged the order approving his accounts.

He stopped, took a folded paper from his pocket, and laid it on the table.

"Here is the forged order . . . signature of Judge Woods inked in over pencil tracing."

There followed a scene of drama which I have met no equal in any imaginary tragedy.

The trapped clerk began to scream, stagger about his table.

"You forced me to write my own indictment," he cried, "to write my own indictment . . . to write my own indictment on which to hang me!"

It was the one thing in all the abominable affair that seemed an overwhelming horror to the man.

And Colonel Braxton answered, now—in our reversal of feeling—dominant, inscrutable, like an avenging Nemesis behind the world.

"Yes," he said, "I forced you to write your own indictment . . . for it was an ancient custom of our fathers, in a particularly atrocious and cold-blooded murder, to compel the guilty man to dig his own grave before they hanged him!"

WE SHALL SOON PRINT another of Will Rogers's articles—one of the most amusing and the most philosophical pieces that he has ever written. It is entitled "The Grand Champion," and it is packed with the Rogersesque wit and keenness of observation that have made him the foremost humorist of today. Until the article appears we leave to your imagination who, in Will Rogers's opinion, is the grand champion of the United States.

Happy Days

Blossoms, blue birds, spring joys and the returning sun tell of the approach of Easter. The season demands self-expression—gifts, compliments and social services.

For the social side of Easter we commend the sealed-up sweets in that famous metal box containing

Whitman's Salmagundi Chocolates

Happily likened to flowers for their beauty, purity, fragrance and charm. Each piece in the Salmagundi assortment is a loving expression of good taste.

In one-pound and two-pound packages at the local Whitman agency.

THE DIFFERENCES THAT GIVE LEADERSHIP

CHRYSLER MOTORS

All branches on the same tree; all growing out of the Chrysler root principle of standardized quality

CHRYSLER "75" CHRYSLER IMPERIAL · CHRYSLER "65"
DODGE BROTHERS SENIOR · DODGE BROTHERS SIX
DE SOTO SIX · PLYMOUTH
DODGE BROTHERS TRUCKS, BUSES *and* MOTOR COACHES
FARGO TRUCKS *and* COMMERCIAL CARS · CHRYSLER MARINE ENGINES

All Products of Chrysler Motors

THESE are the *differences* which make Chrysler Motors products each far and away the head of its particular field.

First, the *difference* in *appearance.* Chrysler distinctive and individual style and beauty—in no sense a chance creation — trace directly to those canons of classic art which have come down through the centuries unsurpassed and unchallenged.

Next, the *difference* in *performance.* Chrysler Motors engineers introduced more than five years ago, smoothness and speed and acceleration, which obsoleted all previous conceptions of what a motor car could and should do.

Chrysler Motors performance — and that includes as well, Chrysler ease of handling and control, safety, dependability, economy and long life—outdistances all others today just as far as the first Chrysler was ahead of the cars of its time.

The genius of Chrysler Motors engineers, with the myriad of developments and betterments they have pioneered and perfected, maintains this leadership secure.

Further, the *difference* in *value.* The means to that end is the pooling of all the human, mechanical, manufacturing and financial resources of all the units of Chrysler Motors, under one personal head, with the one object of attaining a common standard of high quality holding down overhead, sharing the results of research, experiment and engineering, increasing efficiency, and *above all, giving greater value to the buyer*

It is because Chrysler Motors cars are better-looking and greater value both in performance and in price, that public acceptance identified Chrysler Motors as the vast new economic force in the automotive industry.

The motoring world has indorsed by generous patronage Chrysler Motors accomplishment of a *better public service*

HRYSLER *Leads Not Alone in Style ut in Safety, Ease of Handling and Value*

ot claiming too much to say that t significant factor in bringing to ca the automobile style leader- f the world is the original mode Chrysler introduced.

er beauty—no chance creation— cing from the origins of classic applied by Chrysler to the n motor car—is universally con- o be the most striking new thing mobile design the world has seen.

ew Chrysler smartness and obvi- le authority thus attained have uch to make Chrysler cars so e to women, as well as to men.

The Chrysler front elevation indicates the influence of the Egyptian lotus leaf motif—still found in all its pristine beauty on the ruins of the great temples at Karnak. Modified to its modern application, it is perfectly proportioned, and applied with consummate artistry in blending beauty and utility.

It is particularly the natural desire of women that in the appurtenances of their daily life they shall be surrounded with things that reflect the newest of new fashion.

Chrysler cars have not only this striking new style that re-styles all motor cars but a superior ease and safety of performance and handling which makes Chrysler cars in any phase of operation trouble-free and dependable.

Further, due to Chrysler's vast resources and economies in its engineering, purchasing, manufacturing and finance, these cars cost less to buy and less to maintain.

Because of this leadership in style, safety, performance and value, Chrysler cars are today inevitably in demand by people everywhere. Chrysler invites your closest inspection and severest test.

I Am Fifty—and It Doesn't Hurt a Bit!

(*Continued from page 29*)

any signs in a human countenance which showed that its owner had been pried loose by disciplining years from our universal starting place at the center of the universe. This habit persists.

There is always a great deal of work that needs to be done, in every sort of field, if the world is to be kept from becoming quite intolerable. Hence there is a steady demand for those human qualities which seldom flower into usefulness until there are some gray hairs on the head. Not only war workers, but the whole world, loves, pathetically depends upon, and richly rewards a quality almost impossible to youth, but very natural to middle-aged tastes, and that is—dependability.

Remembering the heartfelt liking we had in our war work for the plain, middle-aged faces of the women who could be counted on to stick it out, no matter what came, I do not, now that I, myself, am a plain, middle-aged woman, feel desolately that the world has no more welcome for me.

I have now only to pay the simple price of actually carrying out what I have promised to do, and of doing my share of what there is to be done, to see in many, many human eyes a welcome, the warmth of which quite ignores gray hair and wrinkles.

A YOUNG poet would, of course, be quite horrified at my cold, resigned satisfaction. Such a welcome would to him seem the meanest substitute for that always given to rosy cheeks and supple young limbs. Have not the poets always cried out on the frightful tragedy of having been alluring once and being so no more? Yes, sure they have. But bring to mind the fact that 99.5% of good lyric poetry, especially of the somber type, is and always has been written by very young people. When they write about the horror and tragedy of leaving youth behind, they are brilliantly improvising on a subject they know nothing about. When I was their age I suppose I felt just as they do, or I would have felt so if I could have conceived of myself as ever being as old as I now am. But—at this point one of those perfectly ridiculous stories which all families acquire comes to my mind—the flat comment made by a mother of our acquaintance about the approaching marriage of a daughter who had been teaching school for years. "Yes," said the mother contentedly, "I'm glad Marion is going to be married. It'll be such a nice change for her."

As always with family stories, even absurd ones, which get quoted for a generation, there is more in this one than meets the eye. One of the many things which nobody (especially those poets) ever tells you about being middle-aged is that it is such a nice change from being young. Honestly, I mean it. Why not admit it? One of the traits of human nature about which there is absolute unanimity of opinion is its love for change, its never-failing tendency to get tired of what it has had and be ready for something new. This is not only one of the most universally recognized desires of our race, but also one of the most imperious. Food, shelter, and change—we might list thus the three most vital human needs. We must work or fight to get food and shelter. But change is provided for us effortlessly by the procession of the hours and years.

We have all seen the transition from happy childhood to youth oiled to painlessness by this pleasure in something new. Why did nobody ever tell me that if I let myself live naturally, I should slide with the same painlessness from youth to middle age just at the time when I had had about enough of youth?

WHEN you were too old to play with dolls and to spin tops, weren't you, just between ourselves, getting a little tired of dolls and tops? I was. A decree from on high permitting me to remain always at the doll-playing age would not have been received with any joy on my part as I approached adolescence. And yet no child ever more passionately loved play than I. But being human, I could have enough even of a good thing. I'd had all I really craved of hide-and-seek and tag. Now I wanted to see what it would be like to go to parties and have beaux.

It did not occur to me—this is a theme never mentioned by those always-young poets—that if it were possible to have enough of dolls and hide-and-seek, it might also be possible to have enough of going to parties and having beaux. Did I say such a possibility was never mentioned by poets? It is hotly contradicted by them.

Poets, of course, don't call things by their ordinary names. Instead of saying: "At the Thingumbobs' bridge dance a good time was had by all," they burst out with:

> Within those halls where beauty, jest,
> And song their court were wont to keep;
> Where oft with rosy feet would creep
> The dawn, while revels banished sleep. . . .

They can't even hold hands without stepping up the voltage to:

> Fierce midnights and famishing morrows,
> And the loves that complete and control
> All the joys of the flesh, all the sorrows
> That wear out the soul.

It all sounds so shimmering, so glamorous the way they put it that their trusting readers develop a moon-calf fixation. Long after they are old enough to know better, they go on dressing and acting as if life were one perpetual, grotesque "baby-party."

Writing their verses at an age when sleep-banishing revels are the only things they are capable of enjoying, poets shudder at the notion of ever becoming fed up with that sort of thing. At the very idea, 'Their souls shrink back aghast" (as they would put it). Just as a child's would, if he could bring himself to believe he might ever so far degenerate as to prefer reading Shakespeare to playing blindman's buff. But people with some experience of life really ought to know better.

I do not mean by this comparison to belittle the glorious insanity of young love, or the child-passion for play. As well be little the beauty of moonlight and dawn It would be a tragedy to have misse either of these sacred and wildly love elements of life. But, honestly, it woul also be a tragedy never to have had any thing else. When I was a young lady- that is what we were thirty years ago— was anything but superior to the pleasur of young ladyhood. I "adored" openi the long pasteboard box which meant bouquet from an admirer. I loved mapl nut sundaes to distraction, and the never was a girl, I am sure, who mo heartily delighted in West Point hop The sound of a band—the louder a brassier the better—playing the Washin ton Post, and the advance towards over an expanse of polished floor of partner—no matter who—filled me w the sincerest rapture.

But suppose for a moment that a mi cle were performed and that I should n look as young as I did then, and should invited to dance once a week for the r of this session at West Point, as I used do. Well, with all respect for West Po cadets, if you think I'd jump at the char you'd better guess again. I'd rush int as enthusiastically as I should carry ou sentence to play tag for an hour a d The dancing—I could stand that, fo still like to dance, although I really tennis better—but all the rest of it! Co I, for my life, keep my face stra through some of the conversations I member hugely enjoying on the terrac Cullom Hall between dances. They sweet, harmless, amusing memories often think of those days as I pass up down the Hudson now, on my pro middle-aged errands all connected the hard work which is the core sustaining heart of healthy middle ag

From my train window I look up a terrace of Cullom Hall and wave gre to the girl leaning soulfully over the with a murmuring cadet beside her. a friendly greeting, but a little am and very, very resigned, not to sa lieved, to have her and her favorite an ments up there, out of my way, an cluttering up my present life with her and her bouquets.

"ENOUGH'S enough." And "eno as good as a feast"—and better. do we recognize those universally acc axioms as true about everything e the period between twenty and thir

Perhaps because traditions come very far back. Before the days of de and oculists, hygiene and balanced the period between twenty and thir time of superabundant physical vi was the only one that was compara pleasant. Before that period, you w dependent. After it, if you were a you had a toothache; failing eyes ma lag behind the rest of the tribe in hu rheumatism stiffened your sword an you began to suffer internally fro results of unspeakably bad food. woman, you were pretty well wo with much badly-cared-for childbir to speak of having lost most of you

We offer you 30,000 of the finest miles you ever drove!—

with the first-year feel in every mile

e announce the New Mobiloil—an oil so startling in performance that the superlative statements we are dy to make about it are actually conservative.

For example, when we say that with regular drain- and refilling, plus common-sense care, this New biloil will keep the first-year feel in your new ine for at least 30,000 miles, the facts are that in a at many engines the New Mobiloil has kept the t-year feel for more than twice this distance.

epeated road and laboratory tests have proved use of this New Mobiloil commonly assures from to 30% more power than other oils generally for the same motor.

Under high speeds you will find, as our road tests have repeatedly shown, that this New Mobiloil stands up better and consumes more slowly than other oils . . . and it is an established engineering fact that the oil which lasts longest and stands up best at high speed also lubricates best at any speed.

Try this New Mobiloil. It will help save your good engine from growing old before its time. Mobiloil—the World's Quality Oil—is made by the Oldest and Largest Specialists in Lubrication.

FREE: A week's better shaves. Just mail the coupon below.

Why delay, men, getting acquainted

with small-bubble *lather and a longer-lasting shave?*

IT costs nothing to make this comparison. After a seven-day trial, we feel certain you'll thank Colgate chemists for their many years of research. They've proceeded along natural, common-sense lines, creating a moisture-laden lather utterly different from the ordinary air-filled lather. New friends are being won daily to Colgate's, not by lurid claims, but by vastly superior shaves—smoother, closer shaves that last longer—keep you well-groomed from morning until midnight.

Compare with ordinary lather

We invite a critical comparison—your present lathering contrasted with the Colgate way.

The minute you lather up with Colgate's, two things happen: 1.—The soap in the lather breaks up the oil film that covers each hair. 2.—Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist and pliable . . . limp and lifeless . . . scientifically softened right down at the base . . . ready for your razor.

Thousands of men, after various trials with ordinary lathers, have adopted Colgate's as supreme. To prove its superiority, mail the coupon below. We will send also, a sample of After-Shave, a new lotion—refreshing, delightful . . . the perfect shave finale.

COLGATE LATHER
Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out by millions of men.

ORDINARY LATHER
Ordinary, big-bubble lather (greatly magnified). Note air-filled bubbles which can't soften the beard sufficiently. Only water can do the job. Only small bubbles permit sufficient water.

COLGATE, Dept. B-1710, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After-Shave."

and hair and just about all your interest in life from lack of physical vitality.

Now, of course, a reasonable amount of physical vitality is rather necessary for the enjoyment of life. It is possible that a very great many generations of ailing thirty-to-forty-year-olds might establish a tradition that would take more to destroy than the modern two or three generations of life-enjoying, normally well, and active older people. At any rate, as late a generation as mine found the tradition of the physical forlornness of middle age, and its consequent total forlornness, entirely unquestioned. Nobody around me in my youth gave me any idea that in middle age I could still be quite naturally playing tennis, riding horseback, skating, and mountain-climbing. I cannot now imagine what I thought was going to happen to prevent my going on with that sort of fun and with the physical vitality which follows on it. What did happen, I now ask myself, to our mothers and grandmothers (for that matter, to our fathers and grandfathers) so that at fifty they never left the house except for a walk along a sidewalk? As soon as I put that question to myself, I know the answer, and so do you: *They* never did anything else when they were twenty!

IT IS true I don't engage in sports as ferociously as I did when I was twenty, and for a good reason. I don't need to, or care to. At twenty I was like nearly everybody else of that age, frightfully uncertain—half of the time at least—of deserving to be in the world at all, and frightfully anxious to prove my worth to myself in the only way youth knows—by beating somebody else at something. Like most of my contemporaries, I was not really enjoying what I did, but uneasily seeking in everything an opportunity to justify myself to myself.

Here is one of the pleasures of middle age of which nobody breathes a word to you beforehand: The deliciousness of outgrowing that neuralgia of youthful pain at being surpassed in anything! The serenity of pleasure taken in other people's accomplishments unspoiled by the aching comparison of them with our own!

This change is not due to any growth in conscious capacity for magnanimity—rather to the fact that moderately successful, healthy-minded older people have settled into the ocean level best suited to their own specific gravity; have found an excuse for existence in some job that the world seems to want done, which, after a fashion, they seem competent to do. What heartache comes to the mother, engrossed in successfully bringing up happy children, if another woman can drive a golf ball farther than she? To state such a question is to laugh at it. Yet from such things come at least half of the tragedies—real ones, too—of youth. Now, in this meditation on middle age, I encounter a quite providential fitting together of years and tastes. Just as, somehow miraculously now that I have come to the age when any fourteen-year-old boy can skate faster than I, I don't care if he does!

My gentle old uncle, when the cat had settled down to sleep in his favorite soft chair, used always to leave her there and sit on a hard chair till she woke up and went away. When we remonstrated with him, he answered, "A cat has so few

The "Left-behinds"

A SHORT time ago a promising young business man, happily married and the father of two children, one seven and one nine, ved unmistakable signs of failing health. His or suspected the cause at once. A searching ination confirmed the doctor's suspicions. erculosis. He was ordered to give up his ness immediately and go to a sanatorium for er treatment and care.

uncle of the young man was greatly shocked n he heard the report. It didn't seem possible it could be true. He asked for the evidence. handed him x-ray photographs which ed that his nephew's lungs were seriously ed. The uncle asked permission to show hotographs to his own doctor.

n that doctor saw the photographs he said, right thing was done. Your nephew will bly get well. Now, what have you done for an's family, especially the children? Have een examined? You have no time to lose. tuberculosis may not have made any seriroads on their health as yet, it is hardly vable that his wife and children are ly free from infection. An appearance of ruddy health does not exclude the possibility of tuberculosis."

Every child who at any age has had prolonged exposure to tuberculosis should have an immediate, thorough physical examination, especially including the tuberculin tests and x-ray photographs, to determine whether or not active or latent disease is present. While tuberculosis usually attacks the lungs, it may attack any part of the body—eyes, ears, nose, throat, glands, joints, bones or vital organs.

It is now believed that many cases of tuberculosis in adults are the direct result of infection in childhood. The germs may have been taken into the body when the person was very young and have remained dormant for many years.

Boys and girls who are apparently healthy may have latent tuberculosis; without a sign of infection—no cough, no loss of weight, good color. But years later, when some extra strain is put upon the body, the symptoms appear—loss of weight, persistent cough, "indigestion" and fatigue.

When every child is properly fortified against the ravages of tuberculosis, the final victory over this deadly enemy will be in sight.

ar there will be a great forward step in the battle tuberculosis. Efforts will be made to protect "the —the family and friends of the stricken person— fore the signs of tuberculosis show themselves, but e disease may be latent.

tions for the prevention of tuberculosis—natate and local—will warn people of the infection ay follow living in the same household or assowith one who is suffering from tuberculosis.

Their action-inspiring slogan, "Early discovery—Early recovery," will be displayed on billboards, car cards and banners all over the country.

By checking tuberculosis in its earliest stages, before the germs have had time to destroy bone or tissue, tens of thousands of lives can be saved. Send for the Metropolitan's booklet, 49-A—"Tuberculosis". It will be mailed free on request.

Let them play as they learn

says famous psychologist to mothers

"THE easiest way for a mother to teach her children effective habits is to make a game of the whole thing," says Lillian M. Gilbreth, noted authority on child guidance. "Let them play as they learn."

Many little problems of the child's day lend themselves to game making. Breakfast, for instance—that meal which authorities say is so important. School tests have shown that the child best fitted for studies, most keen for play, has started out with one certain thing—a *hot, cooked* cereal breakfast. That is why, in over 70,000 schools, this rule hangs on the wall:

"Every boy and girl needs a hot *cereal breakfast"*

So mothers sometimes say, "Now eat your nice hot cereal. It's so good for you."

Approached this way, youngsters have been known to give a push to their hot cereal—Cream of Wheat, or oatmeal, or whatever it is—and say "N-o-oh! I don't *want* it."

Today, coaxing is no longer necessary. The new psychology solves the problem. By making a game of *hot, cooked* cereal mothers are leading children to eat the right breakfast.

© 1929, C. of W. Co.

FREE—*this plan that gets results at breakfast*

A club that children work out for themselves. A plan that arouses children's interest in *hot, cooked* cereal breakfast and makes them want to eat it regularly. Badges and a secret, gold stars and colored wall charts. All material free, sent direct to your children, with a sample box of Cream of Wheat (if desired). Children cannot resist it! Eating Cream of Wheat becomes a fascinating game, then an enjoyable habit. Mail the coupon now.

For 32 years the choice of child specialists

Specialists in child health have for years recommended Cream of Wheat as an ideal *hot, cooked* cereal.

1. It is abundantly rich in the physical and mental energy children need. All real food.
2. With every harsh part of the grain removed, Cream of Wheat is amazingly quick and simple to digest.
3. Its creamy goodness is easily varied by adding raisins, dates or prunes while cooking.

Safeguard your boys and girls by giving them, regularly, Cream of Wheat for breakfast.

pleasures compared with those open to me." I have something of the same feeling about the boy who beats me in a race on the ice. He does *so* enjoy beating somebody. And there is so much else I can enjoy of which he doesn't dream. For one thing, right here and now on the ice, I can consciously, disinterestedly, relish the physical delights of the exercise, the miraculous knife-edge poise, the gliding speed, the tingling air, the beauties of the frosty trees. I enjoy these things far more than he does, or than I did when I was his age, freed as I now am from his single reason for being on the ice: either beating, or learning how to beat, somebody else.

Understand me, I don't at all make the preposterous claim that middle age is more enjoyable than youth; or that I enjoy my corner of the ice-pond—where my fun consists of executing neatly a few figures dependent on skill rather than strength or speed—more than that magnificent, long-legged kid out there, racing from one end of the hockey field to the other in eagle-like swoops. He is enjoying a wild, physical intoxication which gets considerably dimmed by the years. And he is not hampered as I am by the need to favor a bad knee. But as far as that goes, physical intoxication is not so wild as that of a group of quite little children who, with glowing faces of pure joy, are merrily scuffling along on a slide at one end of the pond. The point I wish to make is that we are all, in our different ways suitable to our ages, having a glorious time, and that the young couple who swing dreamily around and around, hands clasped, are not the only ones to enjoy the ice.

I USE skating, of course, as a convenient symbol for the way life is taken at different ages. Now, you will note that all those age-groups on the ice, I, the oldest, am the only one who has the notion that *everybody* is having a good time. Although the fourteen-year-old boy may be amused by "the kids without ever skates," he is not sorry for them, because he remembers that ages ago he used to joy sliding and consequently guesses they do. But it is real pity he feels for poor fish who's got tied up with a girl has to steer her around. And probably pity is even greater for the gray-haired woman sticking off there by herself in corner, who seems to think that the circles is skating. The young know, of course, that the hockey-playing boys who have not yet found their mates are having some sort of childish good time because they too, before this new year came into their lives, thought it was. But as they glance at me, I can see in young eyes the conviction that it must too awful to be so old as to have grown with your first love far behind you.

The trouble, you see, is that the young trust the future. Young people seldom They are afraid to. They are so immersed with the present that what they can now this instant seems lost forever. play at life like beginners at bridge their anxiety not to miss a trick pour out trumps and honors—anything not to lose the lead. Compared with Charge-of-the-Light-Brigade tactics spider-like seem the seasoned players carding so calmly during the early letting their opponents wreck their

Why this penetrating foam

CLEANS WHERE TOOTHBRUSH CANNOT REACH

In a dramatic way science now proves what millions of people know—that Colgate's cleans teeth better.

A scientist recently made an important experiment with toothpastes.

He measured their power to penetrate the thousands of tiny crevices which are found in normal, healthy teeth and gums.

He found that some dentifrices merely scrub the outer surfaces of the teeth. Others go partly down into the larger crevices.

*Then he discovered that Colgate's has a higher penetrating power than any of the leading dentifrices on the market today.**

This is the secret of Colgate's remarkable ability to clean—it gets down deep into the hard-to-clean places where the toothbrush cannot reach; where ordinary toothpastes do not go.

Colgate's penetrating power is due to the fact that it contains the world's greatest cleansing agent.

When brushed, this cleansing agent instantly bursts into a sparkling, snow-white foam that surges over teeth and gums. This foam possesses a remarkable property (low "surface-tension") which enables it to go down into the tiny tooth crevices where decay may start. There, it dislodges clinging food particles and mucin, sweeping away impurities in a detergent wave.

In this foam is carried a fine chalk powder—a polishing agent prescribed by dentists—which polishes the enamel safely, brilliantly.

Thus Colgate's cleans and beautifies; purifies and refreshes the entire mouth restoring natural loveliness of teeth and gums.

If you have never used Colgate's, please try it. The 25c tube is economical—contains more toothpaste than any other leading brand priced at a quarter. Or, mail the coupon below for a generous free tube.

ow Colgate's cleans where toothbrush cannot reach

atly magnified ture of tiny h crevice. Note e ordinary, tgish tooth- e (having high face-tension") to penetrate n where decay start.

This diagram shows how Colgate's active foam (having low "surface-tension") penetrates deep down into the crevice, cleansing it completely where the toothbrush cannot reach.

The function of a dentifrice is to *clean* the teeth. No dentifrice can cure pyorrhea; no dentifrice can permanently correct an acid condition of the saliva; no dentifrice can restore the normal hardness of the gums. Any claim that any dentifrice can do these things is false and misleading. The highest dental authorities support this statement.

establishing their own strength for the vital struggle.

"'Twon't last. Nothin' does," is a middle-aged dictum, abhorred by youth, that has more powers of consolation than youth can guess. When you stumble upon the middle-aged discovery that the stars in their courses do not reel on every occasion when you have made a fool of yourself, you can see that there are some compensations for stiffening joints and gray hairs. There are simply no words which can do justice to the relief which comes when you stop caring so terrifically about always appearing well to others. And yet this new freedom is only a minute part of the enormous widening of life which comes when time enables you (nothing else BUT time can do it) to make a faint guess that you are not the most important person in the world. Like Pilgrim's burden, at least half your unhappiness rolls from your bent shoulders when this great truth begins to penetrate your aging mind.

But, you ask, is it not painful to realize this? Deprived of the life-giving sense of your own supreme importance, is life worth living at all? Is it true, as people say, that youth is naturally happier than age because the one lives on hopes, the other on memories, and that while you can change hopes to suit yourself, memories persist in staying more or less the way they actually happened?

Stuff and nonsense! Hope's always left, no matter what afflictions have come out of Pandora's box. It's not a question of an age limit. From cradle to grave the favorite slogan of every mother's son and daughter is always: "I know I used to be a dub, but I've learned from my mistakes. Hereafter everything I tackle is going to go over big." Middle age has, true enough, left behind the stimuli which gave youth its zest, but it has plenty of thrills of its own—thrills which youth cannot know because youth is wrapped up in itself. There's all the difference between spending your time in a room hung with mirrors and looking out from the top of a mountain. I admit it is seldom warm and cozy on the mountain-top, but the view is, perhaps, on the whole, finer than anything that can be found in a looking-glass.

The disinterestedness in judgment, the pleasure in beauty even if you can't get something for yourself out of it, the flexible, free *interest* in the complex spectacle of life—it would be cheap to buy these qualities at the price of heart-felt sorrow over lost dancing days. But you are not called upon to buy them at any price at all. The mere passage of time provides you gratis with all these new pleasures.

BUT what about the horror of old age, its skeleton form so much nearer at fifty than at twenty? Don't you feel that you have one foot in the grave? And how can that situation be anything but terrifying?

The first answer to these questions is that the capacity for fear seems to diminish with experience of life. I can be sure only of my own case, and yet I believe, from observation, that this is nearly universal. It is a well-established fact that primitive peoples suffer much more from fear than civilized men. And I am sure that even well-cared-for, cherished children in comfortable homes know the depths of terror as few grown-ups ever can. We should go mad if we had to continue

Suddenly, out of a spring sky . . .

An Advertisement of the
American Telephone and Telegraph Company

All was well on the telephone front on April 27, 1928. Suddenly, out of a spring sky, rain began to fall over central Pennsylvania. As night came on this turned into a furious storm of sleet, snow and wind. Inside of 48 hours, 3700 telephone poles were down. Seven thousand miles of wire tangled wreckage. Thirty-nine exchanges isolated. Eleven thousand telephones silent.

Repair crews were instantly mobilized and sent to the scene. From Philadelphia 47 crews came. Other parts of Pennsylvania sent 13. New Jersey, 6. New York, 4. Ohio, 6. Maryland and West Virginia, 12. In record time, 1000 men were stringing insulated wire and temporary cables along the highways, on fences and on the ground.

Within 72 hours the isolated exchanges were connected and the 11,000 telephones back in service. Then, while the temporary construction carried on, neighboring Bell System warehouses poured out all needed equipment, new poles were set, new crossarms placed and new wire and cable run.

In any crisis there are no state lines in the Bell System. In all emergencies of flood or storm, as well as in the daily tasks of extending and maintaining the nation-wide network, is seen the wisdom of One Policy, One System, Universal Service. Better and better telephone service at the lowest cost is the goal of the Bell System. Present improvements constantly going into effect are but the foundation for the greater service of the future.

Norman Rockwell tells *Jim Henry*

JIM HENRY—*famous Mennen salesman—is interviewing some famous users of Mennen Shaving Cream. . . . This photograph shows him talking to Norman Rockwell, the famous painter. . . . Mr. Rockwell is seen working on a painting for the front cover of the Saturday Evening Post.*

"I can put more *Chuckles* in my pictures when I've had this COOL shave"

NORMAN ROCKWELL:—"Sure, Jim, I'll give you the dope on the artistic shave. . . I like to paint hoboes, but I certainly don't like to *look* like one. . . That's why I shave carefully—every day. . . Being a particular cuss, I've experimented with shaving creams almost as much as I've experimented with colors.

"I guess I was one of the first to try that Menthol-iced of yours. . . I don't know what's in the cream, but I do know that it gives my face a keen cool tingle that I've never had from any other shaving cream. . . There's a real kick to it! Some day, maybe, I'll do a painting of a happy shaver with his tube of Mennen. You know, Jim—that would be a self-portrait!"

Mennen Menthol-iced—
The Young Man's Shave!

THERE is a dash and a cool invigoration in Mennen Menthol-iced that is typically young—modern! The lather has a "get-up-and-go" feeling to it that fits in with young ideas. Menthol, blended into the cream by a secret process, gives your shave a mountain-air COOLNESS such as you never felt before! The minute the rich creamy lather bubbles up from the brush you'll say to yourself, "Here *is* something different!"

Dermutation Improves Shaves!

MENNEN Menthol-iced Shaving Cream is the newest member of the Mennen line—a modern team-mate for the regular Mennen Shaving Cream. Both creams have Dermutation — a three-way shaving improvement — exclusively Mennen's. . . . Dermutation 1. Softens the beard. 2. Lubricates the razor blade. 3. Invigorates the skin. The proof is in a trial. *Send the coupon!*

After the shave—Mennen Skin Balm. *It protects the skin and removes "face shine" . . . non-greasy.* Mennen Talcum for Men—*the man's powder that does not show. . . Great after a bath, too!*

MENNEN MENTHOL-ICED SHAVING CREAM

Jim Henry's treat—14 COOL shaves

JIM HENRY, The Mennen Company, Dept. D-2, Newark, N. J. All right, Jim! If Mennen Menthol-iced is as good as you and Norman Rockwell say it is, send me a FREE tube. And a trial tube of Skin Balm, too.

live with the imaginary terrors of childhood, the awful ones we all had as children, of which we seldom spoke, but which we all remember: The Old Man who lives in the attic after dark; the Policeman who will get you; the Something lurking in the dusk that will spring out at you from behind that door. And the real terrors of childhood—the dentist, the bullying big boy, the possibility of being found out by your parents in a lie. . . . I honestly believe that if I should learn, this moment, that I had but an hour of life before me, I should be incapable of being as frightened as I have been many times in my childhood. And I was not at all a timid child.

No, fear is another thing which, for the most part, you outgrow when you are rescued by time from being the center of everything. As a little child, you, yourself, are about all you have experienced of the world, and when you are really in the grip of fear, there is nothing else, nothing, in all the universe but you and the torture you are enduring. We know this, not only from memories of our own childhood, but from the utter agony on the face of a frightened child. But when you have, stored away in your memory, years of human life, they stand by you when you, yourself, are threatened. Even the possibility, which seemed appalling to you when younger, that you, yourself, your sacred self, may be annihilated, cannot entirely blot out all that will remain—music, love, work, the aspirations of your race.

THE years have made you aware of such an infinite number of things greater than yourself that they bring down to quite endurable dimensions the thought of your possible disappearance. I think the reason we seldom in all our lives see on any grown person's face the anguish we often see on children's is that we grown-ups don't feel it. We have learned of so much else in the world besides ourselves that what happens to us, let it be what it may, *cannot* stir us to the madness of despair felt by a small child who has missed going to the circus.

This steadily continued change in human personalities explains, perhaps, why middle-aged people do not noticeably fear death more than they ever did . . . in fact, in most cases, vastly less. And as the alarm about the dullness and loneliness and misery of old age, experience has taught us, whether we will or no, something which takes the edge from that fear. Having arrived at an age which seemed to me at twenty as forlorn as eighty does to me now, and perceiving that a change in tastes and desire has gone along with change in age, I cannot help guessing that if I continue to yield myself naturally to the rhythm of the years, I shall find an inner time-table making as close and accurate a connection for me then as now.

Presumably, I shall no longer be able to skate and play tennis, perhaps not even engage in the work which now gives significance to my life. Well, many years of changing tastes behind me are a reminder that, even so, all may not be lost. Isn't it possible that (as I now look back on my youth) from some quiet corner of impersonal meditation and contemplation, my seventy-year-old self may look back at my middle-aged self rushing about energetically and give to it a friendly wave of the hand?

These modern linoleums cost money—protect yours with Bassicks

THOSE bright linoleums that liven your rooms and beautify your home. They cost money of course, but they are worth every dollar they cost. Certainly they are worth preserving. That's why linoleum men urge the use of Bassick Casters and NoMar furniture rests. They know Bassick Casters save linoleum from scratches and scars... know that NoMar Rests prevent ugly dents and breaks in linoleum where heavy furniture stands. The cost is small. They will add years to the life of your linoleum—and they lighten housework, too. Ask your hardware or house furnishing dealer—he knows.

NoMar Rests—the last word in floor protection

NoMars were invented to spread furniture weight. That's why they save the pile of carpets from matting in unsightly spots—why they protect linoleum from being pitted and pock-marked.

The smooth surface of NoMars is carefully bevelled. The edges are rounded. There's not a single sharp angle to scratch, tear or cut. In kitchens, living rooms, in business offices . . . wherever floors deserve care, NoMars have proved their worth. Use the coupon below to get the whole story... or go to your hardware or house furnishing dealer for your first set.

Furniture rolls so easily on Bassick Casters

Furniture that must be tugged and pushed and hauled across the floor is as out of date as the old time ox cart. The modern way is to install Bassick Casters. They roll so lightly... without back breaking effort ... without damage to the most costly floor. Can you afford to keep on pushing and dragging in this modern age?

Let us send you our new service booklet with its helpful ideas. Just clip and send the coupon. Or, better still, go to your dealer and get the Bassicks you need . . . enough for every piece of furniture that must be moved.

BASSICK

NO MAR RESTS

NoMars are packed 4 to a set, with sockets. Four sizes for light, medium, heavy and extra heavy furniture.

Size	No. 1	No. 2	No. 3	No. 4
Width of Base	1¼"	1½"	2"	2½"
(set of 4)	$0.75	$0.80	$1.05	$1.50

CASTERS

Bassick casters are packed 4 to a set, with sockets. Many styles; three sizes, for heavy, medium and light furniture. Write for the new Bassick Caster and NoMar furniture rest booklet to guide your selection.

Bassick Casters, NoMar Rests and Bassick Period Hardware are the finishing touches of excellence for fine furniture

THE BASSICK COMPANY, Bridgeport, Conn.

You may send me the illustrated new service booklet which tells where and how to use Bassick Casters and NoMar Rests

Barbarous Barbara

(*Continued from page 33*)

A mystery cannot live long in little Evergreen, and it was soon revealed that brother Perry was indeed extremely attentive to Flora Matson's guest and second cousin from New York City. Her name, it seemed, was Rena Davidge and she was the finest flower that civilization and culture had produced up to the middle of August. Miss Davidge had not as yet decided which of the various arts and sciences she would pursue, if any, but she was living her own life and developing her personality and taking a good look at the crudely elemental cultural life of the West. Evergreen was a disappointment at first; it was crude but not so elemental as hoped. Instead of cowboys shooting up Main Street, there was a traffic cop and a stop-and-go signal.

ON THE other hand, Miss Davidge was delighted to find that this cultural desert contained one oasis, one kindred soul who liked to talk about things of the mind and spirit.

"And that," Nancy told her husband, "is none other than our Perry. Flora introduced her at the bank to cash a check and now he's around there every night talking about things that really matter. Perry says she's much more intellectual than the Matson family."

"That would be possible."

"Don't snicker, dear. Think of the position I'm in. Here I've been worrying for years for fear Perry would throw himself away for some brainless flapper, and now he's lost his head to an intellectual giantess who doesn't believe in babies. I asked him whether he wouldn't like to bring Dolly Lamport around to supper some night soon and he said he'd rather bring this Rena Davidge. He said Dolly was a perfectly nice small-town type but she lacked horizon."

"What's the matter with Dolly's horizon?"

"It's not wide enough, according to the latest report. She's short on background too."

Nicholas made a crudely elemental joke about the large amount of ground the Lamports had, both background and foreground, and was told not to be rural.

"Of course you didn't invite this Miss Davidge to supper?"

"Of course not. Cultivated people don't have supper. I invited them to dinner. Thursday night."

"But why?"

"Because I've got to look her over and see whether she will do."

"Couldn't you examine her without inviting her to s-dinner? Must you see her eat?"

Nancy held that this was one of those things which no man could get through his crudely elemental head.

"But what," asked the alarmed husband, "would I talk about?"

"Anything on earth except your darling daughter. We've got to prove that she's all wrong. I'll tuck Babsy away early and we'll pretend we haven't a descendant to ruin our lives. Of course I had to ask Flora Matson too, but she

NEW DEPARTURE BALL BEARINGS

NOTHING ROLLS LIKE A BALL

Accurate almost beyond the ability of the mind to grasp, the New Departure Ball Bearing stands as one of the most infinitely precise devices made by the hand of man.

You can hardly conceive a measurement so infinitesimal as one-fifth of a tenth of a thousandth of an inch—one-fifteenth the thickness of the page on which this announcement appears. Yet, that is the total variance from standard dimensions permitted in the assembled balls and races of a New Departure Ball Bearing.

This marvelous accuracy guarantees that the operation of all shafts and gears will be maintained in true working relationship without readjustments and without appreciable bearing wear, for an almost indefinite period.

Whether you are a manufacturer or operator of a motor car, electric motor, machine tool or other mechanism, you benefit substantially by these rigidly maintained standards of quality, if your machines are equipped with New Departure Ball Bearings.

clined. She said Rena and Perry didn't have to drag relatives around every place they went. So there'll be just the four of us—won't that be jolly?"

"Very jolly," replied Nicholas in the tone he used for floods, tornadoes, war, famine, and railway wrecks. He made one last protest against this outrage. "They probably don't want to come to this s-dinner any more than we want to give it."

"What," asked Nancy, "would become of social life if people did only what they pleased? You're as bad as Barbara."

THE fatal Thursday dawned hot and humid, and Barbara's voice rose with the sun. She promptly took charge of Nancy's busy day and did her best to ruin it. Perhaps it was the heat, but it seemed as the baby foresaw her evening's banishment from civilized society and took revenge in advance by making trouble in all the dear familiar ways and inventing new ones, such as climbing on a chair and upsetting a water-filled vase of flowers.

When Nancy, in desperation, put the little nuisance out into the back yard, Barbara retaliated by getting stung by a bee. Before her hectic day was over, Nancy was willing to admit for the first time that being the mother of this maiden was a full-time job and left no room for giving parties.

To add a charming little touch to the day, Mr. Sam Chatfield chose this occasion to say that the time was now more than ripe for a substantial payment on the butcher bill. At six o'clock the ice cream had not yet come and Nicholas had to telephone and use threatening language. Barbara had to be put away earlier than usual (against her better judgment) and Nicholas had to be told three times it was time to dress for dinner. Nancy had made her brother and husband agree to wear their tuxedo coats by the simple device of telling each that the other would. In the final race with time, when every moment was precious, Perry brought his first friend ten minutes too early. Nancy had to greet them in her apron and cook's complexion and then set them aside to cool on the porch.

"Why didn't she stay in the cultured East and let us alone?" she asked her husband, who was cracking the ice. Nicholas did not pretend to know the answer to that one.

"As far as I am concerned," he said, "she is as welcome here as the whooping cough."

Yet when the four young people had assembled, it suddenly seemed worth the trouble. Out of the difficult circumstances Nancy had achieved a table bright with flowers, candles, and gleaming wedding silver, and a collation of cool salads and iced coffee fit for an August night. Perry was in his element, proud of his guests, his sister, and even his brother-in-law. The two men, on their best behavior, steered clear of controversial subjects and didn't fight at all.

Nicholas showed splendid self-control under provocation. Miss Davidge asked:

"You have a baby, haven't you, Mr. Folger?" While Perry creaked uneasily in his chair, Nicholas hesitated a moment and answered: "Yes." He managed to convey by his manner: "Now that you mention it, I believe we have." He

Youth and progressive Americans acclaim the AIRPLANE FEEL of air-cooled motoring

ENTHUSIASM is running high! Everywhere you hear, "Have you tried the airplane feel of the new Franklin?"

Those who have experienced this amazing new-type performance agree that the air-cooled motoring of the new Franklin—with its greater power, faster acceleration, ability to maintain high speeds continuously, greater efficiency and complete reliability—is the most forward step in automobile travel since Franklin introduced the first six-cylinder engine.

Today—with the magnificent beauty, the luxurious interiors, the restful comfort and thrilling performance of Franklin—the sensational low prices have established new fine-car standards which are revising all previous conceptions of motor car value. See these astonishing new cars—then if you will take one ride you will have a new appreciation of quality-car ownership—you will know the unique *airplane feel* of driving a Franklin.

Widespread interest in newly discovered health value of Japan Tea

Many thousands are now profiting by this simple safeguard against several common maladies

It has created widespread interest — this recently discovered health value in simple Japan green tea. Day after day letters come pouring in to us from every state in the union.

So many men and women suffer from these everyday minor maladies. So many are glad to learn that flavor-laden cups of good old Japan green tea are a protection against them. Scientists now know that this familiar tea is rich in the precious food element Vitamin C—an element which is lacking in most of the foods which we eat.

"Important to us," writes one eminent scientist, "are the results of a diet *poor* in Vitamin C. The symptoms are a *sallow, muddy complexion, loss of energy, fleeting pains usually mistaken for rheumatism.* It now appears that this condition is rather common among grown people."

Everyday ailments

Loss of energy that so often brings with it lethargy, lowered vitality, poor appetite, sleeplessness, nervousness.

A sallow, muddy skin that mars good looks.

Pains in the joints and limbs that seem like rheumatism.

To many who suffer from these ailments, the discovery about Japan green tea has come as welcome news. Good old Japan green tea is certainly no sovereign remedy. But today it is known to be rich in precious Vitamin C—a protection against these maladies.

In simple Japan green tea, scientists have discovered a rich supply of Vitamin C

Try this simple plan

Only a small group of foods aside from Japan green tea, spinach and a few fruits and vegetables, contain Vitamin C. The Japan green tea that grocers sell brings an abundance of it.

If you are "run down" and easily tired out, if your complexion is sallow, if you are troubled with so-called rheumatic pains, try this simple plan: Drink tempting, fragrant cups of Japan green tea, *regularly* at lunch, at supper, in the afternoon. Take advantage of its rich supply of Vitamin C. In a few weeks you will probably feel more vigorous, more healthy —and look it, as well. Whenever you drink tea, be sure it is Japan green tea.

For years one of the two most popular kinds of tea in this country, Japan green tea comes in several grades — in packages under various brand names or in bulk. Your grocer has it or can get it. American-Japanese Tea Committee, 782 Wrigley Bldg., Chicago.

not show pictures of his treasure nor give out any of her vital statistics. Instead, he remarked: "I suppose you find Evergreen quite different from New York." Not a brilliant observation, perhaps, but it would serve as a subject-changer. Perry looked relieved as they skated safely over the improper dinner-table topic of Barbara.

It was not exactly a feast of reason and a flow of soul. If Rena Davidge was an intellectual light, she kept her dimmers on so as not to dazzle persons with limited backgrounds and horizons. Through all this excessive politeness the two possible sisters-in-law were sizing each other up. Both knew this, yet the surface was as smooth as a mill pond. It is a gift women have.

Nancy honestly tried to be tolerant, but her verdict was unfavorable. She did not believe that Rena Davidge was an intellectual giantess, if she did wear wise horn-rimmed glasses and flat-heeled shoes. "How could Perry, with a good fighting chance for Dolly Lamport, think of marrying that girl? And spending a lifetime with that laugh?"

That laugh was not Miss Davidge's best feature. It was a mirthless little explosion that seemed insincere.

"That reminds me," Nicholas was saying, "—well, no it doesn't either. Excuse it, please."

"The poor dear," thought Nancy, "wanted to tell that cute thing that Babsy said."

Miss Davidge's explosion was a little louder than usual. It rang through the ruined house that had once been a home. From somewhere in the upper regions came a bitter cry of protest.

"I'll just step up and quiet her," said Nicholas. "Pardon me."

"He always welcomes an excuse to take a look at his child," Nancy explained. "Perry thinks he's weak-minded on the subject."

"The daughter fixation, of course," said Rena Davidge, and dropped the subject as too deep for Evergreenhorns.

After the guests had departed, Nicholas made this point in trying to explain his conduct:

"In the first place, she brought it all on herself by waking Barbara up with her cackle."

"And in the second place," Nancy replied, "you couldn't stand it any longer and had to show off."

But what was this crime against civilization and culture that Nicholas had committed? When he went upstairs to put a muffler on his noisy daughter, it was obvious to society that he was not succeeding notably. If anything, the bitter cry of Barbara was louder than ever, for Nicholas had neglected to close the door of the Imperial Bedchamber. Perry mopped his face desperately and said that it certainly was hot. But after about five minutes, the distressing noise ceased and presently one could hear the sound of Nick's oversized feet descending the creaky stairway. It seemed as if this minor social crisis was safely passed.

Nancy saw a look of relief upon the face of her fastidious brother; then suddenly his mouth opened in astonishment and he flushed to the very tips of his ears. She had to turn half around to see her in

I have recommended Yeast for 40 years"—

ean H. H. RUSBY, M.D.

Professor of Physiology in America's largest university

DEAN HENRY HURD RUSBY, M. D.

ROFESSOR of Physiology and Materia Medica nd Dean of the Faculty in the College of harmacy, Columbia University. Formerly rofessor of Materia Medica, University and ellevue Hospital Medical College, New York, nd expert on medicines for U. S. government.

***"The laxative action of yeast is mild ut reliable . . . Yeast cleanses the system. In continued small doses it is ften of service in overcoming habitual onstipation. Its effect is to promote oth appetite and digestion . . . For 40 ars I have lectured to students on the alue of yeast."*—Abstract from text book on Materia Medica" by Dr. H. H. Rusby.**

R. HENRY HURD RUSBY stands with the leaders of the American cal world. His contributions to the ical literature of medicine are monu- al. Today he is a distinguished dean professor of physiology at Columbia ersity.

r 40 years, as Dean Rusby points out, is been teaching and expounding the of yeast as a natural food-corrective onstipation. And in corroboration, a t survey in the United States showed half the doctors reporting prescribed yeast as the great corrective food for ed intestines and related ills.

ischmann's Yeast is fresh. Unlike or killed yeast, it contains millions of active yeast plants. As these live plants pass through your system they combat the harmful poisons of stagnation and purify the whole body.

Headaches, colds, sore throats, indigestion, nervousness, bad skin and bad breath are sure signs of constipation and run down vitality.

For renewed health and happiness eat three cakes of Fleischmann's Yeast every day, one before each meal or between meals, plain or in water, cold or hot (not scalding). To get full benefit from yeast you must eat it regularly and over a sufficient period of time. At all grocers and many leading cafeterias, lunch counters and soda fountains. Buy 2 or 3 days' supply, as it will keep in a cool, dry place. Start now and know what real health can be!

Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-63, The Fleischmann Company, 701 Washington Street, New York, N. Y.

FROM THROAT TO COLON is one continuous tube. Here 90% of ills start, as intestinal poisons flood the system! But here yeast works, keeping this entire tract clean, active and healthy.

THE NEW KELVINATOR

Brings a new meaning of "QUIET"

1 SILENT POWER: Simple, vibrationless, quiet, even when starting and stopping. You need never give a thought to it.

2 A COLD-KEEPER: A wonderful economy feature of the Kelvinator. Acts as a constant reservoir of cold.

3 A TEMPERATURE WATCHMAN: Your Kelvinator will always maintain an even temperature. Never high enough to permit harmful bacterial growth—never low enough to freeze and spoil your food.

4 ROOMINESS: Kelvinators are remarkably roomy. They have been planned for your utmost convenience. Removable wire mesh shelves. Rounded corners for easy cleaning.

5 BEAUTY: The New Kelvinators are beautiful. Simple, yet distinctive, with a marvelous finish. Fitted with handsome, powerful hardware that will gleam cheerfully through the years.

6 UNUSUAL DESSERTS: Kelvinators are generously powered. They provide an ample supply of ice. And there is also plenty of room to prepare dainty desserts for every meal.

You can't believe your ears when you first hear the New Kelvinator running. It is so quiet that you can scarcely realize that here is machinery that is working. For the Kelvinator engineers have achieved a new standard of quietness.

This quietness is typical of the wonderful perfection in the construction of the New Kelvinators. Dependability, sturdiness, convenience, beauty, long life—all the qualities which have made Kelvinator the accepted standard everywhere, have been developed to an amazing degree in this remarkable new machine.

In truth, the New Kelvinators should be seen to be appreciated. Ask the nearest dealer to explain their many points of superiority. Let him tell you, too, of their remarkably reasonable prices. And of the generous terms on which they can be installed. You will be most pleasantly surprised. Let us send you our interesting, free booklet, "The Effect of Refrigeration Temperature on Food and Health." Simply send your name and address to the Kelvinator Corporation, Detroit, Mich., or to Kelvinator of Canada, Ltd., London, Ontario.

THE NEW KELVINATOR

ELECTRIC REFRIGERATOR

coming husband. There was a look of fatuous pride upon his honest face, and in his arms the finest infant in circulation, tropically clad in a single garment about as big as a special delivery stamp.

Thereupon Nancy's polite little party collapsed in hideous ruin and combustion. Rena Davidge said: "How cunning!" and exploded one of her artificial laughs. Barbara looked at the author of this queer noise and a look of pleasure came upon her tear-stained face. In all her twenty crudely elemental months she had never seen anything like this goggle-eyed creature which emitted fascinating rackets. She stretched dimpled, chubby arms toward the mysterious stranger and fervently cried: "Glue!"

"And then you," said Nancy in the post-mortem, "after all you had been told had to go and hand that baby to Rena Davidge. You didn't even stop to wipe her sloppy face—I mean Babsy's."

"How did I know she was going to kick the lady in the chin?"

Nancy with difficulty repressed a smile; evidently this atrocity was not without its pleasing side. The truth, of course, was that Babsy was simply indulging her new passion for having her foot kissed. She showed speed but little control and the darling foot caught the culture fiend on the chin and jarred her equanimity. Uncle Perry gave a cry of anguish that was practically a groan. He looked at the floor as if hoping that it would open and swallow him up, but the Folger home was not equipped with any such convenience. He just sat and suffered while his half-witted brother-in-law deposited the almost naked baby in his lady friend's arms.

Miss Davidge tried to do the right thing by this wriggling creature, but her heart was not in her work. Barbara reached for her spectacles, grabbed the silverware, tried to help her eat her ice cream. When Nancy removed the offensive infant, Barbara set up a howl and refused to be comforted. She had no interest in mother, father, or Uncle Perry. She lavished her unrequited affections upon the girl from New York. At the earliest possible moment the guests took their departure so that the Folgers could put their pest to bed. Miss Davidge's polite adieu was frosty, and Perry's face bore the look of one sorely stricken.

"It ought to show him what kind of girl she is." Nicholas had removed some of his finery and was now helping with the dishes. "There's something wrong with any woman who doesn't love babies."

"Yes, but look how it proves her theories—how babies destroy culture and civilization. I'll bet she's got Perry tied up tighter than ever. It will be a long time before we see him at this house in ruin again."

It *was* a long time—to be accurate, it was two hours. The last chore had been done and Nancy and Nicholas, tired and depressed, had decided to call it a day when the bell rang and Perry hailed them through the screen door:

"Not gone to bed yet? May I come in?"

"Now, look here, kid," said Nicholas, "if you've come here to bawl us out, you can beat it. Nancy is too tired to stand anything more tonight. I made a big mistake; let it go at that."

"No, no, Nick; it's all right. Everyt

It Even Has That Big Car "Feel"

Body by Fisher

The New Pontiac Big Six has the long, low lines and the graceful proportions of a big car. It has the speed, acceleration and ratio of power to weight that give it big car performance. It has still another big car advantage which is equally important in winning the whole-hearted approval of that great group of progressive Americans who form its market. It even has that big car "feel."

The New Pontiac Big Six has this "feel" because it is powered by a big, new L-head engine with a larger, highly perfected carburetor and because its mechanical features include the famous Harmonic Balancer, a counter-weighted crankshaft, balanced rotating parts, the G-M-R cylinder head, the Hotchkiss drive, noiseless, protected internal four-wheel brakes and others too numerous to name.

Its big car "feel" is one more advantage which is attracting forward-looking people to the New Pontiac Big Six. It is one more proof that now you can *step up* in motor car quality without leaving the low-price field.

Pontiac Big Six, $745 to $895, f. o. b. Pontiac, plus delivery charges.

HERE, thee gets an *extra quart*

WHEN thee sees this sign by the highway, it reminds thee that Quaker State Motor Oil may be obtained nearby. This oil, my friend, will prove a boon to thy motor.

For "There is an extra quart in every gallon." Let me explain this to thee:

Quaker State Motor Oil is put through a special process of refining, beyond the point where the refiner ordinarily leaves off. By this added process a quart or more of material, of little or no value to thy motor, is removed from each gallon. So in a gallon of Quaker State thee gets none of the usual waste, but four full quarts of lubricant—in truth, an *extra* quart!

It will be well for thee to know, also, that Quaker State Motor Oils are made from 100% pure Pennsylvania Grade Crude, the value of which is two to three times as much as that of the crudes from which most motor oils are made.

It is the part of thrift, then, for thee to seek out Quaker State filling stations. At these stations, thee indeed gets more than thy money's worth, and gives thy motor a treat in the bargain!

Quaker State Oil Refining Co., Oil City, Pa.

35¢ PER QUART

Their vacation fare bought this fine car

LAST YEAR the Lymans went to a summer resort on the train. This year the family invested their vacation railroad fare in a good Pledge-backed car and will drive through Canada on their vacation—as well as enjoy short trips many week ends.

Hundreds of thousands of automobiles are being purchased this year by second owners! For the same price, these careful purchasers buy unused transportation at a bargain price. Every car on the street is a "used" car. Don't let false pride prevent your family from enjoying a good car.

Pledge to the Public on Used Car Sales

1 Every used car is conspicuously marked with its lowest price in plain figures, and that price, just as the price of our new cars, is rigidly maintained.

2 All Studebaker automobiles which are sold as CERTIFIED CARS have been properly reconditioned, and carry a 30-day guarantee for replacement of defective parts and free service on adjustments.

3 Every purchaser of a used car may drive it for five days, and then, if not satisfied for any reason, turn it back and apply the money paid as a credit on the purchase of any other car in stock—new or used. (It is assumed that the car has not been damaged in the meantime.)

MAYOR WALKER CHRISTENS AS NEW YORK THRONGS

15 Cars, 19 Pilots Start Gruelling Transcontinental Run

Carry Nation's Good Will Greetings Across Country to Los Angeles' Mayor

60 Goodrich Tires Bear Brunt of Coast-to-Coast Battle Against Roads

Massed thousands craned curious necks and watched in City Hall Park . . . Mayor James J. Walker of New York City, lifted the traditional bottle . . . Fifteen cars, gleaming in new, fresh dress of silver paint, stood waiting, engines throttled down.

Crash! The bottle smashed on the radiator of the foremost car. A cheer rose from thousands of throats.

The Silver Fleet was christened!

Little time was spent in ceremony. Mayor Walker shook hands with the fleet commander. Signed New York's "good will" greeting to the Mayor of Los Angeles.

Pilots slid behind their wheels. Engines hummed a higher tune.

Then, one by one, like airplanes taking off, the cars wheeled into line, swung away on the first leg of a journey lasting many months . . .

Dramatically, thus began the most thrilling endurance demonstration any manufacturer has ever undertaken.

Not a demonstration of cars . . . but of the tires they roll on!

Not a single car . . . but fifteen . . . stock models of the leading makes.

A dramatic performance run . . . to demonstrate stamina . . . wear . . . durability . . . in the face of over whelming odds.

Down the Atlantic Coast to Florida the fleet will swing. Around the Gu to New Orleans. Across Texas, New Mexico, Arizona . . . into Californi

Then back . . . in a zig-zag cours across the country, that multiplies th continent's width many times.

Months of the most gruelling tir punishment the Fleet pilots can find

Through every climate, every wea ther, the country knows. Over road the nation boasts about . . . and over back trails where only trouble is en countered.

Through slush and snow, rain an mud. Ice-sharpened ruts and glassy wet asphalt. Cold and snow in th mountains. Heat and sand in the des ert. Good roads . . . bad roads . . . n roads . . . but always plugging on, de

CRASH! THE FLEET I New York ceremony snapped ju traditional bottle over the Fla

"BETTER GO THIS WAY!" *A native advises a better route . . . but the pilots can't be swerved from their course. A closed road means a tough road . . . so the Fleet rolls on! That's just the kind of going they're looking for.*

THE SILVER FLEET CHEER OFFICIAL SEND-OFF

IRISTENED (above). Here's ore Mayor Walker broke the ip of the Silver Fleet.

erately seeking the hardest test of an and car and tire . . .

And why?

Simply that you and your fel- w motorists everywhere may have ought home to you . . . conclusively! . the sort of stamina that is built to every Goodrich Tire!

That you may follow, month after onth, the record of Goodrich Tires *der far harder service conditions than u will ever have to face!*

That you may see, in short, proof of e unsurpassed dollar value of the es bearing the Goodrich name.

Talk to your Goodrich dealer about the Silver Fleet. Ask him about its schedule . . . when it will arrive in your city. See the same tires that the Silver Fleet rolls on . . . identical casings directly from his stock. Let him point out why Goodrich can undertake such a tour.

Then when the Silver Fleet rolls in . . . be on hand! Pick out the companion car to the one you drive. Talk to its pilot. Watch his demonstration. Ask him about the conditions he has had to face . . . and contrast them with your own.

Lieut. H. R. Schaeffer, Fleet Commander

In the meantime, you can follow the thrilling progress of the Silver Fleet in the pages of this magazine.

The B. F. Goodrich Rubber Company, established 1870, Akron, Ohio. Pacific Goodrich Rubber Co., Los Angeles, Cal. In Canada: Canadian Goodrich Company, Kitchener, Ont.

THREE GOODRICH TIRES to meet your mileage requirements. Silvertown De Luxe, for the motorist who demands superlative style and outstanding mileage service. The famous Silvertown—the standard quality tire of the nation—the choice of millions of car owners. Goodrich Cavalier, a new low-priced, high quality tire for hard drivers and keen buyers. Ask your Goodrich dealer to show you these tires. He carries the size you need in stock.

Have You Tried This *Drugless* Way To Instant Sleep?

Induces Immediate Sleep . . . Makes You Feel Like a New Person All Next Day

YOU fall asleep almost instantly you go to bed. And all the next day, teem with new energy and "pep." You look and feel like a different person.

On doctors' advice, millions employ this new way. For it is as free of drugs as the bread you eat or the milk you drink. And does far more than simply induce sleep! *It rebuilds your wasted tissues while you sleep.*

What It Is

It is called Ovaltine; a scientific food concentrate developed in Switzerland by a scientist of world-fame. You take it in a cup of warm milk at bedtime; a super-delicious drink.

First it induces sleep; sound, natural sleep. The kind that rebuilds and rejuvenates.

Then *while* you sleep, Ovaltine re-supplies your system with the energy lost the previous active day. For it contains practically every building element necessary to life and energy, in a form which the human system can easily absorb while you sleep.

You can take it night after night and not only not form a habit, as with drugs, but build up your health as well.

Do you wonder then that people are flocking to its use? New to America, Ovaltine is being recommended by over 20,000 doctors. Used for 30 years in Europe, its use has spread to over 50 different nations. It marks one of the most important scientific findings of its time.

Accept Test

Doctors urge it not only for sleeplessness, but for all nervous and run-down conditions. They recommend it, too, for nervous, underweight children. Thousands of busy people take it during the day, to relieve fatigue. A few weeks' use will make an amazing difference in the way you feel.

Believe or not what people claim for Ovaltine. *Try it.* Obtain at any drug or grocery store, or use coupon for special 3-day test.

MAIL FOR 3-DAY SUPPLY

Make this experiment. Drink a cup of Hot Ovaltine before retiring, for three nights. Note how quickly you go to sleep; how refreshed you feel when you awaken; your unlimited energy next day; Mail coupon with 10c for a 3-day introductory package.

The Lord of the Air

(*Continued from page 39*)

the latter was, so he declared, a coward and a pirate.

Franklin did not in this matter display the practical wisdom which generally distinguished him. The bald eagle is not a coward. Franklin saw the tiny kingbird attack the eagle with impunity, and he apparently forgot those occasions when he himself had beaten a hasty retreat before an angry bee or wasp. The philosopher was equally unjust when he undertook to apply the principles of human ethics to an animal far removed from the human species, even so highly developed an animal as the eagle. If we do this consistently, we shall soon find that only the weakest and most helpless animals are commendable, since the stronger and abler ones make ruthless use of their strength and speed.

THE eagle is king and he enforces his sovereignty. He is the mighty, the irresistible, lord of the air; and he acts the part, and acts it boldly without apologies to anyone. If we must blame someone for it, we must blame, not the eagle, but Nature herself, who gave the privileges of kingship to the swift and the strong. The larger, more important truth, which Franklin missed entirely, is, of course, that the eagle cannot be conceived of and comprehended within the limits of its natural history.

The eagle, the whole eagle race, has been lifted far above fact, far above biological actuality, by the tradition, the poetry, the immeasurable glamour of all that it has signified in the past. It is not the eagle of the naturalists who sits above our standard; it is the eagle of song and story, the eagle of legend and history, the great bird of proud and dauntless mien which, through many centuries, has typified strength and swiftness and all the virile attributes of the warrior, that mien which for us typifies, above all else, freedom.

Let us, however, get back to the eagle of flesh and blood, the bald eagle as he actually is in life. He, also, is a fine bird though perhaps not so perfect as the sublimated eagle of legend, and it is high time we knew him better. The bald eagle is really abundant only in certain regions generally near the coasts; yet he occurs fairly frequently in many parts of the United States.

There is no well-authenticated instance of a bald eagle's carrying off a child; he comparatively seldom nests on crags (in this respect he has been confused with the golden eagle) but nearly always builds his nest in trees; he does not feed habitually upon lambs and kids, though he has been known in certain thinly settled regions to kill these animals. As a rule his diet consists of fish, varied, especially in winter, with waterfowl such as wild ducks and coots, and he is always more abundant near the sea than in the rugged mountain fastnesses where the average man pictures him. It is not true that eagles disdain all food except that which is completely fresh, or that their refined nostrils cannot tolerate the smell

General Electric presents

the first All-steel Refrigerator

A new small-family model at the very low price of

$215

ANOTHER chapter has been added to the achievements ne engineers and scientists of the General Electric arch Laboratories. The same group of men who, after n years of painstaking endeavor, perfected the her- ally sealed mechanism of the General Electric Refrig- r, have now designed and built the first all-steel re- ator cabinet. This marks the greatest improvement during thirty years, in esign and construction usehold cabinets.

DESIGN—MADE IN EW WAY . . . General ic has made a large in- ent in new machinery. presses had to be de- l and built to cut the bend it into shape and together the folded But it has achieved rpose. Its aim was, by roduction, to build the best refrigerator ever produced and offer it to the small families of America at a price easily within their reach—$215 at the factory.

All steel, with electrically welded joints. Heavy hardware, bolted into the steel. Black faced door edges, self-closing latch, gliders to protect linoleum, and many other unique features.

$215—WITH CONVENIENTLY SPACED PAYMENTS . . . The new all-steel General Electric makes safe refrigeration possible for every home. Only a small down payment is required. The balance can conveniently be paid over a period of time.

FIRST PUBLIC SHOWING MARCH 22 . . . The only way to appreciate the durability and the beauty of this refrigerator is to see it. You will then readily understand why General Electric announces it so proudly and why it has been called "the refrigerator of the future." On display by dealers everywhere on and after Friday, March 22nd. Be sure to be among the first to see it. Write for a descriptive booklet to Section A-4 Electric Refrigeration Department of General Electric Company, Hanna Building, Cleveland, Ohio.

Keeps Hair Neat

Rich-looking — Orderly

IF your hair lacks natural gloss and lustre, or is difficult to keep in place it is very easy to give it that rich, glossy, refined and . . . orderly appearance . . . so essential to well-groomed men.

Just rub a little Glostora through your hair . . . once or twice . . . a week—or after shampooing, and your hair will then stay, each day . . . just as you comb it.

Glostora softens the hair and makes it pliable. Then—even stubborn hair—will stay in place of its own accord.

It gives your hair that natural, rich, well-groomed effect, instead of leaving it stiff and artificial looking as pastes and creams do.

Glostora also keeps the scalp soft, and the hair healthy by restoring the natural oils from which the hair derives its health, life, gloss and lustre.

Try it!—See how easy it is to keep your hair combed—any style you like . . . whether brushed lightly or combed down flat. If you want your hair to lie down particularly smooth and tight, after applying Glostora, simply moisten your hair with water before brushing it.

A large bottle of Glostora costs but a trifle at any drug store.

Try It FREE

THE R. L. WATKINS CO. 29-G-38

tainted meat. On the contrary, both the bald and golden eagles, while preferring their food fresh, often dine upon animals that have been dead a considerable time.

Certain other popular beliefs about the eagle are better founded. It seems to be a fact that the bird lives to a great age, perhaps a hundred years or even more. It is probably true also that eagles mate for life; but when one bird of a mated pair is killed, the other does not lead thereafter a celibate existence, but proceeds to procure a new consort as rapidly as possible. The female bald eagle, by the way, is nearly always larger than the male, though some males appear to be bolder and more energetic.

LEGEND has magnified only slightly the eagle's keenness of vision and swiftness of flight. He may not be able, as the ancients believed, to gaze directly at the noonday sun; but his eyes are marvelous organs, nevertheless, capable of discerning small objects at amazing distances. He is certainly not the swiftest of birds—some of the falcons, for instance, are undoubtedly swifter. Yet he is impressively swift.

Because of his great bulk, the eagle often does not appear to be moving as fast as he actually is traveling. Moreover, unless the occasion demands it, the eagle does not really exert his powers, but is content with patrolling the air or moving from point to point in leisurely fashion. At such a time—and it is thus that he is generally seen—he appears rather slow upon the wing. But when there is need of haste, those great, dark pinions of his, seven or eight feet in extent from tip to tip, can drive him onward with tremendous power. Again and again, seeing an osprey in the air with a fish gripped in his talons, I have searched the sky in every direction for the osprey's overlord and have given up the search, convinced that there was no eagle within miles. Then, in a few minutes, I have heard the osprey scream and, looking up, I have seen the king coming—coming from some watching-place in the skies beyond the range of my vision, coming with such astonishing speed that within a period of minutes his vassal is overhauled and the booty won.

It is always, no matter how often witnessed, a thrilling sight, this encounter of the eagle and the osprey in the high air. The osprey suffers no harm except the loss of his fish, a loss which, as a rule, he is easily able to repair; and the spectacle of the king of birds in the full sweep of vigorous and triumphant action, displaying with magnificent abandon those splendid powers to which he owes his kingship, is undoubtedly one of the most impressive in the whole panorama of the feathered world.

The osprey is himself a large and able-bodied bird, one of the largest and finest of the hawks, endowed with no mean powers of flight; yet he has no chance in a straightaway race. If, as generally happens, the osprey circles upward, the eagle mounts still faster, driving himself higher and higher, sometimes with powerful wing-beats, sometimes with scarcely a discernible movement of his pinions, as if climbing an invisible spiral stairway to the skies. The osprey often drops his fish promptly, but at other times there is a fine aërial display hundreds of feet abov the earth, the big hawk dodging an twisting, the eagle swooping and darting threatening with beak and talons, and last compelling his vassal to relinquish th prize.

Then comes the climax of the whol performance. The eagle's speed in straightaway race is as nothing compar with the speed of his plunge, his "stoop He does not merely fall through the a but, with wings half closed so that he a sumes the shape of a gigantic spearhea he drives himself down a steep inclin overtaking the falling fish almost as if were suspended. Sometimes he miss and the fish drops to the ground, to be covered there; but more frequently t great bird, with admirable skill and a dress, snatches it out of the air.

This maneuver, the actual seizing the fish, is completed so quickly that oft the keenest eyes cannot distinguish ju how the thing is done. Occasionally t eagle is seen to turn belly-upward in t air, just under the falling fish, his tal extended above him; sometimes he see to drop upon the fish from directly abov more often he drives himself obliqu across the line of the fish's descent, body slanting sharply, and seizes t prize with a swift outward thrust of talons. On still other occasions, when t fish has been surrendered by the osprey a great height, the eagle's moveme appear deliberate, almost leisurely. sweeps down to the prey then in wide or in long, pendulum-like swoops, hurriedly, as if he had all the time in world at his command; and in these cumstances he seldom misses his str although sometimes the fish is only a sh distance above the ground or the w when he seizes it.

DURING the nesting season most of prey taken by the eagle goes to the young birds. At other seasons sometimes deposited in the aerie, whi apparently made use of, when unoccup as a storehouse for surplus food. aerie of the bald eagle is in keeping his majesty and dignity. He mates life, and he builds his home, not for a son, as do most other birds, but for a time. There is a nest in Ohio which been occupied continuously for more thirty-four years and one in South C lina which was in use for more than h century.

The nest is added to with each of occupancy until its size bec enormous—a huge mass of sticks, sods, bark, moss, and humus, weigh ton, or even more, and measuring six or seven feet in height and pe eight feet in width. Nests eight feet and twelve feet across the top have recorded; and nearly always these mendous aeries are situated in the t tall trees, either living or dead, so they dominate the country for around, like the castles of feudal b

The eagle's home is his castle seems to feel a genuine affection guarding it with the utmost vigilanc returning to it often even after the e which are generally two in number, gone forth to make their own way world. d eagles offer no effective resistance their nests are invaded by man. fact is, of course, that what appears cowardice is often simply the result e eagles' accumulated experience, teaches them that man is an enemy st whom it is useless to contend. are many cases on record in which ged eagles have forgotten the man- which even the most powerful of wild als acquire so quickly in contact with zed mankind, and have defended nests and their young with the most less resolution; while a wounded brought to bay will fight for its life a furious courage scarcely surpassed y other living creature.

LL regions inhabited by eagles, one rs various stories about them. It is ary, of course, to separate the wheat the chaff. Years ago a negro fisher- old me a story which he could hardly invented.

was fishing from his small rowboat oastal inlet when he saw an eagle and overtake an osprey which was across the inlet with a fish in his tal- The birds were not high above the and the osprey surrendered his fish y; the eagle plunged for it, but so was the distance that the fish struck ter before he could seize it. For a nt the eagle hung poised above the hen, half closing his wings, he shot ard. Through a shower of spray gro saw the great bird's dark pin- esperately beating the air; then, ly, they vanished. The fisherman en many sharks, both large and swimming near his boat that morn- le believed that the eagle, search- water for the fish that had just into it, saw a dark object close to face and, plunging instantly, struck ws into the back of a large shark s carried down.

April morning I saw an adult bald ying above the marshes, perhaps a d feet in the air, heading northeast- Half a mile away, three beautiful herons, or egrets, were flying in a ly direction at about the same Their course presently brought cross the eagle's path, and, seeing proaching, they suddenly changed ection of their flight, in evident d confusion, fleeing eastward with wifter wing-beats.

eagle immediately swung toward nd followed, overhauling them First one heron swung aside, other, the eagle pursuing the third, ad now changed its course again it was heading northward. Over- he fleeing white bird almost as if tanding still, the eagle struck at it ngs and talons, while the heron with every evidence of extreme then, straightening to an even eagle calmly continued on his

was a queer performance, but no than others in which eagles oc- y indulge. A friend of mine, a great blue heron flying across a arbor, saw a bald eagle leave its a tall stake in a marsh and go in of the wide-winged, stately bird. e easily caught up with the heron ck it a severe blow, so that the squawked with terror; whereupon the eagle turned and flew back to his watching-place in the marsh, leaving the heron to continue its journey with no other injury than that which its dignity had suffered.

Occasionally, however, the eagle dines upon heron. Why does he not prey regularly upon these slow-moving, peaceful birds, which are, in many regions, among the most abundant inhabitants of the eagle's kingdom? The heron's long bill is his only weapon, and it seems unlikely that he could maneuver this with sufficient quickness and power to repel the eagle's attack. Yet, as a rule, the eagle pays no attention at all to the herons.

There are other puzzling questions which will occur to everyone who studies the bald eagle in his wild state. Like many others among the larger birds of prey, he is often annoyed by crows. Sometimes, with a quick, threatening gesture, he puts a sudden end to the antics of the black rascal, but often, rather than take the trouble to do this, he leaves his perch and goes to the greater trouble of flying perhaps a mile or several miles to a new lookout station.

The eagle is amply able to catch his own fish, yet he very seldom fishes for himself. Nearly always he prefers to have the osprey perform this service for him, although the pursuit of the osprey through the air and the swift aërial maneuvering necessary for securing the prize involve, one would suppose, a far greater effort on his part than the act of fishing would require. He is not only swift, but also exceedingly adroit and agile in the air, as his skill in catching the fish surrendered by the osprey proves; yet he comparatively seldom uses his powers to kill game upon the wing, though he kills many ducks and other waterfowl upon the water.

THE prevailing opinion among duck-hunters is that the eagle is not swift enough to catch an unwounded duck in full flight.

Apparently the duck squadrons know that for them there is safety in the air and deadly peril on the water. One of the most stirring sights in the whole world of bird life is a great, open lagoon or broad estuary where thousands of ducks are riding on the waters at the moment when a hunting eagle appears upon the scene. Far off one can hear the drumming thunder of innumerable wings as the armies of the wild fowl rise from the surface. Squadron after squadron, regiment after regiment, they lift themselves into the air as the eagle comes on—a vast multitude fleeing from one bird.

The spectacle of their flight, the surging, palpitant clamor of their hurrying pinions, is perhaps the most impressive of all possible tributes to the power and majesty of the lord of the sky. They know that when once they are fairly on the wing they are comparatively safe; but if they wait too long, if the eagle reaches a position directly over them, their doom may well be sealed. If there are water-growths near by in which they can hide or to which they can cling for a while beneath the surface, they may yet escape; but in clear water, free from weeds or grass, the duck that lingers too long in the pathway of the eagle has little chance of life. He dives, but the instant he comes to the

surface the eagle swoops at him. Down h must go again before he can fill his lung with air; and so the grim game continue until, exhausted at last, he feels t sharp talons fasten on his body.

Seen thus in vigorous action, pursui his prey and relentlessly hunting it dow the bald eagle is a fine example of t great order of birds to which he belon the Raptores, or hunters. Yet he is at best, I think, in those cool, soundless s tudes of the upper air, where on brig windless days he takes his ease, comp ioned only by the clouds, soaring in w circles for hours without a movement his widespread pinions.

I can imagine no nobler spectacle the realm of birds than four or five ea (seldom in most regions may a grea number be seen together) circling at v ous altitudes far above the earth, t dark wings sharply outlined against blue of the heavens, their snowy he and tails shining in the sun. No one expressed more eloquently than Hud the sublimity of the great soarers, t place in the panorama of nature, their peal to the mind of the beholder:

> Seen on high in placid flight, circlin and ascending, with the sunlight fallin through the translucent feathers of the broad wings and tails, they looked larg indeed . . . They were a feature in t landscape which made it seem vaster a the clouds higher and the sky immeasu ably farther away. They were somethi more: the sight of them and the sound their shrill, reiterated cries completed a intensified the effect of Nature's wildn and majesty.

The bald eagle does this for us other bird of our skies, except perhap golden eagle, can. There is some else that he should do for us—he s awaken in every American who sees sense of the greatness and the pow this nation whose emblem he is.

HE IS our national bird, the sym America's freedom; yet in most of the country a desultory but destr war is waged against him, and ye year his numbers diminish slowly, s now he is rarely seen in many where once he was familiarly k There is no good reason for this Except in Alaska, where his relat the salmon fisheries is a subject troversy, the bald eagle is an harmless species, so far as man cerned. He means something t something of greater value than t lambs and kids that he kills in a few populated districts, something of importance than the toll he ta waterfowl, a mere nothing compar the slaughter made by man.

Surely it is time the American gave him the hand of friendship. states of the Union he is suppose protected by law, but the law is to ineffective, and the killing of eag on. What we need now is a natio ing that will make the wanton kill American eagle a deed to be ash Then, and then only, shall we perf duty to our national bird. Only t we make certain that to our c children in the years to come the can eagle will be something mor name.

WORLD'S GREATEST SEDAN VALUES!

GREATER BEAUTY ✓ LARGER BODIES

WITH all their many improvements, the new Superior Whippet Four and Six Sedans are still notable for their startling low prices. They hold their place as the world's leading values in four-door enclosed cars.

Longer bodies, graceful lines, rich, distinctive colors, higher radiator and hood, sweeping one-piece full crown fenders and perfection of detail mark the new Superior Whippet as the style authority created by master designers.

As the mechanical triumph of leading engineers, the new Superior Whippet possesses the important advantages of silent timing chain, full force-feed lubrication, aluminum alloy invar-strut pistons, remarkable new "Finger-Tip Control"—and, in the Six, a seven-bearing crankshaft. Long service will prove Whippet's dependability and economy of operation.

"Finger-Tip Control"

—a single button, in center of steering wheel, starts the motor, operates lights and sounds horn.

WATER BUCKET SLAVERY

end it with

RUNNING WATER

for only $70

In the home *without* Running Water the hands of the women are shackled to the slavery of pump-and-carry drudgery. But fortunately, the price of freedom need not be a serious consideration for any home with electricity. No longer is Running Water under pressure a costly luxury.

Cash f.o.b. factory, for 210 gallon per hour size. Complete with motor for 60 cycle or direct current.

A complete Electric Shallow Well Home Water System can be had for only $70. Deferred payments make the purchase still easier. Within the handsome blue lacquered enclosure are pump, motor, tank and automatic switch. No moving parts exposed—inquisitive fingers are safe.

Why deny yourself this necessity longer? Take the first step toward a better home now! Use the coupon. Nomatter what your water service problem, Fairbanks-Morse engineers will help you.

$70 for 210 gal. per hour size. A 420 gal. per hour size for $100. Both of these systems for use where source of water is not more than 22 feet below the unit. Other Fairbanks-Morse systems provide running water regardless of source of supply or type of power available.

My Little Place Away from It All

(*Continued from page 65*)

about the premises making estimates that I had a sinking feeling every time I thought of the initial cost, to say nothing of the upkeep.

The neighbors thought we were about to build an apartment house or business block, and became nervous.

And every week-end from Washington's Birthday until May 15th I had to drive up to check up on the workmen and see how the remodeling was getting along. This meant two days out of every week were a total loss to me in a writing way, no matter what they may have done for me as a student of building. Many an idea for a story had to be put aside because of a sudden decision to cut a new door, put in an extra window, or allow for another clothes closet. It was one harrowing spring.

When a man is having a place remodeled he is not supposed to stand around doing nothing. It is not good ethics to gape at the workmen. Etiquette requires that he help a little. Many a resolution to do some writing was sidetracked by a sudden impulse to help a plumber tear out a set-tub, hold a plank for a carpenter, or stir the white lead for a painter.

But the time I gave to general jobbing and repairing before I occupied the house was as nothing to what I spent in tinkering around the place after I moved in. I have become a skilled porch furniture painter, iron fence decorator, window-rattle remover, floor varnisher, stepping-stone-path layer, and leak-in-the-roof detector. No man has ever really gone into painting in a serious way until he has tried to paint a rattan rocking chair, *chaise longue*, or wicker table. You can paint a barn or house and skip places here and there, but you can't skip any places on porch furniture and get away with it.

A GOOD deal of time and energy was wasted, too, in trying to do the right thing by a flagpole. There was a flagpole, a perpendicular one, attached to the front of the house when I bought it, but there was no rope through the pulley. And a flagpole without a rope is not much use. It seemed a simple thing to "shin up" the pole from an attic window, run a rope through the pulley, and be all set for a flag raising on national holidays or in the case of war, riots, or insurrections. But flagpoles are deceptive. You don't know what real hazard is until you have tried to shin up a flagpole, a none too stout flagpole wavering in the breeze, and have suspended activities when about half way up in order to look around and survey the situation.

I became quite an accomplished flagpole sitter. On one occasion when I climbed a bit higher than usual and then heard the pole crack under my weight, I sat there in terror and suspense so long that I threatened Shipwreck Kelly's record.

My sincere belief when I bought "Big Yawn Manor" was that I needed it in my business. I felt it would give me fresh viewpoints, a zest for work, and all that sort of thing. My plan was to do my daily newspaper feature in an hour or two each morning, dash off a magazine story by noon, and, between swims or golf strokes in the afternoon, think out the details of a drama. But in "the little place away from everything" nothing of the came to pass.

It was a real struggle to do the newspaper feature, especially in fine weather. One of the first things Mrs. Phillips had done at the new place was to pick out a room for my study. It was very thoughtful and very nice of her, but you know how wives do those things. This was the room which would serve no other purpose very well. It was in the back of the house over the kitchen. And it was my impression that someone—the iceman, the vegetable man, the traveling butcher, the Armenian lace peddler, etc.—was eternally pounding on the kitchen door.

I DECIDED it would be more inspiring to work outdoors. My plan was to take all the morning newspapers out on the rocks and look them over for news stories that would lend themselves to satire. Then I would make notes, after which I would come in and feed them to the typewriter. The plan sounded well—but! Opening newspapers in a shore breeze is no easy matter. It takes practice. For the first week or two I was kept busy chasing newspaper sections over rocks and up and down beaches. When I captured them I would return to find that my notes had blown away, and that the dog was playing with my pencil. After a time I got so I could master the papers in a wind, but this business of working in the open was never what I had expected it to be.

Of course, my system was all wrong. I would read a paper, drop it, and dig some bait; read another paper and do a little fishing; make a few notes and then take a swim; go into the house and begin typing my article; and then heed an invitation to take a little spin in a motorboat. There was no sustained effort. Instead of a daily feature being done in the forenoon as it is done in the city, it took me most of the day. My business suffered, and I did my fishing and swimming.

It began to dawn on me around Labor Day that I had developed into a hit-and-run writer and that the summer had been a bust in the matter of bigger and better things. Besides, I didn't feel any too well. The constant strain of trying to avoid what had begun to tell on me. I had that hunted look of the man who has spent months trying to run away from a big responsibility. It was all very pathetic.

It suddenly struck me that it would be a fine idea to get back to the city and do some work.

But presently I was back in the city, from the birds and bees, back to the four-room apartment commanding no view of the water, bathing girls, yachts, or porpoises at play; back to the city home where a beautiful sunset can be seen only by an elevator trip to the twenty-third floor, and the repair work is done by a janitor. A few days I was my old self. I soon got to like the idea of work again.

It's a little place far, far away from the little place away from everything." That is the swell part of it.

THE APPLESAUCE TWINS

–make painting a farce!

THE latest fashion in "cheap" paint applesauce is out. It goes like this . . .

"Our price is *very low* but our paint isn't 'cheap,' because, etc., etc., etc., etc."

Don't be fooled. A *low-price-per-gallon* means a "*cheap*" *paint*—a *skimped* paint—a *terribly costly* paint—*every time*. And there's no "because" that can explain it.

Only one thing is more costly than "cheap" paint. Just let "Cheap" Paint's twin brother, "Cheap" Painter, in on the deal.

There you have a combination that will make a farce of any house paint job.

"Cheap" Paint is costly enough *alone*, as thousands of home owners now know. But when you add the careless preparation and unskilled daubing of "Cheap" Painter—you have the *costliest paint job in the world*. Don't let these "Applesauce" Twins fool you. Don't throw good money away.

There is only one way to save money on a house painting job . . . use the *best* house paint and let a master painter do the work.

Fine old SWP House Paint, for example, is made of superfine materials. It may be a little higher priced by the gallon, BUT—for every 11 gallons of "cheap" paint required, *only 7 gallons of fine old SWP are needed*. That 4-gallon saving makes SWP cost about the same as "cheap" paint, on the wall or by the job.

The cost of any paint job divides about like this: *One-third* for paint. *Two-thirds* for labor.

Don't try to save money by hiring a "cheap" painter. His careless work *will cost you dearly—in repainting expense.*

Don't engage a *master* painter and then ask him to use "cheap" paint. With all his skill, he can't make "cheap" paint *last*.

It quickly cracks, chips, peels. The *cheap colors* fade. Every year or so it has to be "repainted" at heavy expense.

YOU CAN'T PAINT A HOUSE WITH APPLESAUCE

..for ECONOMY

use the best paint and engage a good painter

he only combination that will *save* oney for you is a *master* painter d *the best paint money will buy.* The master painter is an artist. e is trained. He knows his profes- on. He uses good equip- ent. He prepares the sur- e carefully. He applies e paint skillfully. He is nscientious and takes pride his work.

So, when a master painter plies fine old SWP House int for you it assures a ndsome job — *at lowest nt cost per square foot of ll*—a finish that will serve many years — *at lowest t per year.*

n other words, fine old SWP and laster Painter are the most eco- nical combination of all.

The "Master Touch"

u may hear arguments as to for- las — meant to lead you astray. ust remember this. The SWP nced formula has been openly ted for years. Anyone can have et the characteristic qualities of P have never been duplicated. y? Because formula is only *one* or. The *quality* of *ingredients* is lly important. These might be icated and still SWP would re- a unchallenged. *Because* there e element in fine old SWP that r has been and never can be ed successfully.

S-W Paint Products are sold the world over under this famous trade-mark.

It is the *"master touch"* of the scientific men of Sherwin-Williams.

These laboratory experts are to "paint" what Edison is to *electricity*—what Marconi is to *wireless.*

Their "master touch," which makes SWP House Paint different from all others, is a *human* ingredient, impossible of successful imitation or duplication.

Only Sherwin-Williams has it. Only SWP House Paint users benefit by it.

Before you buy any "cheap" paint, visit Paint Headquarters, your local Sherwin-Williams dealer. Get his advice and material estimate *on the job.* Compare it with "cheap" paint.

And remember, that what is true of house paint is true of any other *exterior* or *interior* finish. It must be *good* to be *economical.*

See Paint Headquarters and save money

If you do not know a reputable painter who will apply fine old SWP House Paint for you, write us. We will send you the name and address of one who will.

We will also send a free copy of our famous Household Painting Guide, which saves costly mistakes in painting.

—and Easy to Park Anywhere

TODAY'S traffic and delivery problems have developed the Harley-Davidson Package Truck. It safely outstrips all other delivery vehicles through street and highway traffic—and it can always be parked right at the delivery point.

Double parking and long carries are eliminated—more deliveries per day are made—and at a far less cost per call and per mile. Running cost of Package Trucks averages less than 1/3 that of any car or motor truck.

If you have a delivery, service, or *trade extension* problem, let us show you how the Package Truck will solve it—save you money—and advertise your business.

Call your local Harley-Davidson Dealer for a demonstration. Mail the coupon for illustrated data.

HARLEY-DAVIDSON MOTOR CO. Milwaukee, Wis.

Rapid growth of demand for Package Trucks has created great sales opportunities for Harley-Davidson Dealers. Write for Franchise Proposition. Address Desk A1.

The Bomb That Blew the Movies Upside Down

(*Continued from page 49*)

must be trying to drive people out of the theaters!" she cried, in a voice that was half scream, half sob.

"We're trying to pull 'em in, baby," he retorted. "You dolls have gotta learn something, and that is that yer pans ain't what they was. When the folks out front hear you begin to talk, they forget about those beautiful eyes of yours and lissen to what you're saying. Your little friend may not have the classy looks you got; but she can talk rings around you!"

THERE was a wild scurrying around to see how one could master the art of proper pronunciation. Many wept when they found that no amount of training could take the place of proper laryngeal equipment.

A new business sprang up in answer to the demand. All over Hollywood were shingles reading: "School of Voice Culture"; "We Teach Dramatic Art." Their number increased until they had a separate section in the local telephone book!

Teachers as well as students soon found that it took both acting ability *and* brain to play in the Talkies. There wasn't time to train people. The public wanted speaking pictures and clamored for them.

What really saved the day was that there were a good many real actors and actresses in Hollywood—men and women schooled in the best stage traditions—though they represented about one half of one per cent of the total number appearing on the silver sheet.

There was Pauline Frederick, who had been famous on the New York stage two decades ago and had also gone through a career in the movies. She was no longer a headliner. Now, suddenly, she found herself in demand.

Conrad Nagel, son of a Hollywood physician, had long been known in Hollywood for his readings of poetry. He jumped into immediate prominence in the Talkies. Fanny Brice was imported from New York for "My Man." John and Lionel Barrymore, famous stage folk, the former noted especially for his fine voice, promised to win new laurels (and bank accounts) in the Talkies. The bidding for their services was said to be comparable to the Coolidge bull market in size and violence!

Scouts rushed to New York for more talent.

The country began to ask what Hollywood had been asking itself for months: What would Doug and Mary do? How about Charlie Chaplin? Would the big movie stars fall into line?

None knew. Probably the best answer was that the Talkies would develop their own Dougs and Marys, their own star comedians. Some men and women would have *voice personalities* so appealing, vivid, pathetic, comic, and striking that the public ear would be attuned to their latest *bon mots*—spoken, of course—in all the theaters of the land.

Three disputes raged violently about who would make the ideal Talkie actor. One argued that the movie veteran was best because he or she had learned all the tricks of the film trade. Another insisted that a combination of legitimate and movie actor was best—such as the Barrymores are. Still another loudly shouted that movie experience was a liability in the Talkies.

Another storm arose when it was discovered that the new Talkie used a small cast. Only a few could speak on the screen in any one picture. "Why pile up the overhead?" said the producers. Singing extras were picked from choirs and choral societies. It didn't make much difference what they looked like so long as their voices were all right.

The traditional Screen Test had given way to the Voice Test.

Meanwhile, the battle against noise was on—that is, noise in the studios where the Talkies were being made.

This was a body blow to the red-blooded director. For years he had thrived on noise. "*Music! Action! Camera!*" he had thundered for years. "*Where is that blankety-blank script!*" he loved to roar. And now they were going to choke him off!

But there was no other way. The very electro-mechanical efficiency that had made the Talkies possible, now began to make them impossible! All sorts of crazy noises were caught by the delicate ear of the recording mechanism.

Noise was anything that you did not wish to record. Sound was what you recorded. There were two kinds of noise "*surface* noise," made up of all sorts of microscopic sounds, partly electrical and partly mechanical; and "*spot* noise" made up mostly of avoidable sounds, such as coughs, footsteps, automobile horns, and the thousand other accidental noises that might occur around a studio.

Even the camera had to be squelched. Its musical whirr had not intruded before. Now it was like the rumble of an express train rushing through a tunnel.

A separate sound-proof booth was worked out. Early recording apparatus had had camera and recorder in the same booth. Now they were put far apart; but their mechanisms still had to be kept perfectly synchronized.

Other noises had to be hurriedly eliminated by imposing a severe military discipline upon the whole studio. Even the uneasy shuffling of property men was wholly stilled.

THE Talkie studio became a sepulcher during the precious moments when actors spoke their pieces.

One day the camera booth's door became unlatched during the recording, and the sound of the camera spoiled the whole take. After that they locked the precious camera man in!

"Surface" remained the biggest problem of noise. This consisted of echoes, resonances, hollowness, strange breathings, and other ghostly whispers that continued to pry their way into the precious record. Let the public once hear of these defects and the Talkies were doomed.

He Tried Home-Study Training

In Seven Years It Multiplied His Yearly Income Seven-fold

Seems too good to be true—that a man can double his income just by devoting a few spare hours each week to home-study training—

"But—maybe it *is* true," said B. J. Mertz to himself—*and within seven years home-study training had increased his yearly income better than 700 per cent!*

Mertz was principal of a rural high-school in Texas, at $80 a month, when the idea came to him to enroll with LaSalle for training in Higher Accountancy.

Upon completing the course, he first took a place as Assistant Bookkeeper, in Chicago—then joined a firm of Certified Public Accountants, chiefly to get experience. Then he became Office Manager and Acting Secretary of a foundry in southern Ohio. *Already—in only four years—his salary had increased 500 per cent.*

Today, he is Comptroller of the Buckeye Union Casualty Company, Jackson, Ohio, and in addition conducts a private accounting practice which brings him back the entire cost of his training every month in the year.

You Have the Same Good Opportunity

Why not resolve just to *double* your salary? Get the training—grasp your opportunities—and the future will take care of itself!

Two books placed B. J. Mertz on the path to greater earning power. They are "Ten Years' Promotion in One"—and "Accountancy, the Profession that Pays." LaSalle will send them to you *free.*

You want to make more money—but are you willing to do your part?

Your biggest opportunity is as near you as the point of your pencil. If you are determined to make progress, clip and mail the coupon NOW!

— — — *Find Yourself Through LaSalle!* — — —

LaSalle Extension University

The World's Largest Business Training Institution

had to build new sound-proof studios. An entirely new kind of structure was needed. Whole new sets, staffs, methods, and principals were rushed in, while most of the old was unceremoniously rushed out.

Strange curtains had to be hung in strange places throughout the studios. Arc lights were replaced by incandescent lamps. Obscure interferences between electric currents had to be rectified.

Another unforeseen horror was the microphones through which speech or music was taken. Actors could no longer get by with pleasing gestures. They were "slaves of the mike." Mikes had to be hung all over the place. An actor had to be sure he was in the right position for his words. If he were a foot or so to one side, his recorded voice would sound as if he were speaking from the bottom of a well.

In some studios red spots were painted on the floors so that an actor would know just when and where to speak. This was painful for the ardent lover who was supposed to rush into a room and exclaim: "Darling, I'm here at last!" He had to be standing on exactly the right spot each time he spoke.

Of course, mikes were usually above the picture line of the cameras.

But sometimes the ceiling of a room had to be shown, or even some higher places. All sorts of dodges were then resorted to. Special mikes were built in the form of telephones, vases, and other pieces of furniture.

A TOUGH mechanical task daily tormented the studio helpers. This was the cruel necessity of keeping the camera and sound apparatus in step: "*synchronization,*" it is technically called. The sound part of the mechanism was like a phonograph. It had a wax disk on which was recorded the Talkie.

In the past, synchronization has always been the will-o'-the-wisp of Talkies, even when one ignored the mechanical sound of the voices. It was easy to get the scene and sound somewhere near together. But so acute is the perception of the human ear and eye that an audience can detect the slightest variation between a screen speaker's lips and the sound he or she is supposed to have uttered.

Speed ratios of making the two records were simple enough. The wax disk went at a speed of about 100 feet a minute under its vibrating needle. The film took about 1,440 pictures in the same period of time. But a cameraman who cranked 1,600 pictures one minute and 1,200 the next would soon have the male characters speaking with female voices!

It was evident that the crank had to be taken out of the hands of a man and turned over to a motor which ran at the same speed as the recording instrument ran. The cameraman was furious.

Furthermore, the wax record and the film had to be started at exactly the same instant.

"We began to wish we had never heard of talking pictures!" one of the men who worked with them in the early days feelingly told me.

"It was even worse when we realized that we had to cut and splice our film in spots, and yet not break the synchronization of sound and scene."

Ever since the beginning this possibility had been hanging over the heads of the Hollywood producers like the swor Damocles. For years there had alw been some editorial revision of a film the last minute. But with the Talkies, those who made them couldn't bring themselves to face w was to them an unsolvable problem.

Then came the day of reckoning. morning an assistant rushed up to director waving a yellow telegraph bl

"They've done it!" he cried.

The director, like all who were ha anything to do with Talkies at the t was pretty jumpy. "Done what?" exploded nervously.

"Censored that last film!"

The director collapsed into a chair. had been so careful, so painstaki meticulous not to tread on anyone's in any of the Talkies he had made. now some censor had said it was n sary to cut a piece out of the film!

"Throw it all away," he almost sob

It looked as if that were the only t to do. You could cut film by snippi with shears and gluing the ends toge But you couldn't do that with a wax di without absolutely ruining it.

There were half a dozen confere Wild, pleading messages were shot and forth across the continent. But purpose. The censors stood their gro

The engineers stood their ground, There were limits to what science achieve, they said curtly.

The only thing to do was to again—throw about $200,000 wor production into the ashcan and ma over!

But movie producers were use fighting. After the first shock, they their bloody heads, so to speak, an them together in an earnest huddle

They decided finally that the only out was to use a part of the original as far as it was good, making it reco a new disk just as if it were the actor musicians; and then, at the critica ment, break in with the real thing

"Don't try to kid us," laughe engineers. "It just can't be done!"

But it was done!

THEN came still another solar blow:

"*Sound film won't work in big th What do?*" was wired from the dem New York.

"You see," my informant told m were still learning about synchroniz Sound travels at about 1,100 fe second; light at 186,000 miles per s In large theaters the vision of movi reached the back rows before the reached them.

"Maybe some day we shall have of accurately remedying this defect now the only thing we can do is to g big houses special prints, synchroni that they will sound right to those in the middle of the house."

During all this technical strug even more vigorous battle was go behind the scenes between those str to control the new Talkie industry.

When fifty movie magnates, h heavy-weights of the huge film field to gird their loins for battle the seismic tremors throughout the h world.

"Vitaphone is a success, financ well as artistically!" almost panted

"'Our Investment in friendships' *we call our* Second Car"

"TWO YEARS ago my husband gave me a car of my own," a woman writes us. "Of course, I was thrilled at possessing it, but I never dreamed how much happiness it was to bring.

"Ever since we have been married we have lived on the outskirts of Cedar Rapids. Having young children, I was almost confined to our own yard after my husband drove off to business. I made few friends. I could not get to town for club meetings, and I think I missed most of all the activities at the church. I envied the families with a second car.

"Now, after having my own car for two years, I am a different person. I am active both in club work and at the church. Talking and sewing with other women, hearing their problems, telling them mine, has given me a new point of view. We all get so many ideas, such rest and stimulation from these visits that we go back to our homemaking with light hearts.

"My husband says that his own car is a tool, without which he could not do business. But my car he calls an 'investment in friendships.' And that's just what it is!"

Two-car ownership has come fast. Three hundred thousand two-car families ten years ago; more than three million today. Within the General Motors line you will find any combination of cars your family may require —with the GMAC Plan offering a comfortable and convenient payment method. In addition, General Motors dealers offer a wide choice of used cars which also may be bought on the GMAC Plan.

Warner, when, in 1928, he emerged triumphant from the battlefield strewn with the débris of commercial warfare. "The result has been an enormous expansion in Vitaphone installations."

But he didn't tell the inside story; probably it will never be told. He didn't reveal the fact that even after the Talkies were a success in the New York theaters, they seemed doomed to failure because there were no theaters elsewhere with equipment for showing them.

He didn't say that he had been promised Talkie projectors for $5,000 and the price was jumped overnight to $25,000, so that the theater owner couldn't afford to buy one.

He didn't say that $2,500,000 had already been expended on underwriting the equipment of 100 theaters so that others might "warm up" and buy on their own hook. He didn't say that he nearly had a nervous breakdown when by superhuman efforts he managed to float a $4,000,000 bond issue and borrowed $1,000,000 from the banks besides, in order to keep the ball rolling.

He didn't say that after he had done all this he *still needed $4,000,000 more!*

He didn't say he needed this huge sum because no matter how good his Talkies were, no matter how industrious his directors were in Hollywood, the productions were useless if there weren't theaters equipped for giving Talkies to the public!

Harry Warner didn't tell these facts because it wasn't a good thing for the public to know them; several times he was almost sunk—but up he came again.

In fact, the public never even knew how and when the Titanic struggle began. It really began with the first Talkies back in 1889!

EDISON had invented his phonograph in 1886. He wanted pictures to go with it. Realizing that he ought to have about forty pictures to the second to make them look right on a screen, he invented a camera to make them. He then developed the "Kinetescope," which used a new product called "film" made by a young man named George Eastman up in Rochester. He synchronized his two machines, gave his customer an ear-tube and a peephole, and produced a talking picture.

But to everyone who heard these early Talkies the idea was anathema for the rest of his natural life!

Twenty years later a vital experiment was being carried out by the engineers of the Western Electric Company. This is the manufacturing subsidiary of the great American Telephone and Telegraph Company. In 1912 its engineers were trying to connect San Francisco and New York by telephone. The line had to be ready by the opening of the World's Fair at San Francisco in 1914 or 1915, to celebrate the completion of the Panama Canal. The great handicap to the plan was that by the time a voice got through to, say, Chicago, it had become so weak that it couldn't be heard. It had to be automatically boosted if it were to reach to its destination.

This boosting was accomplished by the use of vacuum tubes such as are used on our home radio sets. "Step-ups" they were appropriately called. When the dwindling voice of the telephone speake passed through them, it was re-born to tone so sturdy and clear that it was read for another thousand miles or so of wire

Strange to say, this same principle wa discovered at almost the same time in th laboratories of the General Electric Com pany in Schenectady, New York.

This "stepping up" device, couple with our war need of chasing submarine under water, induced a new and intens curiosity about *sound* among physicists

As a result of this curiosity, ther followed two inventions of far-reachin popular importance, inventions that mad Talkies finally possible: the first was th Western Electric *Public Address System* which enabled a speaker's voice to b magnified electrically and reach a hug audience; the second was the *Electric Recording Mechanism*, a mechanism fo transmitting these same electrical vibra tions to a needle that recorded them i soft wax, just as air vibrations (sound had for years been recording them for th ordinary phonographic disk.

THIS was in 1924-25. Electro-mechan cal recording and projecting of soun waves was possible at last.

Engineers and financiers saw at on that if a movie camera were run in ste with the apparatus, a real talking pictu would be possible. The film could b shown and the records played (with radio horn out of sight under the screen and an audience would get the effect visible actors speaking.

But the motion picture people wou have none of it. The idea was peddle about to all the more important of ther it won not a spark of response. "Talkin pictures are the bunk!" was the unanimou response.

They wanted them to be the bunk. was easy to see what an explosion the would be if Talkies went across.

Then the Warners put them across!

In December, 1926, the leading sile film people saw that they, too, would ha to get on the band-wagon. It was like t World War: neutrals couldn't keep ou Talkies had to be faced.

Very soon Paramount, Universal, Fo and others had to begin "sound" pictur as they called them; they couldn't ma them talk yet. Meanwhile, Gene Electric, with the Radio Corporatio came out with a Talkie apparatus th put the talk on the film instead of on disk. Fox began to use his Movieto There were Phonophone, Paratones, other inventions.

But the dramatic part about the wh situation was that in 1926 only *one* co pany was able to make good Talkie only one little group of men had dared risk their fortunes, even their lives, on extraordinary gamble. As a result, t company, Warner Brothers, was two ye ahead of the field.

In February, March, and April, 19 Talkie films first began to come in ra succession: "Tenderloin," "Glori Betsy," "The Lion and the Mouse," a others. Movie-goers were fascinat They realized the shortcomings of t new form of film. They saw the wo limitations of the infant medium. T they were sold, nevertheless; and the m they saw, the greater their enthusia grew.

Original from UNIVERSITY OF IOWA

The motion picture theater owners ere drawn into the vortex of technical artbreaks and professional rivalry. But eir technical troubles were the worst all.

The projection apparatus of the Talkie a complex and delicate apparatus. The ax records are fragile and wear out. our sets are always provided in case ere is breakage. And a set used in any eater is never shipped to another one. If the film breaks and has to be spliced, ere is the devil to pay. Part of it may taken out, but the record still contains the music or talk.

If the amplifying apparatus gives uble, it takes a real electrician to air it. The bicycle-shop mechanic is longer able to cope with the machinery the movie theater.

The different forms of record were coning. That developed by the great neral Electric Company records its nd on the margin of the film. This is e by having a ray of light vibrate on film just as the needle vibrates on the k record. The wavy line that is made ransmitted back through an electrical nd projector on the same general iciple by which the radio plays music. all this only complicated matters for poor movie theater owner.

Observers" had to be placed in the ience during a Talkie performance. observer had a telephone leading to projection booth and a buzzer on the of his chair with which to signal the ator. If he buzzed once it meant e point louder"; twice, "one point er." Three times meant, "Answer the hone." Four times meant an emery, such as "No sound is coming ugh."

No sound" is a real emergency, too, picture that is a Talkie!

ere usually has to be an auxiliary rical panel to switch to in case the ar panel fails.

roughout the showing of a Talkie the operator has to closely follow his heet so that he knows when he is to ge his record, and this change has to stantaneous. Cue sheets are sent the records and have to be thory studied in advance of showing.

ONE knows what is going to happen o the foreign market with the Talkit does not pay yet to put Talkies oreign languages, so a silent version oreign titles is made of all important es. But things are going so fast that is no telling what will come next.

e thing is certain out of this big up. If people all over the country oing to hear our language spoken ly, the whole standard of speaking ng to be improved.

the standard of dramatic taste is to go up also. Silent movies depend often on spectacular effects than on er their people can act well or not. peculiarity of the drama that, when n, the acting must be far more t to get the illusion across to the ice. Now the inhabitants of every nd village of the United States will le to see and hear George Arliss, Barrymore, and other great artists, ever before could travel to the of our population.

A PAINT ENAMEL

EASILY KEPT IMMACULATE

WITH A DAMP CLOTH

THOUSANDS have found in Barreled Sunlight a labor-saver comparable to the vacuum cleaner and the floor-polisher.

This satin-smooth paint enamel actually seals itself against dirt. It has no pores to hold dirt embedded. A damp cloth instantly removes every smudge—without injuring the finish.

Barreled Sunlight has a rich depth all its own and is guaranteed to remain white longest.

Extremely easy to apply—flowing freely from the brush and spreading evenly. No unsightly "laps" or brush marks!

Gloss, Semi-Gloss and Flat Finishes. All-sized cans and drums. Readily tinted any shade. Where more than one coat is required, use Barreled Sunlight Undercoat as the first coat. See coupon.

Also ask your dealer or painter about the new exterior paint, Outside Barreled Sunlight, which is lending new distinction to white-painted homes everywhere.

U. S. Gutta Percha Paint Co., 33-M Dudley Street, Providence, R. I.

Distributors in all principal cities.

More than 7500 retail dealers.

A pure, lustrous white—easily tinted any shade

You can easily tint Barreled Sunlight any shade you wish. It is an "all-oil" product and blends readily with any good oil color, producing beautifully clear, lasting tints.

Dealers carry handy tubes of Barreled Sunlight Tinting Colors. Quantities of five gallons or more are tinted to order at the factory, without extra charge.

Do You Know How to Get a Job?

(*Continued from page 47*)

job right off the bat. But I can tell you about a lot of wrong ways that I see people using all the time, and I believe I can suggest a few things to be avoided and some that should be done.

"You must understand also that I shall speak chiefly about getting a job with one of the bigger firms. Concerns that employ from only a dozen to fifty or seventy-five people usually draw their assistants from personal acquaintances of the boss. But getting a job with a large organization is impersonal.

"A great number of job-hunters mistakenly insist on seeing the general manager or president, or somebody else at the top. They often say, 'I have a letter of introduction to the president; I want to see him *personally*.' They are very much offended when told, 'That is all right; just present the letter down the corridor in the employment manager's office and he will be glad to take care of you.' If they persist, they may, at most, get in to see the president's secretary, but it won't do them any good. It won't do you any good if you do see the president, because he will send you to the employment manager for a general interview.

"The first mistake, however, that nearly everybody makes who is out of a job is to use his shoe leather instead of his brains. Of course, a great many people are completely down and out and have to hustle and grab the first thing they can get hold of. But, even while you are doing that, you can begin a broader and, in the end, a safer and more effective campaign. I am not talking to the person who is chronically living from hand to mouth and is content to pick up temporary bread-and-butter jobs. I am talking to the person who is looking for a permanent position, where his best abilities will tell and where he can stay and work up.

"Even that sort of person usually starts out on what I call the 'shoe-leather' plan, instead of analyzing both himself and his market in a common-sense way and then mapping out a real campaign.

"I SHALL speak later about this point of analyzing your market, but I wish first to make clear to you that getting a job is a *selling proposition*, pure and simple, first, last, and all the time, whether it is a job as messenger boy or executive. You must also realize that you have just three things to sell: First, your general ability; second, your particular ability to do some particular kind of work; third, your personality—that is, the sort of person you are: your character, appearance, dress, manners, your responsiveness to the firm's purposes, policies, and regulations.

"Now, scarcely one person out of fifty gives us any clear idea about *any* of these things. We usually have to give him a long interview and dig it out of him, either by diplomacy or main force. For example, we have received letters, not only by the hundreds, but by the tens of thousands, written on everything from souvenir post cards, pieces of pasteboard, and cheap or soiled note paper, up to perfumed, deckle-edged stationery, tied with a pink ribbon, and yet there is not one out of hundreds of these letters that does not require us to write back to get more information—information about the most ordinary things that every employer would have to know. Thousands of these applicants do not tell us whether they are young or old, whether they have any education, or, if so, how much and what kind, or how and where they got their education (which is very important); they don't tell us whether they are married or unmarried or have children or not; what their ambitions are, and their likes, hobbies, religion; in fact, they omit all those simple everyday things in regard to human life that your common sense should teach you an employer would want to know about a person whose services he is going to buy.

"Nearly all people—I don't care whether they are mechanics, or coal shovelers, or college professors, or magazine writers—fail utterly to *consider the employer's side of the problem.*

"IN MY present position as consulting engineer I see letters received by my clients. A great many of them do not even tell us what kind of job their writers want, nor what kind of work they can do. Is any wonder that an enormous number of people have the idea that you land a job mostly by pull, luck, or chance?

"Even when people tell us something of their qualifications, they often mention qualifications that are not suitable for the job they want. Can you beat it? You see now, why I am emphasizing so strongly to you, as a job-seeker, the employer's side. If more people understood the employer's problems there would be far less trouble finding jobs. If you don't care anything about his side, you approach the whole thing in the wrong spirit. You are often going to get your feelings hurt just because you don't understand why he asks you what you may think are a lot of foolish questions about yourself, and also why he doesn't give you a job right off the bat.

"That phrase, 'waiting list,' is a bugbear to most job-seekers. They get hurt and don't understand it just because they do not see the employer's side and the big problems that every employer has regarding his working force. I call the first 'Acquisition' and the second 'Development.' Let us see what these words mean.

"By '*Acquisition*' I mean that every forward-looking employer must determine what man power his business is going to need and then *acquire* a potential labor supply to meet this requirement, a waiting list of people whose records, abilities, and character he has on tap.

"But right here is where an enormous number of your job-seekers lose out. The moment an employment manager says, 'I will put you on my waiting list,' the applicant says, either to himself or aloud, 'Oh, shucks! that is just a slick way of pigeonholing me. I don't want to get on anybody's waiting list.' You don't realize that your best opportunity lies in being on a *number* of good waiting lists. The moment you feel this in your bones

200,000,000 germs die in 15 seconds

that's why

LISTERINE

full strength is effective against

SORE THROAT

Have you tried the new
LISTERINE SHAVING CREAM?
Cools your skin while you shave and keeps it cool afterwards. An outstanding shaving cream in every respect.

LISTERINE'S success against ordinary sore throat colds is based entirely on the germicidal action formula unchanged in 47 years.

You may find it hard to believe that Listerine wi pleasant flavor, its gentle action, its healing effect, full strength, is so amazingly powerful against ge Nevertheless, it is true. Countless tests prove it.

Witness its destruction of germs used by the U States Government to test antiseptics.

The stubborn B. Typhosus (typhoid) germ, fo ample. Listerine, full strength, destroys 200,000,0 them in 15 seconds. Think of it. And the obno M. Aureus (pus) germ is rendered harmless in the time.

Recognizing Listerine's power against germs, yo readily understand why it checks colds and sore t which are caused by germs.

At the first sign of either, gargle with Listerine strength. Keep this treatment up. Remember it i to use this way in any body cavity. You will be deli to find how quickly you get relief. In case you d consult your physician, as your trouble may be a s tom of a more deep-seated disease requiring attention. Lambert Pharmacal Co., St. Louis, Mo., U

Prevent a cold this way?

Certainly!

Millions of ordinary colds start when germs carried by the hands to the mouth on food attack the mucous membrane. Being very delicate, it allows germs foothold where they develop quickly unless steps are taken to render them harmless.

You can accomplish this by rinsing your hands with Listerine, as many physicians do, before each meal. Listerine, as shown above, is powerful against germs.

Use only a little Listerine for this purpose—and let it dry on the hands. This simple act may spare you a nasty siege with a mean cold.

It is particularly important that mothers preparing food for children remember this precaution.

anges your whole attitude toward the tter of getting a job. It gives you a ferent spirit in answering questions ring your interview.

A number of the biggest and best ns always have the latchstring out for ege men; others want a great many ege women; while others want eighth-de or high-school boys and girls whom y can take in and develop. Still others ld up a waiting list of engineers, sales-n, mechanics, waiters, painters, print-carpenters, and the like.

THIS brings me to the second problem which your employer has, namely, velopment.' It is important for you to this, because you are the main end of it. When you get a job with a company irm, whether as elevator boy or execu-, your first month, or even year, is t hardest. But about nine employees of ten fail to see that, so far as the employee is concerned, it is likewise employer's hardest time. Your boss onstantly saying to himself, 'I wonder this fellow is going to *develop*.' He its to know what to expect of you in months and years to come. Will you steady promotion, or will you stay in place?

Let us go back, now, to the writing of letter, and let us repeat here the e main points on which the job-seeker lly falls down in composing it First, as not considered the employer's side; nd, he has never analyzed himself or ualifications clearly enough to know t he has to sell; third, he has never yzed his market and is trying to sell elf to the wrong firm. Steel mills do want linen salesmen, for example.

There is, of course, no stereotyped of letter to be used," Mr. Morgan inued, "but I can describe what I was the best letter I have ever re-d. It came one day in a pile of mail I immediately opened it because it d like a first-class lawyer's brief. On irst page I found a photograph of od-looking young man about thirty old. Immediately I said to myself, nder who this fellow is?'

n the next page, set out in clear type-ng, was the following brief letter:

am eager to become connected with your any and present herewith my qualifica-which I hope will be considered. I should iate a personal interview at the first op-nity.

hat is all the letter said.

n the third page was a nicely typed abulated statement of the following Address, age, height, weight, re-, ambitions, education in detail, , when, and what courses studied. s also shown that he was an engineer, arried, had one child, and was pay-r his home, the amount still unpaid stated.

n the next page was a record of his us employment, how long he had at each place, exactly what he had and exactly why he had changed. ving this were a number of letters previous employers and also from acquaintances of standing. It was ind in a nice, neat, loose-leaf binder, fully typed on very fine paper.

don't say everybody should write a exactly like that, but I do say that it will always stand out in my memory as the one and only real *personality selling brief* that I have ever seen. I sent for that man, and later gave him a job."

"But, Mr. Morgan," I inquired, "do you not get many a nice-looking letter with photograph of the writer, setting forth his or her qualifications in fine style, and when you see the writer himself, you find he doesn't have the stuff back of him? Furthermore, when he tells you all about his ambitions, religion, home life, and all that, doesn't the fact that he talks so much about himself give you the impression that he is egotistical or slopping over?"

"Of course, we have to watch that sort of thing all the time," Mr. Morgan replied. "We get a lot of 'phony' letters, and when we see the people who wrote them, we discover immediately they can't make good on the prospectus they have sent in. They had gotten someone else to prepare their letters for them. Then, also, we have to look out for the egotistical fellow who is eager to impress us with what a wonderful person he is. Another fellow we have to look out for is the high-hatter—the person who does not want to find a job, but 'desires to accept a position'—the person who is insulted when put through an interview or asked to fill out an application blank. I told one young fellow I could give him a job at fifteen dollars a week. 'Why,' he said, 'that wouldn't keep me in cigarette money.' If you want to kill your case, just put on the high hat, or egotistical attitude, and you will be pretty sure to do it. Such things are always certain to show in either your letter or your interview.

"Another kind of letter, of which we get many, is the one that tries to soft-soap the employer. That sort of stuff never gets you anywhere, but many people make the mistake of trying it.

"IF I were writing a letter, I should simply say something like this:

"I am looking for a position. I am thirty-two years old, married, have two children; one is two and one four; am a high-school graduate, Philadelphia, School No. 34, graduated when I was eighteen, working during the summers as messenger boy I worked three years for the XYZ Company, city grocery salesman, salary $125 per month; worked five years with Jones & Company, ribbon department, etc.

"I am living at ——, have my home three fourths paid for. I wish to make a change because of ——.

"I should like to have an interview with you concerning opportunities for the present or future. Enclosed are some references and some testimonials.

"It will be a rare employer who will not answer that letter and grant you an interview, either immediately or when he has an opening that fits. You might also state that you enclose a separate page giving some further facts about your experience, personal characteristics, social and religious life, ambitions, and the like. Be sure to mention ambitions, because employers want people who want to get somewhere.

"Another mistake job-seekers make is that they don't come clean. This applies both to their letters and to their interviews. I don't mean that they lie and exaggerate—although a few do that—I refer especially to those who cover up and skip

What a cigarette meant there

Forty hours in the wireless room, sending, sending, sending . . . till help for a helpless ship is drawn across hundreds of miles of storm-wracked ocean. And afterward, only one comment: "Good thing we had plenty of cigarettes!"

What a cigarette means *here*

Forty hours at the curing-barn—the most anxious hours in all the tobacco season.

The last wagon in from the fields, the barn full, the fires lighted—now the delicate work of curing commences. Day and night, day and night, watching thermometers, tending fires, adjusting ventilators—with loss of a year's work the penalty of carelessness, with loss of flavor the result of haste.

Vastly important, of course, are the later ageing and blending—but to this tireless vigil at the curing-barns you owe no small part of Chesterfield's flavorful and satisfying mildness.

Liggett & Myers Tobacco Co.

From 800 to 1,000 pounds of tobacco can be cured in this barn at each "firing."

Improved Performance *with New Improved* CHAMPIONS

TODAY'S motor cars are designed to give more thrilling and better performance than ever before. What most motorists fail to realize is that all engines are subject to an imperceptible though steady depreciation in performance.

The new improved Champions are designed to maintain new car performance and to meet *all* conditions of the most advanced engineering.

The far-reaching improvements, the time-tested and exclusive superiorities of the new improved Champions are so great as to warrant immediate equipment with new Champions—no matter what spark plug you may now be using.

The new improved Champions will show actual savings in gas and oil, which will more than offset their cost.

You can be sure of superior performance with the new improved Champions. But to secure the best performance results from your engine, make sure it is equipped with the *proper type* of Champion. Every Champion dealer has a chart which will show which Champion should be installed in your engine for best results.

Remember it is a genuine economy to install new Champions every 10,000 miles.

TOLEDO, OHIO - WINDSOR, ONTARIO

over, and who just don't mention important things we ought to know. One of the worst mistakes you can make is not to tell exactly why you left your former position and why you want a new one. When a man shies at a question about that, it always makes a bad impression. But when a man says to me candidly, 'I got sore at the boss,' or, 'I made a mistake, and it caused some breakage, and they fired me,' that man at once gains my confidence. He has made a mistake, learned his lesson, and is better for it.

"Another mistake is to misrepresent yourself, either in your letter or your interview, in some such way as understating your age, overstating your experience or earnings, and the like. Often, when a firm advertises for a man thirty-five years old, people from thirty-eight to forty-five will come in and try to palm themselves off as thirty-five. The job-seeker should realize that when an employer spends money in order to state exactly that he wants a man thirty-five years old, he does not mean twenty-five or forty-five. If he says he wants a college man or a man of some particular religion, he has some special reason for saying so.

"Suppose, however, a man starts off a letter to me: 'Referring to your advertisement, I am not qualified to meet your specifications in full, because I am over your specified age by six years, but it occurred to me there might be an opening in your concern that I could fill. Here are my qualifications, etc.,' why, that is another thing entirely. We know that the applicant is a candid, honest person.

"On the whole, however, people tend to understate rather than overstate their qualifications. Even when they try to overstate them on one or two points, they usually fall down in giving us the essentials that might lead us to hire them, and often burden us with a perfect flood of non-essential facts.

"Why all this failure on the part of the job-seeker to tell us the essentials about himself? It goes back to my fundamental statements: First, he has never analyzed himself so that he can tell us what he has to sell; and, second, he has not analyzed his market and is trying to sell himself to the wrong firm.

"LET me say a few more words about analyzing yourself, and then close with a few suggestions about selecting the market for your services.

"When I speak of analyzing yourself for a job-finding purpose, I do not have in mind a complete analysis such as a psychologist might give you, with all sorts of mental and temperamental measurements, speed reactions, and all that.

"What I mean by self-analysis, either in the letter you write or when you present yourself for your interview, is a clear, brief, common-sense statement of the general facts about yourself. What else could it be? It should cover your education, how you got your education, what your early surroundings were, what studies you liked best in school, what sort of people you like best, what clubs and fraternities and church you belong to, what kind of sports you enjoy, what your hobbies are, and your ambitions, what your special training has been where you have worked, *exactly* what you have worked at, *exactly* why you quit, *exactly* why you want a new job, whether you are married or single, or have children or not, whether you own your home, what percentage of your salary you have saved, and things of that sort. You do not need a psychologist to tell you these things.

"My advice to you is to take a piece of paper and make out a list of the things you would like to know about a person you were going to invest your money in, him and work with him. Go over this a number of times and think about each item, and see how briefly and clearly you can state each point. (Even if you are not looking for a job, it will be helpful to make a self-analysis now and then.) You should indicate your points briefly in your letter and then be prepared to make a full statement about them in your interview.

"BEING in the right market is all-important. For, with the best letter and interview, you are merely shooting in the air if you are in the wrong market. There are just two big principles to follow, as far as your geographical location and your situation permit. The first is, *Go after the leaders in your line.* I shall explain this further in a moment. The second principle is, *Go after the job and the firm, whether big or little, where your good qualities will have the maximum of effective and your poor qualities will have the minimum of exposure.*

"Just a word, first, about the geographical location. Here is a girl in Duluth, Minnesota, or a boy in Garden City, Kansas, or a married man with a family in Henrietta, Texas, who write, offhand, to us in Philadelphia, asking for a job.

"Try to put yourself for a moment in the employer's place on that point. Would you take the responsibility of bringing those people far away from their homes, when you know nothing about their family ties and obligations, nothing about their steadiness or character, nothing about their ambitions and plans? A firm will take that responsibility with a great deal of information. Of course, if you make it clear that you are prepared to make a trip to submit your qualifications, why, that is a different matter. It is perfectly legitimate, for example, for an ambitious man or woman who has been working in one place to write to a firm somewhere else, giving definite reasons why he wishes to move. But he must be very clear and definite on these points.

"Now, by the 'leaders' I simply mean the best, soundest concerns within a range of territory, which are in the line of work that you like and which you are especially qualified to serve. Other things being equal, I should get with as big a house as I could. It will have a better future for you. It will have more chances for promotion, more available jobs, bigger prizes for successful work.

"A second reason for trying to get with the best firms is that there are definite reasons why they are the best. Among these reasons are: stability of employment, fair wages, good working conditions, good business practice, enlightened public policy, and all that.

"A third reason for trying to get with such firms is that you have a stable employment record when you make a change."

You'll get more from your car if I'm in the tank

Ethyl

The reason is simple . . .

HIGH COMPRESSION

DO you know *why* an automobile engine "knocks" and grows sluggish? The answer is important o you, as a car owner.

Power increases as compression is raised; the ighter gasoline and air are squeezed in the cylinder efore ignition, the greater the force of the explosion ehind the piston.

But ordinary gasoline can be compressed only so r. After that it explodes too rapidly, with the re-ilt that instead of more power you get "knocking" id power loss.

That is why General Motors Research Labora-ries sought something which when added to gaso-ie would eliminate this inherent fault and make e advantages of higher compression possible.

The result was Ethyl fluid—the anti-knock gredient which leading oil companies are adding their good gasoline to form *Ethyl Gasoline*, the ndard anti-knock fuel.

National distribution of Ethyl has enabled the tor industry, during the past two years, to offer new models with engines of higher compression and greatly increased performance. They will "run" on ordinary gasoline, but their full measure of power requires the use of Ethyl. Obviously, a "high compression" engine requires high compression fuel.

"*But what,*" *you may ask,* "*of the millions of cars of average compression?*" To them Ethyl Gasoline means high compression performance as carbon forms in the cylinders. For carbon automatically raises compression by decreasing the size of the combustion chamber.

So much for the reason for Ethyl Gasoline. Its real test is its use. Whatever the make or age of your car, Ethyl will give you a performance beyond that enjoyed with ordinary gasoline. Ride with Ethyl today.

POSTUM

...made of rich, golden grain

2,000,000 families invite you to share the delights of this drink...

SIT DOWN to dinner this evening in any of these 2,000,000 homes. Note carefully the drink that is served you. Its deep brown color that lightens to gold as cream is added. Its enticing aroma, tangy as a woodland in October . . .

Now lift the cup and drink. Drink deep . . . Ah, we knew you would like Postum! So different from the "invalid drink" you may have expected. Instead, a rich, distinctive flavor, mellow, full-bodied!

Nor is this all. You'll find your enjoyment of Postum, unlike that of caffein, does not end at the table. It only begins there. For Postum has no after-effects. It never robs you of sleep, never frays your nerves, never impairs digestion, as caffein so often does. Postum is *safe!*

The reason? Postum is made from golden ripe grain—from whole wheat and bran, blended and roasted. A drink that contains no caffein—no artificial stimulant of any kind.

To test Postum's value fully, make it your mealtime drink for thirty days, in place of caffein. Then measure your gains—in health and happiness. See how soundly you sleep! See how much better you feel—*and look!* Like millions who have tried Postum before you, you'll become a Postum enthusiast *for life!*

Postum costs much less than other mealtime drinks—only one-half cent a cup. Order from your grocer. Or mail the coupon for one week's supply free, as a start on your 30-day test. Please indicate whether you wish Instant Postum, made instantly in the cup, or Postum Cereal, prepared by boiling.

© 1929, P. Co., Inc.

Post Food Products

Postum is one of the Post Food Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms. Instant Postum, made in the cup by adding boiling water, is one of the easiest drinks in the world to prepare. Postum Cereal is also easy to make, but should be boiled 20 minutes.

Fifty Years on the Ol' Mississip'

(*Continued from page 57*)

every boat and shipping office on the river got a copy of that and I came in for a lot of chaffing. Old 'Quaker Oats' Cal Blaizer wrote to ask if I had turned ladies' hairdresser.

"And, speaking of the devil—there's old 'Quaker Oats' drifting his tow of coal barges round the next bend. That's navigating for you. He's got more cargo there than forty old-time packets like the Lee and Natchez could carry.

"If he 'steered' that bend in the usual way, those ten or fifteen acres of barges would smear half a mile of bank and go to pieces. You'd hear cables snapping like gunshots and see the barges piling one on the other like stampeding cattle. But old 'Quaker Oats' will 'drift' it without setting the quaking aspens a-shiver on that caving bank. That's piloting for you! Old Horace Bixby, for all the reputation he had 'count of what Sam Clemens wrote about him, couldn't do that in a thousand years. Bixby was *one* of the best (though not *the* best by a long shot) of the packet-boat pilots of his day; but packet-boat piloting was child's play compared to handling big tows.

"THEY call Cal Blaizer 'Quaker Oats,'" the Captain explained, "because he looks like the picture on the breakfast-food package. No, he's not really a Quaker. Quakers speak softly and don't swear. Cal has the only voice on the river that can make itself heard above the roar of a tow of barges busting up in an ice gorge. And he is almost as famous for his spitting as for his piloting. He always has a quid in his cheek and he keeps his spittoon over against the front of the pilot house beyond the wheel. He can spit through the spinning wheel for watch after watch without tarnishing the brass-work or a spoke.

"Another famous spitter was Tom Garrison," related Captain Good. "He weighed three hundred and fifty pounds and had been the end man of a minstrel show before he became a steamboat captain. Tom spat neatly and accurately with tobacco, but his most artistic work was done with Number 4 shot. He could expel these pellets with such force from his muscular lips that a fifty-feet-distant darky deckhand would slap his stricken neck and holler, 'Wasp!'

"Captain 'Wolfie' Clark was a mean spitter but deadly accurate with his revolver. Once he shot the pipe out of the mouth of a steersman. Then one time missing his boat at Louisville, he followed by train and dropped to the deck of it from the middle span of the Cairo bridge swathed in a white sheet. Not unnaturally, a negro watchman, who had been seen 'Wolfie' in his vain race for the boat down the Cincinnati levee, yelled 'Bloody murder!' and jumped over the side."

The Oleander's day, like that of the cotton-hoeing darky who explained that he worked from "yu can till yu can't" was literally from daylight to dark.

All the world is pictured here

HERE . . . assembled for the moving picture director, as for the tourist . . . you'll find the desert sands of Egypt, the rocky coasts of Scotland, the majestic mountain ranges of Switzerland, Italian lakes, Mediterranean islands, Old Spanish Missions, Alaskan snow scenes, the mighty Yosemite, the great plains and the cacti of our own vast West. You'll find no variety like this except in Southern California . . . vacation land supreme.

See here also the diversity of semi-tropical agriculture. Visit lemon packing houses. Drive through the date, avocado and orange groves. Los Angeles County, one of the richest in the country, produces farm products valued at $95,000,000 annually and has oil fields valued at a billion dollars. See Los Angeles, largest city on the coast, and visit its harbor from where ships sail over the southern route for Hawaii.

The summer climate of Southern California is always a revelation to the visitor. Summer days are cool, comfortable, and free from humidity. Light wraps are worn in the evening and nights are slept under blankets.

Stay a week, a month, or all summer. Make this the happiest, most profitable vacation you have ever spent. For little extra expense you may see the entire Pacific Coast.

The first step is the coupon. Mail it today. We'll send you a new book on Southern California . . . 73 large pictures in gravure, showing magnificent scenery, sports, musical and social events of this land of joy.

Captain, 'twixt grins and chuckles, reminisced of the queer-uns of the river all through supper. As we came out upon the deck in the twilight his son, Captain Joe, "a regular chip off the old block," was heading the boat in along the Missouri shore looking for an eddy in which to tie up for the night.

Reminiscence flowed still faster in the Oleander's pilot house during the days that followed. Now it was an island or a light bearing the name of a sunken steamboat that released the golden stream; now a storied landing, the roof of an old plantation house beyond the levee, or the scar of an ancient crevasse. More often than not one yarn ran on into another, so that the flow was continuous save only for the interruptions of landings, soundings, shifting of stations, and interviews with keepers, white, yellow, and black. But of keepers more anon.

Only when his own experiences were concerned did Captain Tom display reticence. A half century of Mississippi River history was on tap at my elbow just so long as it was confined to the doings of others; when I pressed for the record of Tom Good, the magic stream dwindled, trickled, and ceased to flow. Others had had their adventures—the snaggings, the blowings up, the races, the rescues—as for himself, he had just jiggered away at the wheel and done the best he could to keep the lights burning. This from the man who no less an authority than the president of the Mississippi River Commission had assured me knew "The Father of Waters" as no pilot before him had ever known.

The brief account I am setting down at this point of how Tom Good came to the Mississippi, and became of the Mississippi, was not extracted at a single session, nor yet during a single day or week. Rather it is a composite of odds and ends he let slip during the course of some score of shared watches, pieced out with bits from two of his sons and several of his earlier and later shipmates.

THE stock was Dutch on the Good side—Pennsylvania vintage. Tom, preceded by six or eight brothers and sisters, was born in Covington, Kentucky, in 1[illegible]. His grandfather kept a ship chandler's shop on the Cincinnati waterfront. His father, a man of energy and initiative, became captain of a packet running the Ohio River points to New Orleans in the fifties. During the Civil War he was employed by the Federal Government in the construction and operation of iron-protected river craft. In 1869 he was called to St. Louis to organize and manage the Mississippi Barge Line, in which he subsequently became a partner.

Tom's brothers and sisters were high proper young folk, eager to get on in the world, and so fell in easily with their *père's* plan to send all his children through school and college. Only Tom and another brother had low tastes, preferring the levee to the schoolroom, the river boat to the master. When this brother was drowned swimming in the Mississippi Tom remained as the only family problem. The threat of a hiding every time he was caught setting foot on the levee proved an irritant, not a deterrent.

The first big event of Tom's life came at the age of ten. St. Louis had seethed for days with talk of the great race between

FILM
A Dangerous Coating
That robs teeth of their whiteness

A way to remove it that quickly restores brilliance. Film, it is agreed, also fosters serious tooth and gum disorders. Please accept free 10-day supply.

HERE is a scientific way to keep teeth white and brilliant. A way nce itself evolved, to safeguard better inst the commoner tooth and gum ases, including pyorrhea. A way that shes enamel.

he source of discolored teeth is a ky, dingy film. Film, too, is the source erious dental troubles. Science knows —thus the approved method today of ecting teeth is by removing film. A spe- dentifrice called Pepsodent has been pounded with that as its sole purpose. ou may receive a 10 days' supply to Send the coupon for your free tube.

You must fight film

for film with your tongue—a slip- viscous coating. Food and smoking stain that film. Germs by the millions breed in it . . . germs of many different kinds.

Film hardens into tartar. And germs with tartar are the chief cause of pyorrhea. Film is also the basis of decay.

The special way to remove it

Ordinary brushing ways are not successful. You must employ the scientific method that first curdles film. Light brushing then can easily remove it in safety to enamel. Old ways may be discarded.

As children's teeth appear you marvel at their whiteness. Yours may once again regain that color. May take on a brilliance that is actually amazing. Lustreless, dull teeth are known to be unnatural.

Test FREE for 10 days

Perhaps unattractive teeth have cost you too much in society and business. You must not delay another day in testing this method. Get a full-size tube wherever dentifrices are sold, or send coupon below to nearest address for free 10-day tube to try.

the Natchez and the Robert E. Lee. Now they were being groomed in New Orleans. Now they were off; now passing Memphis; now Cairo; now they were on the home-stretch. The Lee was leading and, barring snags, grounding, or a boiler explosion, would reach St. Louis first. Licking or no licking, young Tom was not going to miss that event. When his father, who was on the committee of distinguished citizens named to receive and do honor to the winner, refused to take him to the welcoming stand at Eads Bridge, the young river-boy set off on his own.

I will set down the story just as he told it himself to me in the pilot house of the Oleander, nearly sixty years after the historic event. We had put in to replenish oil at Yucatan Light, forty miles below Vicksburg, and not far from Palmyra Island, so long the plantation home of Jefferson Davis. Backing off into the channel, Captain Good remarked casually that we would just about be passing over the hull of the Robert E. Lee. It had burned to the water line there some time in the eighties, not very long after he and his young wife had taken their honeymoon voyage on it.

"ALWAYS felt a bit sentimental about the Lee on that account," he went on, as the bow swung downstream and he rang up for full speed ahead. "'Nother reason, too—but had I told you I watched the Robert lead the Natchez into St. Louis in '71? The old home was only a few blocks from the levee, but there was such a jam of people all along the bank that we—the gang of street gamins with which I herded—had to go two miles and a half below town before we could get a clear view from the bank. There were sawmills down there at that time, and a big log-raft from Minnesota offered a fine vantage for any that could keep a footing. We kids led the way out and after us came the hundreds that crowded down later.

"The first sign we saw of the Lee was a big cloud of smoke—boiling and swirling up black as bitumen, for she was firing with pitch. The glint of gilt on the funnels began to flicker in the sunlight as she rounded into the straight from Carondelet, six miles down. Then the texas humped against the sky line, and at last we saw the bow tearing through the water. Everyone was yelling like an Indian, but the one thing I remember out of all the bedlam of cries was the booming voice of a big buck nigger who kept shouting: 'Look at him froffin' at de mouf!' A tumbling bow-wave has always been a 'froffin' at de mouf' to me ever since.

"The Lee roared past us faster than I have ever seen any river boat speed to this day. The big wall of water she pushed ahead drove our log-raft grandstand high upon the sloping mud bank, and then the depression sucked after her dragged it back into the river again. Men and women and kids were tumbling over each other, and a lot of them must have fallen between the rolling logs. Some must have been killed or drowned. I don't recall ever hearing, and I wouldn't have remembered if I had. That sight of the roaring, snorting old Robert E. Lee occupied my thoughts to the exclusion of everything else for many days. I don't even remember whether I got a hiding or not when I forgot myself at supper and bragged that I had seen the Lee before Dad had."

Some days passed before I had Tom Good threading his personal story again. But this time he took me far. School was more irksome to him than ever, with that vision of the speeding Lee interposing between his eyes and the silly books. He worried along to somewhere between the third and fourth readers, and there he drifted aimlessly in an eddy of discontent.

"If you won't go to school you can try a job," ruled his stern but sensible father. Tom tried a job; and then a second and a third. There must have been a dozen shifts in the course of the next year or two, and the only job from which the boy was not fired had to do with checking cotton bales on the levee. At last came Good Senior's ultimatum.

"Tom," he said, "there is only one thing an otherwise worthless young numskull can do and still remain a gentleman. That is to be a Mississippi River pilot. I know the river life as only a packet captain can know it, and I planned to head all of you boys away from it. But you're good for nothing else. In a choice between the river and the penitentiary, I suppose the river is the least objectionable alternative."

Tom gasped with delight at this unbelievable turn of luck, thanked his father, and went to work as "cub" on a towboat the next week. That was in 1879, when he was eighteen. In spite of an ill-trained mind, he was up for his license examination well inside of a year. He was far from being adequately prepared technically; but the Examiner knew his father and evidently thought he saw signs of good river stuff in the son.

"You're not quite ready for your license yet, boy," he said gravely; "but you'll be a year ahead in experience if you have it this season. I'll grant it if you'll promise solemnly to remember just three words."

The lad grinned and promised lightly enough. This was easier than he had expected. But the Examiner, holding Tom's eyes with his own across the table, did not speak for many long seconds, and in that interval it suddenly came home to the happy-go-lucky candidate that the fate of boats and the lives of men would hang upon the way he came through. If there was ever a hair-line turning point in human life that tense interval in Tom Good's was such. A boy's lips flung the glib "Yessir, I'll promise"; a man's hard set face and unflinching blue eyes revealed that he understood the full significance of the undertaking.

The Examiner was satisfied with what he saw and broke silence. "Stop in Time!" was all he said.

"I HAD the luck to have this formula for the river driven home to me," said Captain Good, "so that it stuck without disaster—which is the way most pilots learned it. And the usual run of disaster meant the loss of a man's license, if not his life. I've never had a wreck when I was in command," he added, with a palpitating tap on a wooden wheel-spoke. "They talk of 'Tom Good's luck,' and I won't say that I haven't had more than my share of that. But more than everything else combined, it was just having kept that 'Stop in Time!' floating before my inner eyes all the while and never being too cocky to act on it."

He reached over and rang the engine

GIVE YOUR HOME THIS HEALTH PROTECTION!

EVERY home in America needs a good refrigerator. Ice is a recognized family necessity because it protects food—and food means our very existence. In offering the Leonard Refrigerator at prices ranging from $35 to $70, we make it possible for every home to have this positive health-protection.

And remember! These are genuine Leonards. Insulated with thick compressed cork-board. Some lined with seamless porcelain—the famous Leonard Cleanable lining. All bearing the approval of the National Association of Ice Industries based on their thermometer tests at Columbia University.

Our announcement of these unusual values has already created an early-season demand for the new models. All adapted to electric, ice and gas refrigeration. So do visit the Leonard dealer in your city now—while he has a good assortment to show you. Or write to us for a Leonard style book. Leonard Refrigerator Company, 614 Clyde Avenue, Grand Rapids, Michigan.

Other models up to
$400

REFRIGERATORS

down to half speed. "That little mental danger signal, for instance, is the main reason that I am going to nose in and tie up at Paddy Hen Light in the middle of the afternoon instead of blundering along in this thickening fog. Ten to one, we could clean up at Hopefield and push right on into Memphis and lay in snug at the levee. But there is just the odd chance that some other darn fool would be smearing his way through the fog and that we would get in each other's way. And so, just to be on the safe side, and remembering my fifty-year-old promise, we'll 'Stop in Time.' . . . Joe, I'll bring her in so you can run a bowline to the root of the fallen hickory and the sternline to the trunk of the sawed-off fir."

"Don't you mean the hollow pecan stump, sir; the one just above the light station?"

"Fir, I said!" the skipper roared back through his megaphone. "Tumble lively! There it is now!"

Then, in a lower tone, to me: "Pecan stump half caved in last visit. Knew it would be gone 'fore we came back, so spotted the fir, forty feet back, for the next sternline mooring. Spoke to Joe about it at the time—and now he's gone and forgotten it. That comes from his towboat piloting. Don't care how and where they tie up."

I gulped as the significance of the incident came home to me; and then gulped again. A thousand miles of the lower Mississippi and, say, three times that length of banks. And here was a man not only remembering just what trees his bow and stern-lines should go to in mooring at one of the seven hundred lights, but also casting ahead and pigeonholing a second line of moorings for use as the first one crumbled.

ALL of the serious disasters in which Tom Good figured came in his early years on the river, when he was a subordinate. His first towboat was assailed by a tropical storm in September, 1879, losing its stacks and upper works and having one of the pilots drowned. On two of his towboats, the John Gilmore and the Henry Lowry, he learned what it was to have his boat foundered against a levee on the treacherous "coast" of Louisiana. But when, in time, he won to commands of his own, the magic clothed in the common sense of that saving "Stop in Time!" had its effect, as it still has. Rescues he participated in by the score, but never wrecks of his own. He saw the N South, getting up steam for a race with the Itaska, drive onto a snag which pierced hull and cabin and came out through the roof of the pilot house, killing three passengers outright. He was near when Grant Marsh capsized in the Sea Eagle and coolly walked down the upper wo and right around onto the bottom of slowly turning steamer. But to his o boats things just didn't happen.

"Tom Good's luck" became proverbial after a decade or more with a clean rec doubtless having much to do with the that he was constantly offered better better boats at a time when the pac trade was being all but wiped off river by railroad competition. An was probably that same unblemi record which led the Government to him the command of its new lighth

The Obligation of a MAN

FINE to have the incentive of the finest family in the world; fine to do everything you can for their comfort and happiness; to plan and work and keep going ahead—but suppose the biggest thing you could do for your family is the one thing you *haven't* done yet?

The full obligation of a *man* to his family is never fully met until he has definitely taken care of the future; made sure of protection through adequate life insurance. You feel a wonderfully satisfying sense of security when there is a Provident Mutual Life Insurance Policy to guarantee the continued well-being of those you love.

Calling a Provident Mutual Representative, *today,* may be the first step to complete contentment of mind for you.

If you do not know the address of the nearest Representative, the Company will gladly supply it.

tender for the Lower Mississippi District.

There were few fixed lights on the Mississippi during the early days of steamboat navigation. The levees of cities and towns displayed beacons of sorts, and occasionally plantations did likewise. For the rest, each master memorized as many natural day-marks as he could and blundered as best he might at night. Up to the time of the electric searchlight, night landings were made by the flickering glow of iron baskets of blazing pitch-knots. Most of the several thousands of wrecks which are incorporated in the bottom of the Mississippi between the mouth of the Missouri and New Orleans went to their reward before the regular light system was established by the Government.

The almost prohibitive difficulty of making a channel that is here today and gone tomorrow made progress slow in the matter of safeguarding navigation on the Mississippi, and no comprehensive system was worked out until after the peak of the old steamboat traffic was long past. Then, over a considerable interval in which river trade dwindled year by year, the lighting system was not only maintained, but improved and extended, with characteristic United States Lighthouse Service thoroughness. Channels that were scarcely churned once a month by a dilapidated stern-wheeler were kept sounded, marked, and lighted, although the cost of the service must have been far and away beyond any benefits derived.

IT WAS in the very lowest ebb of river traffic—1900—that Tom Good was put in charge of the lights of the lower thousand miles of the Mississippi, from the confluence of the Missouri to New Orleans. There were 331 lights at this juncture, and there were a good many people in the country at the time who professed to believe that this number was just 331 times the number for which any reason could be found justifying their maintenance at Government expense.

The new captain of the lighthouse tender, knowing of the great economy in barge transportation from the operations of the line managed by his father, confidently looked forward to a time when a comparatively small number of powerful towboats would transport more cargo a month than the hundreds of old-time packets had carried in a year. He might not live to see that time, but he would do everything he could to build up a system of lights and marks which would be worthy of the vast inland waterway transportation system that was to come.

None of the great navigable rivers of the world offers so baffling a lighting problem as does the Mississippi, especially in its twisting, turning, caving-banked reaches between the mouth of the Missouri and the sea.

A river which flows in front of a town one day and back of it the next is, obviously, impossible to light with fixed beacons. Indeed, if changes of this description (which, as Mark Twain pointed out, might have made a freeman of a slave in a single night by transferring him from Missouri to Illinois) were at all common it would be quite out of the question trying to light it at all. Since, for the major part, changes of channel go on steadily but comparatively slowly, it has been possible to devise a system which is of a

93% of the doctors favored this kind of bran!

We asked ten thousand doctors this question: "Do you believe that raw natural 100% bran is the best form of bran for the relief of constipation?" 93% of the answers were "YES."

HERE is advice from men who know. If you suffer from atonic constipation—bowel irregularity caused by intestinal sluggishness—be sure to get the kind of bran these doctors recommend—natural 100% bran. Pillsbury's Health Bran is natural 100% bran, untreated and unsweetened. Nothing has been added, nothing taken away—it is bran in its most effective form. You'll enjoy eating it—there are recipes on every package for delicious foods made with Pillsbury's Health Bran. Get a package tomorrow and try bran macaroons, muffins, date bars, tea cakes—any of the fourteen recipes on the package. You'll find these foods are good to eat. And you'll find them genuinely helpful, because they contain the kind of bran which is most valuable as a laxative—Pillsbury's Health Bran, the natural 100% bran.

(There are more good recipes in our free booklet "Fifty Prize-Winning Recipes for Pillsbury's Health Bran." Send for it today. Pillsbury Flour Mills Company, Minneapolis, Minnesota.)

Farm Trade Tips

Volume 1 — Business Building Ideas for Rural Retailers — Number 1

9 TRIED AND PROVEN BUSINESS BUILDING IDEAS

Bigger Profits

George H. Moss, head of the Raleigh Hardware Co., Beckley, W. Va., which sold over a quarter of a million dollars' worth of washing machines last year, believes that responsibility for keeping the "time" sale "sold" rests with the salesman. He doesn't pay the salesman his full commission on the sale until the salesman himself collects not only the down payment, but also the first two monthly instalments. That way the sale is personally serviced for 60 days—the buyer learns how to use his purchase to get satisfactory results— and he gets into the habit of having his monthly instalment ready on the day it is due. Result—fewer "reverts" and increased profits.

5 Good Rules

One of the successful chains tested out these five ideas—and made them standard store rules after observing their effect on sales:

1. Check all price tags every three weeks for correctness and cleanliness.
2. Search stock carefully every three weeks for unsalable or slow-moving items.
3. Change window displays weekly.
4. Change counter displays weekly.
5. Change interior displays, including those on top shelving, every three weeks. And place merchandise used in such displays so it will be sold ahead.

Free "Want-Ads"

Nearly every farmer has on hand a cow, horse, or piece of equipment he'd like to trade for fancy chickens, young pigs, or something else. Why not help him out? Miller's big store in Salem, Oregon, publishes a monthly called *Farmers' Exchange* that usually carries free of charge about 1200 farmers' want-ads. Its circulation is now about 19,000. About 10 per cent of their farm customers use this free service each month. All want-ads are *delivered in person* at the store for insertion. This keeps farmers in touch with the store's merchandise and their own needs.

Courtesy of Boot and Shoe Recorder

Let Your Window Displays TALK

"Sales" May Be Walking By Your Door

THIS window display idea increased sales 36 per cent and doubled the number of window shoppers in an Illinois shoe dealer's store. Yet it cost less than $10. Here's how it's made:

The letters spelling out his name were 48 in. high, 6 in. deep and 30 in. across the wide ones. They were of wood—made up into box compartments. Each compartment displayed a single item of merchandise. Color scheme was black, orange and silver—the latter being inside the letters to throw the displayed merchandise into relief.

Can you use this idea in *your* store? How about a line of auto accessories making the word S-T-O-P with a red traffic light in the background—or a line of aluminum ware announcing a Saturday special with S-A-L-E —or a display of canned goods with the word E-A-T—or a radio display with "DX"?

Easy to Read

Make your show cards easy to read. In his book "Language of Color" M. Luckiesh gives the following results of experiments with the legibility of type on various colored backgrounds:

Visibility Rating	*Color of Type*		*Background*
1. *Best*	Black	on	Yellow
2.	Green	"	White
3.	Red	"	White
4.	Blue	"	White
5.	White	"	Blue
6.	Black	"	White
7.	Yellow	"	Black
8.	White	"	Red
9.	White	"	Green
10.	White	"	Black
11.	Red	"	Yellow
12.	Green	"	Red
13.	Red	"	Green
14. *Worst*	Blue	"	Red

Expert Ad-vice

Advertise your store and goods at least once a month to every 200 people in your trading area, advises Guy Hubbart, retail advertising expert of *Hardware Age*. If the population of your town is 5,000, divide by 200. The result is 25. And 25 inches of newspaper advertising *per month* is the least amount of space you should use in reaching customers through the year.

He Takes Cash

Sell the farmer the idea of keeping the old car on the farm —where he really needs it—advises O. L. Steensland, Lake Andes, S. D., car dealer. When he says he can't afford to keep two cars—tell him surely he *can* afford five cents a day for a handy light truck. Moreover, when he drives to town for a roll of barbed wire, it costs only so much for gas and oil if he uses the old car. And if he uses the *new* car it costs the same for gas and oil *plus possible damage*. So what he spends running the old car is more than balanced by what he saves by not using the new car in heavy-duty work. The old car's service costs only the price of an extra license—about five cents a day.

Neighborly Ads

H. D. Skinner, successful hardware dealer of Braymer, Mo., gives his "ads" the attention value of the "personal" column in his local newspaper. He tells the folks out on R.F.D. 1 what their friends on R.F.D. 2 are buying from his store. Here are several samples of the kind of "copy" he runs:

Mart Waller, whom everybody knows, was here Monday for a walking cultivator that was broke to ride. We had it and he led it home behind his car.

Dave and Earl Brownley "milled" about for two or three hours Wednesday, deciding on a wood-saw outfit. We finally took their order and their checks for a twenty-eight-inch saw. They, too, have a "smooth-mouth" Ford, and they plan to make the poor old thing run the saw. —*Printer's Ink.*

He's a Link

Col. George Frank, independent clothing dealer of Maysville, Ky., says his store is a link in the "biggest chain in the world"—the big chain that sells nationally advertised goods exclusively. He says the turnover on nationally known goods is faster and steadier — that his business grows in proportion to the number of purchasers he keeps satisfied with guaranteed merchandise of known quality.

$10.00 for Your IDEA

WE PAY $10 apiece for acceptable farm trade "tips." Send in YOUR idea. This is not a contest. Send in as many "tips" as you wish — we may use them all. You don't have to be a store owner. Anyone connected with a retail store can submit ideas. The only requirement is that the idea must have brought in more farm trade or sold more goods.

"Farm Trade Tips" now appears regularly in *Collier's* and *The American Magazine* as part of FARM & FIRESIDE'S service to rural retailers.

Send your idea to—

calculable assistance to the navigator.

I will give a brief description of this system, not as the primitive thing turned over to Tom Good in 1900, but as the greatly improved and highly efficient service he has made it at the end of nearly three decades of patient, persevering, intelligent effort.

The lights of the Mississippi are officially designated "aids to navigation." The term light, or lighthouse, is reserved for a fixed beacon, the purpose of which is to warn a ship away from a shoal or dangerous point. An *aid*, on the contrary, is almost invariably intended to give a pilot an approximate bearing for a course that will keep his boat in the always narrow and winding channel. Since a channel is constantly changing as the river rises and falls, it follows that the position of the aids will have to be shifted in order that they may help rather than mislead. The work of sounding the channel and moving aids to conform to it is only one of the multifarious tasks performed by the Government lighthouse tenders.

THE type of aid uniformly used on the Mississippi today has been developed by Captain Good from the primitive lantern hung on a pole, which was the original light. It consists of a heavy post, about twelve feet high, deeply set in the ground and furnished with props, with cross-arms to heighten conspicuousness, and with a bracket to hold the light. All parts are painted white. Lamps hold enough oil to burn continuously for seventy-two hours. A highly refined grade of kerosene is used, furnished under specification that it burn the whole three days without depositing soot on the glass.

To simplify tending, lamps burn by day as well as night, so that the principal thing a keeper has to do is to refill the kerosene tank every third day. He must also keep brush and overhanging foliage trimmed back so that the light can be clearly seen at the proper angles from both up- and down-stream. If a caving bank threatens to carry away a station, he must do the best he can to move it back to a safe position without materially altering its bearing. Finally, if a station *is* carried away, as by a sudden rise, he must lose no time in hanging out a lantern on a tree or temporary post, and then rushing word to the Superintendent at St. Louis.

There are twice as many lights on the lower Mississippi today as there were when Captain Good came to the command of the Fifteenth District tender in 1900, and they are better lights and served by better keepers. It was Captain Good who inaugurated the system of detailed reports of which changes in channels and the positions of lights are made known to masters with a minimum of delay. A light itself means almost nothing to a pilot until he is told why it is so placed and how it should be used as a guide. This information, which for years trickled out in a hit-or-miss sort of way, is now dictated from the wheel to the Captain's clerk as the work progresses, and then rushed off post-haste to the St. Louis office for general dissemination. These daily bulletins, in the strange but expressive "riverese" already alluded to, are entirely a development of the Good régime.

But Tom Good's greatest achievement has been the development—one might almost say the creation—of the light keeper. Under the old system a keeper was picked from the family living nearest to the light, without much or any regard to personal qualifications. Thus the keepers included all the human flotsam and jetsam of the river: fishermen, shantyboat-men, farmers, moonshiners, and others who were "just layin' low for a spell"—men and women, boys and girls, of every grade of color and running the whole gamut of the social scale.

The first complete up-and-down voyage of the newly appointed captain of the lighthouse tender revealed that most of this strange assortment were indifferent keepers, with many quite worthless. A pitiful few were sufficiently intelligent and dependable to do their work properly. For the twenty-eight years since that first trip Tom Good's unrelaxing effort has been to eliminate the worthless and indifferent and to bring the faithful, resourceful keepers up to a mark as close to perfect as is humanly possible with the queerest material that ever fell to the hand of man to mold.

Captain Good's general method is to make sure of the qualifications of a keeper and then slowly increase the number of lights under his care. Fishermen, as a class, proved the best keepers, doubtless because they were rivermen themselves and knew from experience the life-and-death balance suspended over the flicker of a guiding beacon. All fishermen, moreover, had motorboats as a part of their working equipment. It was soon proved that an energetic man with a fast launch could give adequate care to ten, fifteen, and even twenty lights. Several keepers have charge at the present moment of this maximum number. A score of lights takes all of one man's time, but the two hundred dollars a month received by way of compensation—ten dollars for each light attended—makes him a substantial member of the savings-bank-depositor class, for he pays no rent and raises most of his food. The idea of a Mississippi River light keeper with a bank account would have raised a guffaw of laughter in 1900. Today savings are the rule rather than the exception.

I HAVE heard of countless instances of the courage, resource, loyalty, even heroism, displayed by the individual keeper in the discharge of duty. But a single comprehensive instance showing the *esprit de corps* of the river service as a whole must suffice. When the greatest of modern floods swept the lower valley in 1927 no single class was so sorely tried as the light keepers. Scores and scores of them—living on the very banks of the swelling river as they did—had their every possession swept away at the outset. Many had desperate fights to save their families.

One keeper removed his wife and children ten miles across the flooded bottoms in a boat and then rowed back, built a driftwood platform in the top of a giant cottonwood, and lived there a fortnight, nesting among his precious oil cans, in order to be near his crucially important light. How many others showed equal bravery and determination in carrying on will never be known, but out of it all this astonishing fact remains:

Although the master of every craft plying on the Mississippi was under the strictest

The Taylor family pushes

The time had come when Sam Taylor decided something had to be done about it. Of course there was nothing *wrong*. His salary was livable, wife—lovable, children—adorable. Yet life just didn't click. An occasional discord sounded in the accustomed rhythm of his work. Something was dulling the sparkle in Mary's eyes. Certainly something had to be done. He needed . . . well . . . that was it! A change. A trip? Not one of those regular summer vacations to the same old nearby resort, but a trip that would open his mind, stir his pulses. He would go into that land he had long since visited in his imagination—the West!

Careful as always, he did check up with the agent of the West's big railroad, the Southern Pacific, before he went home and made sure that the cost would fit his pocketbook. That night, he casually suggested to the family that this summer they might visit the Pacinc Coast. Sam will tell you now that the excited pleasure of that evening was worth every cent the trip cost him. The Taylor family journeyed West, many, many times before they actually boarded the train.

Nature's mystery, Crater Lake, in the gorgeous Cascade range of Southern Oregon—served by Southern Pacific's Shasta Route.

Mary wanted to see Santa Barbara and Del Monte, little Miss Margaret insisted that they visit Hollywood, Sam knew he must see the Pacific Northwest before he died, and if Junior didn't get to go through San Francisco's Chinatown, it would be much safer to stay at home.

Sam had to find tickets that would include them all. The Taylor family went West,—Southern Pacific.

Their baggage bristled with golf clubs and tennis rackets. But the clean, brisk fun on cool fairways and tennis courts that overhung the Pacific's shore, was only part of the vacation's reward. Days of hiking and riding, nights of dancing, merry tours to Mt. Rainier's flower-edged glaciers, to Yosemite's half-mile-high waterfalls, and to Los Angeles' movieland—these, too, were but a part of the outing.

As they wandered through the many shrines America's history has left them—Davy Crocket's Alamo at San Antonio; the old Missions of the heroic Padres; Ramona's Marriage Place at San Diego; the land of the Forty-Niners; the Mark Twain and Bret Harte country; Monterey; Lewis and Clark's mighty Columbia; they felt the full inspiration of this Western Land. Horizons fell back. These United States became *their* United States. Mary's eyes will carry forever the sparkle of mountain lakes. The thrill of new friends, train-friends, will live in their memories. The brave sweep of this Pacific slope, its contrasts, people and natural wonders will stand behind them always. The Taylors became *a family with a national background.*

Sam made a little talk at his company's monthly pow-wow shortly after his return. He didn't say a word about his trip. Just business. But you couldn't help feeling that he had all the authority of a dozen states to stand on. In the fast developing Pacific Slope he had visioned the possibilities of a branch factory for his firm. And, somehow, you knew he had gained the poise and self-confidence to make the dream real.

To the casual observer, Junior carried home only two things from the West. A bit of western sunset in his cheeks and a strange imitation of two Chinamen in argu-

ne city, no one sector is complete

without the changing, blending, majestic background of this vast Pacific land. You have choice of Southern Pacific's four great routes. Go one way, return another and let this pioneer railroad, interpreter of the West, show you the whole Pacific Coast.

For example, you can go west by any northern United States or Canadian line. You will take SHASTA ROUTE at Seattle, and thence down through the "Evergreen Playground of the Pacific Northwest" to California. You will see Puget Sound with its Mt. Baker and Rainier National Park. Seattle and Tacoma—cities you have heard about. Portland, and the Columbia River Highway through mighty gorges and around Mt. Hood. Crater Lake National Park. The alpine lakes of the Cascade line of the SHASTA ROUTE, or the river valleys, orchards and farms of the alternative Siskiyou Line to California. Mt. Shasta, Lassen Volcanic National Park, Lake Tahoe and Yosemite. Or, if you wish to detour by motor coach in southern Oregon and northern California, a marvelous ride through the Redwood Empire with its vast, age-old trees and glimpses of the craggy shore of the Pacific. Berkeley and Oakland. San Francisco and the Golden Gate. Here is the largest Chinatown outside of China; cosmopolitan streets; smart shops and famous bazaars, and many scenic golf courses. Then southward—Spanish Missions. Santa Cruz Beach and Big Trees, Del Monte, scene of the National Amateur Golf Tournament in September. Lovely Santa Barbara. 113 miles along the Pacific's shore. Or, by alternative route, the inland valleys with their access to Yosemite, General Grant and Sequoia National Parks, and the high Sierra—United States' loftiest mountains. Then, Los Angeles, Catalina Island but two hours away, its neighboring cities—Long Beach and Pasadena, the oil fields and orange groves, San Diego with exotic Agua Caliente, Old Mexico, nearby, and homeward by either SUNSET ROUTE via San Antonio, Houston and New Orleans; GOLDEN STATE ROUTE via El Paso, Kansas City and Chicago, or OVERLAND ROUTE (Lake Tahoe Line), San Francisco to Chicago.

San Gabriel Mission, near Los Angeles, founded 1771, is one of the chain built by the Spanish Padres, about a day's ride on horseback apart, along the California Coast.

On the train to California!

Or you can reverse the direction, going west by the southern or central lines and returning via the northern lines. You can take Southern Pacific steamship from New York to New Orleans, or go to New Orleans by rail, then by SUNSET ROUTE across Louisiana, Texas and the Spanish-American Southwest with a bit of Old Mexico at Juarez, just across the line from El Paso, and in Arizona the Apache Trail highway (comfortable one-day motor stage sidetrip)—on to San Diego (via Carriso Gorge) or to Los Angeles and up through the Pacific Coast and homeward.

Stopover anywhere on roundtrip tickets. Hawaii and the Orient lie just beyond. To the South, Southern Pacific's WEST COAST OF MEXICO ROUTE,—centuries off the beaten path—offers through service from Los Angeles and Tucson down the Coast to Guadalajara.

The low excursion fares will go into effect on May 15, return limit October 31. For example the roundtrip fare from Chicago to California is $90.30; from New York is $138.32; Des Moines, $81.55; from New Orleans, $89.40.

Send your name and address at once to E. W. CLAPP, Dept. 34, 310 So. Michigan Blvd., Chicago, for illustrated book "*How Best to See the Pacific Coast*".

CHARLES KARR CO., Holland, Michigan
Dear Mr. Karr:
I want to know Spring-Air's secret. Send your free book, "Sleeping Relaxed". No obligation, of course.
Name.....
Address.....
City.....State.....
A-429

"You Can't buy bed-comfort by the Pound"

Absurd, Isn't It?

Does a mattress *have* to be clumsy and hard to handle? Must it be built like a fortress?
"No", say America's foremost sleep critics. "Spring-Air puts an end to all that. Here is the new type of mattress our modern pace demands."
These critics—managers of the famous hotels and hospitals—know whereof they speak. Over 600 of them bought the output of Spring-Air during its first two years.

—At last!—an up-to-date mattress —easy to handle—makes you sleep relaxed

Spring-Air is easy to handle—a little child can carry it. The all-steel construction can never wear out. You can wind Spring-Air around your arm—it's that flexible! It is self-renovating. No other mattress approaches it in sanitation because only Spring-Air has removable ticking covers.
But the real thrill comes from sleeping on this amazing mattress. Relaxation is instant. Spring-Air actually compels you to sleep more comfortably than ever before in your life. You awake knowing the true benefits of relaxed sleep—greater vigour, finer poise, enhanced charm.

Save $20.00

Sleep on Spring-Air for ten nights. Pay nothing—not even the express. Only on one condition are you to keep it: Spring-Air itself must convince you it is the most comfortable, most convenient, most sanitary mattress money can buy. Spring-Air has sold for upwards of $60 at retail stores—but you need pay only the introductory direct-from-us price of $38.50. You save $20. This introductory offer is temporary; soon the price goes up—now is the time to send that coupon.

SLEEPING RELAXED

orders to report at the earliest moment any light not burning, not a single instance of such failure was brought to the attention of the Superintendent during the whole course of the flood.

When Assistant Superintendent Allen made this statement to me last July in St. Louis, I found it as difficult to credit as will anyone else familiar with the Mississippi and the conditions prevailing on and around it during the flood. A week later, on the new lighthouse tender, Willow, I voiced my wonder, if not doubt, to Captain Tom Good himself.

"I don't blame you for having your doubts," he said, with a nod and a grin. "Just the same, as the old song goes, 'It's funny but it's true.' In the course of the regular grind we always had, and have, a certain number of light failures, due mostly to carelessness, cussedness, and moonshine. Keepers were getting better right along, but were far from perfect—quite far. Until the flood came along, that is. Then—well, they just came through when the emergency arose. Most likely it was some such thing that makes a bunch of telephone flappers stick to a burning exchange till they get their bobs singed. Funny thing, though, that they *all* had the stuff in them—to the last old rheumaticky mammy."

THE Willow came to Captain Good as the crown of his almost three decades of work in the United States Lighthouse Service and a total of fifty years on the river. For stanchness, comfort, modernity, and general river-worthiness no such boat has ever been seen on the Mississippi. The Captain's quarters are as roomy as the suites de luxe of an Atlantic liner. Running ice-water, hot- and cold-air ventilation, and separate electric refrigeration chambers for vegetables, meats, and every class of provisions lend the last touch of down-to-the-minuteness.

It was practically the Willow's maiden voyage and congratulators streamed aboard to wring the hand of "Capt'n Tom" at every levee, landing, and light. Ninety-year-old "Neffy" Duke, who had been on the City of Alton with Horace Bixby and Sam Clemens, boarded us at the Kate Adams wharf boat at Memphis to tell how he watched by bonfire light to see the Lee lead the Natchez up along the Chickasaw Bluffs. With him was an ancient, white-haired darky by the name of George Turner, who had been the barber on the second Kate Adams when Captain Good was in command. So perfect a type was George deemed of the ante-bellum negro that he had played without make-up the part of the barkeeper in the movie of "Uncle Tom's Cabin."

A younger well-wisher was the three-weeks-old son of a darky light keeper near historic old Fort Pillow. Born while the new tender was chugging by on its down trip, the pop-eyed mite bore the appropriate name of Thomas Good Willow Oleander Wilkins.

But there was a brooding shadow darkening the roseate pathway of the pride of the United States lighthouse tender fleet. Mauve and purple cloud-shadows from the sky came and went, but this one hovered and clung and would not lift. Only those close to the Captain felt the influence of it, for on him alone it fell. I, myself, was quite unaware of the sinister loom of it until the evening before I was to bring my voyage to a close at Cape Girardeau.

We were battling up against the swirling current rolling down through that strange, cyclone-swept stretch of the river to which the name "Graveyard of the Mississippi" is applied—because of the almost overlapping wrecks of storm-swamped hulls littering its bottom. I had said something about the stanchness of the Willow—of how unbelievably comfortable and homey it was for a new boat. Tom Good squinted long across the sunset-gilded yellow-brown flood before he spoke.

"Yes, she's all that she could be for the job," he said. "They gave me everything I asked for—and then some. The like of her will not be seen on the river for many a year. But—well, you know I retire automatically on pension at the end of my thirty years of Government service—and just as things are beginning to get interesting, with the barge traffic piling up month by month. The growing barge tows are going to need a constantly improved light system, and that means better and better keepers. It has been a great game—and I'll hardly know what to do for a while without my lights and my keepers to look after. And I guess that—for a while—they'll miss me."

It was not the occasion for a conventional remark of sympathy. But the blinding glare of the golden path of the setting sun, laid ribbonwise across the bend to mask the narrow channel, led me to quote softly:

By mine eyes grown old with staring at the sunwash on the brine,
I am paid in full for service. Would that service still were mine!

Tom Good nodded slowly and gravely acknowledging that I had interpreted aright the drift of his thoughts.

"From 'The Galley-Slave,' isn't it?" I asked. "I remember the lines now; but never occurred to me to apply them to my own case." Then: "There's salt water most that Kipling wrote—and all the salt water I've ever seen was on a cruise made from New Orleans to New York. But I've always thought Kipling would have liked the ol' Mississip'. Wish I'd had the chance to show it to him."

TWO months later, and before this year was written, I repeated those words to Rudyard Kipling, a wiry, brown, little man, as we tramped stride-to-stride over the grassy hills of his Sussex estate and (to use his own language) "swept the years since our last meeting with a besom of conversation." The eager eyes ever set in the head of a man flashed up at me through the bushiest eyebrows.

"My old friend Mark Twain guided me to the Mississippi with Huck Finn and Tom Sawyer. Great stuff! But why wouldn't I have given to do it with you, Tom Good! You're in luck as usual. I mind you show your thankfulness by slipping up too much in doing him justice when you scribble your tale. Men like that are not easy to put on paper, as I learned by experience."

And so have I.

CLEANS *MASSAGES*

like a refreshing bath — *like a stimulating rubdown*

Pro-phy-lac-tic *does double duty!*

Danger!

Blame sluggish circulation in the gum tissues for much of the trouble you have with your teeth. These dental ills can largely be prevented by careful daily massage of the gums.

Win Tooth Health!
with the aid of this free book

Would you like a remarkable little book that will be of invaluable aid in gaining—and maintaining—tooth health? Let us send you immediately "TEETH, Your Servants or Your Enemies?" telling how to care for your teeth, how to brush them correctly, how to choose the right brush . . . in short, the full story of tooth health. Mail us your name and address NOW.

YOUR teeth are alive. They need to be *nourished* as well as cleaned. And that means gum massage. For only active gums can properly feed the teeth—set fresh vitality coursing through every dental tissue.

Pro-phy-lac-tic does this vital double job of cleaning AND massaging. Pro-phy-lac-tic is scientifically shaped to sweep away every particle of waste food matter—clean those hard-to-get-at crevices where germs hide—polish every tooth surface glistening white.

More, Pro-phy-lac-tic bristles—live, springy, full of massaging power—are specially blended to gently stimulate the edges of the gums—and massage the vital membranes that dentists say really control tooth health!

Simply brush with a Pro-phy-lac-tic from the base of the gums to the tips of the teeth. Notice how your teeth and gums respond with a radiant glow of tingling good health!

Get a fresh Pro-phy-lac-tic today. Use it twice a day. Receive a double benefit from each brushing. Without one you may be missing one of the two vital things a properly designed tooth brush *must* do! Pro-phy-lac-tic Brush Co., Florence, Massachusetts.

The Masso Pro-phy-lac-tic, designed for those whose gums need more than normal attention.

The Oval Pro-phy-lac-tic, for those with smaller-than-average dental arch.

Where Do You Go When You're in Trouble?

ST PRIZE

e Hum of the Sewing Machine Cures My Blues

OU'LL probably smile cynically at this and think it incredible, but when I'm in trouble I always find ce in my sewing machine. Every her knows there's always a pile of ing and mending on hand where there children. Many a time when things e been going well with me, I have nted having to sew. Yet when worries e along, especially heavy ones, I im- iately fly to my machine.

very woman knows what cotton crêpe o sew. It's the jumpiest material ginable and will not stay put. Well, morning, after a sleepless night—a t I shall never forget—I flew to my hine and that day made two of the liest and most intricate of crêpe ses for my two youngest children— ses with roll-collars and kick-pleats. were, when finished, works of art. ter, I attempted the same style of ses in pleasanter and happier circum- ces, and they were a sad failure. t I had accomplished with a troubled racked mind I simply could not nplish with an untroubled one.

y sewing machine never fails me. As feet pedal away to its rhythm and sewing slips smoothly and rapidly r the quickly flashing needle, there s to me a great solace. For while my ine doesn't banish my troubles, it help to soothe them with its buzzing m and flashing speed. A. I.

ND PRIZE

y Wife and I Hit the Trail of the Lonesome Pine

ERE is nothing more majestic, more and in outline and beauty, than a rch of the forest. We have here, on fty-acre tract, a tall pine. It is ht as an arrow, considered to be a entury old. The unscarred trunk res nearly one hundred feet to the imb, then stretches sixty feet of and foliage to the top.

en the tract was timbered in 1915, ndmark was left to reforest the All about it have sprung up the g pines, many now reaching a of forty or fifty feet. The ground is densely carpeted with the brown s. In semi-open spaces; blueberry grow, and on the ground near by awberry, partridge-berry, arbutus, ntergreen vines.

never troubles arise that require ed effort to combat, my wife and I r way up the trail, a half mile from bin, through dense undergrowth. lk in silence, puzzling over the n to be solved. Upon arriving at ur shrine," we cuss and discuss the n confronting us.

e have been serious matters under on, the working out of many life s. This sacred spot, at the base of the Tall Pine, has enabled us to reach many a righteous verdict and we have always faithfully respected the conclusions found there. C. H.

THIRD PRIZE

The Henhouse is My Solace Spot

WHAT do I do when I am in trouble? I clean the henhouse! It's a necessary job that I hate, at ordinary times. But when things have gone all awry, bubbles have burst, plans have smashed, or there's a tar spot on my best crêpe dress that will not give an inch to any known solvent, then I go gladly to the clean-up of the chickery.

I can "rassle" out almost anything with myself if, at the same time, I am toiling perspiringly at work I despise. So I find my henhouse a haven of restoration. And a clean house usually finds a clear mind, with some definite solution to the problem that bothered.

I can't explain why the hardest of toil of my body brings the clearest thinking to my mind, but years of coping with a thousand and one "out-of-joint" happenings has proved it so. B. L. S.

PRIZES—THE AMERICAN MAGAZINE offers a prize of ten dollars for every TRAVEL TRAIL accepted for publication. Send the solution with your trail. Art work not essential. TRAVEL TRAIL, to be eligible for the contest, must not be shorter than seven words nor longer than twenty-five, including the starting point and destination. Also, it must have the home town of the contestant as its starting point or destination. Send your contribution to TRAVEL TRAIL Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City. Manuscripts not accepted for publication will not be returned.

Byrd Antarctic Expedition carries Sergeant's Dog Medicines and Dog Food exclusively.

(BELOW) *Our Veterinarian With One of Byrd's Sled Dogs*

(ABOVE) *Loading Byrd's Huskies Aboard Ship*

ONE hundred Eskimo dogs are a vital part of the personnel of the Byrd Antarctic Expedition. They'll draw the sleds to carry supplies to the many "caches" upon which the life of the Expedition depends.

Unless the dog-teams are in splendid condition, the great adventure will fail. The dogs *must* be kept healthy.

With his usual foresight, Commander Byrd made exhaustive tests of various dog medicines and dog foods—and then, chose Sergeant's Dog Medicines and Dog Food exclusively.

Keep *Your Dog* Healthy

Dealers everywhere sell the complete assortment of Sergeant's Dog Medicines and Dog Food carried by the Byrd Expedition. Sergeant's Medicines are backed by fifty years' experience. You can depend on them. *But don't wait until your dog is sick.*

Famous Dog Book *Free*

We urge you to get your free copy of Polk Miller's famous Dog Book. In clear, non-technical language it tells the symptoms of all dog diseases and the best treatments for each. A "Symptom Chart" makes it easy for you or your dealer to diagnose your dog's ailments.

Expert Advice Free

Our expert veterinarian cared for Byrd's Huskies before their departure. He will answer without charge, questions about *your* dog's health. Write fully. Sergeant's Dog Medicines and Dog Food are on sale at dealers everywhere. If you cannot obtain them or the Free Dog Book, write us direct.

Meet Mr. Sherlock Holmes of the Plant World!

(*Continued from page 25*)

laymen," laughed Doctor True, "look upon the botanist as a queer, bespectacled chap who spends a great deal of his time hunting strange flowers with long names and pressing them in books. Maybe you had to do that when you went to school, and it led you to believe botany is pretty dry stuff. It may surprise you to hear that today botanists are being employed by big industries the same as they employ chemists and engineers. Expensive and bitter legal battles have been settled out of court purely on the word of a botanist, who is also often called as an expert witness at important trials. Virtually every person who owns a farm, a back-yard garden, a patch of lawn, a few trees, or just a few potted plants, has problems which he would be glad to have a botanist solve for him.

"When I was a student at the University of Wisconsin, one of my old instructors was wont to tell us that a most excellent form of preparation for a scientific career was the reading of first-class detective stories.

"'You'll never be a good botanist,' he would warn, 'until you are a good detective. Three fourths of your work as botanists, when you get out into the world, is going to be along detective lines.'

"I was a trifle skeptical of that until I actually did get into practical work in the field with the Department of Agriculture. Then one of my very first important assignments brought me up against a mystery that kept me busy for the greater part of a year. In solving it, the only detective equipment of the stories that I didn't find it necessary to use were handcuffs, blackjack, and revolver."

"Tell me about it," I urged.

"IT CONCERNED cigar making," continued Doctor True, "which is quite a big jump from classroom botany as most folks understand it. A Pennsylvania manufacturer reported the appearance of a mysterious mold upon his finished cigars. Sometimes the mold made its appearance among the packed and boxed cigars in the warehouse. Again it appeared during shipment. Frequently the cigars would reach the retail dealer in perfect shape, only to have the mold begin its growth while they reposed in the show-case.

"'Ours is not the only factory bothered by this mold,' the manager told me. 'Many cigar factories are troubled by it. We don't know what causes it. We don't know how to prevent it. When it shows up on cigars, the only remedy we know of is to unpack every box, wipe each cigar separately with an alcohol-moistened cloth, and repack, with the hope that the mold won't appear again. In this factory alone it is causing us a loss of twenty thousand dollars yearly. Larger factories have even greater losses. The total losses may be more than a million a year!'

"The mold was always white in color, and you will gain an idea of its appearance from the fact that it was known in the trade as 'whiskers.' Analysis proved it to be *Aspergillus candidus*, a long name which simply means white mold. However, there was nothing whatsoever to indicate what caused it to grow on cigars. It never appeared on the tobacco leaf, nor in pipe nor cigarette tobacco. It wasn't a tobacco mold. Nor did it appear on the cigars until after they had been packed, and even then it didn't appear on *all* of them.

"I began a detailed study of cigar making. I knew nothing of the industry; I wasn't even a smoker. That meant that I had to start at the bottom and learn the business, the while keeping constantly on the lookout for a clue. It was evident from the facts that the mold was the result of some factory process, and a very obscure and seemingly unimportant process at that. Otherwise, the cause of the mold would have been detected long before.

"FOR days my investigation continued, getting nowhere, until I came to the process of wrapping and finishing the cigar. Here I noticed that a little paste was used in sealing the cigar wrapper. The paste was of a kind known as tragacanth, a natural gum, peculiar to certain trees in Turkey and Persia. On some of the pots of paste there were as many as a dozen or fifteen different *kinds* of molds and in every pot which contained any mold at all I found the villain I was looking for, *Aspergillus candidus*!

"That settled beyond doubt the source of the mold. The cigars were packed moist. This moisture and certain conditions of temperature and atmosphere later encountered, in storage or in shipment, caused the mold to grow from the tiny amount of paste used on the wrapper.

"But my problem had only begun. Some way had to be devised to prevent the mold growth. The method had to be such as to add no foreign taste or odor to the cigar. I made experiment after experiment without success. There seemed to be no kind or quality of tragacanth paste that met the peculiar requirements among the twenty different sources of paste investigated. Therefore, it remained for me to discover an agent which could be added to tragacanth to inhibit the mold and yet not spoil the cigar. The search involved several months and a number of failures.

"In science it is upon failures that we build success. Each failure, by eliminating another possibility from the field brings the seeker that much closer to what he seeks. Such was true in this case. Likewise is it true in detective work.

"Finally, by mixing up the paste, not with water, but with a strong solution of boracic acid, we found that the mold was eliminated. The process produced no taste or odor when the cigar was smoked and the factory put it to trial. There developed that the boracic acid formed crystals on the cigar which looked like mold. This necessitated further experimenting until we had obtained just the right concentration of the acid, one that produced no crystals and yet killed the mold. I believe the method is used generally in the cigar industry today."

Suez boatman bucks up British pipe-smoker!

Stranded in Port Said . . . devil bit of Edgeworth . . . ardent pipe-smoker is thrown a welcome "line" . . .

IT was a long, long way from home—was Mr. Read. A thousand miles from dear London—a thousand miles from Calcutta. Make matters worse his stock of his favorite tobacco was gone. Life seemed blue indeed, when—Eureka!—from the hold of a dory a Suez boatman offered a humidor tin of Edgeworth and the sun broke through the clouds.

It's queer how a man will carry his likes and dislikes into a foreign land. You might think that a man stranded in Port Said would welcome *any* kind of tobacco. But not so! There's a flavor about Edgeworth that once the pipe is there to stay—a quality that pipe-smokers all over the world insist on having and none other.

If you would like to become acquainted with Edgeworth pipe-tobacco, let us send you 7 pipe-loads of both Edgeworth Ready-Rubbed and Edgeworth Plug Slice. (Both for one pipe.) Simply send your name and address to Larus & Brother Co., 45 S. 21st Street, Richmond, Va. If you like these trial packets you'll like Edgeworth wherever and whenever you buy it, for the taste of dear old Edgeworth is *always* the same.

Edgeworth Ready-Rubbed and Edgeworth Plug Slice are sold in various sizes from pocket packets to handsome pound humidor tins and also in several handy intermediate sizes. "Plug Slice" Edgeworth is made specially for pipe-smokers who like to "rub up" a pipe-ful at a time in the palm of the hand.

On your radio—tune in on WRVA, Richmond, Va. — the Edgeworth Station. Wave length 270 meters. Frequency 1110 kilocycles. Special feature: The "Edgeworth Club" Hour every Wednesday evening at nine o'clock, Eastern Standard Time.

13 Woodburn Park Rd., Calcutta, India
March 10, 1928

Larus & Brother Co.,
Richmond, Va.

Dear Sirs:

I have smoked Edgeworth for several years. I commenced buying the little blue tins in England more years ago than I care to remember, and I think I can safely lay claim to the originatorship of the agitation that gave us Edgeworth here in India in the vacuum-packed tins.

Traveling out to India on one occasion I found myself at Liverpool, within two hours of sailing time, with a very small quantity of my tobacco. The few tobacco shops in Birkenhead stocking Edgeworth could supply me with a very limited amount, and the ship's bar kept none. My stock lasted me until we reached Port Said, our first port of call. At Port Said, divil a bit of Edgeworth could I find.

That evening, slipping along the Suez Canal, I was approached on deck by one of the canal pilot's boatmen—hairy and vociferous gentlemen who eke out their wages as boatmen by selling glutinous Turkish Delight, synthetic amber beads, and Egyptian cigarettes to unwary passengers. None of his wares appealed to me, but we chatted amicably enough about the cost of living in Ismailia, the price of dates, and other topics safely within his range. Idly, I asked him if he had any tobacco. He said he had, tucked away in his boat somewhere. He spoke as if the 'baccy were not fit for human consumption, and I lost interest in the matter.

A few hours later I received the shock of my life. My friend the boatman approached me with the largest glass jar of tobacco I had ever seen in my life and—God bless my soul, it was Edgeworth!

He had got it off an American ship in exchange for a mouldy box of dates, or something equally piffling. He would have been bucked with a shilling for the jar—"humidor," I think you call it—and when I gave him five he very nearly fell into the canal in his excitement!

Really, your sailors are very poor judges of value.

I enclose my card,
Yours faithfully,
An Englishman
(Mr. G. C. Read)

Her hair is oily

She should use Packer's Pine Tar Shampoo

If you have the kind of hair that loses its fluffiness shortly after shampooing, use Packer's Pine Tar Shampoo. This preparation is tonic and mildly *astringent* . . . approved by dermatologists. It leaves the hair fluffy, with a natural sparkle. Use it every four or five days at first; later every week or ten days may be enough.

Her hair is dry

She should use Packer's Olive Oil Shampoo

Like all Packer soaps, this shampoo is a vegetable oil soap . . . in addition, it contains a rich, soothing emollient (and nothing to dry the scalp). Dry scalps will never feel a stinging sensation when they use this special shampoo. Leaves your hair soft and silky to the touch—more manageable—and delicately perfumed.

He has dandruff

He should use Packer's Tar Soap

. . . the soap that made pine tar famous for shampooing. Pine Tar is antiseptic, healing, with properties valuable in the treatment of dandruff. Packer's Tar Soap is endorsed by dermatologists for skin and scalp. For noticeable dandruff use Packer's Tar Soap every few days until improvement begins.

Select the shampoo your hair needs

Acute cases of dryness, oiliness and dandruff need the care of a dermatologist—a doctor who is a skin specialist. But nearly all scalps *tend* to be dry or oily, and many are mildly affected with dandruff. Now—each type of scalp can have the special shampoo which meets its particular needs. The coupon below is for your convenience. The regular size of each shampoo is for sale at your drug or department store.

Check Sample Desired

For 10c enclosed send sample of PACKER'S

☐ Tar Shampoo
☐ Olive Oil Shampoo
☐ Tar Soap

Packer Mfg. Co., Inc., Dept. 6-D, 101 West Thirty-first Street, New York, N. Y.: Send me offer checked, with 28-page book on hair health.

Incidentally, Doctor True could have made a fortune from his discovery; in fact, he had a fortune waved right under his nose—and declined it! He was a government worker receiving only eighteen hundred dollars a year for his services. He was dependent upon that salary.

"Why don't you patent your process and become a consultant in such matters?" demanded the Pennsylvania manufacturer. "There isn't a cigar factory that knows how to cope with this mold. Every one'll be glad to pay a royalty of half the savings yearly to get rid of it."

Doctor True refused to accept a penny. Instead, he published his process in order to make it public property.

"I'm a public servant, in the public's pay," he insisted. "What I discover belongs to the public."

TODAY, at his desk at the University of Pennsylvania, Doctor True is still similarly serving the public—not for pay but because it is the lot of the scientist to serve.

He went on to tell me of other cases of his, many of which have all the aspects of a murder mystery in which botanist played the detective.

In a section of Montana, for instance, during the early spring, sheep died in numbers for no apparent reason. The would be turned out to pasture in good health. Soon afterward deaths would occur and would continue until late in the spring. The single clue the ranchmen could furnish was their belief that the animals ate something poisonous—what they did not know—but they suspected a plant.

"The problem was to find the plant so we began a systematic search over the pasture lands. It was in May, when a great many plants are not yet up and the grass is still thin. We reasoned that because of this scarcity of grass the sheep probably foraged on the earlier greens which later, as grass grew more plentifully, they would let alone. These early greens were most abundant in low, wet places, and in such places we noted a multitude of sheep tracks.

"It wasn't long before we had a suspect in hand, the low larkspur. There were evidences, from tracks and mutilated stalks, that the sheep had fed on this plant, which ordinarily they will not touch. So we fed the larkspur to several sheep, and when their deaths followed the mystery was solved. Herders were warned of the danger and the trouble was checked.

"Practically everyone has heard of loco weed and of 'locoed' horses and cattle. This weed, one of the oddest of plant growths, takes its name from a Spanish word, *loco*, which means crazy. For years, over a vast section of the West the strange loco disease was affecting great quantities of live stock.

"Horses became affected in the most fantastic ways. At certain stages they had illusions, became jumpy and nervous at the sight of the most common things, then gradually grew weaker until they were useless, and finally died.

"Four of us were sent out from Washington to study this loco disease and, if possible, find a remedy for it. We pitched camp in sight of Pike's Peak and b

The story of a typewriter that went to war

By a War Correspondent

T was in July, 1916. The commander of the British Flying Headquarters at Saint-Omer took me flight over the lines.

ldding my Corona between my knees ote the first description of the front ever typed from the air. During a cruise in a British submarine I typed a complete magazine story while we were nosing about off Heligoland, a hundred feet beneath the surface. A description of the first Zeppelin raid over London I typed at a shattered window by the light of the fires from incendiary bombs.

Throughout my entire period at the front, all my writing was done on my Corona. Because of its portability and dependability, I made it a constant companion. Many a story banged off hot in a front-line dugout would never have been written if I had waited to reach a spot of greater convenience.

During my war-time work in Europe I typed an average of 15,000 words a week. In addition to this I typed the manuscript of four books. Yet, in spite of a number of emergency repairs made necessary by violent accidents, my Corona was still in highly serviceable condition when I arrived back in New York in 1919.

The foregoing is only one of many astonishing Corona stories. You owe it to yourself to drop into a store where typewriters are sold and see why Corona is the Champion Portable. The minute you lay eyes on it you will realize why a million people use it—why Roosevelt took one to Africa—why 30,000 Coronas were used in the World War—why more novelists, more newspaper men, more business men, more students in schools and colleges use Corona than all other portables put together.

For a small down payment you can take a beautiful new Corona home with you today. Don't neglect this opportunity. Don't let another day pass without doing something about it. Know *now* the joy of owning a sturdy, speedy, smooth-operating Corona—the Champion Portable Typewriter of the World.

An interesting illustrated booklet called "Corona Typewriters," which describes Corona in detail and contains beautiful illustrations of the new color models, will be sent you upon request. No obligation. Simply mail the coupon below.

nais the World's Champion Portable on 8 Exclusive Points

ENGTH: *The only portable with a rigid one-ce solid aluminum frame.*

PLICITY: *Fewer parts than any other ndard-keyboard typewriter.*

IPLETENESS: *More big-machine features n any other portable typewriter.*

Y TO LEARN: *Corona design is the result of years' study of the needs of beginners.*

R SERVICE: *An unequalled record for dura-y as the official portable of the Allied nies.*

ULARITY: *As many Coronas have been sold ll other portables combined.*

ABILITY: *Coronas purchased 20 years ago still giving satisfactory service.*

What's all the shouting about?

IT WAS a simple enough hunch—that a lot of pipe lovers secretly craved a milder mixture than they'd been smoking. We gave it to them—literally—a free tin to every man who asked for it. And now so many tobacco connoisseurs are cheering for Sir Walter that we can scarcely make enough of it. Isn't it time you too discovered how good a pipe can be?

LIMITED OFFER
(for the United States only)
If your favorite tobacconist does not carry Sir Walter Raleigh, send us his name and address. In return for this courtesy, we'll be delighted to send *you* without charge a full-size tin of this *milder* pipe mixture.
Dept. 167, Brown and Williamson Tobacco Corporation
Louisville, Kentucky

B.W. PRODUCT

SIR WALTER RALEIGH

Who discovered how good a pipe can be

It's  *milder*

an investigation which was to take us more than two years. First, we determined, by feeding, that the loco weed actually was responsible. Animals became addicted to it as men do to a poisonous drug. Its action was slow, dragging out over months. On an average it was two years before death overtook the animal, from which you will appreciate the tedious nature of our investigation.

"We took sixty-eight locoed animals for treatment and study, conducting what amounted to a locoed animal hospital. Each animal was kept under daily observation and had its temperature taken regularly; and a card record was kept of its case. This close study led us to discover that the loco disease was similar in many of its symptoms to locomotor ataxia in people, and that certain arsenic compounds administered hypodermically were an excellent form of treatment in many cases. In fact, through this remedy we were able to save two thirds of the animals under our care. They never completely recovered, but they lived, and many of them once more became useful to their owners. But though we worked faithfully for months, we never were able to identify the particular poison which gave the loco weed its weird property."

"WHAT is the biggest trouble-maker to the average *person*, among plants?" I asked Doctor True.

"Poison ivy," he answered promptly. "It grows wild almost everywhere and, because so many people make no effort to destroy it, it is constantly on the increase. You can't take a ride into the country without seeing poison ivy on some fence or stone wall.

"Poison ivy creates all sorts of mysteries because of the amazing way in which its poison will spread. A few years ago four friends and I, all botanists, were boating on the Potomac River. Desiring to land, we rowed our boat to shore and made it fast with a rope to a stump. About the stump was some poison ivy. Not one person in the party touched the vines nor even brushed against a leaf. Yet, a few days later, every one of us was broken out with ivy poison!

"I repeat, none of us, in person, had touched the ivy—but the *prow* of the *boat* had touched it. When we shoved off for the return trip, one of the men grasped the prow with his hands. Then he took up the oars. The day was hot, and when he tired of rowing, another of us relieved him at the oars, until each of us had taken a turn. Incidentally, with our hands that had been in contact with the oar grips, we took out our handkerchiefs and frequently mopped our faces. By the time we reached home we were so poisoned that we could have been little worse had we rolled in the ivy vine itself.

"Often, people will walk through the poison vines, return home and change their shoes, and wonder how in the world the ivy got to their hands. Again they may pick up something, like an ax or a scythe, which has been used by another who has been in contact with the ivy—a very common way of transferring the poison on the farm.

"Some years ago a veritable epidemic of ivy poisoning broke out in a little town in California. There was scarcely a home that didn't have a case or two of it. Yet not one in ten who suffered with th poison had been within a mile of any iv vine!

"This town happens to be situated i the mouth of a canyon. It developed tha just preceding the epidemic, vegetation i the canyon had been afire and the smok had been blown by the wind through th town. The smoke had carried the poiso from burning ivy vines.

"Fortunately, not everybody is su ceptible to ivy poisoning; probably thre out of every four are immune. But th trouble is that you never can tell ho long your immunity will last. I never w bothered with poison ivy until after was forty years old. Now I contract most readily.

"Of course, the poisoning is never fat usually spending itself in about ten day The best treatment I've found for it is bathe the affected parts in very hot wat to which a little baking soda has be added. Chloride of iron dissolved in weak glycerine solution helps many case

"It is better still, when one has been contact with the plant, to scrub the a fected parts thoroughly with suds of som strong, alkaline kitchen soap. If this done immediately and well, the poison washed off before it can get busy.

"Poisonous toadstools are other pla pests, because folks confuse them wi edible mushrooms. Every spring I a asked this question dozens of times: 'Ho may I tell the two apart?' My answer variably is: 'Don't try to tell them apa *Buy* your mushrooms.'

It is extremely difficult for the laym to distinguish between safe and harm plants. However, there are ways whi will serve as general rules. If what y think is a mushroom is brilliant in col let it alone. It may be a good mushroo but again it may be injurious. If the st grows up from a little cup formation, it alone. If the plant is ghostly white, it alone. But to be absolutely safe, le the selection of your mushrooms to perts who deal in the cultivated varie or know the wild forms. Otherwise, may go wrong.

"IF YOU live in a community which an established water supply, you n be puzzled now and then by a pecu medicinal taste to the water and may once suspect the presence of a chemical there to kill disease germs or introdu as factory wastes. The possibility is, h ever, that plants, and not germs, are sponsible for the chemical.

"Not so long ago water companies o were mystified and their consumers ho fied by the bad odor of the water suppl Perhaps the water had been most c fully filtered. Chemical tests proved i be pure. Yet the offensive odor persis and finally botanists looked into the p lem. They traced the cause of the odo tiny plants belonging to the family of algæ, which makes its home in water. rid the water of these plants, copper phate is sometimes put into city w supplies.

"A Virginian once came to the Dep ment of Agriculture with a problem w threatened to ruin his business. He w grower of watercress for winter mar had large fresh-water ponds in which grew his cress, and had worked up business to a size where it necessit

THE NEW WAY TO SEE GRAND CANYON NATIONAL PARK

COME linger on this sunlit brink of immensity

Imagine it! To lose yourself in the contemplation of these glorious heights and vast, mysterious depths, drenched with countless rainbows of color, changing subtly with the course of the sun! To sojourn in luxurious Grand Canyon Lodge overhanging its highest brink!

Now Union Pacific makes it possible. The new Grand Canyon Lodge, from which this view was sketched, clings to the very edge of famous Bright Angel Point! Here you will relax, and amuse yourself, and draw strength from the marvelous climate. Here you will get an unparalleled view of this measureless chasm!

But Grand Canyon is only one attraction on the Union Pacific Utah-Arizona tour.

You will travel in easy riding motor buses, to the prismatic labyrinths of Bryce Canyon and Zion National Parks as well. It is a land of infinite variety. Colossal forests are here palpitating with wild life; strange Mormon villages and forts, extinct volcanoes, ruins of incalculable age. Every morning the world is reborn for you.

You may go independently, or on an Escorted All-Expense Tour, with interesting people from the world over. The trip is exclusive with the Union Pacific, and takes only five days after leaving your Pullman in Cedar City, the gateway. Shorter tours to individual attractions. The low cost will astonish you. No other vacation gives so much for so little—and with such economy of time!

The season is from June 1 to October 1. Send the coupon at once for detailed information, together with richly illustrated booklets.

Corinthian Column in the Palace at Versailles

THEY SAY IT IS "TOO GOOD"

WE have been told by those who think in terms of average merchandise, that we make the Clark Grave Vault too good!

But as our vaults must provide protection for the precious remains of loved ones we never have permitted, and never will permit any compromise in the quality and workmanship.

The Clark Vault is sealed by an immutable law of Nature and does not depend on man-made locks. The material is metal, because it is not porous. Special quality sheets of Armco Ingot Iron or Keystone Copper Steel give added rust-resistance.

And our workmanship always insures the fullest utility of these fine metals. Seams are doubly-welded, oxy-acetylene on the outside, electric on the inside, so that the metal flows into one solid piece. A test under 5000 pounds of water proves the perfection of the welds.

And then on the finer vaults a plating of pure cadmium assures a still greater measure of rust-resistance.

The Clark Grave Vault has never failed during a quarter of a century. Leading funeral directors recommend it. A 50-year guaranty with every one.

A de luxe model, beautifully designed, of 10 gauge Solid Copper is also available. It is practically indestructible and carries a perpetual guaranty.

Less than Clark complete protection is no protection at all!

THE CLARK GRAVE VAULT CO.
Columbus, Ohio
Western Office and Warehouse, Kansas City, Mo.

CLARK

GRAVE VAULT

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

carload shipments. Then a green, unsightly slime had made its appearance in his ponds and mixed itself with the watercress. He couldn't get rid of it. His customers complained. He was in despair, when a friend suggested that a botanist might help him out of his difficulty.

"Through the microscope this slime was seen to be made up of beautiful, thread-like filaments. In fact, it wasn't slime at all, but a plant known to botanists as Spirogyra. Not many hours after he had proceeded to carry out instructions, the watercress grower had conquered his 'slime.' All he had to do was to put a few pounds of blue vitriol in a sack, tie the sack over the stern of his rowboat so that it dragged in the water, and row several times over his ponds. As by magic, the 'slime' dropped to the bottom, a feat which may be duplicated by any owner of a spring or pond in which this growth appears.

"THREE fourths of the questions I am asked to answer come from people who own homes," continued Doctor True. "It seems that many of the things which happen about the house and yard are a constant source of mystery, and the botanist is the detective called upon to solve these mysteries either by telephone, letter, or in person.

"Just a day or two ago a gentleman came to me, sent here by his wife. They had been living in the country and had grown some very beautiful house plants. Moving to the city, they had taken the plants with them, going to some expense to do so. In less than a month various of the plants had started to die.

"The leaves turned yellow and sickly-looking, and many of them dropped off, leaving only the stalks. Flowers which were in bloom wilted and dropped, or didn't emerge from the bud stage. Cut flowers kept only a day or two.

"'My wife thoroughly understands plant culture,' explained the man, 'and she has done everything within her knowledge. The trouble is not from any lack of attention. But what puzzles us most is that in the house next door, which hasn't the sunlight of ours, every plant is thriving. Our neighbor doesn't pretend to give her plants half the care my wife gives ours!'

"'What plant was affected first?' I inquired.

"'The begonia,' he said. 'It lost all of its leaves.'

"'Have you illuminating gas in the house?'

"'We have a gas range, a gas log, and there are gas fixtures as well as electric in most of the rooms,' he replied.

"'Then it's a good guess,' I told him, 'that your plants are warning you of a danger in your house from a gas leak, just as rats or canaries warn miners of gas in the mines. Every symptom you have related indicates that your home contains escaping gas, not enough perhaps to be evident to your nostrils, but sufficient to poison your plants, which must breathe just as you do.'

"My client had a gasman make a careful examination, in the course of which a bad connection was discovered in the gas range and repaired. Thereafter his wife had no difficulty in growing plants in their city home.

"You would be surprised at the number of people who live in homes with leaky gas fixtures and don't know it. With the arrival of the first cold snap in autumn, when flowers are brought in from the porch and yard, I get calls for help. In nine cases out of ten the flowers are giving warning of escaping gas.

"One of the ingredients of the gas which affects the flowers is ethylene. The carnation is particularly sensitive to this, as is also the begonia, the castor-oil plant, and the sweet-pea seedling. If the buds of your carnations will not open, if the begonia's leaves drop off, or if the leaves of the castor-oil plant assume an odd angle it is a sign that the air of your home contains gas, though in such small quantity that your nostrils can't detect it.

"A reliable test may easily be made. Plant sweet-pea seeds in a small, light-tight box or pot that may be readily watered and moved about. By day keep the seedlings in a dark closet or so covered that no light whatsoever will reach them. By night let them stand uncovered in one of your rooms, with the windows closed and the shades drawn so that daylight won't creep in before you arise. The idea is to let the seedlings get air but no light.

"In two or three days look at the seedlings. If no light has reached them, the little stalks will be entirely white. Now look at the stalks. If they are erect, well developed, and straight, the air is free from ethylene; but if they are curved over gas is intermingled with the air. The more pronounced the bend, the greater the quantity of gas present.

"Another question often asked pertains to the effect plants have on air, especially on the air of a sick room. There seems to be a feeling that flowers contaminate the air at night and therefore should be removed from the room. This feeling is not without some reason. Green plants, during the daylight, breathe in carbon dioxide and give out oxygen. During the night, instead of giving off oxygen they continue exhaling carbon dioxide, which is an impurity to human being. However, unless the plants are in unusual profusion in a room, the amount of carbon dioxide they exhale is almost negligible and surely not enough to do anybody harm.

"BUT, getting back to *home* mysteries," continued Doctor True, "one of the most common has to do with the lawn. Jones can't understand why his neighbor Smith, has such a wonderful growth of grass in his front yard, whereas the grass in his own yard consists mainly of weeds and bare ground.

"'I've the poorest lawn in our block,' one home owner complained to me. 'I'm positively ashamed of it. I've planted grass seed by the bushel, and the finest clover I can buy. I've bought sod and laid it myself, and watered it faithfully. Yet the stuff won't grow!'

"'What is the nature of the soil?' I asked.

"'Blessed if I know,' he shrugged. 'Just regular soil, same as the rest of it.'

"In two minutes I had happened on the trouble, which is the trouble of hundreds of owners of city homes.

"Soil, in general, is of two kinds, sweet soil or sour soil. A soil is sweet when it contains sufficient lime, and sour when it lacks lime. Grass that will grow on

one soil won't always grow on the other.

"A rough test of the soil may be made with two strips of litmus paper placed on the bottom of a glass dish. One strip of paper should be blue and the other strip should be red. The dish should be filled with the earth under test, well moistened with pure water. If the blue paper turns red, the soil is sour; if the red paper turns blue, the soil is alkaline. If no change takes place in the colors, the soil is neutral.

"Once the nature of the soil is known, it is a simple matter to seed it accordingly. In sandy or sour soil the varieties of grass known as redtop, creeping bent, and English rye do best. In sweet soil white clover and Kentucky blue grass should do well. Neutral soil containing sufficient lime will at once come within the 'sweet' classification and be suitable for clover and blue grass. Anyone who keeps these few facts in mind should have less trouble with his lawn."

HOW DOES IT FEEL to adopt a baby? That's a question that a great many people would like to see answered fully and intimately by someone who has been through the experience. Next month Agnes Sligh Turnbull, who is well known to the readers of The American Magazine through her short stories, tells in a charming article what her little adopted daughter means to her.

The Sin of Angels

(*Continued from page 63*)

hand was the umbrella—*her* umbrella—that he had taken from her, just as he had taken from her the solace and protection he could have given, and she so cruelly needed. If she were hungry—as he was at this moment—

"I—I see that I've got . . . some one's . . . umbrella," he said. "I'm afraid I've got to take it back. . . . The . . . the . . . person might need it."

He was well aware that Mr. and Mrs. Alden were looking at him with mild surprise. They would think that he was self-distrustful, that he didn't know how to behave, that he was a fool.

"I'm . . . sorry, sir," he said, miserable and dogged.

"Can't you wait until after dinner, Moorehouse?"

"I'm sorry, sir, but she—" He stopped short, and his face grew hot. This was the finishing touch to his folly. Now they would know it was a girl!

"I'm sorry, sir," he said again, and turned to Mrs. Alden with a wretched smile. "Thank you!" he said. "I'm thank you for asking me."

Of course, the girl would have left the office long ago, and he had no idea where she lived. But as long as he had been being such an incredible fool, he might as well go on.

Indeed, he had to go on. He had to go back there with the umbrella.

"She thought I'd be waiting for her," he said to himself. "I asked her when she'd be finished. . . . Perhaps she was for me—for a while."

He went downtown in the subway

Discover this summer why so many have *chosen* to live in CALIFORNIA*

From every corner of the nation they have come, first to see, then to live. For California has been settled by those from other sections. It is new country. It lures countless thousands. Why not see this summer what it offers you?

From the rugged background of the High Sierra to the foam-tipped crests of the inrushing sea is a land that offers joy of living. Here is Monterey, first capital of California, Del Monte and Carmel-by-the-Sea. Over there is Yosemite, cupped from solid granite to make a playground. Giant Redwoods, oldest living things on earth, lift their shaggy heads above comfortable inns and a thousand glorious camp sites. Sports of every kind—trout streams, golf courses, in the mountains and by the sea, tennis courts that have reared more than a few champions, peaks that are ascended by motor car for mile-high views and peaks that try the hardiest veteran climbers. You select your summer climate as you do your sport, all are here.

You may find opportunity, too. Others have. You may decide to live "where life is better." If so, your vacation will have served a double purpose. Can a vacation offer more? Come this summer to

SAN FRANCISCO

Here is America's coolest summer city and headquarters of a marvelous vacationland. Central gateway to the whole Pacific Coast. Its average summer temperature is 59° and no summer rain to mar your plans. Cosmopolitan, world port with the largest Chinatown outside of China. A city where art and music find deep appreciation. Smart shops, fine hotels, gay restaurants. And in every direction railroads and highways leading to scores of scenic playgrounds that make this state the nation's summerland.

You may have an illustrated travel book, describing this California vacationland by writing to Californians, Inc., a non-profit organization whose sole purpose is to serve you and other guests of California. It is free

Capt. George Fried,

reach for a Lucky instead of a sweet"

"AN S. O. S. from the 'Florida'! We change our course. We on the 'America' strain to arrive in time to rescue the men on their sinking ship, 350 miles away. Through the icy, freezing storm and high seas we plunge on—all speed ahead! Then the night-time rescue, the search lights, the whirling waves, the manoeuvering to get near the 'Florida.' Finally, the 'Florida's' crew coming off one at a time, pulling themselves through the water on the line our men had thrown them. These 32 men, dazed, many half clothed, needed reviving after their long exposure. Hot coffee, food and Lucky Strikes—these gave new life to many of them and we on board the 'America,' crew and passengers alike, found after the strain and struggle that there was nothing quite so comforting and relaxing as the inviting, toasted flavor of Lucky Strikes. Playing this game with 'Davy' is ever fascinating, ever thrilling. And we who follow the sea must be ever ready for adventure. Ours is an active life, demanding nerve control and physical fitness. In my health program I have found that Luckies are most important not only because they provide a respite for frazzled nerves and an exhausted body but because whenever I crave anything which is over-fattening, I say to myself, 'Reach for a Lucky instead of a sweet.' In the toasted flavor of Luckies, I get complete satisfaction. And I find that toasting, by removing the irritants, protects my throat."

Geo. Fried

How Does Your Employer Size You Up?

How much are you actually earning for your company?

How much are you *capable* of earning?

What are you doing to increase your earning power?

Answer those questions—as your employer answers them—and you will know exactly how he grades you for promotion.

SO MANY employes wonder why they stick at the same old salaries year after year!

"Just an old tight-wad," that's the way they speak of the boss—when he isn't listening—and in their dreams they see themselves stepping into his office and laying a curtly worded resignation on his desk. "I'm leaving to go with So-and-So," reads the ultimatum, "and they're paying me twice as much. *There's* a place where my services are *appreciated.*"

How dumbfounded such employes would be if someone in authority should ask them the three questions at the top of this page—and what a revelation if they could see themselves as their *employer* sees them!

Little they dream how eagerly he watches the man who is able to cut costs and increase profits—who possesses the capacity for *growth*—who in spare time is striving to increase his earning power!

Does the average employer favor such a man—promote him rapidly?

You bet he does—and by way of proof we are going to tell you about two men who put their employers to the test!

How G. Roy Eshelman Said Good-bye to $16 a Week

G. Roy Eshelman, of Decatur, Illinois, was earning only $16 a week when ambition prompted him to enroll for Higher Accountancy training with LaSalle.

"Through my training," writes Mr. Eshelman, "I became interested in the Auditing Department of my company, and often remained after hours watching the auditor at his work.

"Observing my interest, he soon placed me in his department at a 50% increase in pay, and as I progressed with my LaSalle work, I was shortly rewarded with an additional 40% increase.

"My studies rapidly equipped me to strike out for myself, and at present I have an extensive practice as a Public Accountant. It is sufficient to say that my present income is many times greater than when I enrolled."

A "Raise" of 137 Per Cent in Fifteen Months!

For four years Philip S. Blessing, of the Lancaster Brick Company, Lancaster, Pa., worked hard as a clerk and got nowhere.

During that time plenty of opportunities came his way—and passed him by. He began to realize what every successful man knows—that opportunities without trained ability mean nothing. He decided to get ready.

Within 15 months after he started training with LaSalle, Mr. Blessing was made Assistant Treasurer of his company, and his salary was increased 137 per cent. It has now been increased 250 per cent.

His employer, Clarence B. Horning, General Manager, adds the vital point: "We believe he has many successful years ahead of him." His business progress has only begun.

Send for Free Book "Ten Years' Promotion in One"

How does *your* employer size you up?

Does he perceive by your interest in some special field that you are capable of discharging greater and greater responsibilities? *Read again how Eshelman said good-bye forever to $16 a week!*

Can he say of you—by reason of your spare-time efforts to increase your earning power—"We believe he has many successful years ahead of him?" *Read again how Philip Blessing won the position of Assistant Treasurer at a 250% increase in salary!*

The business world is crowded with unthinking fellows who are forever looking to hard work and faithful service to put them ahead—forgetting that these are only the *beginning* of what the boss wants.

"Merely a loyal worker"—is that the way your employer sizes you up? Or does he rate you as a first-class business man—*a future leader?*

Prove that you have the will and the stamina to win success—by what you do with this coupon NOW!

(*Continued from page 59*)

with suspicion a talking machine and disordered piles of records in a corner of the living-room and had thanked all the gods that no one had thought of playing the thing. But I had rendered thanks prematurely. No sooner had the crowd arrived than the liveliest dance records were selected and the jazz box wound up. And it wasn't permitted to run down. The gang kept that infernal machine going until three o'clock in the morning. Two or three middle-aged husbands in the crowd managed to get their wives away shortly after midnight, but most of the poor fish were caught for the night.

My legs ached from dancing; my feet felt like kegs of nails encased in hot binders; my eyes were red and swollen from loss of sleep. And the wife was going strong.

Came three P. M., and I was sure the party would disperse. But no; some demon thought of the sun; the sun would rise about four o'clock; it would never do to pass up a sunrise on the ocean now so nearly due; they would all go down to the beach and see the sun rise on the ocean. Wonderful!

RIGHT then and there I took a sneak deserted the party, and tumbled into bed. I slept for possibly an hour and then there was no more sleep. Back from the beach, another jazz hound had an idea.

From time to time I looked at my watch and wondered when it would end. The noise died out at eight A. M. I don't know when my wife got in; I was dead to the world. But at 11 A. M. my wife was shaking me and telling me that they were waiting breakfast for me. She raved over the wonderful time she had had. There were roses in her cheeks, sparkles in her eyes. I looked at myself in the mirror: eyes bloated, the corners of my mouth sagging, three chins where there were only two before. I groaned, dressed somehow, pulled myself together, went to breakfast, wondered why breakfasts were invented.

Came evening again, and I thought surely there would be sleep this night. But no. Most of the same gang and some new pace-setters came over, and the fun began all over again. Inwardly I groaned but thought sure it would terminate earlier this time. But I had misjudged the middle-aged married women, including my own phenomenal wife.

Came midnight, and they had settled down to playing Ramona on the new machine, then turning the record and playing Among My Souvenirs and turning the record to Ramona again. They were having such a good time that nobody cared about fishing for a change of record. At one o'clock I went to my room, packed my bag, and then, succumbing to a feeling of guilt, sat in the dark hesitating, hoping against hope that the party might break up soon. No such luck. I wrote a note to the wife, telling her I had gone back home, telling her to come by the next day, left the note on her pillow, slipped quietly out of the merriment.

Gone

is all the drudgery and mystery of learning to play a piano

So simple and effective are the new methods of teaching that Public Schools are successfully giving Class Instruction to Children

THE piano has taken a new and important place in modern education. For years educators have agreed that if piano study could be made simple and interesting it would become one of the real important subjects in training the minds of the children of this country. And why not? Is not music the greatest spiritual influence that a child can have?

Piano Study Simplified

The simplification of piano study has been accomplished. Modern methods of teaching make learning to play the piano so natural, so effective and so interesting, that over 400 cities and towns in this country have added piano study to their curriculum.

This new educational movement is gaining ground daily. City after city is offering piano study as an optional course in its public schools. Think of the significance of these happenings. In not a great while every child in America will be able to learn the rudiments of piano playing at school —and at public expense.

Chicago Schools Adopt Class Piano Instruction

So successful is this plan of teaching children to play the piano, that the city of Chicago recently put piano study at the option of its public school children. To know and love music and how to make it, is indeed a contribution to public welfare.

You will naturally be interested in the spread of this work. It means additional advantages to your own children. Let us send you some literature describing this new development in child education. Send for it today.

When WRITING beckons to you what do you answer?

"Some day I'll start" . . . "I'd like to, but I'm busy" . . . "I'll get there, all right, once I make up my mind. . . ."

And so they go, those time-devouring *good intentions*. A day, a month, a year goes by. Again something happens to rouse the urge within you. And again: "Some day" . . . "Yes, but" . . . or some equally deadening evasion, and no progress!

So it is that many live and die, thinking they could be writers. So it is that many who really have ability never learn how to make it count.

Today thousands of practical people are meeting the challenge that writing offers by taking instruction from the Newspaper Institute of America. They are finding out things about writing and about themselves that they would never otherwise learn . . . what sort of style they have, what its possibilities are, what specialized training they need, how to write and how to sell their output.

Theirs is the modern attitude, the attitude of inquiry, earnestness and openmindedness based on the common-sense principle that the way to understand anything is to make a working contact with it. The Newspaper Institute course is a working course created and directed by a group of New York newspapermen of long and recognized experience. Instruction is based on journalism—metropolitan journalism—because the recent history of American literature demonstrates that an overwhelming majority of the day's greatest writers are products of newspaper training.

Mrs. Grace L. McMillan, 1345 Willamett Blvd., Portland, Ore., is but one of many men and women trained by the Newspaper Institute of America to make their gift for writing pay prompt dividends. She writes:

"Here's how I'm putting into practice some of the teachings of the N. I. A. Two weeks ago we drove down the coast to Newport for a week-end and while there I saw a very remarkable dog. I decided to write my first news story. I sent it in at regular rates and it was accepted and published in the Sunday Journal. Needless to say, the fact that it was printed almost word for word, gave me a good bit of encouragement."

Another of our student-members who tried is L. A. Emerton, Jackson Street, Hanover, Pa.

"My first big thrill came last month. An acceptance slip! The check that followed was not large but I got a real kick out of it just the same, for it proved that I can write printable stuff."

Perhaps the greatest virtue of the Newspaper Institute course is that it starts and keeps you writing; you begin to get experience with the very first lesson. You write, on assignment, just as you would for a great metropolitan daily. You send what you write to the N. I. A. editors, who analyze, correct, criticize, and suggest. And you respect what they say, because their capacity to teach you is made progressively evident throughout your contact with them.

It is in this sort of training that you can most quickly find yourself. Practice, effort, criticism rouse you as no expounding of theory could. And the whole cost of this intimate, challenging home-study course doesn't amount to more than about one month's living expenses at college or school.

We expect, upon your part, a practical attitude toward writing, one which, at the outset, aims not so much at fame and royalties as at the $25, $50, $100, etc., to be earned by articles, short stories, and a great variety of other material such as you see published every day.

Test us and test yourself, with our Writing Aptitude Test. Mail us the coupon and without obligation, learn how our training will fit your case. Newspaper Institute of America, 1776 Broadway, New York.

But her Old Man is all in; no night club for him. And the despondent wife wonders whether all husbands are alike.

There is a false notion in some quarters that the strenuous life is the city life and that we folk in the small town and rural settlements of America lead an uneventful and rustic life, bordering on boredom. Nothing of the sort. The cinema, the automobile, the radio, the beauty parlor, and prohibition have made over small-town life in America.

The cinema has brought all the life of the world to the suburbs and whetted the appetites of suburban mortals for all the fads, foibles, frolics, and frivolities of modern life as lived in Newport, Hollywood, Paris, London, Palm Beach, and Honolulu. The automobile, swift and dependable, has extended our world and enables us to make sufficient excursions here and there to confirm much that the cinema has revealed to us. The radio has done the rest and makes it desirable to keep late hours, lest we miss something from the outside world. We don't go to bed with the chickens down home any more.

The beauty parlor has further rejuvenated and intensified small-town life. What woman wants to go to bed at 10 P. M., to muss up a new finger wave and lose the bloom of a facial for which she spent an hour and her coin that afternoon? She wants to sit up and be admired, and there isn't much fun in sitting up by one's self.

IT USED to be the women who married to settle down. The poor things had suffered much from the restraints of their old-time, feudal home life and their confinement in strait-jacket clothes effects. Having had to sit up stiff and straight in steel-ribbed corsets and starched clothing and endure the tortures of tight lacing and tight-fitting shoes all their single days, it was a relief to a woman to marry and settle down to life in a house dress and soft shoes. If invited out some place, she most often declined the invitation, because it was a long and tedious ordeal to dress and "fix" one's hair.

But the modern *couturier* has released the formerly pent-up bodies of women and emancipated them from the slavery of clothes and hair. Where it used to take a woman an hour to get ready to go out and another hour to get ready to retire for the night, she can now skin into a pair of hose, slippers, a one-piece step-in, and a one-piece frock that fastens with a single snap, give a toss of her head to fluff out her hair, put a dab of powder on her nose on the way downstairs, and in a minute and a pair of seconds she is ready to go any place. And there is no hurry about getting back home, for she can undress with a shrug of her shoulders. We boob men did all this, and more, for women, and made trouble for ourselves.

We have, by our inventions and enterprise, emancipated woman from the drudgery of housework; we have given her steam heat, electric refrigeration, and electric cookery, a vacuum sweeper, and a delicatessen around the corner. No wonder the dear better halves think so much of their leisure time and devise so many ways of enjoying it, while we boob husbands exhaust ourselves at our own work by day and have little heart for anything but a snooze about nightfall!

And yet I have failed to take into account the most interesting and significant fact about woman. Woman is essentially romantic and adventurous. The old boy who accused the first mother of exploring the Tree of Knowledge and capturing the forbidden apple was most certainly aware of the inquisitive and enterprising spirit of the female. Old Adam would have contented himself with grapes and figs and huckleberries closer to hand all his days. But not Eve; being a woman she wasn't going to miss anything.

It is this romantic nature of women that makes them strive ever to be young. I am heartily of the opinion that marriage is generally a disappointment to the sentimental and romantic nature of the woman. The glow of anticipation that glorifies her man in the full flush of his pursuit of her, turns to a rather drab pallor when the gentleman concludes his pursuit and proceeds forthwith to lose himself and neglect his mate in the irksome and prosaic business of providing an income for two or more.

But the romantic nature of woman will not be thwarted. She takes another look at herself in the mirror, reaches for the rouge, and determines to lose none of her charm and her coyness; she would be a lover to the end of her days. The boob husband would be satisfied to be merely a good provider. The male is easily persuaded to slow down; the woman never gives up. If she is a normal, healthy, red-blooded woman, she persists to the end of time in believing that romance still awaits her right around the corner. She may not think that's what ails her—may be utterly unconscious of what it's all about—but I am sure I have diagnosed her case. This is why women are generally religious; there is so much poetry and mysticism in religion.

Men fear old age and plan for it. Women fear old age and deny it. A man thinks of the rainy days ahead; women look forward to more sunshine. My next door neighbor, a woman eighty-six years old, died only last week. Before taking her bed a few months ago, she delighted in turning on the phonograph and dancing to the music with a step she learned when she was in the flower of her girlhood.

BUT I wish we boob husbands could make the dear wives understand that the female of the species is inherently and fundamentally tougher than the male. They forget that they were originally made for the harrowing business of bearing and mothering children and doing the manual labor incident to home-making, not only keeping the house, but tending the farm as well. They are equipped by nature to stand more labor and more punishment, with less fatigue, than men.

Primitive man was a hunter, a fisherman, and a warrior, having a leisurely good time of it while the woman stayed home and did the work. With little of the old-time drudgery to hamper them in this highly machinized modern age, women have got to have outlets for their energy and I shall not condemn them for seeking the pleasurable ways. But I sometimes wish they would remember that I come from a long line of fishing and hunting ancestors.

The Woman Across the Street

(Continued from page 43)

years. I haven't the right to ask you to sacrifice—"

"No? I'd like to know who's got a better right?"

"You'd be giving up the best years of your life."

"Which is why I'll give them," she answered rapturously. "Bert! Oh, Bert!"

Mrs. Mason came unexpectedly into the parlor to find them standing as one figure, Bert gripping the girl tightly, his face on her shoulder. Dorothy, her arms equally about the sorry teller, was saying thickly:

"But they won't be the best years of my life, laddie. The best years of my life will come after the horrid ordeal is over and I know the mettle of the man I've married!"

THE news of Bert's decision got about the town. Local persons contended that while the first flush of determination was strong in the youth, he would doubtless keep to his grim self-discipline. He might even stick it out for two or three years. But as time sped onward into his thirties when people had forgotten the drab heroism of it and nothing faced him but season after season of poorly-paid toil then the break was bound to occur; sooner or later he must decide that no such gesture of moral integrity could possibly be worth the price he was paying.

It was a hard situation in which to put the boy. He was young, popular, just starting his career in a new place and longing to go about and enjoy himself. Yet he gave up his boarding quarters at the American House and took one meager little room with the Brooks woman, on Union Street. It cost him three dollars a week and looked out on a chicken yard. His suits became shiny from much over-pressing, which he did in his room with an old, bent flatiron. His hair often went uncut, though his face was kept clean shaven.

As the months grew into a year, it suddenly dawned upon Paris, Vermont, that the teller in Cogswell's bank resembled the Prince of Wales no longer. The youthful, girlish pinkness had gone from his features.

And though he hired no more rigs from Uncle Joe Fodder, he frequently dropped into the old hostler's barn often to give voice to his loneliness to one who understood. The burden of his complaint to the aged philosopher seemed to be the penalty he was making Dorothy pay for his wise. But the hostler shook his head.

"Son," he said sagely, "wimmin are funny. They takes notions 'bout things. One of 'em's love. They's a certain kind o' female—an' it looks like your Dorothy one—who don't love a man t' commence with 'less they mean t' stick through fire an' boilin' water, hard luck an' ornery wimmin, sickness an' health, ol' age, crossedness, rum, riot, an' rebellion. When you've got connected with such a female y' might as well give up. In so far as she's concerned, she's hitched t' you f'r keep.

THE SAFE AND GENTLE WAY TO END A CORN

1000 HOTEL POSITIONS OPEN!

Hotels, restaurants, clubs, apartments, hospitals, institutions, schools and colleges everywhere need trained men and women. Over 70,000 positions paying $2,500 to $10,000 a year open annually in hotels of the United States. Nearly one and three quarter billions of dollars' worth of NEW HOTELS, CLUBS and INSTITUTIONS being built this year will need over 200,000 trained men and women. Hotels start you at salaries up to $3,500 a year, with living usually included.

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. Thru our Simplified Study Plan we give you the valuable knowledge that it has taken successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. A common school education is all you need.

We Put Our Students in Touch With Positions

We train you and put you in touch with big opportunities. All of your training under the personal supervision of Clifford Lewis, who has been appointed Managing Consultant by over 300 hotels thruout the United States. Our students employed by leading hotels everywhere.

Send today for Free Book, "Your Big Opportunity," showing how we can train you for one of these splendid positions, and explaining our Money-Back Agreement.

How Does Your English Impress Others?

You are sized up every day by the words you use, how you use them, your spelling, grammar, pronunciation.

Others think you are lacking in culture if you say "between you and I" instead of "between you and me;" if you use "who" for "whom" and "shall" for "will;" if you say "hosPITable" when you mean "HOSpitable," or if you make similar mistakes. Fairly or unfairly, you are judged by your English.

At last there is a way to improve your English quickly and surely. Sherwin Cody has perfected a remarkable device, which will quickly find and correct the mistakes you unconsciously make.

Already over 50,000 individuals in every walk of life have used this invention. It is so remarkably successful, because it concentrates on the formation of correct habits. There is no hard study. Only fifteen minutes a day are required, over a short period, and the instruction is guaranteed to improve your English to your satisfaction, or it costs you nothing.

Free Book on English

A new book, "How to Speak and Write Masterly English," explains Mr. Cody's surprisingly easy method. Get a copy free and learn how to stop making embarrassing errors. Merely mail the coupon or a postal card. SHERWIN CODY SCHOOL OF ENGLISH, 94 Searle Building, Rochester, N. Y.

Art Crafts GUILD TRAVEL BUREAU
Dept. 614, 180 N. Michigan, CHICAGO

He needed no records to recall past transactions in which the bank had been involved. He held the credit rating of local borrowers at his finger tips. He knew the value of every parcel of real estate within three adjacent counties. Suddenly he found himself elected cashier. But still at thirty a week—with the cost of living going up and up. . . .

Dorothy Peters, too, underwent a change while Bert fought that fight. She kept on at the boarding-house till Mrs. Mason died. Then she leased the place from the Mason family. People said she did it to keep as close as possible to Bert, right there across the street. It added nothing to the man's mental tranquillity that the girl who still waited for him season after season was making double his own income and by the time his ordeal was over would own the property without even a mortgage.

DAY after day, week after week, month after month—spring, summer, autumn, winter—they held to the grind. They were rarely seen together. If Bert met her on the walk, or she entered the bank, he spoke to her with a certain red-faced tenderness, as one whom the memory of old intimacies hurt.

All the same, his stamina was making him a local celebrity. Astute business men of the valley approached him with offers to leave Jerem and the bank. He turned them down consistently.

"That debt of mine has become a sort of habit," he laughed to John Stevens, of the Hard Rubber Process Works. "I've gone so far with it, I've got to see it through. Besides, I'm getting a grip on the Paris Savings Bank and Trust Company that I can't afford to relax. When I'm all paid off we'll see what happens."

But, after the whimsy of Kismet, when release came it was not what all expected.

Once each year for the past three decades the agricultural element in the Green River Valley has come together and offered for public patronage a cattle show and county fair. In the twelfth year of Jerem Cogswell's presidency of the Paris County Fair Association, and the sixth year of Bert Seavers's ordeal paying back Abe Albee's chicanery, the September arrived when hundreds of farmers' rigs fringed the Fair Ground, bands played, prize stock bellowed, fakirs held forth, for three county holidays. Jerem Cogswell scarcely appeared at the bank in this interval; he was a person of importance on the Fair Ground and for three days he strutted.

Bert Seavers did not go to the Fair. In the first place, he had no money to toss away on bucolic diversions. In the second, it always recalled his first summer in Paris, when one of his first outings with Dorothy had been a boyish splurge at the carnival. Besides, with Jerem absent, it devolved on him to attend to the bank. . . .

So he lolled about an empty town at sunset, trying not to mind the faint band music sounding from the south, or he dropped in to see Uncle Joe Fodder, whose increasing years made him stay clear of crowds.

But the third and last afternoon of this Fair something happened which made it different from other fairs. Bert was drawing the curtains before closing up for the day when he noted a peculiar milling of certain persons who happened to be town and on Main Street. Almost once Uncle Joe's personal rig skidded to the curbing; the mare stumbled reared as the old man pulled her to a h

"Bertrand! Bert Seavers! You be come down with me. Bull's loose on Fair Ground. My nephew jus' phon it's gored ol' Jerem!"

Bert lost no time seizing hat and c Through Cross Street Joe Fodder la the mare, while autos honked past shot up the hill. Across Walnut Stree the top they tore, and down toward Fair Ground, which spread toward river. The place was black with exci humanity. Gala music had hushed in interlude of tragedy.

They fought their way inside. . The great Holstein had been conquer But in a side-show tent Jerem Cogsw was one of the three who lay on blank while the sheriff's aids fought back crowd and attending doctors cursed tardiness of ambulances. Jerem's e opened weakly as Seavers knelt be him. He saw Bert and Joe Fodder.

"Joe . . . you're on th' bank board If I'm finished . . . see to it . . . t Bert takes my place."

The hostler nodded.

"Tell Amos Farmer he's been a g boy—Bert—an' came up t' scratch." doughty old banker was sinking visi "Tell Amos an' th' rest, Joe, I w Bert . . . should have . . . votin' po . . . my bank stock. . . ."

Cogswell never finished. He died three minutes without opening his e

THE following Wednesday after the directors of the Paris Savings B and Trust Company met in executive sion. All of them had been pallbearer Jerem Cogswell's funeral. The man b buried, the bank could not go on a without an official head.

Judge Farmer occupied the chair, the foot of the table was Bert Sea cashier. Every eye was upon him.

"O' course," the judge was sa "you can't expect Jerem's sister, a sole surviving beneficiary, to stan him *givin'* you this controllin' Seavers. She'll put up a court an' o' course win her case. But if could scrape up six or seven tho t' pay her in cash—an' give her note th' balance, I think she'd waive her r 'Specially as that's th' arrangement must've meant t' tell Fodder whilst in'."

"Suppose I can't raise the money?" young man said dully. "You all know load I've been carrying—"

"We'd like t' have you continue us, o' course," declared Farmer, shru his shoulders. "You know th' bank fairs t' a hair. But as f'r controllin Well, I'll have t' make some arrange an' take on that interest m'self."

"Give me till tomorrow noon," cashier asked huskily at last.

The meeting adjourned. But Joe der lingered.

"Young feller," he said, when the were alone, "I think it's high time you an' Dot got married."

"Never mind Dorothy now. When I get seven thousand dollars to grab bank stock?"

The hostler smiled dryly. "Le

'cross an' see Dorothy. She's got property. Mebbe she could arrange it."

"*Not much!* After the way I've made her wait, I'll not go to her for aid in this fix. Besides, I've never been inside that boarding-house since the day I told her—what I did—in the parlor."

"Then it's high time you give Dot a little more attention. Let's go over an' jus' talk with her, anyhow. Let's see what she *suggests*."

Fodder won the fellow over. They went across the street. Dorothy was summoned. They sat down in a little group on the close-cropped lawn underneath the maples.

"Don't say any more," the girl begged the liveryman when that awkward conference had possessed her of the details. "I know what Mr. Cogswell was trying to tell you when he died—and so do you, Joseph Fodder."

The hostler looked sheepish. He turned his bearded face to avoid Seavers's eyes. Bert caught the wrist of the girl, who had arisen.

"If you're going for your deed, Dorothy—"

"Let me go in the house a moment, Bert, dear. You'll understand presently."

JOE FODDER refused to answer Bert's questions during her absence. She came out carrying something beneath her arm.

"Jerem commissioned me to do it, Bert," she began cryptically. "He was a better friend of yours than you imagined. You've had four years lopped off your sentence for good behavior. It's time your ordeal was ended."

"What are you talking about?" the man demanded blankly.

"I mean that you've been saving against this crisis every day since Abe Albee put over a cruel piece of chicanery on you in the bank. When you came running over to the boarding-house here and bearded Abe in his room, do you remember my behavior?—while he was driving you from his room at a gun-point, I mean."

"N-n-o," stammered Bert. "I guess I was too upset—"

"I saw a corner of the money packet under some shirts in one of his suitcases. I whisked it under my apron and the man fled town, never knowing he had lost it. Later I carried it over to the bank. But Mr. Cogswell had already extracted your promise to pay up the loss. He only deducted three hundred and seventy-five dollars for Abe in case he ever was heard from. The balance he told me to put in the People's Bank to our joint account against the day when you'd settled in full. With the directors' meeting today, I knew that time had arrived. This morning I drew it out."

And into Bert's flaccid hands she placed a four-inch packet of bank notes.

"That ain't wholly so!" Uncle Joe cackled. "You had t' talk your perty head off t' make ol' Jerem let up fr'm prosecutin' an' agree to this plan, an' you know it. Even if you did recover th' money—"

"Oh, well, what difference does it make? Bert came through. He showed himself a man! *And what a glorious six years I've had, waiting for this moment!*"

"Play" WITH YOUR BOY

Keep step with your boy—make him feel you are his pal—stimulate his ambition and develop his musical talent by playing duets with him. He likes to do the things you do. Your "company" and help will boost him over the rough spots and prevent discouragement at critical times.

Help your boy to learn to play a

BUESCHER

True Tone Saxophone

In only a few weeks he'll be playing the popular airs with you and having loads of fun. Then come the classical pieces. Beautiful duets that will thrill him—the kind pianists practice years to play—operatic scores and familiarity with the real Music Masters will all be accomplished. Social opportunities are always before the boy or girl who can play a Buescher and it makes it possible to earn money on the side if desired.

Easy to Play—Easy to Pay

Besides being easy to play, we make it easy to pay for a Buescher Saxophone. A small amount down and a little each month if preferred.

Only a Buescher gives you these extra features: Snap-on Pads, greatest improvement, easy to replace, no cementing—Patented Automatic Octave Key—perfect Scale Accuracy—convenient key arrangement.

6 Days' Trial on any Buescher Saxophone, Cornet, Trumpet, Trombone or other instrument. Fill out and mail coupon for full information. Mention instrument in which you are interested.

forget notes ~and fingers, too

and I'll teach you to play the piano—

Do you want to play the piano without "Taking lessons" the old-fashioned way? Will you spend ten years' time and hundreds of dollars, or will you learn to play a piece in three lessons? This method is startling. You don't have to practice for hours; neither do you have to know music. Well, that's queer, you say. What is this method? It is an amazingly odd feature that Dr. Quinn stumbled onto after 30 years of teaching. You simply have to play the piano or organ under his method. You can't help yourself. To prove it,

HERE ARE TWO FREE LESSONS

You'll catch onto it in five minutes. Think of playing a piece in every key—something you can do within a few lessons by means of symbols and colors on the COLOROTONE. You'll say it's magical. What gladness, what thrill in your heart to sit down at the piano and flood your home with music.

Let the COLOROTONE guide your fingers for an evening or two. Then close your eyes as you've seen others do. You must experience the thrill of actually playing something in almost no time without knowing one note of music. After three or four lessons you'll play surprisingly well—in a little while almost faultlessly; and if you complete Dr. Quinn's course you will be a truly remarkable pianist or organist, if you like the organ better.

PENNIES INSTEAD OF DOLLARS

Pennies pay for your course. See the difference between this helpful way and that of paying three to five dollars a lesson for a competent teacher. You save hundreds of dollars and cut off at least ten years of heartless practice and study. Under my method you play right from the start. Read the letters from Quinn Conservatory pupils in my book. Every letter is signed and the correct address is also there. That ought to satisfy anyone.

NO OTHER BOOK LIKE THIS

"How to Learn Piano" is a classic. This book contains everything you need to know about pianoforte. It is lively reading; thrilling because somehow it makes you master of your locked-in talent. Everything is free—the book and your first two FREE LESSONS. You will receive them as soon as you mail this coupon.

Everything Has Its Price

(*Continued from page 23*)

even speculating that's about as safe as investing isn't the thing for *patres familias*," Bob had said.

But the stock had done just what it had been expected to; and Bob couldn't resist telling Will that his stock had already doubled. Will felt, just the same, that he'd done the right thing in not going in, but, someway, he had to keep reassuring himself over and over, and it was terrible on his mashie shots. Just as little Jack's colds always go straight to his bronchial tubes, Will's nerves go straight to his mashie. The fifth week was awful.

The one consolation was that, in spite of the fact that they were doing really better than we were, the week was just as hard on the Carstairses. We all came home together Saturday evening, Helen and I in the rumble seat. The boys were talking about our playing. As though they were wonders, themselves! Helen held up her hand to let me see how it was shaking.

"If Bob tells me once more to take long breaths and get hold of myself," said Helen in a voice that shook as much as her hand, "I shall go stark, staring crazy. He seems to think I'm being nervous for my own selfish pleasure. It's all his fault that I'm nervous at all. I wouldn't say this to anybody but you, Dot, but Bob is terribly selfish. He simply won't be careful about Hetty."

Hetty was the maid the Carstairses had brought from Chicago.

"Hetty is simply wonderful," Helen went on. "I'd never get another girl like her, and Bob knows it as well as I do. And he knows that unexpected company for meals is the one thing she can't stand. Yet, without the slightest consideration for me, he brought a man from the office home this noon. It wouldn't have taken him two minutes to telephone first, but did he do it? Oh, no. He forgot! Hetty's been sulky about it all the afternoon. And yet Bob expects me to be perfectly calm now. Why, for all I know, Hetty may be planning on leaving this very minute. It wouldn't have taken him two minutes to telephone. Telling me to take long breaths and get hold of myself!"

I WAS so busy being mad about the sharp way Will had spoken when I sneezed on the putting green—good heavens, when you have to sneeze, you have to sneeze—that I scarcely heard what Helen was saying. Really, I didn't think a day could be worse than that Saturday. But the next Monday was; much worse. And Tuesday and Wednesday.

For Mother left Sunday for Minneapolis. She had planned on going up for a month with Kathie; but she wasn't going to leave till after the tournament. Sunday she got a wire. My brother-in-law had to leave a week early for the convention, and Kathie was having trouble with the new baby's formula and didn't want to stay alone. I always did suspect that Kathie was Mother's favorite, and without a second thought for the situation it left me in, Mother packed up and left for Minneapolis Sunday night.

Will and I spent all Sunday after down in the section by the tracks, tr to get some girl to come and stay with children late afternoons that one la precious week. We took the twins with and drove from house to house. At fi we were afraid we couldn't find anybo There was a kind of summer grip g around down there, and the girls were busy at home.

Finally, just as we were about to giv up in despair, we found a girl. She was th dumbest thing, and she insisted on thirty-five cents an hour though she didn't look to be worth ten. However, we were to desperate to be choosy, so we took her.

She came fifteen minutes early every day, and it took me fifteen more to show her just how to give the babies the supper, though I had everything ready fo her. Wednesday, Will kept blowing th horn impatiently all the time I was talkin to her. I'd cleaned that morning, and wa tired to begin with. Will was tired too he'd got up at half past five and mowe the lawn before breakfast. Of course w both played worse than usual. And th beginning of the tournament only thre days off! We went around the course in kind of tense, grim silence, as near di liking each other as any married coup ever ought to be.

"WE HAVEN'T a Chinaman's chan of winning any prize at all," I sa gloomily, as we climbed into the flivv to drive home.

"We certainly haven't," said Will. " you can't even keep your eye on the b when you're driving, we'd better drop o and not just make a show of ourselve

"Well, if—" I began angrily. But voice broke and I couldn't go on. I was hurt and mad that I knew in anoth minute I'd be crying.

"If I'd gone in on that stock of Bob's said Will, "we'd have been able to buy pair of twin beds."

I suppose it was just because I was tired and tense that it seemed to me W was blaming me for that, too.

"Don't you ever blow that horn ag when you're waiting for me," I said, my past wrongs coming over me at on

It was sultry hot and we were b dripping and dirty. Will didn't love any more, and I'd have to cook su after we got home. I thought of the C stairses, fresh and cool after a shower ba sitting down right now to supper, out the club veranda, and it just seemed me that life wasn't worth living. Nei of us spoke another word all the home.

"How are the children?" I asked girl as we climbed out of the flivver.

"Yah," she said, looking dumber t usual, if possible. I supposed that me that they were all right.

But just as I went out to put on the water, I heard Jack cough. In a coup minutes he coughed again. I went up gave him a drink and lit the croup ke I've found that it's always a wise caution to have a little benzoin ste the room at the first cough with a b

TS-IT" World's Fastest Way

chial child. It usually nips any possible trouble in the bud.

He quieted down right away, and we went to bed soon after supper. Sometime in the night I woke up with an uneasy feeling, and as soon as I'd struggled back to consciousness, I knew why. Jack was coughing again. I went in and lit the kettle again. Will heard me up, and came in too. We don't dare go to sleep with the kettle going—some people do, but we're both too afraid of fire—and Will said for me to go back to bed; he'd sit up for an hour or so.

I went back to bed, but I couldn't go to sleep. It was beginning to get light and I went in again.

"He's still barking away," said Will. "Maybe you'd better take his temperature."

I always take the children's temperatures when there's anything the matter; it's always so reassuring to see the old mercury around ninety-eight and six tenths. You know, then, that it's nothing serious.

AT FIRST, I thought it was the faint light, that I couldn't have read the thermometer right. I took it into the bathroom and put on the electricity. I stared under the glaring light, afraid to believe my eyes. I hadn't made any mistake. The mercury stood at a hundred and four and four tenths.

Will went right down and called the doctor. Doctor MacIntosh sounded kind of cross and sleepy at first, Will said; but when he heard Jack's temperature, he asked Will if he was sure I hadn't made a mistake in reading it, and then said he'd be right over. The first thing he did was to take Jack's temperature again, himself, and, while I should have felt terribly stupid and guilty if he'd found I'd been wrong, it was worse still when he nodded that I'd been right. He looked into Jack's ears with his little electric light.

"Is—is it anything serious, Doctor?" I faltered.

"Hope not," said Doctor MacIntosh briefly. "Give him a lukewarm sponge and an enema. Plenty of water and orange juice—if he wants anything to eat, give him a little gruel. Dissolve these in a half-glass of water and start him on 'em every two hours."

He never has much to say, but as he went out, he added:

"Keep the little girl away from him. I'll be in again late in the afternoon." And from the doorway, he looked back at me sharply. "And don't be taking his temperature every half-hour."

That was enough. Doctor MacIntosh is always terribly busy and abrupt and he never pays two visits a day unless it's serious. He left me feeling quite shaky but strong; you know, the way you feel when you know you're up against a real job.

I didn't have any time to stand around and shake, either. His directions kept me going like the wind all day. Will had an important appointment and he couldn't stay home. Jill, suddenly without a playmate, tagged me every step I took. She couldn't understand why she couldn't see Jack, or why I didn't want her to shout and clatter up and down stairs as usual. She had to be given her meals, of course, and I did my best to remember that she was just a baby, and that I mustn't be

TEST YOUR
ART
ABILITY
FREE

HERE is your opportunity to find out how much talent you have. Our simple, scientific Questionnaire tests your natural sense of design, proportion, color, perspective, etc. It may show you the way to a bigger future—a real career.

Federal Students Are Successful

Many Federal School students are making $2,000, $4,000, $5,000 and $6,000 yearly. The Federal School is recognized everywhere by employers of artists and by buyers of art work. Big prices are paid for drawings.

Learn Commercial Art at Home

If you like to draw, an almost sure indication of talent, the Federal Course will quickly develop your ability to earn money. Some students earn more than the cost of the course while studying. Many nationally known artists have contributed exclusive, illustrated lessons to the Federal Course. No previous training is needed. You will receive personal, individual criticism on your work.

cross with her. The girl who'd been coming at five, didn't come. Her mother telephoned that she was sick too. I forgot that I'd ever thought I was tired.

Late in the afternoon, Jack began to hold his little hand over one ear. When the doctor came he didn't have much to say, but I could see he didn't like the way things were going. He took Jack's temperature and put his thermometer back without telling me what it read. He looked in Jack's ear again with his little electric light, and frowned. He didn't tell us what he was thinking; but we knew. I hadn't studied all the baby books for nothing. He was afraid it was mastoiditis.

When he left, I looked at Will. Something way inside me turned all weak and watery. Whenever I've been scared, I've always depended on Will. And I could see from his look that he was scared too, now. He had had a baby sister who died after mastoiditis.

Will made me go to bed the first half of the night and he stayed with Jack. I didn't feel tired at all, but I was kind of shaky. At two o'clock I got up, and Will went to bed.

Jack couldn't lie still with his ear on the hot-water bag; he would turn and turn, and whimper in a pitiful little voice, and put his little hand over his ear. Every now and then he'd say, "Mommie, wock-a-chair." The doctor had said it would be all right to hold him if he felt easier that way, so I would rock him slowly, changing him gently from one side to the other as my arm went to sleep.

He seemed to have changed overnight from a dirty-faced, independent little boy to a sick baby. He would lean back against my kimono, and it was as if something awful had me tight around the throat. That sick little whimpering baby voice, "Mommie, wock-a-chair."

FRIDAY was a queer nightmare. Will up early, getting breakfast, making me drink coffee. Home again in the middle of the morning, taking Jill away with him for a couple of hours. Looking down at Jack and trying to keep me from seeing that he was scared. Patting me on the shoulder, "Buck up, old girl, he's getting along all right." Home again at night, putting Jill to bed with clumsy, gentle hands. Remembering that she was just a baby, being patient with her. Making coffee again, and making me drink it.

In the queer, pale gray half-light, just before sunup Saturday morning, I got up and went into Jack's room. Will was staying with him, but I couldn't sleep. I knew Will must be all in and I whispered to him to go to bed till morning, and he shook his head. I drew over the sewing rocker and sat down beside him, by Jack's bed. There wasn't anything to do, but I felt better there.

It was a queer gray in the room, and cool. I hitched my chair closer to Will's and he put his arm along its back, his hand on my shoulder. In the faint light I could barely see Jack's head on the flat pillow. The short dark hair, all boy, the curve of his cheek, all baby. Suddenly, I thought of Will's little sister who had died. I could see Jack and Jill racing across the lawn. Would Jill ever say, "Yes, I once had a little brother—"

We were doing everything we could, every tiny thing the doctor had told us to. So had Mother and Father Horton. And they must have watched at night, just as we were watching, beside the baby that had once gone running back and forth across the grass with Will. I didn't look at Will, we didn't speak, I scarcely felt his hand on my shoulder. It was as though we weren't two people there together, loving and helpless. It was as though we were the same person, in two different bodies.

Suddenly, the gray light in the room changed to a faint, yellowish red. The sun was up. Will leaned forward to look at Jack, drew me suddenly forward, too. Jack was lying very still, his eyes shut, not whimpering any more. In a stiff terror, I touched his little hand on the sheet. It was relaxed and limp. And softly warm, not hot. He was sleeping comfortably.

WHEN I woke up from the first real sleep I'd had in days, the afternoon sun was streaming in at the windows. Will came into our room, and I started guiltily. I couldn't seem to remember a thing after the doctor's early morning visit, when he'd said Jack was going to be all right. I did remember vaguely Will pushing me back to bed, saying he'd stay home from the office.

"Where's Jill? It must be time to get dinner—I—"

Will grinned.

"Calm yourself, calm yourself," he said. "Everything's tended to. Rosie Merton heard about Jack this morning and she was here inside of an hour with our dinner in the fireless cooker and some broth for Jack. She's taken Jill back with her for the day and night."

I felt the tears of sheer gratitude rush to my eyes. When you're in real need of help, commend me to the woman who's got four children of her own and more work than she can do!

Jack was asleep and so was Will—poor all-in darling!—and I was sitting out on our front steps when I saw Helen Cr[illegible] stairs coming up the walk. She'd just heard that morning that Jack was sick.

"I'm so relieved that he's better," she said. "I'd have been over first thing; but you know today was the beginning of the tournament."

"Tournament?" I repeated vaguely. I'd actually forgotten there was such a thing as golf in the world. At last, "Have you and Bob played yet?" I asked politely.

"Yes," said Helen; "and we're out of ready. Lost to the Bradleys."

I murmured something properly regretful. Of course a golf tournament doesn't really amount to much, one way or the other, but Helen seemed so upset.

"It was all Bob's fault," she went on angrily, "though of course he blames it on my rotten putting."

"How was it Bob's fault?"

"Oh, you know," said Helen, "what I was telling you about Hetty. Last night of all times in the world, he brought a [illegible] home to dinner without telephoning first."

I had a vague idea of having heard something along this line before, but it seemed a million years ago, and I couldn't for the life of me think what Hetty had to do with putting.

"She gave me notice this noon. Just *minutes before I had to start for the link*."

Helen was so dramatic about it that I tried to make some appropriate reply.

"No human being," Helen went on passionately, "can have any idea of what

Digitized by Google Original from UNIVERSITY OF IOWA

I've been through in the last few hours. Bob telling me to take long breaths and pull myself together! There's no use trying to make Hetty change her mind, she's homesick for Chicago anyway. And Bob talking about my putting! I can't even make him realize what he's done."

And Helen went on and on, how selfish Bob was, how he'd said this and that, how she'd practiced for the tournament till she was ready to drop, how she'd been so shaky she'd missed a two-foot putt. How she'd never get another girl like Hetty. What a terrible strain the day had been. On and on and on.

As I listened, amazed that she could still be going on about these same old worries, it dawned on me that nobody in the world is really care-free. If you don't have anything worth-while to worry over, you simply make the most of whatever you have on hand. Care-free? Helen Carstairs? Why, her eyes were swimming with tears of rage and disappointment. Honestly, I believe she'd had a worse three days than I had.

Suddenly she paused, apparently remembering that I'd had to give up the tournament altogether. She hastily said how sorry she was, what a fine chance we had had of winning. Asking all about Jack. Trying her best to be tactful.

And, for once, I didn't mind. I wasn't even tempted to remind her that just being free to do things together didn't seem to keep husband and wife close to each other. I really didn't mind her tact at all. It seemed to make her feel a little better, and I was too relieved and happy to mind anything. So we sat there, side by side on the steps, indulging in one of life's most unfailing consolations for women with children and for women without.

Pitying each other.

The Hoofing Kid from Claremore

(*Continued from page 35*)

do you want to know the real reson he won? Well, they are one of the only families that dident own a automobile. He used to run to school. So the moral of this success story is, Dont own a car. If each one of our Athaletes in the races that went to the Olympics had never owned a car, we would have won every race there. Those Finns, like Nurmi, would just take an arm full of Herring and just trot along and look back at our Kids who had been used to riding around their College Campuses in an old flivver with a lot of "wisecracks" on it. The only way we will ever win another International foot race is send flivvers to Finland.

DOES HANDWRITING REVEAL your character? "Yes," says Jerome S. Meyer, who has studied the science of handwriting for many years and has written a widely circulated book about the subject. In an interview to be printed in an early issue of The American Magazine, he tells how you may read your own character and the characters of your friends by a study of handwriting.

WILL YOU . .

"Deliver the Goods"

if we pay you

BIG MONEY?

IT doesn't matter whether you are a crack salesman or just think you can be, whether you make $125 a week or $25. Here is the greatest chance *you* ever had to make more money, *big* money, every week the year through.

"Delivering the goods" is exactly all there is to it. In a few weeks the men of America will be reading large-space national advertising about the most remarkably low priced line of high quality, tailored clothing that has ever been presented to them—August Nogar's new line of beautifully textured, smartly cut, made-to-measure suits and overcoats, for general wear, at prices as low as $26.50.

That means "hot leads" to keep you busy, customers ready to buy the moment you show them samples. Experience entirely unnecessary.

FREE kit that shows you just how to do it and makes it easy to sell everybody, goes now to first to apply. Don't procrastinate. Get the facts. Send this coupon now!

The Trail Eater

(*Continued from page 69*)

feet reached desperately for a hold. Everything was sliding and churning under him. He heard the rasp and cough of struggling dogs, caught a glimpse of them above, frantically pawing for a footing on the crumbling white ledge. But he was dragging them over. Inch by inch they were slipping. . . . Suddenly, dogs and sled were on top of him, and together they rolled, avalanched, plunged on down through a choking hell. . . .

WHEN he could think, he found himself half buried in snow with his entangled dogs about him. They were ominously still. He struggled to his feet and shook himself. He was in a suffocating caldron of frost dust, that eddied, deadly and chill, in the lee of the bluff. Conscious that one incautious step might plunge him into eternity, he started prodding the slow-billowing white with the butt of his whip.

When he was assured of reasonable foot space, he began digging out his terror-silenced dogs. One by one he helped them to their feet, his hands feeling swiftly for injuries, while his voice soothed and cheered them.

"Tokon, old man, how are you? . . . Thank heaven, no bones broken here! . . . Well, well, Karluk! Tong—you're all right, fella. And Queenie—spry as a cricket! Here, Cultas, up with that foot. . . . That's the boy! Nothing the matter with you, kid. . . . Who's this under the sled? Why, Mukluk! Poor—old—man! There, there, now. Let me see. . . . Just a bit of a bruise on the old boy's back. . . . That's all. Be all right in a minute. I'll unhitch him and he can trot along by himself!"

He banished their fear and restored their confidence, even while his own heart was heavy with a sense of catastrophe. He was trapped here at the foot of the bluff—or was it a ledge? He was out of the race before he had fairly begun.

He righted the sled, found it intact, and again explored with his whip handle until he felt the upward slope of the drift. Since Sweepstakes rules required a driver to bring back every dog he started with, dead or alive, he took no chances with the unhitched Mukluk, but fastened him by a leash to his sled. He put his creepers on his feet and with a "Come along, Tokon!" began to stamp his way upward. A few blundering steps convinced Kerry of his own helplessness. As he paused to consider his next move, the wind brought him the unmistakable vituperative shouts of a dog driver. Someone was passing him up there on the Trail!

Tokon, scenting his rivals, suddenly shot to one side of Kerry, and with a whine of eagerness began to clamber upward. "Go to it, old boy!" With a thrill of hope, he realized that the dog might be able to do what he couldn't. He caught the uphill side of the sled and, digging for every toe-hold, guided it through the dense, eddying snow.

Just then, on a rush of wind, came another yell. A second racer was passing him up there on the ridge!

The sound galvanized his team to furious action. Kerry concentrated the last of his fighting forces and flung himself upward. The sled leaped into the air, plunged against the full force of the blizzard—and came to a standstill on the level!

While some of the dogs tried to burrow into the snow, Kerry looked them over quickly to make sure that none had injured himself or torn off a claw. Mukluk he put into the sleeping bag, and fastened it in the sleigh. He started again along the Trail, easier now for a leader to follow because of the two teams that had gone before. He had planned to make his first stop at Timber House, sixty-five miles from Nome; but already the slate-colored darkness lay about him. His lungs were seared with frost. His hands in their heavy fur mittens were growing numb. His feet, too, were losing sensation. He felt that he could not go much farther.

He stepped off the runners and ran, heavy-footed, to warm himself. A whiff of wood smoke made him raise his head. Just then Queenie pulled violently to the left, and the sled butted squarely into the corner of a snow-buried cabin. He had no idea where he was, but here at least was shelter. Quickly he unsnapped the tow-line and burst through the door, dragging his ice-coated team after him.

Greetings blurred his blizzard-beaten ears as he yanked his parka hood back and wiped the frost from his lashes. Through the clearing fog of his entrance emerged a lighted candle in the neck of a whisky bottle . . . the red glow of a roaring camp stove . . . hazy figures of men . . . and, milling about the center of the room, prick-eared heads with glistening eyes. Then—pandemonium!

WHEN Kerry finally got his embattled team clear of the others and stood hanging to the snarling Tokon's collar, he found Slim and Jake staring at him across the backs of their subdued but still growling racers. There were both astonishment and chagrin in their snow-tanned faces.

"Hell's bells and panther tracks! You here?" observed Jake, almost indignantly. "I just got through phoning Nome you took a header off Seal Bluff; and they're getting up a party to look for your defunct remains!"

Kerry laughed. "Well, don't look so darned disappointed, Jake. You knew I wouldn't quit just when the party's getting good—not with you two trail-burners ahead of me!" Kerry grinned in malicious enjoyment. "I'll get Nome on the line later and relieve their minds."

"Well, you old son of a sea-cook"—Jake herded several of his dogs to one side and returned to his task of rubbing grease on the frozen flanks of his leader—"cluster and peel your harness; that is, if you can find foot space."

Kerry's glance swept the room, little larger than a box car. In one corner huddled an Eskimo team which the native owner was trying to quiet. Three of the bunks that lined one wall in a double tier were filled with Syndicate racers. The

eyes glinted sulphurously in the dimness as they snapped and growled and churned about, settling themselves. The cabin was not one of the Sweepstakes stations; but the owner, Old Bill Hanley, came forward, grinning, to help Kerry off with his parka.

With Old Bill's assistance Kerry unharnessed his dogs. He gave each an alcohol rub and settled them all in two of the dry bunks next to Jake's Siberians. As he carefully massaged the bruised place on Mukluk's back, the wheeler yelped faintly; but gradually the sounds of pain gave way to grateful whimpers, which Mukluk punctuated with tongue dabs.

The animals grew quiet at last. Outside the arctic blizzard howled with increasing violence. Since the bunks were all occupied by racing dogs, the drivers obtained what rest they could sitting on boxes.

Kerry was losing himself in an uneasy doze when Old Bill's voice jerked him to attention: "Listen, boys! . . . Someone's hollering out in the storm!"

Old Bill flung open the door. A small avalanche of snow rolled in, a cloud of vapor, and with it an ice-hung figure dragging a string of half-frozen dogs.

"Lord! It's Hinkey Scott!" Kerry had cleared the frost-rimmed parka hood from the newcomer's face.

Midas Bernard's driver tried to speak, but they could make nothing of his gasping efforts.

"That's all right. You're all right now, old man," Slim soothed him. "We'll take care of you!"

HINKEY suddenly regained his breath, and the use of his tongue.

"Take care of *me?*" he roared indignantly. "Gene Christy—back on Trail—blown out on the Bering! Heard him yell—tried to find him—lost mitten. Had to come on." He thrust out his bare hand. It was as white and stiff as a dead man's. Almost at once, Old Bill was thawing the frozen member in a bucket of melting snow.

Kerry, Slim, and Jake stood looking at one another. In the minds of each ran the same thought: Gene Christy, a boy of twenty-one, in his first race, blown among the hummocks of Bering Sea. There were areas of shallow open water that meant quick death to anyone plunging into them. Death, not by drowning, but by freezing. No man dared get wet in a blizzard with the thermometer at thirty below.

They questioned Hinkey about location; then, without a word as to who among them should go, the three drivers got into their furs. They were not contending racers now. The spirit of competition had given way before that law of the North that made them one in their efforts to rescue a trailsman in danger. They tied themselves together with a rope that permitted perhaps twenty-five feet between them, and made their way out into the storm.

When they brought up against the rough salt-water ice, they spread out, with the rope dragging between them. Keeping the wind behind, they went warily forward over the tumbled, frigid plain, their shouts riding the gale ahead of them. For more than a mile they advanced, combing the hummocks, crawling on hands and knees, sliding down drifts, huddling be-

WHAT'S FOOD WITHOUT FLAVOR?

the way to a MAN'S HEART

THOSE Creole cooks in old New Orleans know the time-honored way to a man's heart. Plenty of seasoning . . . the kind a man likes . . . racy, spicy, piquant. So down in Dixie they put A. 1. Sauce beside you at the table, just as everywhere the A. 1. homes and restaurants keep A. 1. Sauce on the tables . . . to add that extra spark of flavor to foods. If there isn't a bottle of A. 1. Sauce handy where *you* eat, speak to your waiter . . . or to your wife. Sold by grocers everywhere at no more than 35 cents per bottle, usually less. *Send for the free novel recipe booklet, "LITTLE LOST FOOD FLAVORS." G. F. Heublein & Bro., Dept. 54, Hartford, Conn.*

hind the ridges of ice until terrific blasts drove by.

They found the boy at last, in the lee of a hummock. The flashlight revealed him huddled on his sled with his lead dog clasped in his arms. From an ice-shrouded parka hood his eyes looked out, filled with stark terror.

It took them three hours to beat their way back to Hanley's. Safe in the welcome discomfort of the little cabin, all hands helped the boy with his dogs. They made light of his experience, cheering him with many a boisterous jest.

Fortunately, the snow-crust his dogs had accumulated had kept them from freezing; but as the blond young fellow rubbed his pets down, he soothed their feelings with pattings and a continual flow of sympathy: "Poor old sports," he crooned. "Poor, battered, frozen fellas! I got 'em into a fine mess, didn't I? And they called this blame' jaunt a race! Will they ever get us out in weather like this again, Spot? No; I'll tell the cock-eyed world they won't. I'll—"

"Say, kid, this ain't weather!" Slim dismissed the blizzard with a nonchalant wave of his hand. "Wait until you get to Telephone Gorge, and you're liable to see some. Why, last year when I went through it, the wind hit me so hard it blew the whiskers right through my face, and when I got back to town I had to shave under my tongue!" He turned to Kerry. "You remember that, Trail Eater?"

"*Do* I!" exclaimed Kerry. "And cold! Wow! Honest, it was so cold going across Death Valley that when I hollered, the words froze and fell in the trail before the pups could hear 'em. But coming back the sun was shining, and I never had to say a thing. My conversation was thawing out, and I could hear myself cussing all the way across!"

A grin broke the gloom on Gene Christy's boyish face. "Aw, they're kidding us, Totem!" he said, massaging his leader's shoulder. "But we'll show 'em when this blizzard goes down. We'll go out and beat the tar out of the whole blamed bunch of 'em!"

The team was made comfortable at last, and once more the drivers settled themselves on boxes to get what rest they might. To Kerry the situation soon became unbearable. He was drugged with foul air and weariness. As the hours dragged on he began to think that bucking the blizzard was preferable to the miserable shelter of the cabin.

IT WAS after six in the morning when he rose and stretched his stiff limbs. While he was quietly harnessing his dogs, Jake looked up from bowed arms. "What's on your mind, Trail Eater?" he demanded suspiciously.

"Hitting the Trail."

"In this storm? Say, Slim"—he reached out and shook his racing partner into wakefulness— "Kerry's going to beat it. What d'you think?"

Slim yawned, listened a moment to the howling wind, and cast a pitying look at Kerry. "Think he's crazy as a loon." And he resumed his doze.

From Hanley's it was twenty-five miles to Timber House, where Kerry had his first cache. Mukluk, to his joy, was able to travel on the towline, and Tokon forged ahead, finding the Trail when there was no sign underfoot to guide him. There was only one cabin between Hanley's and Timber—the Fifty-mile Roadhouse. But Kerry had no intention of stopping there.

After a while, he found his movements becoming instinctive, and he marveled at his own adaptability. It seemed that he had always been beating up into the teeth of the wind; had always been swaying, head down, on the runners of a sled that pitched behind invisible dogs.

He felt his team swerve sharply. Before he could shout "Whoa!" he found himself under the lee of a cabin. Through the thinning white he saw a man at Tokon's collar. The next instant dogs, sled, and himself were all inside the living-room of the Fifty-mile House. In the middle of the room stood Bart Pelkie, a smile on his crafty face. Behind him his squaw looked at Kerry across a table spread with reindeer stew, a steaming pot of coffee, a stack of sandwiches—a display more tempting to the hungry man than the feasts of Tantalus.

"What—" began Kerry in bewildered astonishment.

"Gosh, old man, I'm certainly glad I didn't miss you. Been waiting out there ever since I heard you'd left Hanley's. Kerry, you can't make Timber today! Man, it's something awful up on the divide. Just came down from there. Hey, Miak!" he rushed on, "help Kerry off with his parka! I'll tend to your dogs, old man."

"Thanks, Pelkie! That's good of you. I'll grab one of those sandwiches." Kerry suited his action to his words. "But I'm going on." He began swinging his team in the narrow space.

PELKIE, with an uncertain look, started for the door and stood with his back against it. There was something in his attitude that made Kerry's eyes narrow. "Open that door, Pelkie!" The man's glance shifted uneasily, but he made no move. Kerry unwound the blacksnake from his waist. "Now, you white-livered skate, open that door, and let me out!" The whip snaked over the backs of the dogs and the tip of it cracked against the wood next Pelkie's head.

The man ducked, "Hey! Good heavens, man, I'm only trying to—"

"*Open that door!*"

With a quick look of scorn at her spouse who was not big enough to be a villain the Eskimo woman darted to the door and flung it open.

"*Tubra! Tubra!*" She urged Kerry on with a glance of mingled fear and admiration, which was lost on him as he shot out again into the storm.

He went on, his mind busy with what had happened. It was plain that Luce Barton had learned of his departure from Hanley's, and that Pelkie had been ordered to delay him. The Syndicate was worrying about him! It was worth a lot to know that; but at the same time he realized that anything untoward might happen in the race, instigated not by the Syndicate drivers, but by Luce Barton, sitting back in Nome manipulating his dog mushers like chessmen.

He swept down over the divide to the Kochblock River, where the force of the wind was lessened; but just as he was congratulating himself on his progress the team plunged through the snow-crust into an overflow.

Helpless and blind in the welter, he gave the lead to Tokon. The husky swung wide, scrambled up a steep bank, and ran broadside for a time. Kerry knew he was off the Trail, yet he had no idea which way to turn. Half doubting, half hoping, he followed, clinging to the handlebars. . . . Then he felt the force of the wind grow less. . . . Underfoot the snow became softer, deeper. Through the whirling white, long objects began to loom, to expand, to dwindle. Trees! Timber at last! And sooner than he had expected. The truth flashed upon him—Tokon, with incredible sagacity, had taken a cut-off and avoided the overflow. The roadhouse was ahead of them. Shelter . . . food . . . a little rest!

"Good boy, Tokon! Good old fellow!" His shout was a sob of relief. He halted in the lee of the snow-choked spruces and threw his arms about the dog . . . the outlaw that every man in Nome had said would not face a blizzard. As Kerry hugged him and poured endearments into his ears, the husky thrust his whitened muzzle against his master's chest, and his ice-hung tail wagged slowly.

NEARLY two hours later Jake Minton reached Timber House.

"Where's the Trail Eater?" he demanded of Charley, the proprietor, as his blizzard-beaten eyes searched the empty bunks at the back of the big room.

"Sure, the fella gave his purps half a feed, and beat it for Council!" answered Charley.

Jake groaned and jerking the icicles from the fur under his chin, walked to the telephone. He reported his arrival and condition to Luce Barton; then stood scowling as he listened to the instructions that came over the wire.

"Oh, all right! All right!" he answered finally. "I'll be out of here in half an hour—just as soon as I grub my dogs and throw a feed into myself." He jammed the receiver on its hook. "I wonder who he thinks is running this race!" he muttered, as he turned away.

True to his word, half an hour found him following the trail Kerry was making through the still, snow-hung forest. The storm had blown itself out in the last couple of hours; the iced air was intensely rarefied, invigorating; the white world lay about him in the new-born purity that follows the cleansing, cruel sweep of a blizzard. But Jake felt none of this. He knew only that the snow under foot was dry and loose and very deep, a heart-breaking course for the first dog-musher over it. That was Kerry, going ahead of his team "webbing it"—laboriously tramping down a trail on snowshoes.

Jake followed with little exertion to himself. Breaking trail cut Kerry's speed to about five miles an hour, he figured. He would just keep at his heels; but he'd be darned if he'd go ahead of him as Luce Barton had crazily instructed him at Timber. Let Kerry break trail; his long-legged crossbreeds were better able to wallow through than the Siberians.

After a while, through the shrouded trees, he caught a glimpse of the Trail Eater's dogs lunging to their bellies as they followed behind their master's snowshoes. Just then Kerry looked back and saw him. A few minutes later he stopped, ostensibly to remove balled snow from his

Soft Gums *need more than* nice flavor

DESPITE faithful brushing with flavored pastes, gum troubles are steadily on the increase. Soft, easily-irritated gums need a dentifrice that concentrates on *results* instead of taste. Pyrozide Powder has been doing this for twenty-two years.

This sterilized powder is not flavored. It contains *only* those ingredients that dental clinics have proved the most effective gum-stimulating and tooth-cleansing agents. It is medicated with Dentinol, used by dentists to promote gum healing.

Regular brushing with Pyrozide Powder allays irritated gums. It aids in making soft gums firm and resistant. It keeps the teeth clean and white. The economical dollar package contains six months' supply. At all drug stores.

Free sample sent on request.

Makes Life Sweeter

Children's stomachs sour, and need an anti-acid. Keep their systems sweet with Phillips Milk of Magnesia!

When tongue or breath tells of acid condition, it's time for Phillips Milk of Magnesia. Most men and women have been comforted by this universal sweetener—more mothers should invoke its aid for their children. It is a pleasant thing to take, yet neutralizes more acid than the harsher things too often employed for the purpose.

Phillips is the genuine, prescriptional product physicians endorse for general use. The name Phillips is important; don't buy a less perfect product and expect it to have the same perfect results.

Demand PHILLIPS Milk of Magnesia

"Milk of Magnesia" has been the U. S. Registered Trade Mark of the Charles H. Phillips Chemical Company and its predecessor Charles H. Phillips since 1875.

It's Easy

YOU PLAY tunes the first day with an easy-playing Conn instrument and the fascinating new instruction methods. No long drudging over scales. Conn gives you the exclusive features found in no others. Choice of famous artists. FREE TRIAL, Easy Payments. Write now for literature; mention instrument.

wheelers' feet. But the Syndicate driver realized that he should have kept back out of sight if he wished to avoid breaking trail himself.

He halted his Siberians.

"Don't wait for me," shouted Kerry, looking up from his work. "Take the Trail, Jake!"

"Oh, you're doing fine, Kerry!"

"Sure. But we're over half way to Council now. How about taking a turn yourself?"

The courtesy of the Trail demanded that Jake take his turn at trail-breaking; but a plan had flashed into his mind. He managed a laugh of good-natured capitulation and, fastening his feet into his snowshoes, led off across the untrodden white.

The going was heavier than he had imagined. But not more than a mile ahead on the bank of a frozen river the cabin smokes of Council went up in the noon air, thin and blue against the white of the distant hills. Council—eighty-four miles from Nome!

When Jake came to the river he pulled off his snowshoes and swung his team into the beaten path that led up the bank to the main street of the log town. Every soul was there awaiting him, fur-clad men, women, and children lining both sides of the thoroughfare. Jake was a favorite in the betting, and as he passed down that cheering, yelling, color-waving line, he was thrilled by the ovation.

Men trotted alongside his moving sled. "Going to rest here a while, Jake?"

"Nope! Billed straight through to Boston House." He bellowed the information so that all might hear him. "The Trail Eater's right on my tail."

A roar of interrogation went up. "Is Tokon leading?"

"Yes. And going strong. He ought to be coming out of timber on the other side of the river right now," hazarded Jake, knowing that he could have said nothing that would quicker take the attention of the town away from himself. Someone shouted: "There he comes!" And the eyes of Council turned eagerly to catch the first glimpse of the Trail Eater driving a team led by Tokon of the Broken Tusks—the most sensational combination of man and dog the Sweepstakes had ever known.

JAKE, left to go on his way unobserved, sped through the deserted street to the outskirts of the village. But, once there, instead of keeping on toward Boston House, he swung back and furtively made his way into an alley where the Syndicate had a racing stable with a telephone installed.

He chuckled to himself as he unharnessed his dogs and bedded them down. Not a soul in Council had seen him come back. He'd rest a little until Kerry had gone through, and then he'd send in his report to Luce Barton. Luce ought to appreciate his strategy. It was clever of him to outwit Kerry this way.

But after he knew the Trail Eater had passed through he began to be uneasy. He decided to call up Nome and make his report to Luce. Five minutes later he turned disgustedly from the telephone. What did Luce think dogs were made of—ordering him to get out and keep ahead of Kerry—"Keep ahead of the Trail

ater if it kills every dog in the team!"
Enraged and baffled by Luce's orders, ake swung out on the Trail after Kerry. mile from town he made a discovery at angered him more than ever. His rategy had availed him nothing; worse an that, it had put him back in the race. ight now Kerry Wayne was riding his inners, making up for lost time, for the urse, instead of being heavy with soft ow, was hard and firm as ice. The izzard which had piled the forest trail th clogging drifts, had here blown down elsing Draw with such velocity that e old course was swept clean as a floor. o late Jake realized he could have foreen this condition had he taken into nsideration the direction of yesterday's nd.

It was nearly three hours later that he w the blue smoke of Baker's cabin ing to the dun-colored sky. Kerry ould be resting there. But Jake could no sign of his sled outside. He had no siness stopping at one of the Trail ter's rest cabins, yet he had to make e that his dangerous competitor was re. He halted quietly before the door. hile his dogs dropped panting in the il, he went up the steps and knocked. When Murphy, the man in charge, ened the door, Jake asked for a drink of ter and went inside.

"Hasn't the Trail Eater come in yet?" inquired.

"Sssssh!" whispered Murphy, a jerk is head indicating an open door. "He's dere. De pups was dat restless dey uldn't close an eye widout him."

Jake tiptoed toward the smaller room l looked in. The floor was spread deep h clean straw. On it Kerry lay in his ping bag, his dark head resting heavily an outflung arm, his face drawn with riness. As near to him as possible stered his dogs, and backed with his ny head against his master's chest, t Tokon, the killer.

ake set off wearily for his camp at ton House, five miles farther on.

SOON as he disappeared down the Trail, Murphy sidled to the telephone resumed the chair he had vacated at Syndicate driver's entrance. Causly he slipped the receiver off the hook was padded with rubber bands. He ped it to his ear. Now and then he ed down on a pad the things he overd. When Kerry woke he'd have all information possible to obtain about positions and the time of other teams g the Trail.

t the end of thirty minutes, according he plan which allowed Kerry a two- rest at Baker's, Murphy roused him. le he hitched the dogs, Kerry, with nformation supplied him, filled in the chart he had prepared. Like a genfiguring each move of the enemy, he ied the sheet, comparing it with the of last year whereon the Siberians' d appeared.

considered the conversation Murphy repeated to him, that telephone contion between Luce Barton and Jake at Council. A good part of it had in code, and was therefore uninible; but once, when the fiery Jake lost his temper, he had let slip a nce that gave Kerry a clue. Though was plainly still in the dark as to

GERMANY
LAND OF TRAVEL COMFORT

To enjoy Old World Grandeur, Art and Romance, go to Germany where transportation is so efficient and comfortable that traveling is a real pleasure. The world's greatest railway system is the German Railroad Company, its Rheingold Express the world's finest. Germany's famous air service, her two thousand auto-bus lines are the world's most efficient. The thrills of medieval towns, famous art centres, magnificent cathedrals, romantic castles, modern cities, international spas, are greater in Germany for these splendid transportation companies, and their excellent service at low rates. Add to this Europe's finest net of motor roads, hotel accommodations adapted to every taste and purse and a hearty welcome throughout the country—and you have the land of ideal travel pleasure—Germany.

FOOT PAINS ENDED
IN 10 MINUTES
OR COSTS YOU NOTHING

Burning, aching, tired feeling in the feet and legs —cramps in toes, foot calluses, pains in toes, instep, ball or heel —dull ache in the ankle, calf or knee—shooting pains from back of toes, spreading of the feet, or that broken-down feeling—all can now be quickly ended

1 Trouble starts in weakened muscles. Tiny bones of forward arch are displaced. Pain follows.

2 A super-elastic band assists and strengthens weakened muscles, replaces bones. Pain stops instantly.

SCIENCE says 94% of all foot pains result from weakened muscles that permit the foot bones to become displaced and press against sensitive nerves and blood vessels. Now a way is discovered to strengthen these muscles while holding the bones in position. Pains stop in 10 minutes when this amazing band, the Jung Arch Brace, is used. Stand, walk, or dance for hours—you just don't get tired. Just slips on—results are almost immediate. One of the secrets is in the tension and stretch. It is highly elastic and amazingly light and thin, yet strong and durable. An exceedingly soft sponge rubber lift is provided and urgently advised for severe cases. Worn with any style footwear. There is nothing stiff to further weaken muscles or cause discomfort.

Pain stops like magic. Soon band may be discarded and feet are well to stay. Nearly 2,000,000 now in use. Specialists, amazed at results, urge it widely.

Wear it 10 days; if not delighted, your money returned. Go to druggist, shoe store or chiropodist. If they can't supply you use coupon below and pay postman. **Write for free book on foot troubles.**

Nearly everybody needs a *mild* digestive stimulant after meals

OVER 30 years ago Dr. Beeman perfected this delicious chewing gum—as the best way of giving wholesome and pleasant aid to digestive action. No other brand has ever equaled Beeman's Pepsin Gum in this respect, or in its keenness of flavor and wonderful smoothness. Buy a package or a box today. You'll enjoy it after meals, and—

BEEMAN'S PEPSIN GUM *aids digestion*

Barton's intentions, Kerry was nearly certain the lawyer didn't intend the champions to win again this year. No matter what appeared on the surface of the Syndicate's betting, Kerry believed it was Slim who carried their money.

Right now Barton was shoving the Siberian champions ahead, using them as a decoy to lure Kerry into a pace that would wear his crossbreeds out before the race was half over; wear them out, so that Slim, conserving his energy for that last, heartbreaking run into Nome, would finish first.

The result of Kerry's deductions was to cheer, rather than depress him. The Syndicate certainly thought him dangerous, when they sacrified the champions to pace him. But he mustn't be too sure that this was the case. He'd have to make certain. Jake had just arrived at Boston House, where he intended to feed and rest. "After I hit the Trail, Murphy," he instructed, "call up the Golden Sands and tell them I'm leaving."

"Now," he thought, when he was once more swinging along the Trail, "if Luce is really using Jake to pace me, he'll shove him off the minute he hears that. If he isn't—then I'll find old Jake snoring at Boston House."

He didn't find Jake snoring at Boston. As he jogged along through the scrubby spruce about the cabin, he saw the Syndicate driver mounting a hill ahead of him. Jake was running behind his sled, his shouts and curses ringing on the clear evening air.

KERRY started across the Fish River Flats, swaying his weight from one runner to the other. While the sunset faded he talked and crooned to his team, keeping them to a steady, effortless gait that covered the ground with but little expenditure of energy. But as he sped through the gelid land, a mounting wind, chill as the feel of a dead man's hand, fingered his parka and his face, and whispered of the dangerous, glaciered trail that lay ahead in the moonlight.

He reached it soon enough—Telephone Gorge, a deep, narrow crack in the hills filled with ice and darkness. Since fall, running water had frozen, and then had overflowed and frozen again in waves, until from wall to wall the bottom was a glacier which rose steeply toward the summit of the divide. Down this canyon the north wind rushed with the force of a hurricane.

Tokon, clawing for a hold, started up the first frigid billow. The gale flung him back, belly low, paws sprawling. Whining and yelping with determination, he tried again. But there was no footing for a dog. While his team cowered on the ice, Kerry put creepers on his mukluks and, tying the leader to his belt, went ahead against wind so strong that his pronged feet could hardly retain their hold. He mounted, step by step, through the darkness.

Now he was getting above the frozen stream; he was on an ice-enameled trail that ran along a narrow ledge mounting to the top. He gave Tokon the lead and took the handlebars. Slowly, cautiously, the dogs bellied their way upward, bracing themselves at every step against the wind that sought to fling them off the ledge.

He reached the moon-flooded summit, and stopped, leaning heavily on his sled. A thousand feet below him in the moonlight lay the Fish River Flats he had crossed—a vast expanse of snow streaked with lines of timber. Along that lonely, leprous trail he had followed, a tiny line was moving . . . moving forward.

Slim Carvey was creeping up on him!

A POIGNANT realization of his position struck him: Two against one; Jake pacing him to wear him out; Slim behind, coming, steadily, relentlessly, ready to take advantage of him when he was spent. A sudden feeling of helplessness harried him. Then he jerked himself upright and shook off the spell. He swore with self-contempt. "You darned fool—they can't get you. The Trail can't get you. The only thing that can get you is yourself! Now, snap out of it. They've had to put two men against you. That ought to cheer you."

Calm again, he mushed along the divide through moonlight and shadow, cleaving a wind that rushed down from the Arctic Sea. He was high on the ridge of a frozen world. He was soaring above crests of white hills that leaped away from either side. He was racing through argent, interstellar spaces where brilliant stars trembled in skies of steel-blue crystal and the polar moon blazed a trail toward flickering, boreal arches that spanned the North with mystery. Solitary, glacial, inscrutable land, sublime and terribly beautiful in its loneliness!

He called out to his team, to hear the sound of his own voice; then went on until the Trail began to swing to the right . . . on until the wind was on his quarter . . . on until he neared the end of the divide that overlooked the most treacherous, most dangerous stretch that lay along the Sweepstakes Trail—Death Valley.

Last week when he had crossed it, it lay quiet, innocuous, a white, enchanted valley. But he knew that in ten minutes it might become a roaring siphon through which freezing winds rushed, creating on the floor of the Valley the ground blizzard that gave it its sinister name. Such a wind was blowing tonight. He was glad now that Jake was ahead of him. Glad because Tokon would follow another team where he might not lead. He would—

Kerry glanced up, startled. Just beyond he saw Jake's team halted. With his hand on his leader's collar the Syndicate driver was braced against the gale, looking over into the Valley. When Kerry drew near he turned and silently pointed downward.

Kerry looked, and caught his breath. On the far side, perhaps ten miles away, a ridge of mountains stood serene against the stars, but all between was a mighty rushing river of white that whirled and heaved and billowed in the moonlight. It was an icy inferno—yet he must go down to the bottom of it and fight his way across to the other side.

He and Jake looked at each other, the spirit of competition forgotten.

"It's awful!" said Jake. "Never saw such ground swells in my life. And Tanana won't go down into it!"

Kerry glanced from the Siberian leader crouched against Jake's leg, to Tokon. His husky stood, muzzle raised, ears, steady eyes fixed on the rolling river of snow beneath him. A little thrill of confidence went through Kerry. "Tan

The NEW Remington Portable

With Eight New Features

EIGHT years ago, the Remington Portable was launched—to revolutionize its field and become the world's largest seller.

It was the *first* portable typewriter with standard four-row keyboard. Big machine dependability, speed and quality of work. The famous Remington feather-finger touch. Every essential refinement found on a regular office typewriter—but only one-fourth the size and weight.

The public demanded nothing better. But for eight years, Remington engineers have been working to produce its successor—the *perfect* portable typewriter—the one you've wanted without knowing it!

Here it is . . . with

1. *A new streamline body*—added beauty and even greater strength.
2. *Type bars always in writing position*—no raising or lowering.
3. *Perfect visibility*—nothing between your eye and what you write—no shadow on your work at any time.
4. *A new carriage-return lever*—easier to operate.
5. *A new paper bail*—holds paper tight to extreme bottom of page.
6. *A new carriage lock*—protects machine from accident or misuse by others.
7. *A new margin release*—on the keyboard.
8. *Paragraph key*—brand new—makes neater work by indenting paragraphs uniformly—simple as a space bar, five times as fast—invaluable for tabulating.

Added to this . . . new color combinations. But NOT added . . . a single cent in price! As always, $60—terms as low as five dollars monthly. Write for interesting booklet. REMINGTON RAND BUSINESS SERVICE, INC., *Typewriter Division,* Remington Rand Building, Buffalo, N. Y.

PEWRITING makes writing easy — REMINGTON makes typewriting easy

Here's inside information on that saying . . .

"There's a Reason"

Grape-Nuts' crisp kernels encourage chewing—giving teeth and gums the exercise so badly needed in this soft food era.

THAT'S A REASON

Grape-Nuts is made from the most wholesome grains—ripe wheat and malted barley—and brings you all the goodness of both.

THAT'S A REASON

Grape-Nuts is twice baked—to make it crisp, golden-brown, easy to digest.

THAT'S A REASON

To keep health at the peak—Grape-Nuts, with milk or cream, supplies the varied nourishment so many menus lack.

THAT'S A REASON

And flavor . . . there's a reason that easily tops them all! A nut-like, crispy goodness that is different . . . unique. These crunchy, golden kernels speak right up and tell you . . . *"In this one dish is a breakfast banquet."*

THAT'S A REASON

on't go? Well, swing in behind me, ke," he directed. "Tokon will do it." The Syndicate driver shook his head. I don't know. . . . But—if he does, err, let's keep together till we get ross."

"Sure. Hold your pups until I lead me around to the front. . . . Now then, kon! Let's go, boy!"

There was a moment's hesitation, then e husky leader threw himself into the llar. Kerry leaped to the footbrake to ld the sled from crowding the wheel gs. They plunged from night-illumined aks into stinging darkness—into wind-ipped snow that flattened the team to crouching gait and smothered and nded dogs and driver. Kerry clung to e handlebars, gasping for breath. Sepa-tion from his team in such a wind meant ath.

He realized suddenly that he had for-tten Jake. He halted his team, and outed back while he waited. Presently saw the half-smothered string of Si-rians fighting along through the gloom. ey stopped at his heels. He hooked one n through his handlebars and, leaning er, patted Jake's small, snow-plastered der.

After two hours of the hardest trail-ting he had ever known, Kerry reached other side of the Valley. When he nbed the low hill that brought him e more into the moonlight, he felt as is body had been pounded to a jelly. dogs put their ice-bruised feet to the il as if they were walking on eggs.

Kerry waited until Jake came up out the Valley.

The Syndicate driver halted beside him , pulling back his snow-caked parka d, began rubbing ice from the dark bble on his face. He was breathing vily. He turned suddenly and looked k. A shiver ran over him. "Lord, it a place! . . . If you hadn't been ad of me, Kerr, I—I— Well, I don't eve I could have made it."

Kerry knew the admission was his nks. "Nonsense, Jake! I tell you I darned glad to have you with me. you all right to make your camp? If we can make room for you at my n."

"No, thanks, Trail Eater. I've got only le to go."

With a word of farewell, each driver ted his tired team.

KERRY'S rest cabin, Haven House, was just off the Trail, a few hundred yards er on. He was inside it within ten tes. He fed and rubbed down his , and then, too weary to take off his es, tumbled into a bunk. When his er brought food, he lay there eating listening to the news the man had ed up over the telephone. Slim was rted resting at Telephone before nting the Gorge and the Valley.

Kerry's dogs began snoring the moment finished eating; but sleep was not for driver. He had come one hundred orty miles. He had sixty miles to go e he reached Candle. He must make sixty in one run. An hour and a half he was on the Trail once more, his ned dogs hobbling along ahead of n the moonlight. As he crested the hill he paused to rest. The trail d down, then up again over another higher ridge three miles beyond; but the distance across was so short that he could make out a string of dogs moving upward He watched them top the rise and stand outlined against the aurora-lighted sky. A moment later they had gone down on the other side.

It was Jake, ahead of him—and gaining

Six hours later, a clear, arctic dawn reddened the hills and crept toward the naked willows that lined the banks of the Kewalik River. Winding along the frozen stream came Kerry. Wrapped in the sleeping bag on the sled, Queenie snored in forgetfulness of her sore feet, that had given out at Gold Run. Two dogs were coming behind. Kerry winced every time he glanced back and saw their crimson tracks on the snow. During all the ghastly hours of the night, he had talked and sung to them, until now he could only croak. But the sixty-mile run was nearly over.

HE TURNED the bend, and Candle lay before him. From the two towering flagpoles that marked the judges' stand, the Stars and Stripes stirred in the dawn wind. Below each banner a blizzard lantern still burned. It was five-thirty in the morning; but the whole town was awake. In the street men, women, and children awaited the coming of the racers. When they sighted Kerry, a man broke from the crowd and ran down onto the frozen river to meet him. It was Wally. He trotted alongside, keeping up a stream of praise and congratulation.

Men and women on the banks broke into cheers and yells of greeting. They pressed against the roped-off lane down which he drove, shouting remarks to one another: "Great Scott! Look at that pup Tokon still in the lead!" "Say, Kerr, where you going now? Caribou hunting?" The crowd roared, remembering Kerry's race of last year. "Never mind, Trail Eater. Jake beat you in by only forty minutes!"

With the shouts and confusion jarring on his tired consciousness, Kerry crossed the line between the two flag-poles. *The Sweepstakes was half run!*

He handed his papers over to the judges. The timekeepers checked him in and compared his dogs with their photographs. Then at last he was ready to take his team to its stable for a well-earned rest.

While he massaged the dogs, with Wally's help, the latter gave him the news. Jake was pretty well all in when he arrived; but he won the prize of two hundred dollars Candle always put up for the first team in. The luck of the Trail was with Slim; he had rested at Telephone just long enough for the wind to die down. Thus he made the Gorge and the run across the Valley with no trouble at all. The report from Haven said he was burning up the miles when he went by.

Weary as Kerry was after his dogs were bedded down, he took a bath and a shave before he ate. While he was at dinner, Wally reappeared to give him the result of a telephone chat with Tolovana Belle: "She says Nome's gone wild," he announced, his mild eyes shining. "All the little fellows are putting money on Jake. But Tokon's got their goat. His leading right in to Candle has put 'em all on the fence. Rance lost a pot of money on that. Belle says he's drinking like a fish and betting like a madman.

"Belle's having no end of a good time. Been with a bunch of women who have taken the big front room at the Golden Sands and have turned it into a betting-parlor. Belle says it's a madhouse up there—ladies crying over lost bets and fighting one another."

Kerry listened, smiling. Later, when Wally gave him the time and positions of the other drivers, he jotted down the information on his chart. He must know how much of a lead he could give each of his competitors, and still be safe. He allotted himself six hours' rest at Candle.

WHEN he got into his bunk, tired as he was, he couldn't sleep right away. And once, when he was slipping off into unconsciousness, a prolonged cheering sounded in the street. The door opened and Wally poked a cautious head inside. When he saw that Kerry was awake he announced: "Slim's just got in—two hours and a half after you, Kerry. Every dog in the traces, heads up and tails waving."

"How's Slim looking?"

"Rather fit, Kerr. Rather fit," admitted Wally reluctantly.

HALF an hour later when the Englishman thrust his face through the door again, Kerry was sunk in heavy slumber. The man looked at him, started forward as if to wake him, then slowly shut the door and stood outside it pulling the lobe of his ear. He was in a quandary.

Kerry had told him he would take six hours' rest. But since then Candle had become uproarious with speculation and uncertainty. A score of frantic gamblers were even now trying to get telephone connections with their waiting principals in Nome. For Hinkey Scott had arrived half an hour after Slim and turned in his papers. Then, without resting a moment, he had swung his team and started back to Nome! (*To be concluded*)

How Ellery Walter Found Out That People Have Big Hearts

(*Continued from page 44*)

my money had given out. One cold December night, I landed at the old Union station with my suitcase in my hand and forty-seven cents in my pocket. Across the street was a small restaurant run by a Frenchman. I went into the place and ordered a fifteen-cent dinner. After I had finished eating and had settled my bill, I asked the proprietor if he knew where I could get a job. I didn't know a soul in the city, and I had no idea where I was going to sleep.

"Louis turned out to be a friend indeed. When he had heard my story, he returned my precious fifteen cents and gave me a five-dollar meal ticket, with the assurance that I could stay in his place that night.

"I fell asleep in a chair by the stove. I was awakened by a crash in the kitchen. The milkman had arrived on his early morning rounds. In the midst of the racket made by banging milk cans, I heard my friend urging the newcomer to give me a job.

"'How big is the kid?' demanded the milkman.

"'Oh, beeg 'nough,' parried the Frenchman.

"'Could he handle one of these?'

"'I call heem. We see.'

"I was called and found that 'one of these' was a five-gallon can full of milk. It took all my strength to handle it, but I pretended that it was easy. The milkman hired me. My wages would consist of room and board. I later learned that the 'room' meant what space I could salvage from the two tenement rooms into which the milkman's family of five was crowded.

"THIS was the beginning of a strenuous experience. Night after night, from a little past midnight until daybreak, I carried milk on the West Side. There were nights so cold that I thought my hands would freeze and drop off—nights when the hot stench of a 'nickel flop' felt like a breath from heaven.

"At the end of my first month in Chicago, I started working in an electric school, where I earned ten dollars a week. Part of the day was spent in classes, but most of it was given over to practical work. I stayed on the milk wagon with Tony another month, but as soon as I drew my first week's wages, I moved to a hall room on the top floor of a ramshackle frame building on Van Buren Street.

"Every week I divided my wages into two equal parts. Half went for living expenses; the other half went into the fund that was to get me back to Seattle and started in school. By spring, I had saved up a hundred dollars. I wanted to see something of the world, so I decided to work my way down the Mississippi to New Orleans, then into Mexico, and back through the Southwest back to Seattle and home."

THE next six months were spent largely on the open road. In working intervals Ellery tried everything from bullwhacking in a Mississippi lumber camp to stoking on a boat that plied between New Orleans and Havana. Once, after a brief period of laboring in the sweltering fields of Tampico, where they found the bubonic plague raging, he and his side kick, Hasty, were held prisoners several days by the famous Mexican bandit Pancho Villa. They were released because the officer in charge figured that they were eating far more than they were worth as potential soldiers!

Hasty was a seasoned hobo of twenty-four years whom Ellery had picked up on his trek down the Mississippi. It was he who introduced the boy to the scheme of "boarding free" at whatever jail was handiest. When the two were short of funds, Hasty's favorite stunt was to get them locked up for the night. As the offense was never more serious than stretching out in a very public spot in some park to sleep, they were reasonably sure of at least one square meal and a dismissal in the morning. On the way from

Digitized by Google Original from UNIVERSITY OF IOWA

the oil fields to the border, Hasty was killed by a party of bandits in a midnight raid. Ellery, who was rescued by a Catholic priest, got off with a broken arm.

"From then on," he said, "I hoofed it alone, but all the fun had gone out of being a vagabond. I missed my buddy."

He arrived at Seattle in the middle of September with his left arm bound in a steel splint to his body.

"I HIKED straight out to Franklin High School," he told me, "to enroll for the two years I lacked of finishing when Mother died. By the time I had bought a change of clothes, I had less than a hundred dollars left to run on.

"Servants in Seattle were scarce. A lawyer who lived near the school was looking for a 'handy man.' With my left arm out of commission, I asked for the job, and got it. I was pretty awkward at first, but by the end of the third month, when they took off my splints, I felt as if somebody had made me a present of an extra arm.

"All that winter I ran the car, nursed the furnace, scrubbed the floors, and did the cooking. After I had put a meal on the table, I would sit down with the family and help eat it. My friends kidded me about the double life I was leading. I wasn't so crazy about my white-apron job myself, but I was grateful for the chance it gave me to earn a living.

"My ability to cook has got me out of many a tight corner. The only lessons I ever had were from a retired top sergeant who had served in the United States Marine Corps for thirty-two years. My brothers and I used to spend our summers camping with him in the mountains.

"He was one of the finest men I ever knew and one of the strictest disciplinarians. For any infringement of camp regulations, or for failure to come up to scratch in the performance of duties, he would thrash us soundly. If we wept or flinched during a flogging, he kept right on applying the lash until we could meet it standing up straight and smiling. Naturally, we soon learned to take our punishment without whimpering. A fellow can't learn a more valuable lesson than that.

"Up to the time of Mother's death, I had made fair grades, but nothing to brag about. When I reëntered high school upon my return to Seattle, I sailed in with the deliberate intention of coming out as near the top as possible. It's curious what a difference a purpose can make. I finished two years' work in a year and my rating showed far and away the best record I had made up to that time."

In addition to doing his school work and running his job with the lawyer's family, the boy found time somewhere to take a leading part in the senior play and to debate on the team that won the state championship. He also turned out for football.

Summer vacations he always spent working out of doors, to develop brawn and muscle, for he was already cherishing dreams of rowing on the varsity crew of the University of Washington.

"When the fall of 1924 arrived," he told me, "I entered the University of Washington. This was the proudest moment of my life. I had won the first round in the fight I had set out to make for an education. It was thrilling. Now I was sure that nothing but time could stand

Drive" the Waters this Year

FOR about half the cost of a low priced car you can "drive" the waters this year. It's more fun than flying, with a powerful, smooth running Evinrude at the stern of a sleek, trim runabout! Room for the whole family. Away from crowds, traffic.

Four *twin-cylinder* Evinrudes, to choose from — 2½, 6, 14, 20 H. P., with light weights of 44, 58, 75 and 95 lbs., respectively.

A size for any craft from canoe to small cruiser. Waterproof ignition, easy starting made still easier, torpedo-streamline and many other new 1929 features fully described in new Evinrude Year Book. Send for it today.

Now Comes The New Shorthand

FOR years there has been a crying need for a really modern, scientific shorthand that could be written RAPIDLY—that would be more ACCURATE—more PRACTICAL—and could be learned more EASILY and QUICKLY than ordinary shorthand. Now at last it is here—the new shorthand. Business and professional men and women everywhere have hailed it with enthusiasm. Experienced stenographers as well as beginners are adopting it.

Speedwriting
The NATURAL SHORTHAND

Right this minute you know the principle of this amazing new method—you use the same "A-B-C s" as you do in your daily speech. No need to spend long, tedious months memorizing a "foreign language" of dots and dashes, hooks and curves. You start using Speedwriting in a few hours and in a few weeks you can acquire all the speed and proficiency necessary for practical work.

Speedwriting was originated by Miss Emma B. Dearborn, who has taught practically all systems for eighteen years in such institutions as Columbia University, Rochester Business Institute, Simmons College, and the University of California.

ROSE TREE

ONE TREE $1.00
3 for $2.50
PREPAID

The ROSE TREE OF CHINA (Prunus Triloba) is the most beautiful and showy of all small trees. It begins to bloom before the leaves appear in the spring, being literally covered with very double rose-like pink flowers. As an ornament from early spring until late fall it has few equals. This symmetrically formed, graceful little tree grows usually to a height of but 8 feet, and is attractive as a specimen or when planted in groups or shrub border. It is hardy and easily grown, and no lawn is so small that room can not be found for at least one of these wonderful trees. Many who have seen it declare it to be the most beautiful tree they have ever seen. The rose-like blossoms make fine cut flowers.

Choice trees for **$1.00 each; 3 for $2.50,** by parcel post, postpaid.

SPECIAL For **50c** extra we will include three small **TULIP TREES**—fine ornamental shade trees with tulip-like flowers.

Our stock of trees will not last long at these low prices. Order now, and state when you want trees shipped. CATALOG FREE. **BURGESS SEED & PLANT CO., 342 T. R., GALESBURG, MICH.**

between me and the realization of my dream. I was standing on top of the world, and I asked no odds of fate!"

It was just as well that Ellery Walter could not see into the future which he so blithely challenged. Before he could finish his freshman year, he was destined to enter upon many months of intense suffering—a veritable Gethsemane of body and soul, out of which was to grow, slowly and painfully, a new dream and a new future.

For the first seven months the boy carried full college work, turned out regularly two hours every afternoon for crew practice, and worked from six in the evening until two in the morning at the business of earning a living. From six to ten o'clock, he acted as night clerk in an apartment house; from ten until two, he was a janitor in the Y. M. C. A. downtown.

It took an hour on the street car to get from the Y. M. C. A. to the fraternity house in which he lived. He tried to study on the way home, but usually he was sound asleep when he reached the end of his journey, and the street car conductor would have to shake him into wakefulness. Next morning he would be up in time for an eight-o'clock class.

Day after day "Rusty" Callow, Washington's famous coach, urged Ellery to give up something, even if it was his cherished place on the crew. But the boy was young and stubborn. He wouldn't listen. There was nobody to *make* him listen.

Early in April the inevitable happened.

During rowing practice he had a slight accident which resulted in strained ligaments and tendons in his left ankle. In a few days he picked up an infection through an abrasion made by the brass heelplate in his racing shell. He had no resistance with which to fight the poison.

On the day that they took him to the hospital, his temperature was 106. For weeks it was thought that he could not live. The leg was opened and drained, and the bone was scraped. A few days more, and another incision had to be made.

FOR two months, Ellery lay on his bed in the hospital waiting for his leg to heal. He suffered acutely all the time, but at night his pain became torture. Night after night, morphine was offered him, but he declined.

"I remembered Sergeant Montair," the boy explained haltingly. "I wanted to take my punishment straight—without flinching. But," he added, with a whimsical little grin, "I'm afraid the old Sergeant would have been ashamed of me if he had known the truth, for there were times when I had to chew the bedcovers to keep from crying out.

"There was one thing, though," he went on, "that put heart into me even when the doctors looked gravest, and that was the amazing number of people who took the trouble to visit me. Class- and college-mates took turns sitting up with me at nights during the zero hour when the pain was most maddening. The elevator boy in the 'Y' where I had worked as janitor came too. So did a couple of the hard-boiled longshoremen who had shifted salmon cases with me in Alaska. The vice president of the bank from which I had borrowed money for my hospital expenses came to offer me more money."

That fall and winter, by means of extension courses, Ellery did the work of his sophomore year from his bed. In breathing spells between grueling rounds with pain, he continued to sell life insurance policies, a means of earning a livelihood that he had tackled intermittently the preceding year. The difference between his earnings and his expenses, he borrowed, giving his personal note.

When spring came again, the doctors decided that a sea trip would afford him the most beneficial treatment. What he needed most, they agreed, was relaxation, plenty of sunshine, and a chance to build up his margin of strength. Hawaii, they said, was the place to go to.

Ellery had just sold two unusually big insurance policies. He had the money to buy his passage and a little over. A relative in the East had written to promise him an allowance which would cover his living expenses while he was gone.

ONE fine morning in June almost three years ago, the boy boarded a boat for Victoria, British Columbia, where he was to take ship for Hawaii. As he said good-by to his Seattle friends, he laughingly assured them that in two months he would be able to walk back home without his crutches. He did not dream that he was not to return for more than a year and that, in the meantime, he was to circle the globe, living one of the most amazing adventures in friendship that it is possible to imagine.

When Ellery landed at Honolulu he did not know a soul on the island. Attracted by the beautiful setting of Halekulani, a hotel on the beach, he stopped there.

"'Halekulani' means 'House of God,'" he explained. "Before I left Honolulu this seemed to me a very appropriate name, for never in my life have I met with more kindness than I found among the people who lived at Halekulani."

Hardly had the boy got settled when a letter came from the States saying that owing to an investment which had turned out disastrously, the relative back East would not be able to send the promised allowance. This was a blow. But Ellery refused to worry. He had his passage money and enough to keep him, with strict economy, for a few weeks.

Several very happy and restful days passed. Then, without warning, his leg became inflamed all the way up into the thigh. He called a doctor and was told that his left leg ought to come off. He had no money for hospital bills, not even an acquaintance to whom to turn for advice. He begged the doctor to make fresh incisions to drain the poison out of his leg instead of operating at once. This was done and he got some relief.

An evening or so later, as he was sitting on the beach beneath the palms, he heard a voice behind him say: "Young man, would you like to go for a ride?"

The boy turned and saw that the speaker was a very distinguished-looking man whom he had noticed several times in the dining-room at Halekulani.

"I told him," said Ellery, "that I should like very much to go for a ride. After dinner, he came for me in his car. We had a delightful hour. He did not introduce himself, and I did not realize until afterward that he had made me do most of the talking.

"The next morning someone said, 'I see you were out riding with Governor

Brown last night.' I then learned that my host of the evening before was Raymond C. Brown, Secretary of Hawaii, and, at that time, acting governor. After that, Governor Brown was always very kind and friendly to me, often inviting me to sit at his table and to go on long rides with him"

All this time, Ellery's leg was growing worse. Finally, the doctor delivered his ultimatum: "Take your choice," he said. "It's a question of being alive with one leg, or dead with two."

The boy gave in.

He had been told that he probably would be out of the hospital in a week or ten days. Instead he spent nearly six months there. During this time he had seven operations, four of them taking place in as many days. His bill was more than a thousand dollars. When he asked for it—for once with something very close to desperation in his heart—he was told that everything had been paid by Raymond Brown and some other friends at Halekulani.

At this piece of news, the boy who had learned to stand up to a lashing with a smile on his lips, felt the hot tears creep up into his eyes, and he was not ashamed. But he would not take the money as a gift. He sent for Governor Brown, and by signing a series of long-term notes, made arrangements to pay off his indebtedness as soon as he recovered his earning capacity.

A FEW days after Ellery left the hospital, the doctors advised him to take a short ocean trip. Travel and change, they said, would divert his mind and help nature get in her work. A boat was about to sail for Sydney, Australia. With the money he had saved to get back to Seattle, the boy bought a return-trip ticket to Sydney.

"I never used the return half of that ticket," he told me. "When I reached Sydney I sold a story about my experience in Mexico to a newspaper and went on down to Melbourne with some friends. Here, it became necessary to have another operation. That meant several days in a hospital. In order to meet this unexpected expense, I had to cash in my return passage. When I had paid my bills, I found myself stranded in a strange land more than eight thousand miles from home.

"I was getting down to my last shilling and things were looking a little serious when I had one of my lucky breaks. An Englishman came to me and asked if I would like to tutor his children on a trip to England. Up to this time, I had been thinking only of getting back home. Now I decided that I might as well make a thorough job of it and go on around the world. When I got my breath, I gladly agreed to the Englishman's suggestion.

"We took ship at Melbourne for Ceylon. Before we reached the west coast of Australia, my thigh became badly inflamed again, and the ship's surgeon, a splendid man who had accompanied Sir Ernest Shackleton on his South Pole expedition, was called in to examine me. Five minutes after the door of my cabin closed behind the doctor, I had a visit from the managing director of the line, Sir Alan Anderson, who told me that I would have to get off the boat at Free-

"I'm going to raise his salary"

"I'VE had my eye on him for some time and I know he can handle bigger work.

"He studies those I. C. S. textbooks every chance he gets, and I want to tell you it has made him a valuable man for this business.

"I'm going to raise his salary and give him that new job we were talking about. I wish we had more men like him."

How do *you* stand when your employer checks up his men for promotion? Does he pass you by as just a routine worker, or does he think of you as a man who is ambitious to get ahead? Won't you be far more likely to get the promotion if he knows you are studying at home and are really preparing yourself to handle bigger work?

Think it over. Then act. It takes only a moment to mark and mail the coupon and find what the International Correspondence Schools can do for you, yet that one simple little step may be the means of changing your whole life. "Do it now."

Beauty that comes from health has a gentle quality

THE radiant beauty of youth is the reflection of inner cleanliness. Diet specialists at Battle Creek have demonstrated for 50 years the wonderful benefits of a wholesome intestinal tract. To this end they have prepared many special foods and dietary accessories. Roughage that rouses the lazy colon. Oil that soothes and lubricates. A new seed that has both of these properties.

But best of all for this purpose, is Lacto-Dextrin. It is a remarkable colon food that changes "the intestinal flora." That is, it drives the destructive, disease-producing germs out of the intestines. Thus reaching the very source of headaches, lassitude, nervousness, colitis and kindred complaints.

Hot Lacto-Dextrin
Mix Lacto-Dextrin with hot water. Drink like hot lemonade. Refreshing. Featured this month at all Health Food Centers.

At the famous Battle Creek Sanitarium and other institutions, Lacto-Dextrin is used with outstanding success.

Together with the other health foods in the Battle Creek line, Lacto-Dextrin is sold by your Health Food Center—usually the leading grocer.

SAVITA—Yeast extract rivaling finest meat flavor. PROTOSE—Vegetable meat rich as choicest beef. MALTED NUTS—Delicious food drink teeming with health. FIG BRAN—A dainty cereal of bran and luscious figs. "ZO"—Toothsome vitamin cereal everyone enjoys. VITA WHEAT—Appetizing all-wheat 6 minute porridge. BRAN BISCUIT—Crisp, tasty, wholesome bran crackers. LAXA—Crunchy biscuits of bran and agar. LACTO-DEXTRIN—Refreshing anti-toxic colon food. PSYLLA—Seeds that sweep through intestine. PARAMELS—Creamy caramels of mineral oil.

BATTLE CREEK SANITARIUM HEALTH FOODS *for Everybody*

Free Diet Service

At Battle Creek we maintain a staff of graduate dietitians to advise you on any diet problem. If you will write to Ida Jean Kain, our chief dietitian, she will send you suggestions for your particular diet. "Healthful Living," a most interesting and helpful book written by a leading nutrition expert, will be sent free if you write your name and address on the margin of this ad and send it to us. It describes with recipes many of the foods used in the Battle Creek Diet System. THE BATTLE CREEK FOOD CO., Department 14, Battle Creek, Mich.

mantle the next day and return to Melbourne. He said the doctor feared that if I stayed aboard I might have to be put off at almost any port and run the risk of being operated on at an inadequately equipped native hospital.

"I told Sir Alan that I would take my chances and begged to be allowed to remain on the boat. The surgeon came in and looked me over again. Then, 'Young man,' he said bluntly, 'are you prepared for a burial at sea?'

"In spite of all that had gone before, this was something of a shock. I had no idea that things were as bad as that. The doctor told me frankly that he did not think that with my infection I could possibly live through the intense tropical heat of the Red Sea.

"IT BECAME a point of honor with me to live through the voyage, and I certainly was aided and abetted by everybody on board. Sir Alan himself would help me down the companionway to my cabin and stand by while the steward tucked me in bed. Nevertheless, I was pretty well shot to pieces by the time the voyage was over.

"We disembarked at Port Said and my employer, my charges, and I went into Cairo. Here, it immediately became apparent that I should have to go to a hospital and have an operation on my good leg. When I asked at Shepheard's Hotel for the best doctor available, they provided me with a Swiss surgeon. The next morning he took me to a Greek hospital where they had German nurses and Arab attendants. Not a soul in the hospital spoke English, and my French was nothing to write home about.

"In the operating-room, when I haltingly managed to ask what they were going to do, the doctors gesticulated in concert and broke into floods of French. The German nurses agreed with hearty 'Ja's,' while in the background the stolid Arab sponge bearers and scissors grinders almost broke into smiles of approval.

"I broke into a cold sweat!

"I was afraid that in their enthusiasm the lot of them would take off my good pin, so I firmly refused the anesthetic they tried to coax me into taking and otherwise made it plain that I intended to stay on the job until they had finished their chore. Whereupon the little Swiss surgeon took out his watch and with his forefinger painstakingly traced fifteen minutes on its face. I told him to go ahead and I would keep time on his.

"He was a pretty good guesser. Inexactly sixteen minutes, they had made the incision, scraped the infected bone, and had everything shipshape."

As soon as he got out of the hospital Ellery sailed with his party for Naples where they were to take the train for Rome. Here, he was to leave his charges while he went on to London. On the steamer the boy had still another instance of the spontaneous friendliness he had met at every step of his trip around the world.

"I had just settled myself in the lounge the first evening out," he said, "when directly behind me I heard a gruff voice which demanded: 'Why haven't you an artificial foot on that leg of yours, young man?'

"A little startled, I faced about to look at the man who would address

tranger so abruptly. I saw a tall, dis-inguished-looking chap of about thirty. It his side was a charming young woman who gave me a reassuring smile.

"My husband lost his leg in the World Var at about the same point you lost ours,' she explained. 'He is interested in verybody who has suffered a similar isfortune.'

"My infection has gone up into my igh, so I cannot yet be fitted with an tificial leg,' I stammered.

"'That's too bad,' said the brusque ranger. 'It struck me as a shame that a ung man like you cannot get around as ell as I do, when I am many years older.'

"At this juncture, he got to his feet d demonstrated his statement by stamp-briskly about the saloon. He walked thout a stick or a crutch, and with only slight limp. Coming to a halt in front me, he pulled up his trousers leg and udly displayed a metal leg attached to knee.

'One thing led to another, and pres-ly he asked me if I should like to play dge. We found a fourth and settled wn to a quiet evening at cards with-any introductions having been made. er, I learned that the English are quite ual about introductions—or the lack them. When bedtime came, my new nd helped me down to my cabin.

Imagine my surprise the next morn-when I learned through the ship's sur-n that my friendly 'pick-ups' of the ning before were General and the Hon-le Mrs. Asquith. General Asquith is son of the late Earl of Oxford and uith. Before we parted, the Asquiths ted me to 'have a meal' with them n I got to London.

ROME," Ellery went on, "I had a ood 'break.' Mussolini had agreed to audience to a group of American ents. I begged admittance to the s. With pounding heart, I awaited urn to meet the world-famous Dicta-I was already building dreams about incident. It would be something to about to my grandchildren!

ne by one, we stepped up and shook remier's hand. Most of us were ill se in the presence of the great man. urn came. Tremblingly, I gripped nd. I had carefully rehearsed a sen-in Italian, but at the critical mo-it deserted me. I *had* to say some-Bowing my head deferentially, I bled, 'Howdy, Benito!' trusting that ce's English was no better than my n. But a twinkle in his eyes told me ntly. For a moment, my blood ran but when the twinkle spread over ce in a broad smile, as he replied, ly, America!' I knew that for the eing the world was again safe for racy!

lidn't dream then that in less than I should return to Italy, have a interview with Mussolini, and be raphed with him.

ur days in marvelous Rome, a top in Naples, and I was on my London."

te he left London, Ellery sold articles to newspapers. This gave ough money to buy his passage to ork, where he disposed of an ac-f his early adventures in Mexico. en I got back to Seattle," he told

Your time is limited

but you can invest quickly, wisely, this way

The busy man willingly pays extra for the hours which the "Limited" saves him between New York and Chicago. In the rush of modern life the pressure of things to be done makes us quick to take advantage of the time-and-worry-saving conveniences which now extend into nearly every human activity — even to the making of investments. No longer is it necessary for you to make a prolonged personal study of your investment problem — simplify things by picking out one or two widely-known investment houses and rely on their experienced advice. At the nearest National City Company branch office you will find an investment advisor with our world-wide knowledge at his command ready to give you immediate time-and-worry-saving help in selecting from our broad lists of investigated securities.

American School, Chicago

Charter. The American School was chartered in 1897 as an educational institution.

Not for Profit. Being conducted as an educational institution, not for profit, it is exempt from all income taxes.

Satisfaction Guaranteed. The School guarantees every graduate satisfactory instruction or his money back.

Home-Study Council. The American School, like home-study departments of colleges and universities, is not a member of the National Home-Study Council.

Get Ready for a Better Position

You want to earn big money—steady promotion. Are you prepared for the position ahead of you? For a more responsible position at better pay, a fairly good education is necessary. To write a sensible business letter, to prepare estimates, to figure costs, and to prepare reports, you must have a certain amount of training. Many concerns will not hire men who are barred from promotion by the lack of elementary education.

If You Have Not Completed High School

and are under thirty, we urge you to do so at once. If you can't go back to your local high school, take our simplified High School Course. We use the same standard textbooks as your local high school and will give you equivalent training. Get at once the foundation training required for success and big money. YOU CAN DO IT.

If You Have Completed High School

you are ready to specialize in some well-paid trade or profession: Architecture—Drafting—Electrical—Mechanical—Business—Automotive Engineering, etc. A knowledge of higher grade work brings promotion. The work you are doing today fits you to continue doing it. Promotion doesn't mean longer hours—but shorter hours and more pleasant work. It is the reward of the man who has fitted himself for the bigger, more important positions.

Qualify for a Better Position

To prove to you how easily and quickly you can learn by our home-study method, we want to **send you samples** of our special lesson papers. We guarantee you **satisfactory instruction or your money back** on graduation.

Let us show you how to get on the road to success. Write today. It costs you nothing but a stamp.

me, with a little touch of pride, "I was sixteen dollars to the good, and I had gained thirty pounds in weight since leaving Honolulu. And in the meantime, I had found out that even if a fellow has only one foot, he can learn to stand on that. But best of all, I had discovered that friends are folks whose response is measured by your need of them, no matter whether they live across the street or across the globe from you!"

Ellery stayed in Seattle only long enough to settle up his personal affairs. Then he returned posthaste to New York to find a publisher for his book, "The World on One Leg," which he had been working on from time to time during his trip around the globe. The first publisher the boy interviewed agreed to bring out the book, and suggested that he talk to the manager of a well-known lecture bureau about a series of engagements. Ellery did this, made a few test lectures, and was soon booked up for the coming fall.

As soon as his manuscript was ready for the press, the boy set out in search of new adventures. This time, his destination was Europe and his avowed intention was to get personal interviews with some of the outstanding figures in European politics.

OF ALL the great men of Europe, young Walter found von Hindenburg hardest to get to. When the boy arrived in Berlin last June, he discovered, to his dismay, that von Hindenburg had not been "seen" by a writer in eighteen years. However, Ellery succeeded in enlisting the personal championship of Ambassador Schurman. At first, the Ambassador's efforts in Ellery's behalf met with flat failure. But when von Hindenburg heard that the young American had worked his way through college, his interest was aroused and he consented to an interview. It seems that Germany is developing a class of students who are working their way through the colleges and universities—a thing unheard of before the war—and that the head of the Republic is intensely interested in the experiment.

President von Hindenburg received Ellery at the presidential mansion in the Wilhelmstrasse. Ambassador Schurman accompanied the boy as his mentor and interpreter.

"I had another one of my lucky breaks," Ellery told me. "A cabinet meeting was breaking up just as I got to the house. Imagine the kick I got out of being presented to all the ministers!

"Von Hindenburg himself was magnificent. I shall never forget the stately picture he made as the great folding doors rolled back and disclosed him standing against an impressive background of heavy velvet curtains. He is six feet five in height and his hair is snow-white; his manner is simple, direct, and very kindly.

"Through Ambassador Schurman, he questioned me for fifteen minutes about our American institutions of higher learning, and in particular about the students who acquire an education under their own steam."

THE next notable whom Ellery succeeded in seeing was Pope Pius XI. The young Quaker gained a private audience through the friendly offices of Edward L. Hearn, High Commissioner of the Knights of Columbus in Rome. When Ellery arrived at the Vatican, the antechambers were filled with persons assembled for the noon-hour public audiences. The Swiss guards at once turned the boy over to members of the Papal household, who escorted him to the golden throne-room. Here the Pope received him alone. With a twinkle in his eye, the Pope laid his hand on the youth's shoulder and greeted him cordially in English: "Welcome. Welcome!"

Ellery said: "When I tried to thank His Holiness for being received so graciously, he replied: 'More people from America come to see us than from any other country. We are always glad to see them.'"

On the same evening, through the influence of Ambassador Fletcher, Ellery was received by Mussolini.

"Il Duce was most considerate," he told me. "He escorted me personally to his desk, where he placed two chairs and with his own hands arranged my crutches near by. I had brought along a memorandum of the things I wanted to ask Mussolini, and, without thinking, I foolishly laid the paper on the desk at my side. Mussolini picked it up and, to my great embarrassment, began rattling off questions and answers:

"'Thanks for interview,' he read, and added the amused comment, 'Not necessary.'

"'Ask if tired of Americans,' was the next thing that caught his eye, and to this he gave a vigorous 'No!'

"I hastily explained that he was not supposed to see the memorandum. He immediately told me to submit to his secretary a list of the questions I wished to ask, assuring me that he would answer each with all possible care.

"'What do you think of my English?' he asked, soon after he had switched from French, in which he was much more fluent.

"'Much better than I expected,' I replied before I had time to frame a more tactful answer.

"'But I understand English better than I speak it,' he reminded me with evident relish. We both laughed. After that I was more at ease.

"Whether or not you agree with Lloyd George that Mussolini 'saved Italy,' you cannot talk with him five minutes without realizing that stupendous power is concentrated in the man. I came away with the feeling that he can do anything that he sets himself to do. More than that, I came away with the feeling that most any of us could work wonders if we put our whole souls into the job as Benito Mussolini does!"

AT THIS TIME of year all of us watch expectantly for the coming of spring. It is the most welcomed season of the year—the time when our hopes and spirits are upraised. In a beautiful article next month, Archibald Rutledge interprets spring for us. "In the spring," he says, "we renew our knowledge that truth and beauty are the language of God; that virtue is the behavior of God; love, the will of God!"

"My Money is on the Man Who Believes in Miracles"

(*Continued from page 26*)

When Mark was twelve, his father lost most of his money through an unfortunate business connection. Previous to this, Colonel Woods had "cried" only one live-stock auction. His success having convinced him that auctioneering was a proper field for his abilities, he decided to make a new start in Nebraska, the center of the live-stock industry.

The move was a grand adventure for the boy. To save railroad fare, Mark and his brothers rode in a box car with the household goods. Lincoln, in 1882, was next door to the frontier, handy to cow country, Indians, and the hard-riding older west. A new kind of life, shot through with the pioneering spirit, unrolled for Mark. He took to it with enormous zest.

Money-making appealed to him just as it does to most healthy boys. He hunted for any honest spare-time work in order to pick up pennies and dimes. Odd jobs proved plentiful. Besides these, he had two regular occupations.

During the summer he raised vegetables and peddled them in town. His young sister drove the wagon, while he called his wares. When he shouted, "Fresh peas!" at the top of his lungs, housewives could hear him distinctly two blocks away. "The auctioneer's boy!" they smiled appreciatively.

Mark was ambitious, and he bargained with some of the neighbors to sell their vegetables on shares. Selling, he shrewdly discovered, was more profitable than hoeing.

Mark's other regular occupation was carrying papers. He ran his route for three years, and never was late nor absent. Here he first came to grips with the real meaning of business honesty—what he calls *being on time with your obligations.*

"MY FATHER," he said, "used to say that you can have all the ability in the world, but it will do no good unless you're honest. It was an eye-opener for me when I discovered that not everybody acted accordingly.

"One old codger on my route was a judge of the circuit court. That should have been a guarantee. But the first time I called to collect my few pennies, he put me off. The next time, he did the same. And the next, and the next. I felt so sure I would pay eventually that I kept right on delivering the paper, and at last his bill was so large that I was afraid to stop it.

"By chance, somebody dropped the remark in my hearing that the judge was a risk who never paid a bill if he could keep out of it. That was a shock. I stopped the paper at once. But by that time the judge owed me eight dollars and forty cents, and he died before I could collect. I never got one penny out of him. I was disgusted. The loss rankled, and I think it's one of the things that inclined

Powder

"Cleans Teeth Best"

Just ask your dentist

When you go to your dentist to have your teeth cleaned . . . what does he use?—POWDER!

If, like your dentist, you are interested in really clean teeth—and safety—use what your dentist uses . . . for he knows best.

There is nothing known that will clean and polish teeth so quickly, and leave them so gleaming white—as POWDER.

Powder—is the one thing that all forms of dentifrice must depend upon for cleaning.

As powder is the essential cleansing part of any dentifrice; a dentifrice that is . . . ALL POWDER . . . just naturally cleans best.

In use over 60 years

Established 1866

For over SIXTY YEARS, since 1866, dentists everywhere have prescribed Dr. Lyon's Tooth Powder, because—teeth . . . simply cannot . . . remain dull and film coated when it is used. It cleans off all stains and tartar, and polishes the teeth in a harmless and practical way that gives them perfect whiteness.

It cannot possibly scratch, or injure, the softest enamel . . . as SIXTY YEARS of constant use has shown. Dr. Lyon's is the only dentifrice old enough to prove it can be safely used for life.

Dr. Lyon's Tooth Powder keeps your teeth REALLY CLEAN, and clean teeth mean firm, healthy gums and the least possible tooth decay.

Brush your teeth with it regularly—consult your dentist periodically—and you will be doing the very utmost to protect your teeth.

Once you use tooth powder, you will never be satisfied to use anything else.

Tooth powder leaves your teeth feeling so much cleaner, your mouth so refreshed, and your breath so sweet and pure.

Dr. Lyon's Tooth Powder is not only more efficient, but it costs . . . much less . . . to use.

A package lasts over three months.

me to lean backwards on this idea of meeting obligations on time."

Mark Woods and his brothers all attended the University of Nebraska.

"I went," he said, "for only two years. I was too eager to get into business to stay longer. Real estate was the line I had set my mind on. I had no real estate, and no money!"

He soon got both.

"I HAD attended many auctions with my father," he explained, "and knew a good deal about cattle and cattlemen. I could judge the value of a herd and make a stab at guessing a man's honesty and ability. Most cattlemen at one time or another borrowed money on their herds. So I went to a man of means in Lincoln and proposed that he let me lend some money for him.

"Cattle paper was rather risky, and interest rates were high. Borrowers had to pay a two-and-a-half-per-cent commission, besides ten per cent a year. I proposed selecting high-class borrowers. In return, I was to receive half of the commission. Thus, a ten-thousand-dollar loan would net me a little over a hundred dollars.

"At first, my banker said I could lend up to fifteen thousand dollars. The deals turned out well, and he extended the limit to fifty thousand; later, to one hundred thousand. I soon earned a stake to start in real estate."

Mark was then eighteen!

He bought a farm on the outskirts of Lincoln, paying only part of the purchase price in cash. He cut it into building lots, which he sold, as a rule, for a little cash and a lot of contract. What money he had did a great deal of work; and he stretched his credit to the limit. Within five years he actually accumulated one hundred and twenty-five thousand dollars. Then came the great panic of 1893!

"My fortune," said Mr. Woods, "was partly in cash, partly in bank stocks—about half and half. Those bank stocks were the prettiest gold engravings you ever saw. They looked like a million dollars. But when the panic came, up they went, like *that!*

"The banks that didn't crash assessed stockholders one hundred per cent. My cash and investments disappeared almost overnight. All that I managed to salvage, eventually, was about ten thousand dollars, and my home.

"But—I kept my name absolutely clear. *Every penny that I knowingly owed to any human being, was paid on the day due, or covered by a new note.*"

Not many at that time could say as much.

One day, when things were at their worst, Mark Woods looked up, to see a friend in the doorway.

"Hello, Charley," he said; "what's on your mind?"

"Business," was the reply. "Mark"—the next words were a thunderbolt—"do you know you owe me five thousand dollars?"

"I owe *you* five thousand? Why, Charley, I didn't know I owed you a cent."

The friend explained. The ghost of Mark's speedy prosperity was claiming vengeance. A flock of the mortgages that he had taken in payment for his real estate had risen to haunt him.

Digitized by Google Original from UNIVERSITY OF IOWA

I was the law in Nebraska that an owner of mortgaged real estate "assumed and agreed to pay" the mortgage, without a time limit, even if he sold the property and title passed to somebody else—provided a later owner failed to pay. Because of the panic, dozens of Mark's customers had defaulted. His name appeared as one of several who had "assumed and agreed." And his friend had come down on *him* for payment.

"This will take some looking into, Charley," Mark said; "but if I find I owe it, I'll pay you."

He quickly learned that the law might be unconstitutional; that he might wriggle out without being considered actually dishonest; that he might justly insist on others paying part. But he saw that these "mights" were subterfuges. With eyes open, he had "assumed and agreed." That meant only one thing: he must pay. And pay he did, though he nearly had to "take the skin off his back" to do it.

The friend got his money. Mark got something far more precious. He made a fellow admirer of the man he paid. And that man was to go very far and was to mean big things to Mark himself. For the "Charley" of the debts was Charles G. Dawes. In thirty-five years of fast friendship, Woods and Dawes have been associated repeatedly in big deals.

MARK WOODS quickly got back on his feet after the knockout of the panic. All that he had salvaged, plus five thousand dollars that he borrowed, went into the purchase of a herd of cattle—real estate being temporarily at a standstill. Cattle prices soon went up, as Mark Woods foresaw they would. Before Christmas, he had made sixty-five thousand dollars.

"I had kept my name clear," he emphasized. "People knew I would pay. So I was able to borrow at a time when cash commanded wonderful bargains."

Woods dealt extensively in live stock for some time. He became one of the country's largest importers of blooded draft horses. He owned and sold as many as ten thousand head of cattle in one year. Cattle-buying trips took him into rough and dangerous country. Once, in a blizzard on the sandhills, he escaped freezing to death only by a miracle. Another time, he had to go into the Jackson Hole country when it was a bandit stronghold.

Big deals became habitual with him. In Montana he bought a hundred thousand acres of railroad land at a dollar and a few cents an acre, re-selling it promptly at one to two to twenty-five dollars per acre. With Lincoln, he and his brother George, in their real estate business, platted most of the city's growth, helping largely to make one of the loveliest capital cities in America. The Lincoln traction company, in the hands of absentee capitalists, went from bad service to worse; finally, Mark Woods took things in his own hands, and with his neighbors, built a new line, put the old company to a standstill, bought it, and gave the city a thoroughly modern system. Likewise, he and his partners built the telephone company now providing national and international service through Bell connections.

[illegible] then one day—but let Mark Woods tell the story in his own vivid way.

[illegible] was sitting in Charley Dawes's office

Expensive! ...What Do You Think I Paid for This Suit?

YOU would expect to pay much more for such material, tailoring, style and perfection of fit as you find in Ed. V. Price & Company clothes. Such remarkably low prices are made possible only through the economies effected by tremendous buying power and a highly organized staff of skilled tailors.

And *never* have we offered values more outstanding than we have ready for you this spring. Genuine Ed. V. Price & Company quality in a wide selection of beautiful new patterns and smart weaves and in a full range of prices. Each suit not only is cut to your individual measurements, but also is draped and balanced to your attitude by our exclusive "Attitude Method" of tailoring.

Our representative offers you all this *extra* value this spring for as little as $30 a suit. Make your selection now. If you don't know him we will gladly send you his name.

"... flames licked her thin dress..."

Cruel scars from burns have brought hideous, life-long disfigurement to many children. Is there a mother who does not fear them for her child?

Yet how needless are such scars! How needless, too, the searing pain of all burns and scalds!

Almost instantly Unguentine eases pain, starts quick healing—very nearly always no scar remains.

Eight out of ten hospitals rely on Unguentine, the standard, *antiseptic* surgical dressing. Its antiseptic qualities form an effective safeguard against infection.

One tube should be in the bathroom medicine chest—always. Keep extra tubes in the accident danger zones—kitchen, office or shop, automobile. Buy these extra tubes today. At your druggist's—50¢. Send for free household manual, "What To Do," by M. W. Stofer, M. D. The Norwich Pharmacal Co., Norwich, N. Y. Canadian address, 193 Spadina Ave., Toronto, Ontario.

Norwich
MAKERS OF UNGUENTINE

"... not a sign of a scar"

"When Marjorie was six years old she was horribly burned with gasoline . . . We used Unguentine from the start. It was a wonderful relief to see her pain soothed. And best of all, our little daughter will be unscarred."

* *

"Johnny struck out with his tiny fist, spattering volatile oil along his forearm . . . I used three tubes of Unguentine . . . The skin, even the flesh sloughed off. But now not even a pink streak is left."

• •

Now—Unguentine Soap, too. Bland and soothing. It rapidly clears up the blemished complexion — particularly when burns, cuts or bruises have left the skin irritated and sensitive.

in Chicago," he said. "Young Eddie Morris, of the packing-house Morrises, came in. Eddie pulled a long face, and said he had been hunting high and low and couldn't find a buyer for a farm he had on his hands. It was located on the Missouri River, in Nebraska. A good farm, he said. There were about six thousand acres. But it was a hot poker for him, because by his father's will he had to sell it before a certain day. He wanted Dawes to suggest something.

"'Sure I will!' Charley said. 'Here's the man that will buy your farm, Eddie'—and he pointed to me.

"Dawes was more or less in fun. But Morris was mighty serious and he took me up. I said I didn't know whether I could scrape up enough money.

"'But I *might* buy it,' I said, '*at a price*.'

"Morris wanted seventy dollars an acre. I took the train that night for Omaha, drove out next day to look over the ranch, wired an offer of sixty dollars per acre, and Morris accepted.

"That was that.

"A year or so later, the superintendent that I put in charge of this farm happened to mention that we had recently lost a hundred acres of good land.

"'*Lost* it?' I said.

"I didn't have any idea what he meant. Brought up inland, I failed to appreciate what these rivers can do when they run wild.

"The superintendent explained. It was the first time I had heard of real estate picking up and running away; literally, that was about what it amounted to. High water in the Missouri had washed it out.

"We have since taken many moving pictures of this phenomenon. On the screen you can actually see great chunks of the richest farm land in the country tumbling into the river. Sometimes half an acre will go at a 'bite.' Cornfields, houses, cattle and horses, highways, men and women, railroad tracks—anything that happens to be in the way is swept off. The government estimates that farmers lose ten thousand acres a year from this cause. *We* had lost one hundred acres and I didn't like it a bit.

"'Pretty soon,' I remarked, 'there won't be any ranch left!'

"I MADE it a point to ask engineers how I could prevent this annual steal. They advised me to sink piers and anchor brush and tree mats to them. The mats would slow up the current, they said, and rob it of its cutting strength. Moreover, the river would actually make new land where the mats were.

"You see, during floods, the river carries a tremendous amount of silt in suspension. As long as the current is swift the silt can't drop to the bottom and stay. The banks are cut and undercut until they tumble in.

"But just as soon as you slow up the current sufficiently, the river begins to deposit silt. The silt gradually builds up new bottoms and banks. So, according to engineers, I could not only save the land I had, but I could also get back some that had been stolen.

"But the engineers told me something else. They said the scheme was no earthly good unless piles to anchor the mats were sunk to bedrock. Anything less, in a

Be a CHAIN STORE MANAGER

Share in Kresge Profits

You may share in the profits of the great Kresge chain of 510 stores. You may earn an executive's portion of the profit from $150,000,000 in sales yearly. You may be a Kresge store manager. To men of intelligence, character, personality and ambition, we make this offer: *We will train you to be a Kresge store manager. We will instruct you in every phase of store management. We will pay you a small salary while learning but after you are trained you will earn, as store manager, a share in the profits of your store.* It will help if you have had experience in retail merchandising.

Read What Others Have Done

W. E. S. is managing his second Kresge store. He has always found the Kresge Company most fair and liberal in all his dealings with them. If he were starting out in life again and confronted with the task of choosing a career, he says he would cast his lot with the Kresge Company without hesitating one minute.

L. K. C. was employed as buyer in a large department store for several years. Then he accepted a job in the stockroom of a Kresge store. He is now manager of a large Kresge store. He says, "Today I am happily situated and still in line for promotion to greater executive responsibilities with the Company."

F. W. E. says: "After a few years of steady climbing to a store manager's position, I see still greater opportunities ahead. Since the Kresge Company promotes its men from the ranks to big executive jobs, I will not be satisfied until I reach the top."

S. R. E. worked as a salesman for several years and then started in a Kresge stockroom, which seemed quite a let-down to him. But today as a manager, he is firmly convinced of the wisdom of his decision. He says, "My present salary is far more than I ever dared to dream of receiving as a salesman."

If you are between 22 and 30 years of age and are interested in an executive position with Kresge's, write your qualifications to our Personnel Department and we will arrange for a personal interview.

Kresge Building, Detroit

flood, would be washed away like toothpicks.

"Now, at lots of places along the river, bedrock is anywhere from seventy to one hundred and twenty-five feet below the surface. It costs a lot of money to build a cofferdam and sink even one pile that deep; and it would take many piles. Cofferdams were the only known method. The cost put it out of the question. My land that the river was stealing was not worth it.

"So, that was *that*.

"ONE day Harry Byram called me up. At that time, he was vice president of the Burlington Railroad. He said he was running a special train to a new bridge that the Burlington was building, and invited me to go. I said I was too busy. He insisted. Finally I yielded. It was lucky I did!"

For on this trip Mark Woods got the idea that made him master of rivers.

"The big feature that Harry Byram wanted to show us," Mr. Woods went on, "was a self-sinking pile invented by a Burlington engineer named Bignell. It was interesting to watch.

"The pile was built of concrete, around a hollow pipe center. A derrick held it upright over the spot where it was to be sunk. Then a jet of water under enormous pressure was forced through the pipe.

"The hydraulic force, far more powerful than the jet of a fire hose, brushed mud, sand, gravel, and even good-sized rocks out of the way like so much dust. The pile sank to its own weight. In a few minutes it reached bedrock, even if bedrock was a hundred feet below the surface. The cost was only a fraction of the cost of cofferdams and the old method.

"'There,' I said to myself, 'is the very thing I've been looking for.'

"I tackled Bignell.

"'Why,' I said, 'couldn't I anchor brush mats to your self-sinking piles? Wouldn't they hold? And wouldn't they save the banks of my farm?'"

There was the big idea, *only awaiting proper application to make it worth millions.*

"Bignell," Mr. Woods continued "at once agreed that it might be feasible. I tried to get him to do the job for me. But he was busy and kept putting me off.

"'If *you* won't do it,' I said, '*I'll* have to.'

"He said I'd have to buy a steamboat and a barge.

"'Well,' I said, 'why not?'

"The upshot was, I hired an engineer, bought the steamboat and the barge, and even bought Bignell's rights in his patents. They were of no use to him, except in his railroad construction. He reserved the right to use them there.

"In a few weeks' time we drew up alongside my ranch and started to work. Within one month of the sinking of the first pile, I had the satisfaction of knowing that the Missouri River would never bite any more chunks out of that land."

Mark Woods' vision now swept in *all* the farms along *all* the rivers of the country that were subject to erosion; and not merely the farms, but all valuable property, in great cities or elsewhere, threatened by the wrath of uncontrolled flood waters. Here he saw the opportunity for a great service, the basis for a great business.

He organized one more subsidiary to the Woods Brothers Corporation; namely, The Woods Brothers Construction Company. Soon the "son" promised to outgrow the "dad." Ten years have made the construction company the largest business organization engaged in river-bank protection. Contracts have been closed, or estimates furnished, for projects on practically every important river in the United States affected by erosion, and for sea walls along the Gulf of Mexico and elsewhere. The total value of property already protected is beyond estimates, certainly in the *billions*. And the surface is barely scratched!

Some of the jobs have been spectacular. The Missouri River was cutting a new channel at Omaha. The state line between Nebraska and Iowa lies in the middle of the river. Had the new channel been cut, part of Omaha would have been annexed automatically to Iowa. The taxable value of the threatened portion was forty million dollars. For a very small fraction of *one* million, Mark Woods and his engineers chained the river in its old channel.

A railroad main line at Folsom, Iowa, has been a source of worry to officials ever since it was built. Every year floods threatened to wash it out. Through passenger trains had to crawl. Thousands of dollars were spent at every flood, and the line was no whit safer when the next flood arrived. Mark Woods took a contract to make the river stop acting the bully at that point. The protection-works cost altogether about the same amount that had previously been spent during one flood. And not a penny has been spent since. The main line is no longer endangered.

A GREAT railroad bridge was to be replaced. Navigation was blocked, because the river had shifted its channel. There had been a movable span over the old channel; but there was a fixed span over the new one, and large boats could not pass underneath. Mark Woods took a contract to put the river back in its old channel. This was done for a few thousand dollars. The new bridge, which would have cost over a million, was not required.

Then Mark Woods found large tracts adjacent to the railroad terminal center and bordering on the banks of the Missouri River. The land was undeveloped. Kansas City people had failed to note its possibilities. He acquired the land at nominal cost and began development operations. The property was platted, fills being made where necessary. Today every lot is supplied with trackage. Many factories have been built. The government selected a site on the property for river docks. The intercity viaduct connecting Missouri and Kansas runs the full length of the property. A huge terminal grain elevator is under construction. In three years, this tract has been converted into one of the most important industrial districts of the middle west.

For eight and one-half miles, up and down the Missouri River, Mark Woods

ns or controls virtually every available dustrial site.

As a fitting climax to this tale of vision d energy, the government has named e Missouri River as a Federal navigan project. Within months, boats will plying regularly between Kansas City d New Orleans, making the inland city, effect, a seaport. The docks will be on d rescued by Mark Woods. Already, , he has provided there a great air-t.

These are great achievements! But it impossible to talk long with Mark ods without realizing that he counts own ideas and achievements largely a ying-on of what he learned from his ner.

"O FAR as I remember," he said, "I never had a dollar of financial support n my father until I reached the point re I did not need it. But he gave me, ead, what was worth millions—the nsel of a remarkable mind, the guid- of a noble example.

For thirty years and more, he wrote it least one letter a month. I've kept n all. They fill several drawers. If ted, they would make a remarkable ment. They are full of homely busi- wisdom, often pointed with stories. father was a great story-teller. He not always agree with my brothers me in regard to our projects. More once he reminded us that fools and money are soon parted. But in the e came to have confidence in us, and invested in some of our enterprises. he lessons I learned from him were reatest ones I ever learned anywhere. ught me that with ability must go ty. It was a religion with him. With of these must go hard work. And with everything else, it is necessary punctual, economical, alert, open-d.

y father died a few months ago. He vigorous, so awake to current prog- hat I thought he would live to be a ed. But he died.

n going through his papers, I found r he had treasured for almost half ury. He lost his money in Chicago, we moved away, because he cheer- ettled accounts and debts saddled im by a crooked partner. When he aid everything and was nearly a banker who knew what he had hrough gave him a letter. It was est testimony I can think of, not my father's character, but also to th of common honesty. To cover up bad breath or drug a headache is not to remove their cause

INTESTINAL TOXICITY MUST BE CONQUERED

If in a man's business a certain mistake kept on recurring, he would not long continue merely correcting it. He would soon be looking for the source of the error *and eliminating that.*

That applies to women and their task of homekeeping, too! Yet when the matter takes on a personal aspect, such as one of health, so many of us are satisfied to cope with effects and to neglect the cause.

Take this problem of intestinal toxicity—a prevalent condition these days—one that is sapping away energy and health from countless men and women—why do we neglect it? We get countless warnings of its activities. Bad breath, headaches, tired digestion tell us of the danger. Yet, in direct contrast to business efficiency, we continue to combat these symptoms day after day instead of attacking the cause.

Do not run this risk. Thousands are successfully combating this dangerous condition with Eno's Effervescent Saline. Its stimulating, sparkling effervescence tends to settle an upset stomach. Its laxative action, gentle but thorough, flushes the overloaded digestive tract and washes away accumulated poisons. It is a valuable antacid too!

Eno has a really pleasant taste . . . unlike the bitter taste of other "salts." It does not gripe nor interfere with the daily routine. It does not shock the system by drastic action. You'll like it . . . and you'll like the way Eno "sets you up" for the day.

Your druggist has Eno at 75c and $1.25 a bottle. Get a bottle today and take it regularly morning or evening.

Prepared only by J. C. Eno, Ltd., London, England. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

Eno — health precaution—will cost you less than 3c a day.

When you get up, simply take a glass of water and add a generous teaspoonful of Eno. Taking this sparkling, delightful saline regularly will help to keep you fit and eager throughout the hardest day.

For a business headache, nothing is better than a glass of Eno. You can get it at the better soda fountains everywhere.

Every woman has the right to know

the real truth about feminine hygiene

WHY not? Feminine hygiene is an intimate matter but also it is a perfectly natural and simple matter, and nothing will keep it natural and simple but a frank view of the facts. And today authentic, scientific information concerning feminine hygiene is available to women everywhere.

Feminine hygiene *is* a healthful practice. Women of refinement know that it brings peace of mind and gives the feeling of daintiness and well-being so necessary to their happiness. Why, then, any doubt or any mystery?

Zonite displaces old methods

Ask any physician or trained nurse. You will find they approve of feminine hygiene. It is only the *old-fashioned methods* that they warn against —the poisonous antiseptics so many women use. They know the dangers—not only to the women during actual use of the poisons, but to the family in case of accidental swallowing.

How different is Zonite. It is as safe to use as pure water. It is absolutely non-caustic, non-poisonous. Yet it is actually *far stronger* in its power to kill harmful germs than any dilution of carbolic acid that can be safely allowed on the body. No wonder women are welcoming Zonite!

Free book has all the facts

Send coupon below for "The Newer Knowledge of Feminine Hygiene"—correct information given simply and frankly. Zonite Products Corporation, 250 Park Avenue, New York, N. Y.

Use Zonite Ointment for burns, abrasions, skin infection or chapped skin. Also as a powerful deodorant in greaseless cream form. Large tubes, 50c.

The Drift Fence

(*Continued from page 15*)

rich, powerful old duffer an' bullheaded as one of his steers. Who're we down here to go to law? An' where'd we go? Fairfield, the county seat, is farther away than Flag. It takes time an' money to travel."

"Oh, dear," sighed the good woman. "Then it'll mean hard times."

"Wal, Susan, we can stand hard times, an' I reckon come out ahead. But this drift fence means trouble. It's a slap in the face to every free ranger in this section. They'll all take it Traft accuses them of stealin' unbranded stock that drifts down into the draws on the West Fork."

"What kind of trouble, Uncle Caleb?" queried Molly soberly.

"Lass, do you remember the Pleasant Valley war over across the mountains in the Tonto? Let's see, you must have been about seven years old. Ten years ago."

"Yes, I remember. Ma wouldn't let me play out of the yard. We lived at Lunden then. But if I hadn't remembered, I'd sure know what that war was. Pa talks about it yet."

"Ahuh. Lass, some people say your dad was crippled because of sympathy for one faction in that fight."

"Pa denies it. But he was on the side of the sheepmen. An' that riles my brother Arch somethin' funny. They never get along. Arch isn't much good, Uncle Caleb."

"Humph. I'd not say that, for Arch has good parts. But he's much bad, an' that's no joke. . . . Wal, if Traft's outfit ever finishes their fence—at least down in the Diamond—it'll be cut. An' as Traft runs a lot of hard ridin' an' shootin' cowpunchers, there's shore goin' to be blood spilled. It takes years sometimes to wear out these feuds. An' we've a lot of thick-headed hombres in our neck of the woods."

HIS ominous reasoning had a silencing effect upon his hearers. The women of that country were pioneers in suffering, and there were many widows and orphans. Molly thought of her brother Arch. He was only twenty-two, yet he had killed more than one man; and through many fights, but few of them bloodless, he had earned a reputation that was no source of pride to his family. Arch not so long ago had been a nice boy. Lack of work, and drinking, and roaming the woods with fellows like Seth Haverly, had ruined him. Now it would grow worse, and that would make it harder for their crippled father, who had to sit at home and brood.

Molly conceived a resentment against the rich cattleman who could impose such restrictions and embitter the lives of poor people. And as for Traft's tenderfoot relative, who had come out from Missouri to run a hard outfit and build barbed-wire fences—Funny if she should meet him! It was unlikely, however, that she should have the luck to encounter Mr. Traft's nephew from Missouri, which fact would be good luck for him, at least. Molly would certainly let him know what she thought of him.

It had been years since Molly had been so many miles from the village. She did not remember the road. From her own porch she always had a wonderful view down the valley and across to the grand upheaval of earth and rock locally called the Diamond, and to the rugged black hills toward the south. But now she was riding at the fast trot of a spirited team through a winding, timbered canyon along the banks of the West Fork. As there was a gradual down-grade, the gray cliff walls grew higher until they were far above. Only a lone horseman was encountered in all the fifteen miles down to where the West Fork poured its white torrent into the Cibeque.

HERE Mr. See took the main road which climbed and wound and zigzagged up the long slope. Molly looked down and back at the wilderness which was her home. All green and gray, and so big! She could not hate it, somehow. All her life she had known that kind of country. She had played among the ferns and the rocks, and in the amber water, and under the brown-barked pines and spruces where deer and elk and wild turkeys were as common as the cows she drove from pasture in the dusk. She felt that it would take a terrible break to sever her from this home of forest and gorge.

From the head of the Cibeque the road wound through undulating forest land heading the deep draws and glens, and gradually ascending to the zone of cedar and piñon, which marked the edge of the cattle range.

Several ranches were passed, at any one of which See would have been welcome to spend the night, but he kept going all daylight, and by night had covered more than half the journey to Flagerstown.

"Wal, wife, we've made Keech's, a that's good, considerin' our late start," remarked See, with satisfaction, as they drove into a wide clearing, the hideousness of which attested to the presence of an old sawmill. Rude clapboard cabins and fences, not to note the barking dogs, gave evidence of habitation.

The cabins were more inviting inside, Molly was to learn, and also that the widow Keech was a most kindly and loquacious hostess.

"So this hyar is John Dunn's girl growed up," said Mrs. Keech. "I know your father well, an' I seen you when you was a big-eyed kid. Now you're a woman ridin' to Flag!"

Molly, however, was not to be led into conversation. This adventure seemed to her too grand to be joked about. She was keen to listen, and during the dinner she heard much about Flagerstown and the fair to begin there on the morrow and end on Saturday with a *rodeo*. Mrs. See had not imparted all this marvelous news to Molly and she laughed at the girl's excitement.

"What you know aboot this drift fence?" finally asked See.

"Caleb, it's a downright fact," replied the widow forcefully. "Traft's outfit camped ten miles north of us. The

IF YOU ARE RUN DOWN, FAGGED OUT, CONSTIPATED AND *IN FACT* . . .

ONLY HALF THERE

EAT YEAST IN THIS MODERN FORM

Eat yeast for your health's sake. It's good for you. It's a marvelous tonic and conditioner. But eat it in a form that you like, such as Yeast Foam Tablets. No water, no starch, no other ingredients—just yeast. Delicious little tablets that are easy to swallow, although most people like them so well that they chew them like candy.

Eat this yeast for constipation, indigestion, skin disorders, "nerves," run-down condition. Only 5c for the little glassine envelope (6 tablets) or 50c for the 10-day bottle. At drug stores. Satisfaction guaranteed or money refunded. This yeast is the standard for research work in leading universities. Northwestern Yeast Co., 1750 North Ashland Avenue, Chicago, Illinois.

pass here this summer an' be down on your Diamond by the time snow flies."

"Ahuh. So we heerd. But what's your idee aboot it?"

"Wal, Caleb, all things considered, it'll be good for the range. For no matter what folks say, cattle rustlin' is not a thing of the past. Two-bit stealin' of calves is what it really is. But rustlin' for all that. An' up this way, anyhow, it'll help."

Molly listened to everything, and she particularly wanted to learn more about the young Missouri tenderfoot. But to her disappointment, no more was said about the drift fence.

"Wal, we'll rustle off to bed," concluded See. "Mrs. Keech, I'll want to leave early in the mornin'."

MOLLY shared a cabin with Mrs. See. It was small and clean, and smelled fragrantly of dry pine. It had three windows, and that, to Molly, was an innovation. She vowed she would have one like it, where she could have light in the daytime and air at night. She was tired, but not sleepy. Perhaps the bed was too comfortable. Anyway, Molly lay wide awake in the dark, wondering what was going to happen to her.

When at last she fell asleep it seemed only a moment before she was rudely awakened. Mrs. See was up, dressing by lamplight. A gray darkness showed outside the open window, and the air that blew in on Molly was cold enough for early fall down on the West Fork.

But the great day was at hand. When she came out from breakfast, a clear, cold morning, with a rosy flush in the east, greeted her triumphantly, as if to impart that it had some magic in store.

Then they were off behind fresh horses and soon into the cedars. Before long they came to the open top of a ridge and Molly beheld a gray, dim, speckled world of range, so immense as to dwarf her sight. The scent from that vast gulf was intoxicating.

"What's the sweet smell?" she asked.

"Sage, you Cibeque Valley backwoods girl," replied Mrs. See. "Anyone would think you'd never been out of the timber."

"I haven't, much," laughed Molly. "Reckon I'd better be pretty careful up at Flag, Auntie See?"

"Shore you had. But what aboot?"

"Talkin'. I'm so ignorant," sighed Molly.

"You don't need to be dumb. You just think before you speak. You're such a pretty little mouse that it'll become you. I don't care for gabby girls, myself. An' I never seen a man who did, if he was in earnest."

Molly was silent enough for the next long stretch. She watched a sunrise that made her think how beautiful the world was and how little she had seen, hidden down there in the green brakes. From her own porch she could see the sun set in the great valley where the Diamond sheered abruptly down into the Cibeque, and nothing could have excelled that. But this open range took her breath.

Here was the cattle country—what Mr. See had called the free range and riders like her brother Arch and Seth Haverly regarded as their own. Was it not a shame to fence that magnificent rolling land of green? For a moment Molly understood what it meant to be a range rider, to have been "born on a horse." She sympathized with Arch and Seth. A barbed-wire fence, no matter how far away, spoiled the freedom of that cedared, grassy land.

"Wal, lass, thar's the smoke of Flag," said Mrs. See. "Way down in the corner. Long ways yet. But we're shore gettin' there."

Ten miles from Flagerstown Mr. See pointed to a distant ridgetop, across which a new fence strung, startlingly clear against the sky It gave Molly a pang.

"Traft's drift fence, I reckon," said See. "An' I'd almost rather have this a sheep range!"

For all her poor memory, Molly remembered Flagerstown—the black, timbered mountain above it, the sawmill with its pile of yellow lumber, the gray cottages on the outskirts, and at last the thrilling, long main street, with buildings that looked wonderful to her. Mr. See remarked with satisfaction that the time was not much past four o'clock. He drove straight down this busy thoroughfare. Molly was all eyes.

"Hyar we are," announced Mr. See, halting before a pretentious brick building. "This is the new hotel, Molly. Now, wife, make the best of our good trip in. Take Molly to the stores. I'll look after the horses, get our rooms, an' meet you hyar at six o'clock."

Three hours later, Molly, radiant and laden with bundles, tagged into the hotel behind Mrs. See, likewise laden, to be greeted vociferously by Mr. See.

"For the land's sake! Have you robbed a store or been to a fire?—An' hyar me waitin' for supper!"

"Caleb, it happens seldom in a lifetime," replied his beaming wife. "Help us pack this outfit to our rooms. Then we'll have supper."

MOLLY had a room of her own. She had never before even seen one like it. Loath to leave her precious purchases, she lingered until Mrs. See called her from the hall. The dining-room might have been only "fair to middlin'," as Mr. See put it, but it was the most sumptuous place Molly had ever entered. Sight of it, added to the excitement of the few hours' shopping, effectually robbed her of appetite, and she was glad to get back upstairs to the privacy of her room.

There she unpacked the numerous bundles and parcels, and laid out her newly acquired possessions upon the bed. How quickly her little hoard of money had vanished! Still, it had gone farther than she had anticipated. Mrs. See had been incredibly generous. A blue print dress, white dress with slippers and stockings to match, the prettiest little hat Molly had ever seen in her life, ribbons and gloves and what not—these had been the expansion of the good woman's promise.

But not only the pleasure of looking and buying had Molly to recall. She had met more people than she had ever met before. She had been asked to serve in one of the booths at the fair. One of the storekeepers had offered her a position as clerk in his dry-goods department. And altogether the summing up of this day left her staggered with happiness.

"Oh, dear," she said, "if it's true it will spoil me!" And she cried a little before she went to sleep.

Look for 3 benefits from this tooth paste

WHEN you try Listerine Tooth Paste you make three important discoveries:

1. That it leaves teeth amazingly white and clean with a minimum of brushing.

2. That your entire mouth feels healthy and exhilarated afterwards—a wonderful sensation you associate with Listerine.

3. That your tooth paste is not only costing you less, but lasting longer.

We waited many years before producing Listerine Tooth Paste. Meanwhile we studied the requirements of teeth and mouth. We aimed to produce a dentifrice worthy of the Listerine name. Finally we achieved one—ideal for all.

That was less than five years ago. Today Listerine Tooth Paste is an acknowledged leader. Never in history has the triumph of any tooth paste been so complete. It has succeeded on sheer merit, supplanting older and costlier favorites.

We urge you to try it. Give it a thorough trial. A month at least. And note results. You will be delighted. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

A magazine subscription—a good book—

paid for by your tooth paste

Or hosiery, handkerchiefs, necktie, perfume, a golf iron, an inner tube—so many things you can buy with that $3 Listerine Tooth Paste saves you every year. A tube of Listerine Tooth Paste costs you 25¢ instead of 50¢, the accepted price for a dentifrice. You use about a tube a month, therefore the average yearly saving is 12 times 25¢—or $3.

LISTERINE TOOTH PASTE

Boys Who's next?

Many Prizes waiting to be selected by Ambitious Boys

OH BOY! Here's the chance of your life to win such dandy prizes as baseball equipment, bicycle or gold watch. You can do this by being a Crowell Junior Salesman.

IT'S EASY TO START

Crowell Junior Salesmen are a group of peppy go-getters who deliver The American Magazine, Woman's Home Companion and Collier's, The National Weekly, to regular customers. This does not interfere with their school work or fun, as they use only a small part of their spare time.

YOUR OPPORTUNITY

You can join this group of boys and earn your own spending money and select prizes from our Big Prize Book. Mail the coupon below.

Mr. Jim Thayer, Dept. A-20
The Crowell Publishing Co.
Springfield, Ohio

Dear Jim: I want to get started toward prizes. Please start me off as a Salesman.

My Name.....

Town..... *State*.....

Another morning probed deeper into Molly's faculties for enjoyment and wonder. Mrs. See had relatives and friends in Flagerstown, and they made much of the girl. Not the least of that morning's interest was a look at Jim Traft, cattle king of the range. It was in the bank, to which Molly and Mrs. See had accompanied Mr. See.

"Thar's the old reprobate," whispered See to Molly. "Jim Traft, who's fencin' off West Fork from the range!"

Molly stared. She saw a big man in his shirt sleeves, with dusty top-boots. He had a shrewd, weather-beaten face, hard around the mouth and chin, but softened somewhat by bright blue eyes, that certainly did not miss Molly. If he had not been Jim Traft, it would have been quite possible to like him.

As they turned to go out, he hailed See.

"Hey, don't I know you?"

"Wal, I reckon I know you, Traft," returned See, not over-civilly. "I'm Caleb See."

"Shore. I never forget faces. You live down in the Cibeque. Glad to meet you again. If you're not in a hurry, I'd like to ask you some questions about your neck of the woods."

"Glad to accommodate you, Traft," returned See, and then he indicated his companions. "Meet my wife. . . . An' this is our little friend, Molly Dunn. Her first visit to Flag since she was a kid."

TRAFT shook hands with Mrs. See, and likewise with Molly. He was self-assured and genial, and his keen eyes approved of the girl.

"Wal, wal, I'm shore glad to meet you, young lady," he said. "Molly Dunn of the Cibeque. I think I used to know your father. An' this is your first visit to Flag in a long time?"

"Yes, sir. It seems a whole lifetime," she replied.

When Molly got outside again, she exclaimed breathlessly: "Oh, Mrs. See, he looked right through me! . . . I don't want his pity. . . . But I'm afraid the Dunns of the Cibeque have a bad name."

"Reckon they have, Molly dear," rejoined Mrs. See practically. "But so far as you are concerned, it can be lived down."

"But, Mrs. See—I'd have to stick to Dad an' Arch," said Molly, suddenly confronted with a lamentable fact.

"Shore. In a way you've got to. I wouldn't think much of anyone who couldn't stand by her own kin."

Not until afternoon, on the ride out to the fair grounds, did Molly quite forget Jim Traft's look and the ignominy of the Dunns. But once arrived there, she quite lost her own identity. This girl in blue at whom everybody stared was some other person. Crowds of people, girls in gay apparel, cowboys in full regalia, Indians in picturesque attire, horses, horses, horses, and prize cattle, and every kind of vehicle Molly had ever heard of, appeared to move before her eyes.

Quite by magic, it seemed, she found herself separated from the smiling Mrs. See and conducted to a gayly decorated booth. There she was introduced to a girl a little older than herself, with whom she was to share the fascinating work of serving the public with sandwiches and coffee. Fortunately for Molly, her partner was nice and friendly, and certainly gave no indication that she had ever heard of the Dunns of West Fork.

Under her amiable instructions, Molly, who was nothing if not expert at waiting at table, acquitted herself creditably. But she could not get used to the marvelous gown she had on, and was in a panic for fear she might get a stain upon it. She did not, however, have so much work that she could not see what was going on; and presently she was having a perfectly wonderful time.

Once she served three cowboys. They were hardly a new species to Molly. Nevertheless, she had never seen such brilliant scarfs and fancy belts. She noticed, too, that these young men, like Arch and Seth, packed guns in their belts, a custom she had hardly expected would be followed at a fair. One of them made eyes at her.

After a while they came back, when Molly's partner had left, and if ever Molly had seen the devil in the eyes of a youth, she saw it in the gaze of one of these boys. Still, he was not bad looking and she could not help liking him.

"Miss—Miss—what'd you say your name was?" he asked, as he straddled the bench before the counter.

"I didn't say," replied Molly.

"Oh, *ex*-cuse me. My mistake," he returned, crestfallen at the subdued glee of his comrades. "Have you any pop?"

"No," replied Molly. "Only coffee an' sandwiches an' cake."

"Cake? Well, give us cake an' coffee," ordered the cowboy.

She served them swiftly and discreetly, deftly avoiding the bold hand that sought to include her fingers as it took the cup she passed.

"Do you live here?" he asked presently.

"You know quite well I'm a stranger in Flag, else you wouldn't be so impertinent," returned Molly severely.

"Aw!" He subsided, with that exclamation. And his comrades proceeded to enjoy themselves at his expense. Molly's keen ears lost nothing of the banter. Evidently, the bold one enjoyed something of a reputation as a lady killer and had at last met defeat. Presently, as he could not get Molly to notice him, he threw some silver on the counter and said loftily, "Keep the change, Little Snowflake." Then he strode away, and after a few moments the others followed.

FROM this time on Molly was kept busy, and only gradually did it dawn upon her that the string of cowboys who kept coming and going, did so for the no very obvious purpose of getting a look at her. More than once she heard the name Snowflake. Still, none of them were rude. Manifestly, they had taken her for a guest of some prominent family in town, and a lady of quality. Molly enjoyed it hugely though she had more than one melancholy reservation that it might have been different if they had guessed she was only one of the Dunns of the Cibeque.

Soon she was relieved by the young lady, Miss Price, who shared the booth with her.

"You've got the boys guessing," said this smiling worthy. "They've nagged me to death. I don't know them all, though. Just keep it up."

"I—I didn't do anythin' but wait on them," gasped Molly.

Balsam-Wool is a guaranteed Weyerhaeuser product—a blanket of fluffy wood fibre that looks and acts like sheep's wool. It is TRUE Insulation—keeping the house warm in winter and cool in summer—because it is—

FLEXIBLE-THICK
EFFICIENT
WINDPROOF
WATERPROOF
FIRE RESISTANT
VERMIN PROOF
LIGHT WEIGHT
PERMANENT

This
Heat Saver
an essential part of the modern Heating Equipment

PUT into your new home as fine a boiler as you please—and the newest and best radiators. If you stop there the heating equipment is not complete.

The boiler makes heat—lots of it, perhaps, and economically. The radiators put it into the rooms. But a third or more of it leaks out through the walls and roof. Costs you money. Does you no good.

The modern *complete* heating system does not waste heat in this way. To the boiler and radiators it adds the final essential—the Balsam-Wool Blanket which *saves* the heat—keeps it *indoors*.

And such a modern complete heating system costs little or nothing extra. A smaller boiler is required. Fewer or smaller radiators. The saving pays all or at least a large part of the cost of the Balsam-Wool Blanket.

Balsam-Wool is *thick*—you can get it in the recommended full inch thickness as well as the half inch. It is *flexible*. It *tucks in*—between the rafters, around doors and windows. It does the job thoroughly—stops heat as no thin, rigid "insulating board" can do it.

Balsam-Wool is sold through retail lumber dealers. You should know more about it. Send the coupon today for free sample and instructive free booklet.

"That's it. Guess they think you're cold, when you're only shy," went on Miss Price. "But you can have a heap of fun. Keep on freezing them. Tomorrow night you'll have the time of your life."

"Tomorrow night?" faltered Molly.

"Sure. Big dance after the *rodeo*. Didn't my mother tell you? Anyway, you're going with us."

"I—I hadn't heard. It's terrible kind of you. But I really couldn't go. I'm such a stranger. An' if they—they think—"

"You dear kid! You are going. Mrs. See promised Mother."

IT WAS Saturday afternoon and the *rodeo* had just begun, which accounted for the deserted appearance of the adjacent grounds. Molly had remained at her booth longer than was really necessary. Mrs. See would be waiting for her at the stand. She was about to leave when she saw that she was to have another customer.

A young man, in overalls and heavy boots, got off a dusty horse and approached the booth. He asked for something to eat and drink. Apparently he took no notice of Molly. His face wore a troubled look.

Of all the young men Molly had waited upon in two days this was the first one who had not looked at her twice, and the only one who had not appeared gay or bold or pleasant. Molly felt a little pique and more than a little curiosity.

He might have been twenty-two or-three years old and evidently was not a cowboy. Molly judged that he would have been fair-skinned if he had not been so sunburned. Presently he laid his sombrero on the counter, disclosing light, wavy hair and a broad brow marred by deep furrows.

He slowly drank the last of his coffee and, looking up, met Molly's glance. Then she knew he had not seen her before. He had gray eyes full of shadows.

"What'd you do if you were just about licked?" he queried suddenly.

"Sir?" exclaimed Molly.

He repeated the question, this time more deliberately, as if now he weighed it.

"I—I'd get up an' fight some more," declared Molly, surprised into genuine sincerity.

He smiled. "You would! Suppose then you got licked sure?"

"It wouldn't make no difference," replied Molly, at last forgetting to watch her speech. And she smiled back at him.

He saw her really then as a girl. Leaning his elbows on the counter, he regarded her with interest verging upon admiration.

"Very well. I'll take your hunch. I'll not quit. If they lick me—I should say, *when* they lick me, I'll get up and fight some more!"

His words were severe, his purpose almost grim, yet Molly realized that the best compliment she had ever received was being paid her.

"I never saw you before," he went on.

"That isn't my fault," replied Molly demurely, with level gaze on him. What a nice face he had!

"But you don't live in Flag," he protested.

"No, indeed."

"Where then?"

"I'm from the Cibeque."

"Cibeque. Is that a town or a ranch or what?"

"It's a valley."

"Never heard of it. How far?"

"Two days' ride."

"Just here on a visit?" continued the young man, and it was manifest that every word carried him farther into interest.

"Yes. We leave in the mawnin'," said Molly, and sighed. Would she ever come back to Flagerstown? And, if so, could it ever be so wonderful?

"That's a long while yet," he returned, and smiled again, with a meaning which made Molly's heart jump. "I haven't heard, but of course there'll be a dance tonight. And you'll be going?"

Molly nodded. She had begun to be conscious of confusing sensations.

"I'll bet every blame' cowboy at this *rodeo* has a dance with you," he declared.

"Not quite."

He gave her a long gaze, that began in doubt and ended with trust. Molly felt that he knew every last thing in the world about her, and she wanted the earth to open and swallow her.

"I don't care for these town dances," he said. "But I'm going to this one—if it's true you're not engaged for every dance."

"To tell the truth I—I haven't one single dance yet," she replied.

"Well! Then your best fellow isn't here?"

"He doesn't happen to exist," said Molly wistfully. Like all the others, he had taken her for somebody, and if he knew she was only Molly Dunn of West Fork, he would not be so nice.

"Listen. This is a serious matter," he rejoined gravely. "Young ladies aren't always to be believed."

"I wouldn't lie to anyone," retorted Molly.

"Honest? You haven't a best fellow?"

"I haven't *any* fellow," replied Molly, blushing rosily. "I'm only seventeen. Did you think me as old as Methuselah?"

"Your age hadn't occurred to me. But I'd have taken you for nineteen, anyhow. It really doesn't matter. . . . Will you dance with me tonight?"

"Yes."

"How many times?"

"I—I don't know about that. You see, I'm not used to city dances."

"Oh, it'd be quite proper, if that worries you. You see *I* might be taken for your best fellow. I'd sure like that. . . Would you?"

"It'd not be terribly disagreeable to me," said Molly archly, and after a roguish glance, she looked away.

But his response to that was different from what she might have expected. "Thank you," he rejoined, and stood up, with his gray eyes alight. "Save some dances for me. Good-by, Miss Cibeque."

HE STRODE away and led his horse in the direction of the corrals. Molly stood there tingling, to be disturbed by the arrival of Mrs. See.

"I had one last customer," said Molly, as if apologizing for the delay.

"Child, everythin' closed at one. The *rodeo* is on," returned Mrs. See. "Hurry now, but don't forget the cash. We'll turn that over to Mrs. Price. . . . You've been a success, Molly. An' I'm tickled."

They hurried into the crowded stand, where someone had kept seats for them; and straightway Molly became absorbed in her first *rodeo*. After that, time meant nothing. The horse races left her weak and her voice quite husky, for she yelled in unison with everybody else present.

Then came exhibition trick riding by experts of the range. Molly could ride a horse herself and she knew what good horsemanship included, but this riding went far beyond anything she could have imagined.

The roping of calves was not new to her, though she had never believed such swift time possible. The roping of two-year-olds was a sterner game. After that came the riding of bucking bronchos. In any horse country there are bound to be some mean horses, and Molly imagined she had seen a few. But she had not even known what a mean horse was like. There was a black devil of a mustang with rolling white eyes that simply made the cold chills run over her. Buck! He went six feet into the air, doubled up, and came down stiff-legged. And he threw three successive riders.

Yet how these lean, supple, round-limbed, small-hipped cowboys could ride! They stuck on like burrs. But it was dangerous sport. Many were thrown. And when that whirling, dusty, snorting, and yelling mêlée ended, it was none too soon for Molly.

"Bulldoggin' steers next," announced Mr. See, consulting his program.

"Goodness! Do they chase them with bulldogs?" ejaculated Molly, in amaze.

See laughed heartily. "Wal, thet's a good one."

"Caleb, this is Molly's first *rodeo*," reproved his wife, though it was plain the girl's remark had tickled her.

MOLLY was soon to learn more. A wicked, wide-horned steer was let loose, and a cowboy, superbly mounted, came tearing down the field, to drive the steer furiously, catch up with it, and then to dive out of his saddle. He alighted on the neck of the steer and, swinging down by the horns, he tumbled it head over heels and rolled over with it. Molly screamed. But the cowboy came out of the dust unhurt, and victorious, for there he sat on the head of the steer, holding it down. Fortunately, none of the riders were seriously hurt during this most perilous test of horsemanship and hardihood. And the rest of the program allowed Molly to recover.

"Wal, lass, an' how'd you like it?" asked Mr. See.

"I've had the most wonderful time in all my life," dreamily replied Molly.

"With the best yet to come," added Mrs. See. "This is all very well for the men, but it's the dance where a girl shines."

With that remark there came flashing back to Molly the strange thoughts and sensations roused by her last customer at the booth. What would Mrs. See and Mrs. Price think of her if they knew she had promised dances to a stranger who had not even told her his name? The omission had not occurred to Molly until just then.

All during her service at the booth she had been most careful of her tongue, and then the very last young man had made

her forget herself and what was due her hostesses. Molly could not understand it. He had sort of carried her away. Still, he had not been bold like some of the cowboys or flirtatious like others. At least she did not think so. But then she might have been wrong. The trouble was he had surprised her into liking him. No doubt of that! Molly burned within and without. And she was ashamed and shocked to confess it. What had good Mrs. See brought upon her?

This perturbing state of mind got sidetracked at the hotel. Molly was thrown in contact with women whom the Sees knew, and at dinner they sat with friends, so she was not able to think for herself until she got to her room. There, anticipation and delight assailed her again, into which crept a dread of she knew not what.

Then she spread the white gown and accessories out on the bed, to revel in them and forget the proximity of catastrophe. The following hour was one of exultation and dismay combined. She fixed her hair this way and that, never satisfied. It was an apparition which stared wide-eyed at her from the mirror. Who was this girl? Her arms and shoulders were bare. She could not get over the feeling of being still undressed.

When Mrs. See came in, to exclaim in raptures over her, Molly's last vestige of sense went into eclipse. She needed to be scolded and reminded that she was only Molly Dunn of the Cibeque, instead of being lauded to the skies and told that not one of the society girls at St. Louis, where Mrs. See had once been, could hold a candle to her.

"Upon your haid be it!" murmured Molly tragically.

AND so they went out to the dance, which was held in the town hall, a few blocks from the hotel. They walked, and the girl trod on air. Inside the hall there was a goodly assembly, among whom were Mrs. Price, her daughter Ellen, and an awkward son about Molly's age. They at once appropriated Molly, and this, perhaps, was the time of greatest strain for her. It was hardly necessary for her to remember Mrs. See's injunctions. She scarcely had a voice at all. Fortunately, she was too little and dainty to be clumsy, and shyness only added to her charm.

There was a good deal of standing around, talking, and waiting, with introductions in order, while slowly the hall filled comfortably. Then the music began, and it was not a fiddle sawed by a backwoodsman, but real music, and Molly could have danced in leaden boots.

Waltzes and square dances, with the former in large proportion, were to be the program. Everywhere Molly turned she met smiles and admiring glances. They bewildered her. Yet she was keen to note that this was no wild, continuous stamping, log-cabin dance. Hilarity prevailed, but not boisterousness. She wondered whether there would be any drinking and fights. A dance without these would be new to Molly.

It was after the fourth dance, when she was standing with a group near the entrance of the hall, that she saw *him*. She felt herself tremble. He wore black and looked tall and slim. His eager eyes, dark with excitement, swept the hall. Molly knew what they were searching for. She had never wanted anything so badly as for him to see her, yet she was afraid. He did see her. His smile and bow came before he had time to look her over. Then Molly's cup grew perilously full.

The music burst forth again and another partner claimed her. But even in the whirling throng she did not lose sight of this young man to whom she had promised dances. Now and then as she turned she saw him leaning against the wall. Met his eager glance! It followed her everywhere. He did not dance. He did not mingle with the crowd. During the next intermission she saw that he was noticed by girls, who whispered to each other, and by cowboys who gave him rather contemptuous looks. Both actions struck Molly as singular.

AT THE end of the next number, which Molly had with young Price, she professed to be a little tired and wanted to sit down.

"Shall I take you across to Mother?" asked young Price.

"No, thanks. I'll wait here for my next partner," replied Molly graciously.

"Excuse me, then," he returned, and left her.

Molly hoped her stranger would be quick. But she had scarcely prepared herself for his sudden arrival.

"Is this mine?" he asked, bending over her eagerly.

"Yes," murmured Molly, rising.

Then he whirled her into the throng. His presence did not quite make her oblivious of his strong arm, his light step, his perfect time.

"I was afraid you'd forgotten me," he said, pressing her hand.

"Don't talk," returned Molly.

He laughed and obeyed her. Molly's head came about to his shoulder and she just escaped contact with it. Not that she wished to! She felt that her face must be burning and she would have liked to hide it there. She did not seem to be making any effort to dance. Yet she was whirling, swaying, gliding around among dancers who looked vague and dim. All the threatened feelings accumulated during the last two days took possession of her now.

The music ceased when they were at the farther end of the hall.

"Come. Let's get out before some of them grab you," he said. "I must talk to you."

He led her out through a corridor to a long porch, high up over a garden. It appeared deserted and shadowy. There was moonlight at the corner and just at the edge of it a bench. He found a seat for her there.

"You look perfectly lovely," he said, expelling a deep breath, as if in relief. "I just didn't know you."

"You—you don't know me anyhow," returned Molly.

"Nor you me. But at first I thought you did. It sure was jolly. To think I almost didn't ride to town!"

"That would have been terrible, wouldn't it?" murmured Molly.

"It sure would. But I don't want to tell you about myself, now. I want to talk about you."

"An' I'd rather not!"

"Aren't we mysterious?" He took her hand and held it.

Molly did not have the desire to withdraw it, nor the strength. But she managed to look up. How pale and eager he was! His eyes devoured her. And his face wore an ecstatic smile.

"All's fair in love and war," he said. "And I rustled you away from *them*," he indicated the distant dance hall by an eloquent gesture, "to have a minute with you alone."

Molly's presagement that something was going to happen to her was near its fulfillment.

"There's a strange thing about you—a lack I can't understand," he went on.

"What—do you mean?" faltered Molly. Had he found her out already?

"Oh, it's the most wonderful thing for me. I mean about the—the lack of that best fellow you said you didn't have. How does it happen? Have you a fierce father or brother?"

"I certainly have. Both!" replied Molly, with a little laugh. She was sure of her ground here.

"Then that accounts. I'm glad. I was afraid of something else. . . . Very well, I make application for the vacant place."

"Place?" echoed Molly weakly.

"Yes. I most earnestly apply for the job of being your best fellow."

"Oh, you—you cain't be serious!"

"Serious? I'm afraid it is," he said, running a hand through his hair. "You don't know me. And I haven't any recommendations. But I'd like you to take me on without these."

"It isn't customary," returned Molly, trying to be light when she feared he might hear the outrageous beating of her heart.

"I know that. But I've a weakness to be trusted with responsibility. If I hadn't, I'd never gotten into the trouble I'm bucking now. . . . You'll have to take me on faith—or not at all."

"But doesn't it—it apply to me—that way?" asked Molly tremulously.

"No. I'm a man. And you're a girl."

"Yes. I'm beginnin' to find that out."

He laughed, as if her reply was encouragement, and possessed himself of her other hand. Then undoubtedly he began to draw her a little toward him, but to do him justice, Molly imagined he did not realize it. She did, however, to the imminent danger of reserve and self-control.

"I would take you as my best girl—my *only* girl, I should say, without one single thing besides your 'Yes.'"

MOLLY felt irresistibly drawn to the edge of an abyss. Here was a situation quite beyond even her dreams.

"You're—you're—" She did not know just what he was, besides being very careless and foolish. He had her almost leaning on his shoulder now. She had not made the slightest resistance. She was as unstable as water. Still, she tried to think, in spite of his nearness and his dawning emotions. "If I said—'Yes' an'—an' afterwards you went back on me!"

"Good heavens! . . . Little girl, you had better say 'Yes' pretty quick or I'll—"

He choked at the end of that passionate utterance. Molly knew what he meant. For the moment it paralyzed her. And then it was too late. He had her in his arms—tight against his breast. She closed her eyes. She did not realize her state

"Of course I use Barbasol!"

"No more messy shaving brushes for me. Barbasol gives me the smoothest, fastest shave I've ever had; one that always looks clean in the spotlight."

Paul Whiteman

The man who gave jazz a college degree

ONE quick shave with Barbasol will tell you why men who stand head and shoulders above their fellowmen use this modern shaving cream.

No other shave quite approaches it

No brushing, lathering, or rubbing. You spread on Barbasol with your fingertips . . . and shave! The razor speeds over the face. It mows the beard (the toughest beard) without pulling or scratching. And when you've finished (in a fraction of the usual time) your face feels smooth, cool. It looks fresher and more youthful. For Barbasol soothes, heals, and exhilarates the skin while it smooths the path of the razor.

Here's how it's done: 1. Wash the face (leave it wet). 2. Spread on Barbasol (don't rub). 3. Shave. That's all!

Then look in the mirror. How clean and smooth your face looks! And it will stay that way all day. Feel your skin. Smooth as a baby's and cool. That's the Barbasol, 3-step shave.

Step up to the nearest drug counter and ask for a man-sized tube of Barbasol, 35c and 65c. Then tomorrow morning step into the bathroom and give yourself the quickest, smoothest, most comfortable shave you've ever had. Get a tube —today.

THE BARBASOL COMPANY, Indianapolis, Indiana

Barbasol

For Modern Shaving

No brushing—No lathering—No rubbing

Women Like Their Men

young looking, bright and keenly fresh looking. Men like to be this way too. New Barbasol Skin Freshener cools, revives, freshens. Douse it on the face—after shaving—whenever tired. Nothing better . . . you'll agree!

beyond the exquisite contrast to what her backwoods admirers had aroused in her. And suddenly that thought ended in a singular revulsion. She stiffened. She repulsed him with a stinging slap which, blindly delivered, struck him across the lips.

He uttered an inarticulate cry of surprise and regret. His hand went to his mouth, and then he applied a handkerchief there. The force of the blow had cut his lip.

"I apologize," he said constrainedly. "Sure lost my head—but I didn't mean to insult you."

MOLLY, with an impulse as unaccountable as the other, placed a tender, trembling hand on his lips. "I—I'm sorry," she whispered wildly. "I didn't mean that—at all." And she followed the touch of her hand with a shy, swift kiss. Then she gasped at her utter effrontery.

"Well!—You make sweet amends," he said haltingly, as if she were beyond him. "By that did you mean 'Yes'?"

Molly dropped her head and covered her face with her hands. The tight, hot constriction in her breast eased its grip.

"I don't know what I meant, only it wasn't 'Yes.'"

"In that case you'd better explain."

Molly looked up, impelled by his tone. His eyes burned doubtfully down upon her. His face shone pale in the moonlight.

"I—I'm dishonest," she burst out. "I've slapped boys before when they—took liberties with me. I liked them, I suppose, but I didn't want them kissin' me. . . . I really gave in to you. . . . Only I wasn't fair. I wasn't honest. I hit you because I—I wanted you to keep on believin' I was what all these people thought. . . . They've made me act a lie. Me—in these pretty clothes! But, oh, I couldn't help it. I was afraid all the time. I *knew* somethin' terrible would happen."

"You wanted me to believe you were what?" he asked sharply, bending over her.

"Like Miss Price an' her friends."

"I think they might do well by being more like you," he returned. "I asked to be your best fellow. I sure never asked it of any of them."

"But you don't know me!" cried Molly, distracted.

"I can see and think, can't I? You're the sweetest, loveliest little girl I ever met!"

Molly was brutally torn between the ecstasy of that and the mercilessness of her honesty.

"Fine feathers make fine birds," she replied bitterly.

"You poor kid! . . . There's something queer here, but I swear it's not in you. I'm taking your kiss for 'Yes.' Heavens, what else could a kiss mean?"

"No, no. It meant nothin'," said Molly.

"Are your kisses so common, then?"

"You're the first man I *ever* kissed," she flashed at him.

"I'm very proud of that. Well, then, what else could it mean except 'Yes'?"

"I was beside myself. I told you. . . . I was ashamed—sick because I hit you. But I wasn't dishonest when I kissed you."

"You said you wanted me to think you like Miss Price and her friends. That puzzles me. I do think they can't compare with you."

"But you're only fooled," she said despairingly.

"By what?"

"I don't know. This pretty dress, an' the place—an' everythin'."

"Why, it wouldn't make any difference to me what you wore or where you were," he protested tenderly.

"Oh, yes, it would!"

"But, you child, didn't I fall in love with you at the booth?"

This protestation was almost too beautiful and poignant for Molly to bear. It came in the nature of a revelation of her own beset state. In another instant she knew she would surrender and fall into his arms.

"But you don't know who I am!"

"You're my sweetheart!" he returned.

Molly suffered during one instant of glorious exaltation.

"I am Molly Dunn, of the Cibeque," she said.

"Molly Dunn. What a pretty name! . . . Cibeque? Oh, that's the valley you told me about."

"Yes. They call it the brakes of the Cibeque."

"Dunn. I've heard that name, too. Oh, yes, I got into an argument with a fellow named Dunn. Slinger Dunn, they called him. He's a desperado. Wonderful-looking chap. They call him 'Slinger' because of his habit of throwing a gun. He has killed several men. The sheriff here is scared to death of him. I happened to cross his trail, unfortunately, and gave him a piece of my mind. If I ever saw lightning in a man's eyes, I saw it then. Whew! . . . Well, his companion, as tough a looking fellow as he was, dragged him away. Saved me a scare if not more."

"His right name is Arch," replied Molly, and rose to her feet.

"Of course, living around here you'd have heard of him. It must be unpleasant to have a criminal like that roaming around with the name of Dunn. People might think he is related to you."

"He is!"

THE young man rose slowly, in consternation, and made an appealing gesture.

"Impossible, Miss Dunn. . . . Perhaps a very distant relation?"

"He is my brother."

"Good Heavens! Your brother? You lovely, dainty, sweet little lady! . . . Why, I saw him again, drunk and dirty, hobnobbing with Mexicans and Indians. If he's a—one of your family, he surely must be an outcast."

"No. He was home the day I left to come here."

Her companion appeared suddenly staggered, not only by the truth, but by the nature of his transgression.

"Oh, I'm sorry," he began hurriedly. "I've hurt you. I never dreamed—please forgive me. . . . After all, it was natural enough. Another of my tenderfoot blunders! But who would ever think that you—"

"Ah! Now you've said it," she interrupted passionately.

"Miss Dunn, I was only going to say, 'Who would ever think a wonderful girl like you could have such a brother?' Well, it makes no difference to me, I assure you of that," he said bravely, making a fine effort to keep under restraint. He was regarding her fearfully, and again he had turned pale.

The bitterness of reality had steeled Molly, yet she shook inwardly as he stood there, erect and earnest, doing her honor.

"Yet it does, or you couldn't have talked so," she replied, shaking her head.

"I say it doesn't," he retorted. "And I certainly shall hold you to your word."

"Word? I didn't give any."

"You kissed me. Of your own sweet will! You can't get over that."

"No, I cain't. . . . But it wasn't a promise."

"It certainly was. More than a promise. Unless you lied to me."

"Lie! I wouldn't lie to you," she declared.

"Then I hold you to it. . . . Come, let's forget the—the thing. You see, Molly, we fell in love before we got acquainted. Didn't we?"

"I didn't say we—I fell in love," returned the girl, pondering over the significance of the words.

"Not in words—yet!"

AGAIN Molly felt the imminence of a precipice. She could not resist this young man, stranger though he was, and presently she would not care to try.

"I kissed you because I wanted to be square," she said. "With myself, same as with you. I sure wasn't when I hit you. That's all."

"How can you say that? Kissing me proved your honesty. And for such a girl as I hold you to be, a kiss means a good deal. It just about means everything."

Molly was mournfully becoming cognizant of that very fact. Desperately she cried out again that she was only Molly Dunn of the Cibeque.

At this, he seized her in his arms, masterfully, yet guardedly.

"Stop harping on that," he demanded. "What do I care who you are? You might be Sally Jones of the Missouri. I don't care any more than you'd care if my name was Bud Applegate instead of Jim Traft."

"Instead—of—what?" faltered Molly, slipping out of his arms.

"Why, James Traft. Jim, for short."

"Traft? But that's the name of—of the cattle king!"

"Sure. I'm his nephew. My dad is his brother. I was named after Uncle Jim."

"You're the new foreman of the Traft outfit?"

"Yes, I am," he replied, nettled. "That's the very question your brother asked me. Only he was insulting and you're—well, I don't care to have you ridicule me. The idea of my being a foreman seems to stick in the craw of these westerners. Why not? I'm no nincompoop."

"You're the fellow who's buildin' the drift fence?"

"Yes—I am," he replied unsteadily.

"Did you know that fence is a slap in the face to every person down in the Cibeque?"

"No, I didn't. Uncle Jim said it would rile a lot of no-good homesteaders."

"I'm the daughter of one of them. An' sister to another," rejoined Molly, in tragic finality, and with a flash of eyes she left him there.

LET THE MORNING INTO YOUR KITCHEN

Mello-Gloss in cool, soft tones . . . for the walls of the colorful, modern kitchen

OLOR has invaded the kitchen . . . on pots and pans, on furniture and ors . . . a gorgeous wave.

You have welcomed this vogue of or. Your kitchen has become a ghter, pleasanter, more cheerful ce to work in. But what about the ls? Are they not, perhaps, the one cordant note in an otherwise charm- interior?

hen turn to Mello-Gloss . . . the hing touch for the colorful, mod- kitchen.

Mello-Gloss is a washable paint e in a wealth of soft, charming les. It dries quickly to a smooth, semi-gloss finish which does not readily catch or hold dirt. It can be cleaned easily and quickly with soap and water or with Lowe Brothers Cleaner.

Mello-Gloss is but one of the outstanding paint products prepared by Lowe Brothers. It is made primarily to do one specific thing . . . to give beautiful and lasting color to walls and ceilings . . . and it does that one thing superlatively well.

FREE BOOKLET "Color Harmony in the Home" at any Lowe Brothers dealer. Profusely illustrated in colors with valuable information on home decoration. Or mailed direct for 10 cents in stamps.

All Lowe Brothers paint products are made to meet specific requirements and there is a product for each decorative and protective need.

When you are planning the painting or decoration of your home, and now is the time to plan it, go to the Lowe Brothers dealer in your community. He will be glad to give you the Lowe Brothers Color Cards and help you select the products and the colors you should use for each particular surface. The Lowe Brothers Company, *Factories:* Dayton, O., Toronto, Canada. Branches in Principal Cities.

Something New for CHILDREN ...of every age

Schools have changed. Life has changed. Something new had to be done for the children of every age.

Compton did it.

Compton's took all the learning in the world, made it intensely interesting by picture and story and yet kept it in encyclopedic form so that children could get at it. So in Compton's for the first time in all the centuries is the first complete set of reference books in encyclopedic form that the children and the youth of the world have ever had. It is called COMPTON'S *Pictured Encyclopedia*.

By making their work more interesting, Compton's often means better marks in school for children of every age from Kindergarten through High. And these better marks in school give to young people THE HABIT OF SUCCESS which makes for LEADERSHIP in life.

Mail this coupon and see how children are already using Compton's in 40,000 schools and 300,000 homes.

Our Educational Director will send you a complete Pictured Sample Section of Compton's FREE. Also our FREE Questionario Game which measures the general knowledge of any child at any age. And she will tell you how you can have this wonderful Pictured Encyclopedia in your home for your children for as little as $3.50 Down.

Compton's makes children and young people love to learn. Here is the Coupon. Mail it now. Get the Sample Pictured Section and see how truly wonderful it is.

THE FAMILY'S PROBLEMS

I Wish I'd Never Seen a College Campus

THE other day I conducted my high-school class to our weekly Assembly. Our speaker for the day, a successful business man, spoke of the Advantages of a Higher Education. He had never been to college himself. Therefore, he urged every student before him to get a college education, even if he had to work his way through.

It took me back to the days when I, too, was a student in high school—because I used so often to listen to such advice, given by men just about as well qualified to give it as this one.

I was young, ambitious, and credulous. I believed every word that the people who had never been to college told me about what college meant. I was interested in my studies, and good at them. But my family had only enough money to get along on and no more.

When I was ready to graduate from high school, I was told I had won a cash scholarship to the state university. This scholarship, based on my marks for four years, amounted to $100 a year for every year of college.

There was a man of some means in my town who was interested in deserving students. My teachers saw him, and arranged to have him lend me the money for my tuition.

I was transported with joy. I borrowed the tuition, $150 a term for eight terms at 5% interest. I was not at all afraid to mortgage my future. My college education would soon more than pay for itself. I was encouraged to believe that this was so.

THERE were about 5,000 students, both girls and boys, attending the university. As many of them were also working their way, I arrived several days before the opening, to be sure to get a job. The woman in charge of working students sent me to a professor's house, where, in exchange for my room, I was to wash dishes, wash and iron the children's clothes, do some of the cleaning, and stay with the children in the evening when the professor and his wife wished to go out.

I also got the job of cashier in a cafeteria catering to students. I worked three hours a day there—an hour and a half each at lunch and dinner. For this I received 30 cts. an hour, or 90 cts. a day. My lunch and dinner I ate at the cafeteria, charging them against my 90 cts. I usually managed to save enough to pay for the next day's breakfast. If a reckless ice-cream-and-cake mood overcame me, I did without breakfast.

That took care of board and room, and I still had $100. But it's amazing what registration and laboratory fees, books, paper, and a winter coat will make $100 look like. To make pocket money and carfare, I arranged to work nights in the cafeteria—it stayed open until twelve to serve pie and coffee and sandwiches. Of course, I could do this only when the professor and his wife stayed at home.

I arranged my classes to fit in with my working schedule. I got most of the courses I wanted. But if classes interfered with work—the classes were out.

I made few friends—I wouldn't have had time for any. I had to get studying tucked into my schedule somewhere. I was in college on borrowed money and a scholarship. I had to make good. And I was too tired to go to freshman meetings and song rallies in the evening.

That summer I worked as a clerk in a bank, at $9 a week. I lived at home and was able to save some of this money. It gave me a start on the next year, which went along in much the same way, except that I took a job as waitress in a girls' dormitory instead of a cafeteria job. I waited on tables for all three meals—about an hour's work at each meal—and washed and polished the silver. For this, I received my meals.

THE third year the professor and his wife moved away unexpectedly, and I was unable to get a place to work in pay for my room. This was very serious indeed. But the Dean of Women arranged a loan from the university—$200—to pay my year's rent. This loan was also at 5% interest.

My last year I waited on table in a tea-room, washed dishes in a cafeteria, and took care of children for professors' wives. I finished creditably, though not brilliantly. I was worn out, nervously and physically. I had spent four years of my life in study interspersed with the hardest kind of menial tasks. I had had to work when those about me seemed utterly gay and care-free. I had to do without every pleasure and small luxury in the years when those things are most important.

In return for all this, I had a little book-learning—which I could have got at home. And I had a diploma which entitled me to teach German at the munificent sum of $21.50 a week. And I had a debt of $1,400 to which was accruing interest at 5%. For three years I have been slaving over that debt.

Suppose I had put as much work into business? With intelligence, I would certainly be making more money—after seven years. I would not have a load of debt—that much money is a load to one who makes only $21.50 a week. And I'd be in much better physical condition than I am now.

I wish some of the people who urge youngsters to work their way through college would take a try at it themselves. And I wish that parents, before they urge their children on to such a sacrifice of precious time and strength, would consider the desires, capacities, and temperaments of the children. A real problem in every family is to select those who should go to college, and those who should not go. In my case, that scholarship should have been chucked into the river. A six months' business course was what I needed.

MORE THAN 2,200,000 CIRCULATION

HARRY EMERSON FOSDICK'S

Dramatic Statement of America's

Biggest Problem

DRAWN BY HARRY CIMINO

'e are not tempted where we are eak, but where we are strong

Ve commonly deceive ourselves supposing that we are tempted ere we are weak," declares Dr. sdick. "The fact is that tempta- n swirls around power, and, in nsequence, the more strength we ve, the more we are tempted.

'I have before me a letter from a dent. 'This week,' she says, 'has n sensational in the extreme— ling last night with an orgy so bad t I am a wreck today. . . . It's tearing along on a toboggan, ting up more speed every mo- nt, not knowing if you can ever . . .

A generation which must handle e power than any generation got within reaching distance of e has no business to run wild in aimless license."

THE gist of the problem can be briefly stated: America faces the responsibility of handling more power than ever before was entrusted to any nation. Here in Europe, where this article is being written, this fact stares the traveler in the face. The very taxes which these people pay are in considerable proportion headed ultimately for America, to discharge debts, and the way daily life and business are conducted stands in clear contrast with the more ambitious scale on which we operate.

This fact is not a proper cause of boastfulness; it presents, rather, a serious problem. One who travels widely must observe that there are two kinds of disaster in the world; one comes from the suffering of destitution, the other from the misuse of power. In the tents of the Adwan Arabs I have been served by chattel slaves who counted slavery a godsend and voluntarily surrendered themselves to it because at least it enabled them to keep soul and body together. In that whipped and beaten land, where a succulent weed is a gift from heaven, destitution is so habitual that enough to eat is the great desideratum. Arabian pictures of heaven seem to Western minds sensual and gluttonous, but one can sympathetically understand their source. Just as arctic explorers, after a few months in the niggardly North, dream night after night about eating the viands that they relish at home, so these starved souls and bodies of the desert dream of heaven in terms of beds and banquets.

WHEN one comes home from Arabia to America, one feels acutely how different our problem is—not want, but plenty; not poverty, but power. Disaster, however, has not on that account been necessarily avoided. History shows clearly that power is dynamite. It is not the weak nations alone that have gone to pieces. Sometimes, like the Arabs, they have amazingly persisted and have produced spiritual consequences, such as Islam, that have shaped and shape still the story of a large part of humankind. The course of history is strewn with the wrecks of great empires which blew themselves

Digitized by Google
Original from UNIVERSITY OF IOWA

Drawing by

to ruin with their own power. Mishandled strength is, if anything, more dangerous than endured destitution.

The fact, therefore, is portentous: America in the next few years is going either to handle or to mishandle more power than any nation ever dealt with before.

THE seriousness of this situation is lighted up when we consider our own experience as individuals. One of the hardest moral problems which anybody ever faces is the handling of power. All the seers have recognized this. From Jesus, emphasizing the difficulty of getting a rich man into the kingdom of heaven, to Emerson, saying, "It is hard to carry a full cup," the men of vision have feared the tragedy of misused plenty.

Biography confirms this fact. Francis Bacon, for example, was one of the most highly endowed personalities of our race. Father of the inductive method in science, he is still our unpayable creditor. Moreover, he was a man of high ideals. "I set myself to consider," he wrote at forty-one, "in what way mankind might be best served and what service I was myself best fitted by nature to perform." Then to this gifted and high-minded man power came. He was chosen Lord Chancellor of England. He was elevated to the peerage. As he was the ablest, so he became the most influential, man in Britain, and thereby he fell. Convicted of gross bribery and corruption, to which abjectly he confessed, he spent his last five years in disgrace. Even he could not stand the possession of power.

Mishandling power is the gist of every temptation. From lechery to robbing a bank, from bad temper at home to profiteering on a nation's food supply, sin is misusing strength, and even in practical business no employer trusts a rising youngster with enlarged responsibility without knowing the crucial test that is involved—can he handle increased power?

We commonly deceive ourselves by supposing that we are tempted where we are weak. The fact is that temptation swirls around power, and, in consequence, *the more strength we have, the more we are tempted.* If a boy is a lawyer's clerk, his opportunities for legal evil will be scaled to his position, but if he were to become one of the leading corporation attorneys in the United States, he might make a million in a day beguiling a court. The wind cannot do much with a six-inch sapling, but when the tree lifts its bole and branches sixty feet into the air, the tempests will vehemently wrestle with it.

A mild and tepid clergyman once rebuked a New York merchant for his explosive temper. "Young man," exclaimed the merchant, "I control more temper every fifteen minutes than you will in your whole lifetime." With his choleric and dangerous disposition that man was not tempted where he was weak; he had his trouble where he was strong.

An Erie Canal can have no idea what possibilities a Mississippi River has for going wrong.

This is true of individuals; it is true of nations. It constitutes America's major problem. No nation ever had to handle so much power before.

THE seriousness of this situation is emphasized as soon as we take counsel with history. The worst tragedies of the past have sprung from abused strength.

In America today many are bewailing those disgenic influences which tend to increase the propagation of the weak and decrease the propagation of the strong. We hear much about the Jukes family and the Kallikak family, generation after generation producing a lamentable crop of defective, insane, and criminal descendants. We have been impressed by the revelations of the intelligence tests in the World War army, and the question is propounded as to how democracy can possibly continue with an average mental age of fourteen years among our people. We are breeding most from the weakest elements in the population and least from the strongest elements, they tell us, and, in consequence, feeble-mindedness and insanity are increasing, so that in Massachusetts, for example, from every dollar raised by taxation for the commonwealth, almost sixteen cents are spent to care for the mentally incompetent in public institutions.

This line of thought is so true, so important, and so vividly presented, that we, who are not feeble-minded, who have healthy heritage, good intelligence and patients, and power withal to get on in the world, come to think of ourselves as necessarily the hope of the nation. If there were only fewer of the feeble and more of the strong, we think, all would be well.

Without in the least denying the

FRANKLIN BOOTH

olved in our crazy unwillingness to use enic information to prevent the multi- ation of the insane and criminal classes, Americans need to face another aspect he matter. The great disasters of his- r have not generally been caused by weak, but by the strong. It is not narily the failure of the feeble which es so much of the human story tragic. m the driving of young boys and girls een hours a day in the mines of Eng- to the forces that in America still hard against the release of little chil- from factory toil, we see the abuse of er. From old tyrants to modern soviets ing free speech, free press, and free mbly, we see the abuse of power. From ire chambers, where the torturers iselves are said to have begun their black-haired at night and to have d it white-haired in the morning, to nodern persecutions and excommuni- ns, we see the abuse of power.

our country today we face a dis- ful situation in the crime that comes om the slums of our great cities, where s of youths, often degenerate, some- moron, commit murder for a price spend their lives intermittently in ms and jails. But dangerous as this ion is, no one supposes that the re- c ultimately will go to pieces on it. are other men in the nation, how- not weak-minded, but of such abil- at they rise toward the top in our mic struggle, where at the top com- on sieves the feeble out, and in these w years a few such men, dishonoring urts, contemning the government, orting witnesses overseas, have ted to the world one of the most tating spectacles of wrongdoing in story.

is nation ever goes to pieces or falls world-wide disgrace, one suspects e cause will not be feebleness, but strength.

entire structure of our national government, with its checks and balances between legislative, judicial, and administrative departments, was deliberately intended by the founders to guard against the mishandling of power. They feared it. They feared it so much that they nearly gave up trying to have any central government at all. They knew history. They had read its lessons well. They understood that nations fall, not primarily from weakness, but from mishandled strength. There lies the tragic element in mankind's record. Page Pharaoh! Page Nebuchadnezzar and Sennacherib! Page Nero and Napoleon! Page Pilate, who, about to crucify Christ, stood face to face with him and said, "Knowest thou not that I have power to release thee, and have power to crucify thee?" That is the gist of history's greatest tragedies—the misuse of power.

THE importance of this aspect of our national affairs is emphasized when we see it illustrated, not simply in biography and history, but in the central meaning of our Western civilization. The main elements of that civilization have been contributed by applied science; and applied science means the harnessing of the natural resources of the universe. We have saddled and bridled steam, gasoline, electricity; we have made steel and radium our servants; we have, that is, accumulated power on such a scale as was never dreamed before. It has been estimated that every citizen of the United States now has, on the average, the mechanical equivalent of thirty-five human slaves toiling for him.

The possibilities for good involved in this situation are evident. It means the chance to decrease hours of work and increase leisure. It means the ability to create wealth which, wisely distributed, can indefinitely raise the standard of living of all the people. The possession of power is always hopeful.

But only a decade ago some of us were still in France, watching Western civilization using for purposes of destruction this new Gargantuan strength conferred by science. The result of so mishandling these prodigious forces has been catastrophic, as the whole world knows. I do not mean simply the loss of life, although over ten million picked men dead on the battlefields is no small matter. I am not thinking simply of the financial wastage, although a war costing 250 billion dollars in direct expenses is not negligible. I am not brooding simply over the wreck of priceless art, although one who has seen a bombed cathedral knows that it is easier to destroy than to build. Neither am I thinking primarily of the blasting of domestic happiness, although anyone who ever walked through a town like Bapaume in wartime, a skeleton in stone of what once was a living city, will (*Continued on page 82*)

"You mustn't come any farther, Mr. Randolph

A story in which the call of duty becomes the call of love

The Higher

MARTHA FAWCETT," announced Uncle Joe Fodder, "*has got a feller!*"

The bearded liveryman, dusty hat cocked quaintly, bent forward in one of our newspaper chairs. Hands like huge claws cupped his denim-clad knees. He looked at Sam Hod, editor of the paper. He looked at me, Sam's junior partner. Likewise he favored "Big Mert" Randolph, son of old Philo Randolph, New York corporation attorney and millionaire owner of a Preston Hill residence. Mert merely happened to have been in the office when Uncle Joe came in.

The hostler had reached those Indian summer years when such trifles made his world. His dramatic pause implied that either Sam or I, as community journalists, should exclaim in surprise and clutch for our pencils. Instead of which, Sam went on tearing up worthless mimeographed publicity and drawing between pipe-puffs:

"Well, supposing she has? What's queer about that?"

. *It's dangerous. It might cost you your life."*

Summons

By WILLIAM DUDLEY PELLEY

Illustrated by Stockton Mulford

Let it be set down for the benefit of those unfamiliar with mont-town lexicography that "getting a fellow" is something e than a bucolic colloquialism. "Getting a fellow" is the pted manner of stating that some local girl or woman, illy of questionable pulchritude, has finally succeeded in oking one man into serious consideration of her as ro- tic or possibly matrimonial material. Usually of question- pulchritude, I say. The point is important.

But—but—" sputtered Uncle Joe, "—Martha Fawcett—fine girl, o' course, but who'd ever s'pose a man'd want her?"

"Well, who does want her?" I asked.

"Arthur Winbolt. Yes, sir—Arthur Winbolt! Whatta you know 'bout that?"

"Who said so?" Sam growled.

"Flo Lawrence told my daughter Jane. All th' young folks is snickerin' over it. Flo got it fr'm Art's sister. *You'd* oughta know somethin' of it, Randolph," the liveryman said suddenly, turning to Big Mert. "You an' Flo is perty good friends, ain't

Digitized by Google

you? Seems t'me I've heard it said so."

The tall fellow colored. A six-footer he was—sandy-haired, gray-eyed, dressed in a golf suit and rubber-soled sports shoes. From May to October he was a familiar figure about town and valley, driving a low-hung canary roadster, and usually hatless.

"No, Miss Lawrence hasn't yet taken me into her confidence about Miss Fawcett's romance," he replied good-humoredly. "As a matter of fact, I haven't the slightest idea who Miss Fawcett is, to say nothing of why she shouldn't have a romance—"

"She's one of the oldest nurses up to Putney Memorial Hospital," Sam Hod put in, without looking around. "One of those girls you just don't connect up with anything but her job. If Art Winbolt's got a crush on her—or she's got one on him, whichever 'tis—the answer's easy. Art's just come through a darn dangerous sick spell. She was his night nurse and pulled him through the worst of it."

RANDOLPH sat down on a corner of the exchange table. Hands in his pockets, he swung one foot thoughtfully.

"I can understand that," he told us. "I had a nine-week spell of typhoid year before last. The girl who took care of me—the one who did the most for me—was as plain as a pump. Sick as I was, darned if I didn't get romantic ideas about her before I'd been on my back three days. It's easy for a man, any man, to love his nurse—at least while he's ill. Afterward . . . well . . ."

"One thing's certain," Uncle Joe chuckled, "you didn't get your crush on Flo Lawrence 'cos she took care o' you in no sick spell, Mert Randolph."

Again the chap colored—or, rather, colored deeper. I saw he was vexed. Yet he had to take the town as he found it. Vermonters, especially venerable commanders of the G. A. R., often have a weakness for discussing the private affairs of local aristocrats with a certain artless candor.

"No," agreed Randolph finally, "that's right."

I wondered in that moment just how much this sedate, athletic, wholesome scion of the house of Randolph really loved pert, sophisticated, scatter-brained Flo Lawrence. Far easier to understand an attachment between the plain-faced hospital nurse and Art Winbolt, I found it, than to figure out why this serious-minded young millionaire had succumbed to the wiles of Judge Lawrence's daughter. The fact that she'd been several times abroad, spent her winters in New York, looked down on the town of her birth as bucolic, and that the two families intermingled freely, could have had small bearing on it. But he came from that breed accustomed to pay women deference because they were women. And then again, perhaps he saw something in Flo that the rest of us didn't.

"Well, I'm goin' over t' talk with Art," declared Joe Fodder, "an' find out if it's true. Hospital won't be th' same place with Martha married out of it."

And the old man departed—with Randolph looking after him, grim amusement on the features of the great attorney's offspring. Whereat, strange as it may seem, dramatic to the point of incredulousness, one of those real-life coincidences followed that sometimes cast switches, sending people on strange rails.

The very woman we'd been discussing opened the street door into the office. We heard her in the front room, asking for Sam Hod.

No artist would ever use a dry-point to etch Martha Fawcett's portrait. The stronger the crayon, the better the effect.

"Well, I'm goin' over t' talk with Art," declared Joe Fodder, "an' find out if it's true."

Visualize a woman twenty-eight years old—she'd entered Putney Hospital as a novice nurse at sixteen—with ash-blond hair knotted at her neck, a square forehead, a thoughtful expression in her frank eyes as if perpetually cogitating whether you were able to sit up and take more nourishment, a supple, workaday body, and shoes with serviceable heels, and that's all you need in order to grasp Martha's character. You didn't remember what shape nose she possessed, whether her lips were kissable or otherwise, what sort of frock she wore when out of uniform. You just felt that if you were ailing, you'd be amply taken care of—and let it go at that. A good person to have around in emergency. She'd know what to do and set about doing it.

"HAVE you met Miss Fawcett?" Sam introduced Merton when Martha had entered the small corner office.

"I haven't had that pleasure," the man said, with interest.

"How do you do, Mr. Randolph?" Martha greeted, offering him her hand. Just like that—straight out—no embarrassment about it—certainly no nonsense. "I think I once took care of your sister, though only for a week. When she'd broken a collar bone in a fall from her horse."

Randolph looked startled.

"Why, my sister told me about you, on her return to New York. I—I didn't realize—*you* were that nurse. I recall her saying she wished she might have known you better—had you come to the house—"

"She was thoughtful, like that. I remember I noticed. I heard that she married. Tell her I'd like to see her again."

"They're up on the Hill right now, Fred and Helen. Came up Friday night. And they've got a youngster now—boy a year old."

They were measuring each other, these two, as such comities continued—about of a height, both of them, the man the older by three or four years.

Then Mert Randolph's eyes took on another expression—a look of sudden trouble.

I couldn't have explained it. Sam claimed he didn't see it. All the same, as they chatted and Mert invited the nurse up to dinner at her early convenience, I had a vague hunch that he might be pulling a romantic chestnut of his own from the fire of circumstance. He was engaged to another girl, we understood—a girl of his own set and glamour. And, according to Uncle Joe, some sort of understanding had materialized between the capable nurse and the Water Street coal dealer, five years a widower and probably sick of it. This pair, all the same, had a quality in common—an elusive quality that defied analysis—a quality tinged with a dash of the poignant.

"I can't say what night it will be," Martha added. "With all the rain we've had this spring, hospital work is heavy at present. Besides, I expect to be married later in the summer."

So it had gone that far, I registered. Arthur had actually proposed to her and she had accepted him. Automatically it seemed to devolve on Randolph to include Winbolt in his invitation then. Which he did. For the first time Martha colored—that flush of quiet happiness

Martha, in her wedding dress, was coming down the stairs. A group of white-faced women followed in dismay.

arking a more companionable sort of ex-tence, dearer to her heart than any of had suspected. Not the type to ad-rtise any loneliness, Martha. Assuag-g the physical and social complications others without giving them an inkling any need herself.

"Mr. Hod," she said, when Merton d gone out, "I'm in here on a queer bit business—something in which you ght say I shouldn't meddle. But some-w, having been in nursing so long, I've ached the place where it seems far more ttinent to keep people well than to do ings for them after they get sick. Mr. d, last Sunday afternoon Arthur and I n for a motor trip to North Foxboro. ing back, late in the day, we took the that leads through Mud Hollow. know Mud Hollow and all it repre-ts."

Sam had crossed over to the chair lately occupied by Fodder. He nodded glumly.

"I know Jeff Sampson, the State Superintendent of Charities, told me that the district makes more demands on him than any other cesspool of rural iniquity we've got in Vermont."

"YES," agreed Martha, seated in front of him. "But I'm not concerned with its morals. I'm concerned with its health. Arthur blew a tire in that awful wallow just after you get down the hill from Babcock's. We went into the nearest house afterward—to wash. Mr. Hod, it was awful. I'm telling you if the county doesn't do something about the way those families are living in the Hollow, a pestilence may break out there that will kill people by scores."

"No such good luck," growled Sam not meaning to be callous. "Those folks are too tough."

"Tough, fiddlesticks! Those people are frail, sickly, undernourished, indescribably filthy. And it's what they may do all over the northeast part of the county that worries me. You call the meeting and I'll go in front of the county supervisors and tell them some things they don't appear to know."

This is a recount of Martha's romance, however, not of her speech—for she never made one. The supervisors were busy with gardening or haying—or growling in their beards at the soggy, drizzly weather. To get them together for altruistic consideration of the Mud Hollow hill-billies and their lack of sanitation would have been a civic joke. Not even when Dr. Amos Johnson reported two of the families down (*Continued on page 144*)

You Can't Have FUN Alone

By EDGAR A. GUEST

HIS wife and children had gone to the seashore.

He had never before been really alone. When he dropped into my office that morning I knew there was something on his mind. After the first few minutes of casual conversation, he gazed out of the window into space as if he were trying to find the best way to unburden himself. Finally he blurted out:

"Will you and your wife have dinner and go to the theater with me tonight?"

"Impossible," I said. "We're going out to dinner."

"I'm sorry," he replied, and his face backed up his assertion. He sat in silence for a few seconds and then he came at me again:

"Were you ever left alone—entirely alone?"

"Yes," I replied, "and it's a dreadful ordeal."

"Until recently, I had no idea what being alone was like," he went on. "As a matter of fact, when the family planned this vacation I thought it would be fun to be free again. I had in mind a lot of things to do with my spare time. They've been gone three weeks now and I'm sick of it. The worst of it is, there are still seven weeks more of it to endure.

"I go into the house at night and it's as terrifying as walking into a morgue. It isn't burglars I'm afraid of—it's just that awful silence. The stairs squeak and the wind blows a curtain—and I jump like a nervous woman. I can't sleep for the constant thought that every room in the house, except mine, is vacant. It's queer, too, how dismal the house has grown to be. I hate the sight of my books. All the things I've boasted of and been so proud to possess have lost their charm.

"I tell you, this is the strangest experience I've ever had. I hate the house and everything in it. I've made the discovery that things in themselves mean nothing. I need the little woman and the children in that house. The books and chairs and draperies and everything need them, too. With the folks away, I might just as well be living in a furniture store. What's the use of going home when there's nobody to shout 'Hello!' to me when I open the front door.

"I tell you, Ed," he declared gloomily, "it's no fun being alone."

I've been shouting that idea in verse for the last twenty years. This good friend of mine had just found that there is no such thing as freedom in the sense that a man is sufficient unto himself. Not one of us can provide his own delight. Owning the richest treasures in the world is useless unless someone else shares them.

You can't go it alone and wind up being anything but miserable, and sour and crabbed.

As long as you remain in this world, you must admit other people into your life.

I SUGGESTED to my friend that he go to the theater himself. There was a delightful comedy on that week, and a laugh would be good for him.

"Alone," he said, "it would be tragedy. I want somebody beside me to laugh when I laugh; to see the same lovely things I see and to help me enjoy them; to find something I have missed and tell me about it. Going to the theater alone isn't fun—it's boredom."

"I know it," I answered.

"Well, what am I to do? I've seven weeks more of this loneliness to face and I'll go mad unless something happens to break the monotony."

"Do you really want to be happy while the folks are away?" I asked.

"I do."

"There is a way," I told him. "I can guarantee you a good time. If it is not the best time you have ever had in your life, at least it will be a time that will give you the greatest sense of satisfaction you have ever experienced."

"And what must I do?" he demanded.

"Look up a few people you know who ordinarily don't get many of the pleasures of life, and give them a good time. It isn't any fun to ride alone in that high-priced car of yours. Take some poor old lady out riding next Sunday afternoon—somebody who seldom goes—and see how much fun you'll have. Get the idea?"

He thoughtfully nodded an affirmative. I saw him a week later and invited him up to dinner.

"Can't come," he said, with a grin. "Got a date to go to the theater."

"Alone?" I queried.

"Not on your life," he said. "Taking an old-maid friend of the family. She hasn't seen a good show in twelve years.

If you don't Share your *Good Times*, No one will Share your *Bad Times*

IF you want to escape loneliness, forget yourself!" is Mr. Guest's advice. "The surest road to melancholia and nervous breakdowns and mental dyspepsia is always to be thinking of yourself.

"Do things for other people. Give things—including your own good nature—to others. Thrift is a fine trait in man, but it can be overdone. Don't try to save everything. Don't try to hang onto everything. You can wear yourself out clinging to stuff that won't have any value the minute the doctor gives up your case.

"Run your life on the profit-sharing plan. Make as many gifts as you can, but put them where they will do the most good!"

t isn't all. The other after- a neighbor's boy to his first ball game and bought him peanuts and pop. Why, the weeks have flown by. Incidentally, I haven't been alone in the house all the time, either.

"THERE'S a young fellow down at the plant who is on his way up. Came here from a small town up-state to make his way in the world. He isn't earning much money as yet, but he will be later on. I found out he was living in a cheap boarding-house, in a hot, stuffy room with only one small window in it. I persuaded him to give that up and come and live with me. I had to have company, and believe me, Ed, things started to pick up right away. That youngster brought my books back to life, and he made the rooms livable. The way he'd fondle things and look at them and say, 'Gee! but this is fine furniture!' restored my pride in the stuff about the house. Why, that kid told me all his dreams and his ambitions. Happy? You ought to see him smile! He's saved up a little money and he's moving into better quarters when the family returns. But there will be a place at our dinner table for him whenever he wants to occupy it. His folks came to visit him one week-end, so he and I pitched in and gave them a real time, too. I was the chauffeur and they saw all the sights. I had a lot of fun with them myself."

"You talk differently today," I said, with a smile, "from the way you talked that morning six weeks ago, when you were in my office."

"Yes," he replied. "I'm a different man, too. I've learned a lot. I can look in the mirror now when I'm shaving and not be altogether ashamed of what I see. I'm beginning to think that life is worth while and that maybe even I am worth while. When I dropped in on you that morning I was thinking only of myself and of my loneliness.

"You remember, I wanted to take you and your wife to the theater. And you didn't want to go to the theater. You could buy your own tickets and dinner if you really cared to

PART II

UP TO eighteen years of age James Traft had often seen his uncle, the Arizona pioneer and cattleman, who made frequent trips East. There had grown up a bond of affection between them. From knee-height, James had listened to stories of Indian fights and road agents, gunmen and rustlers. The Westerner had never married; he was devoted to his brother, who was James's father.

Then had come an interval of four years during which old Jim Traft did not visit Missouri. His vast interests had grown so complicated that he could not leave them. During this time James had been at loose ends, trying farming, clerking, and odd jobs without any indication that he might set the world on fire. At last, a letter from the West changed the world for James.

Some passages in this blunt letter to his father were hard for James to swallow. In the natural course of events, all of Jim Traft's property would go to his nephew James. But that was something aside from James's ever making good use of it. If he were a strong, resourceful boy with guts, he might become a rancher. The cattle industry was growing. The days of the great rustler barons were gone, though cattle stealing still represented altogether a big loss to the range. And so on. . . .

At first James had been humiliated and furious, and would hear nothing of going to Arizona. Nevertheless, his father prevailed in the end, and James started West. His first acquaintance with the Great Plains had come from the window of a train, and long before he saw the vast, gray slopes of Colorado and the white-peaked Rockies, the latent spirit of adventure stirred thrillingly in him. Then the wild, timbered uplands of New Mexico and the red-walled canyons of Arizona won him to the West, long before he stepped off the train at Flagerstown.

He had telegraphed his uncle as to his arrival, but there was no one to meet him. What a funny, slow, sleepy, wide-streeted town! Every other building, all high-boarded and weathered, appeared to house a saloon. James finally found a livery stable, where he engaged a loquacious negro to drive him, bag and baggage, out into the country. What he learned from this citizen of Flagerstown in that short drive was certainly not reassuring.

But James liked the pine forest and the gray levels along the road, and the black mountains rising in the distance. And he had a fine view of Jim Traft's ranch home. Across one of the wide, grassy flats the long, low, white house stood on a pine-timbered knoll, and below it clustered a bewildering array of corrals, barns, and sheds. Cattle dotted the wide valley, and in the fenced meadows horses and colts grazed, too numerous to count.

A low-roofed, comfortable porch fronted the house. Here James deposited his baggage and, paying the driver, he knocked. Nobody answered, so he went around to the back. A wide courtyard led out to the corrals. He espied men out there and directed his footsteps in that direction.

SOON he came upon three cowboys around a horse, and then his uncle, who stood with another man watching them.

"Howdy, Jim," greeted the rancher, as if he had seen his nephew only yesterday, and he extended his hand. "Got your telegram, but forgot to meet you. . . . By gum, you've sprung up like a weed."

Traft had not changed. His garb, however, was new to young Jim, and consisted of high boots, corduroys tucked in them, and an old leather belt with an empty gun-sheath on it, a gray soft shirt, and a vest that had been new years ago. He was a stalwart figure of a man, nearing seventy, but still erect and rugged, with a lined,

hard face expressive of his life on the frontier.

"Shake hands with Ring Locke," said Traft, indicating his companion, a tall, lean, sandy-complexioned Westerner whose narrow eyes were almost hidden under an old black sombrero.

"How do," drawled Locke, whose accent proclaimed him a Texan. "I shore am glad to meet you, suh."

"This is the nephew I told you about, Ring," went on Traft. "He has come West to run the Diamond outfit."

Jim tried to bear well the scrutiny bestowed on him by this boss of his uncle's, a right-hand ma had been with him twenty years.

"Uncle should have said I'll try that outfit, Mr. Locke," said Jim fr "I'm not afraid. But I'm an awful foot."

Perhaps his earnestness favorab pressed Locke, for he smiled and dryly: "Wal, it ain't bad to start you're a tenderfoot, just so long know it."

Jim took almost instantly to th Texan. But the three cowboys st by, apparently like hitching-post still eyes and faces, gave him an fortable sensation. To be sure, the every word. What clean-cut, lithe

ached the house, where Jim was conducted to a large, light room, with walls and floor of clean yellow pine. A few deer-skin rugs, a wood-burning stove, a table with lamp, an old bureau and mirror, and a spare blanketed bed constituted the contents, the simplicity of which pleased Jim.

"Come out on the porch and we'll talk," his uncle said. And Jim, after getting the letter and parcels he had mentioned, hurried out to deliver them.

"Thanks. I'll look at them later. . . . Wal, Jim you've growed. You're a pretty husky chap. Too heavy, mebbe, but ridin the range will soon change that. What *your* Handwriting Tells *about* You

By MARY B. MULLETT

A CERTAIN young man in New York—his name is Jerome S. Meyer—suddenly found himself attracting a good deal of public attention. It was a curious case of jumping out of the frying pan and landing right in the middle of a regular conflagration.

For the previous ten or twelve years, ever since he was a boy, Meyer had been interested in handwriting. Not that this is anything new. The study of handwriting—they call it the science of graphology—is three hundred years old.

Whether it is a "science" or not, one thing is certain: Everyone seems to be interested in it. I have never met a person who did not like to discuss his own handwriting, nor one who did not have decided opinions about other people's writing.

With Meyer this interest became a hobby. He studied books on the subject, examined hundreds of specimens of handwriting, analyzed them, and classified them.

Meanwhile, he went to college, also into war service, and finally entered business. Interested as he was in this alleged science, he had no intention of making it a job! He enjoyed devoting some of his leisure hours to it, but his real goal was a business career. It still is; and if his hobby hadn't got him into the frying pan mentioned, this article would never have been written.

As time went on, Meyer discovered that he had picked a perfect boomerang of a hobby! He would analyze the handwriting of one friend—and, presto! a dozen other friends would come around and ask him to do it for them!

The knowledge that he was a shark at it spread in ever-widening circles. If he was invited out to dinner, he invariably went home hungry! The poor young man didn't have a chance to eat anything, because the other guests kept writing things on their plac cards and passing them up t him for analysis.

Engaged girls submitte specimens of their fiancé handwriting—and asked for confidential report. The su ject was injected even in business interviews. Prospe tive customers wanted th writing analyzed, and an a tonishing number wanted get the "dope" on someboc else.

AT LAST the young m found the frying pan g ting inconveniently hot him and began to look fo way out. Apparently, th was no end to the people w wanted to get, from t special angle, a line on th selves and others. But in s of his interest, he coul keep on indefinitely "be the goat." Something ha be done about it.

After long meditation, finally hit upon what see to him a happy solution. would enable people to do stunt for themselves; pro a way for them to analyze t own handwriting. Then haps they would stop pe ing him about it.

The result was a book w he called, "Mind Your P' Q's." The title would been more pointed if he made it "Mind Your *Own* and Q's," for, in a literal s that was what he meant.

The book is so planned a person can put his w through a series of tests, a list of the "marks," an their meaning out of the pages of the volume. H then have an "analysis" own character—and can a it or reject it, as he pl

nly by his friends, he was now besieged by an army f strangers, each with a whole battery of questions. Of course, it is impossible for him to answer all these uestions personally. He wrote the book in self-efense; and it is in self-defense that he now an-vers some of these questions through the pages of this agazine.

I asked him to pick out the ten which have been ost frequently asked him. I planned, after he had ished that list, to open up with my own battery of terrogations. But I found, as you will see, that these n questions cover the subject pretty completely.

Most of them came from people who are more or ss skeptical; and usually they start with arguments sed on their own handwriting.

Question Number One is put in this way: "You y that a certain detail of my handwriting indicates ertain trait of character. For instance, the position the dot over an *i*, or the way a *t* is crossed.

"But my handwriting *varies* in a good many details. metimes I make a letter one way, sometimes an-ier. You say that an *a*, or an *o*, closed at the top, ans one thing. Open at the top, it means some-ng else. But I write them in both ways. How you get around this contradiction?"

"That question," Mr. Meyer said to me, "is asked re frequently than any other. It is asked even by ple who have my book, although the preface an-ers this and most of the other common questions. parently it is a waste of time and paper to put a face in a book.

"The answer to the question is this: The occasional iations in your handwriting are of no real impor-ce. Its *general appearance* remains absolutely the ie. Even the details are practically constant; and s always easy to determine which is the form you *t frequently* employ.

The general appearance, plus the combination of *itual* details, indicates your character. The vari-ns, as I will explain later, may show a change in d or in physical condition; seldom anything more n that."

uestion Number Two: "Children are taught to e. Millions of them are trained in the same method use the same copy books. Then how can their ing indicate their character?"

That question always surprises me," declared Mr. er. "The very fact that no two grown persons e alike, even though they have been taught alike, e best of all proofs that handwriting is an expres-of individuality.

Even children don't write exactly alike. They ! And just as soon as they leave school and get from their teachers, they begin to develop their personal style. By the time they are eighteen, niform, copy-book characteristics have vanished their writing expresses themselves."

estion Number Three: "How can 'thick' or writing show anyone's character, since it de-s on the kind of pen a person uses?"

t does more or less depend on the pen," agrees Meyer; "although two persons, using the very pen, may produce lines which are quite different ickness. But the essential point is this: Which of pen do you *prefer* to use? The fine one, which s thin, delicate lines? Or the broad stub which s thick lines?

you want your handwriting analyzed, use the of pen you instinctively prefer. This preference ply rooted in your character. And the writing you produce with such a pen has literally grown these roots."

estion Number Four: "Writing is simply a ular action—almost an automatic one. Then an it reflect character and personality?"

which Mr. Meyer replies: "I don't pretend to *how* it happens, but it is a fact that it does hap-How about walking? (*Continued on page 154*)

If You Ask Me:

Before you give away a piece of your mind, be sure you have it to spare

I ONCE knew a woman who was a wonder at minding other people's business. She had a right to be—for she worked at it day and night. No one in town could take a trip, trim a bonnet, buy a buggy, or put a baby on the bottle without hearing from her that it was all wrong. Compared to this local know-it-all, Solomon in all his wisdom was a piker when it came to dishing out advice.

How she did pounce on human frailties! "I'll give him (or her) a piece of my mind!" she used to say through drawn lips. And always she made good her threat.

As a critic, she was a ripstaver. As a judge, she was the Almighty's official spokesman. As a busybody, she was all wool and a yard wide. But as a human being, she was almost a total loss.

DAY after day, she gave away pieces of her mind to people who didn't want them. After a few years, she didn't have much mind left to give. Try her on anything constructive, on any topic of general interest, and you drew a blank. Village improvements didn't interest her unless she could find in them something to criticize. She read little. The personals in the local paper were her main meat—and these she perused for the purpose of finding something to take a whack at.

HAVE I failed to paint a picture of an A-1 public nuisance? Then the fault is mine, not that of my subject.

This type of person is a familiar figure in every community. Her name is legion. Towns are tormented by narrow, prejudiced men and women who feel themselves ordained by God to be judges of human conduct, without knowing or caring to know anything about the impulses, the emotions, the points of view, or the circumstances that make people act as they do. Apparently, these self-winding critics are blind to the bitterness they leave in their wake.

Now, it strikes me that few of us have more judgment than we need right on our own premises. And when it comes to questions of conscience, I doubt that the Lord has delegated any of us to act as proxies for anyone else.

Before we try to run other folks' lives we should be sure that we rate 100 in running our own. And the person who can do that has too much common sense to be a busybody!

Let's Go Down *the* Road *to* Meet *the* Spring!

By ARCHIBALD RUTLEDGE

CHEROKEE SYKES, a humble old friend of mine, lives in a wild clearing on a wilder mountain; sometimes I have difficulty in ascertaining where the mountain leaves off and his place begins. His fences, smothered in wild grapevines, are only semi-artificial frontiers of the wilderness. Ruffed grouse, which are supposed to be among the shyest of game birds, ravenously feed on the apple buds right in his back yard. Timid-footed deer take confident liberties with his turnips and his pea vines. He has an almost hand-to-hand fight with foxes for every chicken he gets, and with the wildcats for every turkey he saves.

"They shore did pester me this last winter," Cherokee told me that glimmering April day, when the air had a telltale, relenting warmth, as if but yesterday it had been dallying and romping with the roses and the jasmines in Florida and the Carolinas.

"These here varmints got so bold-faced I pretty nigh concluded that they would be gettin' after *me* next—and me here all alone."

Just at that moment, while we were seated on his porch lamenting the misdeeds of Cherokee's wild neighbors, a gray fox insinuated itself through the sagging bars of the pasture fence. Once through the barrier, the fox paused, head high, one forefoot craftily raised a little. For some reason Reynard did not seem to have a predatory air. Now he moved with silent and innocent grace along the inside of the fence. All wild things have a certain mercurial elegance of movement.

© JOHN KABEL

After what the mountaineer had just been saying to me of the rough handling that foxes had been giving his chickens, I naturally expected him to lay hands stealthily on his gun, leaning within his reach. But he did no such thing. Rather, he amazed me by softly exclaiming—almost with that birdlike tone that children often use when playing, or when their little hearts are utterly serene—

"Now, ain't he the beauty? Ain't he pretty to watch? He can outstep a cat for making no noise! Well, love his heart!"

And this from Cherokee—a human rock oak, with all the bark still on!

"Love his heart!" What an exclamation, thought I. And you know why my shaggy mountaineer had used it: The season was having its way with him. The dewy balm of spring had entered the man's soul, subduing ancient—and, at this time, respectable—enmity. "Love his heart" in this case meant, "God bless that beautiful, thieving rascal. I can't bear to harm him now; the world's too sweet and fair."

Indeed, spring does seem to have the seductive, virtuous power to dissolve hatreds as well as lingering snows; into the deepest chill glen of the heart where implacable resentments are supposed to dwell, and sorrows irremediable, the joy of the springtime penetrates:

> And my regret
> Becomes an April violet,
> And buds and blossoms like
> the rest.

And this is true Resurrection from the Dead; for hatred of anything except sin in ourselves limits, in a final and painful degree, our capacity to love and to achieve, thus circumscribing our chance to be happy.

THE festival of joy's return spring is the rebirth of mortal and of immortal hope. And it is a season that deserves to be celebrated with far more sacred significance than mere pagan rites could represent. The pagan failed to comprehend that virtuous Beauty, God's compassion glimmering into visibility. We have reasonable right to believe that spring is one of the deliberate manifestations, not only of Almighty Power, but of Almighty Love as well. The pagan accepted spring, the animals do—physically. Feeling as he did, he wove garlands, gamboled, shouted, sang, reveled. With a human and natural grace of heart the spring, as at a shrine, we praise and adore the Maker and Preserver of us all.

Miraculously, after her journey from the sun, in the deep void of space, keeping noble pace with Neptune plunging through abysses of night, the Earth has brought us all once more safely to the season of spring. To me it is quite simple and natural to believe that God ordained the seasons. In this faith my mind most perfectly acquiesces. Moreover, it seems reasonable to suppose that the spring may serve the purpose of reminding us of our immortality; here, in nature, is the manifestation of our own far survival through the incredible awakening of the world after the freezing (*Continued on page*

"Spring"

"ONCE MORE Spring comes to us," writes Mr. Rutledge; "this divine miracle of Spring. We delight in its outward manifestations, and our hearts feel its profound spiritual import. Each Spring we renew our faith in the Eternal; and into our hearts these convictions must irrevocably take root and sturdily grow That Truth and Beauty are the language of God; Virtue is the behavior of God; Love is the will of God."

IGOR SIKORSKY, the man who gave the world the principle of the multi-engined airplane, is one of the big figures in aviation. During the World War, he was Russia's hope in the air, for to him the Czar looked for battle planes; but the Russian debacle marked the end of his career in that country. Sikorsky came to America and for several years worked humbly and obscurely to perfect his transport carriers of the skies.

A Shirt Flapping *in the* Breeze Became *an* Airplane *in the* Sky

ING BY CLAYTON KNIGHT

By CHARLES J. V. MURPHY

As he watched the wind blow his father's shirts hanging on the line, young Igor Sikorsky decided to take up flying. . . . How he rose to fame at twenty-four, fell to obscurity, and came back at forty

HE IS not a tall man. There is the barest promise of accumulating plumpness at his waistline, a most pronounced retreat of hair from his well-ed forehead. And the voice that from under his small mustache is d musical, with something of the ed quality one often finds in the of dealers in old books.

s the genius who gave the world nciple of the multi-engined air- a master-builder of the great trans- rriers of the skies; the youth, now the matured man, who lifted a g idea from the two-dimensional of blue prints, caparisoned it ngs and motors, and sent it forth, dly to affect the course of aviation! ame is Igor Sikorsky, and he is one rare geniuses born with a golden n his mouth. At twenty-four, he beardless father of Russian avia- e prodigy of the new science. At five, eager and unafraid of respon- he tackled, amid the tumult of job of building Russia's great fleet ers.

a, hopelessly behind her industri- lies and enemies, had only one fac- give him, few skilled mechanics, notors. The High Command was netic, but emphatic. The orders Build bombers . . . more bombers once!"

ikorsky built them.

as twenty-one when he built his cessful airplane. He was twenty- n he built and flew the first suc- multi-engined plane in history—a huge, under-powered contraption, it seems now, but then a revolutionary machine.

Lean years, however, were destined to creep between the eager youth and the calm-eyed industrialist of today. The Revolution blunted his biography at its peak. Penniless, not even in possession of his own blue prints, he came to the United States and began to build all over again.

AND now, at forty, he is one of the world's foremost authorities on airplane design and construction, and approaching new and greater eminence in aviation. To his splendid factory at College Point, Long Island, has come a prosperous activity. The multi-engined plane he created—amid the derision of skeptics—has become an accepted carrier along the airways of the world.

"Did I ever lose hope?" he said, echoing my question. "Nonsense! It was a good idea, and what has come was inevitable."

Igor Sikorsky was born at Kiev, Russia, in 1889, the son of well-to-do parents. His father was a professor of psychology at Kiev University, an excellent scholar and an understanding parent.

The boy Sikorsky was passionately fond of mechanical things—pulleys, wheels, and such devices that tend to lessen the labors of men. One day, while sitting on a window ledge overlooking the family wash hung out to dry upon the line, he idly observed one of his father's best shirts flapping in the wind. To the thirteen-year-old boy this piece of wash on the line suddenly became pregnant with meaning.

If air pressure could thus lift Professor Sikorsky's heavy-bosomed shirt, why could it not lift other surfaces? He began to experiment with kites and cardboard surfaces. Though nothing came of it, he carried the thought through his early schooling at the university and the Naval Academy, through a special training in mathematics and physics at Paris, and through final concentrated study at the Kiev Polytechnical Institute. He finished this schooling in 1907, at the age of eighteen. This was just about the time that the Wright Brothers began to stir up excitement the world over. These intrepid Americans had flown in 1903—the first men to achieve mechanical flight. Now, as they improved their machine—made it stronger and more reliable—they became the sensations of the world of science.

"When I read about them," Sikorsky told me, "I decided immediately that I would build an (*Continued on page 112*)

ELDER WENTWORTH, of the Congregational Church of Coldriver, was a granite-faced old man who admitted the making of one mistake in his life—his marriage.

To look at the Elder you would not suspect that beauty would ever have attracted his eye, even in his youth. If you studied him in his goings and his comings, his dealings and his conversations, you would have said he was a man to select his mate with calculation, having an eye, first, to her utilitarian qualities; second, to her religious behavior; third, to her reputation in the community for economy.

As to her personal appearance, you would declare, without fear of contradiction that the Elder would not be aware of it at all.

In Coldriver he was rated as an old man, and yet he was not old as age in that land of longevity goes. He had married at the reasonable way station of twenty-seven, and the woman he took to wife possessed none of those qualities which should have attracted him, but did possess in abundance that one quality which should not have attracted him at all: she was very lovely.

At the end of the first year of their married life he became the father of a son; before the end of the second year Mrs. Wentworth went away unostentatiously, leaving a note which no eyes but the Elder's had ever seen.

It gave succinctly the reasons for her going—reasons in which her husband perceived no logic whatever, for they had to do with happiness and with the beauty of life. She ended by telling him she was going away, lest her soul should die of starvation before her body was ready to perish of hard labor. "And," she ended, "I can't bear the thought of a living body housing a dead soul."

He did not follow her nor seek to find her, but often and often he pondered this saying of hers, and could make neither head nor tail of it. Vaguely it troubled him. At moments he sensed that there might be a world of which he was unaware, in which other persons lived. But he could not quite grasp that idea. It only bewildered him as one becomes bewildered who thinks upon infinity.

So he secured a dependable housekeeper and nurse in one, who undertook the task of raising a ten-months-old baby boy.

That had been a matter of twenty-three years ago. The boy was nearly twenty-four, and now, after this lapse of more than two decades, the Elder found himself bewildered again, as he had been by his lovely wife. For his son seemed able to live in that other, incomprehensible, imponderable world of which she had been an inhabitant.

IT WAS not so much what Jason Wentworth said, for he was a silent boy, nor what he did, for he was not an active young man. It was the way the boy looked that troubled the Elder; the expression which came sometimes into his eyes, as if he saw and doted upon many things that were invisible to his fat

Then matters came to a pass, and Elder, feeling that he needed other s port than lay in himself, came to p the problem before Scattergood Bai

"I got it out of him," said the El "and 'twas like drawin' teeth. Kin reminded me of pryin' a door off hinges to git at suthin' that was bein' secret."

"Uh-huh," said Scattergood.

"He's a-writin'," said the Elder hars

"Nothin' in the Bible nor the Stat of the State agin' that," said Scatterg

"It hain't a man's occupation. By sweat of the brow—that's how Scrip says we sh'u'd earn our bread. Not he's earnin' any bread," the Elder sa his cold voice.

"Books or what?" asked Scatterg

The Elder lowered his voice. theater play. Mebbe I could of end if it was a hist'ry of the caounty, or of one of the Presidents or suthin'. B theater play!"

"Um." Scattergood took his fat c between thumb and finger and twist as he did when sudden need for pre of mind was imperative. "Theater eh? I swan to man! How come h

kind of places?" demanded the

's got a set of 'em she bought ent—all bound up in leather— er nigh onto ten dollars. By the name of Shakespeare. The preacher he come and set readin' out of 'em a couple times."

"The preacher hain't goin' to read none out of Jason's theater plays," said the Elder.

"Um. . . . What you calc'late to do?"

"A body don't want to see his son go to rack and ruin."

"Don't seem as though," admitted Scattergood. "What you come to me fer, eh? What you want I sh'u'd do?"

"I dunno. I dunno which way to turn."

Scattergood wriggled his nose. "When a body don't know which way to turn," he said, "he ought to jest stand still and git his bearin's. Want I sh'u'd kind of talk to the boy?"

"I'd be obleeged," said the Elder.

No opportunity presented itself for some days, but on a Thursday Jason Wentworth passed the store, head down, eyes on the sidewalk, as was his custom. Scattergood called to him.

"How be ye, Jason?"

The young man started, turned, and smiled. His eyes were fine—not like the general run of eyes in Coldriver, which did not assay high in dreamers. "Very well, thank you, Mr. Baines."

"Set a spell," invited Scattergood.

"Why, thank you," said Jason, in some surprise. Then, "Did you notice the cloud shadows moving along the mountain? I've been watching them for hours."

"Um. Git any pay fer it?" asked Scattergood.

"Yes," said the young man surprisingly; "big wages."

Scattergood pursed his eyes and regarded the boy. "I dunno," he said, "but what I've earned some of the same. Them shadders is real sightly. Um. . . . I hear you're a-writin' plays."

"Father has been talking," said Jason, turning suddenly grave. "I'm sorry."

"Fathers," said Scattergood, "have a way of talkin' about their sons. Kind of natural, seems as though. What kind of a theater play be you writin', Jason?"

"Just about folks," said the boy. "Just about folks, and how they go groping along. Their gropings are—terrible; but they're beautiful too. It's beautiful to hunt for happiness, Mr. Baines, even though you never find it. It's terrible to set yourself to be decent and upright, and then to have events, or weaknesses, force you into evil. . . . I wonder if things are inevitable; or if it is all just blundering."

"ALL folks is built with different length legs," said Scattergood. "That's why some 's taller 'n others."

The boy smiled and nodded. "And some are bald and some have hair, and some are stout and some are lean. And they're as different inside as they are outside. That's why life is so wonderful."

"Wonderful, is it?" asked Scattergood.

"Amazing," said Jason.

"Um. Calc'late on gittin' your play acted in a theater? Aim to have actors speak off what you've wrote?"

"Why," said Jason, "I've . . . hardly considered that. I just wrote. Because it was there to say. It seemed as if I *had* to put it down."

"Got one all done, from start to finish?"

Digitized by Google
Original from UNIVERSITY OF IOWA

"Yes, sir." The boy, without being aware of it, responded to Scattergood's sympathy.

"Ever read a feller by the name of Shakespeare?"

"Again and again."

"Is yours as good's hisn?"

Jason smiled. "Is an ant hill as high as a mountain?" he asked.

Scattergood coughed behind his hand. "I'm kind of cur'ous about that there theater play of yourn—and how you've dealt with folks in it."

The boy looked up quickly. "I—I would be grateful if you'd read it, Mr. Baines."

"Hain't much on readin'. My idee is that theater plays hain't wrote to be *read;* they're wrote to be spoke off by actors. Um. Seems as though I'd like to hear yourn recited out. Now, I tell ye what, Jason. You jest kind of set in one spot, and bear in mind that patience ketches more fish'n foot races ever done."

"Yes, sir."

"Your pa 'n' me is limited men," said Scattergood. "We hain't give much to cloud shadders on mountains. Not unless we kin fold 'em up and sell 'em by the yard at a profit. I calc'late we don't understand the true inwardness of cloud shadders."

"I'm not so sure about you, Mr. Baines."

Scattergood got up suddenly and, as was his custom, dismissed the boy curtly. "G'-by," he said. "Set tight. G'-by."

"Good day, Mr. Baines," said the boy; but as he moved off, his heart was lighter than it had been in months. He could not have told why. It was that half-hour's gracious contact with healing sympathy, felt by the part of him which dreamed, rather than perceived by any outward sense.

Scattergood peered after him, blinking. He waggled his head. "Dog-gone!" he exclaimed. "Dog-gone! Some folks is different from others, only a good deal more so."

LATE in the afternoon Pliny Pickett, former stage driver, but now conductor on Scattergood's train which ran down the valley, stopped to make his daily report.

"How be ye, Pliny?" asked Scattergood.

"How be ye, Scattergood?" Pliny replied, in perfect imitation.

"Um. Much of a theatergoer, Pliny? Eh? All int'rested up in the drama?"

"Mebbe," said Pliny cautiously. "I've pulled a sight of troupes up on the train."

"Dunno but what that qualifies ye to be a critic," said Scattergood. "Young Jason Wentworth's up and wrote him a theater play."

"Dew tell! How's the Elder take it?"

"Sets kind of heavy-like on his stummick," said Scattergood.

"'Tain't no affair of yourn," said Pliny.

"Wrote it in Coldriver, didn't he?" asked Scattergood, as if that point answered all questions as to how it became his affair.

"Is the' a villain into it, and a sawmill?" asked Pliny.

Scattergood paid no attention to this question. "If you come into possession of suthin', Pliny," he asked, "that you didn't know nothin' about, what's the fust thing you'd do?"

"I'd find out," said Pliny practically, "if 'twas any good."

Scattergood considered. "The's a heap I don't know about this and that," he said. "Seems as though I hain't got what you'd call a wide and comprehensive knowledge."

"I SEE by the paper," said Pliny, "that one of these here fellers they call a theater magnate gits all lathered up ketchin' speckled trout."

Scattergood peered at Pliny a moment. "You fetch me that there piece," he said. And then: "I hear tell the young folks to the Congo Church is plannin' an entertainment to git some new chairs fer the Sunday-school room."

"The's talk about it."

"Who's the bellwether of it?"

"Lucy Martin."

"G'-by, Pliny."

"G'-by, Scattergood."

Presently the old hardware merchant ambled across to the post office, for the evening mail was being distributed. He knew a representative of each family in the village would be present, either in the hope of receiving a letter, or merely to take part in a daily social event. He was disappointed in seeing the person he sought, for Lucy Martin appeared just before the general delivery window was shown up with an important crash.

"Evenin', Lucy," said Scattergood.

"Good evening, Mr. Baines."

"I hear tell you're all finished up with state college."

"I graduated in June."

"Um. Study literachoor there?"

"Yes, sir."

"Was theater plays a part of it?"

"Yes, Mr. Baines. A great part of it. We even used to give plays in our course."

"Dog-gone!" said Scattergood. "How the world does move along. Kin you read a play and tell if it's any good fer anythin'?"

"I don't think anyone can, Mr. Baines. Even the most successful producers never seem to know—until the play is produced."

"Ye mean acted out onto the stage?"

"Yes, sir."

"Um. Know Jason Wentworth? Eh? Elder Wentworth's boy?"

LUCY flushed, and looked quickly at Scattergood to see if he was teasing her; but she saw he was serious.

"Of course I know him," she said.

Scattergood had seen the flush and stored it away in his mind as important information.

"To be sure," he said. "You 'n' him went to the same college. Mebbe you've read that there theater play he's wrote?"

"He—he's never let me read it."

"But he would? Calc'late he would if you urged the matter, don't ye?"

"Possibly."

"Um. Hear tell you're runnin' a entertainment to the Congo Church."

"I've been planning one."

"A theater play?"

She looked up quickly, as at the presentation of a new and alluring idea. "Oh, I wonder if I could—if—if it would be all right?"

"If you was to try," said Scattergood, "I dunno but what I could contrive to donate the use of the hall." He cleared his throat noisily. "I'm almost dog-gone nigh certain I *would*," he said, "if 'twas this here piece of Jason's you was to act out."

"Oh!" she cried, and her eyes began to shine. "Oh, that would be wonderful—if he'd consent."

"Hain't you the one," Scattergood asked, "to kind of persuade him? Seems as though. If I was him I'd kind of hate to have you start in to want suthin' of me if I didn't want to give it."

"I didn't know you made compliments, Mr. Baines."

SCATTERGOOD looked surprised. "No sich thing," he said brusquely. "I was jest statin'."

"I'll try," said Lucy.

Scattergood nodded abruptly, turned his back and walked to his box, from which he extracted a variety of mail. With this he returned to the store and sat for some time in deep thought.

A month later, Scattergood, arrayed carefully by his wife Mandy—with woolen socks on his feet and a black felt hat on his head—sat in a Pullman car on his way to New York City on business. He alighted at the Grand Central and took a taxi to a hotel. When he had registered, he peered at the clerk and asked, "Plenty theaters in this city, eh?"

"Several," said the clerk dryly.

"How's a body find 'em?"

"Stand on the corner of Broadway and Forty-second Street," said the clerk, "and you'll be surrounded by them."

The next morning Scattergood stood, as directed, at the intersection of Broadway and Forty-second Street in a wilderness of theaters. The spectacle

(*Cont'd on page 96*)

"Did ye ever," asked Scattergood, "ketch ye a seven-pound-and-a-half speckled trout? . . . I done so, and there she be!"

Drawings by R. B. FULLER

"How long is it," he asked quietly, "since you have had your teeth X-rayed?"

I PARTED, some months ago, with an old friend, one who for many years shared the most intimate relationships of my life. His name was Dexter Bicuspid and he was the last of my teeth. Whether or not the separation caused a pang on his part, I don't know, but it certainly did on mine.

The humble teeth have suddenly become organisms of the first grade, ranking right up with thyroids and pituitaries and responsible for almost any misfortune that can happen to man. If you feel ill at ease among strangers, or restless at the movies, it's your teeth. If you have queer chills up your back, a pain in your gizzard, or a dull sensation in your left knee—it's your teeth. Even a two-year-old knows that! Nowadays you don't have your teeth out on the advice of the neighbors or even of the dentist. They are ordered out by a surgeon, by a neurologist, or by a psychoanalyst. I didn't have my teeth extracted because they *hurt* me, but because I was nervous. It was not toothache from which I was suffering, but streptococci.

But let's go back to the beginning of all my troubles.

When I was a child, our dental work, like our laundry, was done by the day. Shortly before my mother was married she had her first metal fillings put in by a rising young dentist in the county seat, and so, of course, he became the one dentist in the world for her. Even though she roamed far afield and lived in large cities, there remained only one Doctor Bisby. Coughs and colds, typhoid and pneumonia, could be taken care of in New York or Buffalo. My oldest sister was even allowed to come into the world in Plainfield, New Jersey. But when it came to a toothache, my mother would have packed up and journeyed from London or Budapest back to Millfield, Connecticut, and Doctor Bisby.

Such faith, of course, became hereditary. Once a year Mother would engage Doctor Bisby's chair for the whole period from dawn to dusk and send us children to fill it. As we grew in numbers it meant only that he worked faster. This frightful day came always on a Saturday and usually on the last Saturday before school opened in September. The only consolation in those annual trips was that, next to Doctor Bisby, the town of Millfield was famous for a huge dairy which sold ice cream. And as soon as we had left the office we were, for once, allowed to have all the ices that we could eat.

Good Doctor Bisby! I must say that Mother's faith was fully justified. No tooth ever ached again after he had once hammered it into submission, and when he had put in a filling it was there for life. Indeed, when I had my final clean-up and dispersed my whole collection, the young university man who did the pulling called in the heads of the office to show what he had found in my mouth. My dental work was all inlay, the most beautiful sort of hand work. Most of it was pure Victorian and some of it was even believed to be Empire.

YOUNG people, however, do not think in terms of artistry, and the net result of those yearly sessions was that when my dental life was left in my own hands it followed the usual course. Each time that I left a dentist's office I would solemnly promise to return in six months. Actually, I would return once in four years, when some one tooth had got to the point where it was driving me insane. Curiously, this never happened when I was near a dentist, and it never happened on a week day. It would always happen on a Saturday evening when I was cruising on Long Island Sound or was three days back in the woods in camp.

I came to know the familiar first-aids for toothache—raisins, cloves, essence of pep[illegible] permint, hot water bags, hot blankets—and o[illegible] the plains of Arizona an army surgeon taught me the frontier method. This was to hold a big gulp of raw spirits in your mouth, tilting and twisting your head until it flowed on the suffering spot and blistered your cheek. You held it there until there were tears in your eyes, after which you could swallow it or spit it out according to your mor[illegible] and political views. This remedy would keep any tooth quiet until you could get [illegible] sleep, and when you woke up you could r[illegible]peat it. By nicely calculating the amount [illegible] the bottle and the di[illegible]tance in miles to t[illegible] nearest town, an adept could usually g[illegible] in comparative comfort right up to t[illegible] dentist's door.

Since it was only when a tooth becam[illegible] absolutely unbearable that I went a[illegible] had it fixed, it followed naturally th[illegible] in the meantime, I became an expert [illegible] the minor and preliminary aches. I kn[illegible] the kind of ache that comes when y[illegible] draw in a breath of cold air and the s[illegible]den, naked stab from hot soup. I kn[illegible] the dull, melancholy pain over three [illegible] four teeth in a row that comes when y[illegible] are tired or ill from some other cause, [illegible] I knew the elflike, "sympathetic" twi[illegible] that comes in your upper teeth becau[illegible] you have something the matter with y[illegible] lowers. I knew the kind of tooth t[illegible] throbs only when you lean over and [illegible] though odontologists would probably [illegible] recognize it as a separate species, I [illegible] one most interesting little tooth [illegible] would ache only when I smelled musta[illegible]

From having at least one of these a[illegible] most of the time and frequently two [illegible] three of them concurrently, I develop[illegible] an unconscious technique for living [illegible] harmony with them. Just as a p[illegible] fighter learns to shelter a weak spot in [illegible] anatomy, so could I—by never leaf[illegible] over suddenly, by always drinking w[illegible] very slowly, by keeping my head [illegible] slight tilt, and by eating with just [illegible] sixteenth of my total grinding surfa[illegible] sometimes go for weeks and even mo[illegible] without visiting a dentist.

In theory this may have been very [illegible] genious, but in practice it was appare[illegible] unsound, for when I was about thirty [illegible]

es in my teeth began to die. It may e been that there was nothing for n to live for. In a period of eight s at least ten of them gave up the ggle, and at one time I had not less three in various stages of being ned out and boarded up.

his was the Indian summer, the har- period, but, strange as it may appear, is also the happiest era of my odon- c life. For a dental procrastinator, a nerve, sinister as it sounds, is really deal form of ache. When once it s to go, there is nothing you can do t it. In fact, if you want to, you can one the final operation almost in- tely. One dying nerve that I had, traveling, took me into the most able offices all up and down the At- seaboard, and all the business was in terms of cotton. "I'll just fix this itil you can get back to your own t," my various hosts would say, and never felt so loyal to my own man. e years went on, I began to con- ate myself on my growing collection nproof but perfectly usable teeth. rly as I could see, when they were e that I would be in an enviable n.

URE, however, had other plans. d, by one of the bitterest ironies of , they matured at the exact moment had begun to go to a dentist with gularity. This does not mean that I imately seen the light. It merely that I had at last struck a dentist businesslike system. Instead of me go on my own promise to re- six months, he would send me a appointment at the end of that had to go or pay for the appoint- s not even I had the nerve to call and tell him that nothing was the

r this arrangement I had, for some d none of my usual aches. I had egun to believe that I had settled middle-aged dental smugness, when, one evening, while I was sitting reading, I happened to put my finger on a spot beside my nose. It was an inch and a half higher than any spot at which I had ever had a toothache; and, maliciously, as I write this, I can see a thousand fingers go to a thousand noses.

There was a little exterior soreness there, but nothing bad. I forgot it entirely until several evenings later, when I happened to touch the same spot and found the same gentle soreness. Still my mirror told me nothing, so I just let it go.

I must say this for a streptococcus — which, it seemed, was the germ inhabiting my sore spot —that it is really one of the most polite and well-bred little germs in existence. Abuse it and naturally it will fight back, but, considering the unpleasant mission that it has to perform, it will go about it in the most gentlemanly and considerate ways. For two pleasant months the streptococcus and I kept company, neither of us intruding on the other's privacy. Not once did he interfere with my plans or lose me a minute's sleep. In half that time an ordinary cavity would have been unbearable.

So far as the strep and I were concerned, we could have gone on indefinitely on just those terms, but about that time I had one of my regular appointments with the dentist.

Purely by way of making pleasant conversation as I got in the chair, I told him about the sore spot. At once the dentist was all ears. It was the position of the pain on my cheek that most seemed to grip him, and he began to feel of my face. Then he looked into my mouth.

I had one most interesting little tooth that would ache only when I smelled mustard

"How long is it," he asked quietly, "since you have had your teeth X-rayed?"

It was a silly question, for he knew perfectly well that I had never had them X-rayed. Indeed, like most of his predecessors, he had often expressed doubt that they had ever been brushed. Without, in fact, waiting for an answer, he continued, "I think that the best way to spend your time this morning is to have it done now."

I would always gladly do anything in a dentist's office that didn't involve the use of the drill, so I got out of the chair eagerly.

A WHITE-ROBED nurse led me to a shiny little room where a young man awaited me with a camera. Inside of three minutes my mouth had been snapped from every angle—the front porch, the smoking-room, and the view from the west hill. The instant the last close-up had been taken, my own dentist appeared again. For the first time in our professional acquaintance he patted me on the back and helped me on with my overcoat. "I will call you personally," he said, "as soon as these are developed."

Two days later he was as good as his word. "I have the prints of your X-rays," he announced on the telephone.

"Ah, yes," I answered casually, "and how do they look?"

"Well," he replied, "I think that you had better come down and we will talk them over."

I hung up the receiver and turned to my wife. "Maude," I said, "your husband is going to have false teeth."

Maude turned white and sat down very suddenly. To tell the truth she was not wholly unprepared. I had not been wholly unprepared myself, but, much more than I, she had been clinging to hope.

"Did he actually say that?" she asked faintly.

"No, but he said that he wanted to talk them over, and you know what that means."

"Yes," confessed Maude, "that's what editors say when a story's a frost. At any rate," she commanded, "I am going with you and he is not (*Continued on page 104*)

Exactly like a man milliner fitting a sports toque, he held out the new, shining plates in his two hands

A STORY

By

AGNES SLIGH TURNBULL

The Best Things

Illustrated by W. B. KING

I went into a house, and it wasn't a house,
It has big steps and a great big hall;
But it hasn't got a garden,
A garden,
A garden,
It isn't like a house at all.
—*When We Were Very Young.*

NANCY BLAIR stood at the window watching Jack swing off down the street to catch the 8:15 commuters' express for the city. Her lips were pressed together, and there was anger in her heart. Not the sort of anger that comes in nebulous little gusts in the morning, is blown very thin by the comfortable routine of the day, and then with the evening's kiss is as if it had never been. No, Nancy's anger was not that kind. It was very still and quiet and bitter—the kind from which a woman can draw a chill dignity which makes her seem as unapproachable as the Jura Mountains.

It was in this cold and distant mood that Nancy had prepared the breakfast, sat down opposite Jack in their sunny little dining-room, and answered briefly his cheerful flow of conversation.

"What's wrong?" he demanded at last. "Was last night too much for you? Why don't you let a few of these high-brows eat at home for a while? You're all tired out!"

"I'm all right," Nancy had responded briefly. "That is, I'm not *physically* tired."

Jack grabbed his paper and his watch, lying open by his plate.

"Thunder! I forgot I had to stop at the bank. Good-bye, honey. Now, you rest up today and forget about dinner parties. A darned nuisance, I call them! Good-bye, dear."

He kissed her eagerly, as he always did, and left the house with a great slamming of screen doors and clatter of shoes on the steps. He was whistling as he turned to wave to her from the street. Nancy waved back mechanically, the cold arrow still in her heart, and then turned to the living-room, which recalled only too vividly the whole scene of the evening before.

She sank down in the deep chair to think things over.

The worst of it all was that Jack didn't even *know* what he had done. He was as happy and care-free now as if he had not just laid waste some of her fondest hopes.

It was not even as if she had not explained the importance of the dinner to him. He knew what cultured people the Lynns were. To have them accept at all was positively overwhelming. "Just a little informal dinner," she had told Mrs. Lynn lightly over the telephone; "no other guests." And at that austere lady's "We shall be delighted to come over, I'm sure. It's so pleasant to share young people's home life," Nancy had almost fainted away in her chair. She had anticipated an equally gracious refusal.

But it was like Nancy to aspire and to succeed. Already, during their three years' stay in Woodlawn, she had become a member of three clubs and chairman of a half-dozen mittees; and her aspirations ran still higher. She was, she considered one of the most capable of the young matrons all lines intellectual. Mrs. Lynn, who was president Women's Club, had particularly singled her out for re bility and favor. And when that personage had calle later invited them to her musicale, Nancy had felt th feet were well up on the ladder that she hoped to climb.

For the Lynns were not only wealthy, they were Woo most distinguished family. Mrs. Lynn wrote articles magazines on Club Work, and Women in Politics, and s like that; and Mr. Lynn was interested in *collecting*, a been to Greece, and actually helped a party excavat vases and bones! And they talked only about Worth Things!

SO HAD the stage been set for what Nancy felt w great scene of her social career up to date. The table d lovely. And Jane, her cleaning woman, knew how t beautifully, and was already in the kitchen. In the

Outwardly Nancy was calm, sweetly alert, and entertaining. Inwardly, she was seething with anger, fear, and shame

"Jack, *please!*"

"Oh, all right. Can I wear a soft collar?" He started up the stairs, leaving his newspaper and salesman's satchel on the hall console table, between the two severely decorative candlesticks.

"Heavens, *no!*" Nancy called as she cleared away the offending articles.

IT WAS then fifteen minutes to seven. At ten minutes of the hour a door slammed vigorously upstairs, the sound of running water and violent splashings came down, only slightly muted, to the living-room; and in another five minutes the doorbell rang and Mr. and Mrs. Lynn, poised, immaculate, and faintly condescending, entered.

At this point in her mental review Nancy paused to admit a point of honor. Jack didn't *know* that the guests had arrived. He couldn't hear anything above the sea noises he was making. But he should have *assumed* they were there and acted accordingly.

What had happened next was this: Just after Nancy had explained how *very* sorry her husband was to be late and not present to receive them, and the usual amenities had been exchanged in soft, well-bred voices, a door upstairs had opened noisily and Jack's heavy tramp was heard above, to the loud, cheerful accompaniment of this chant:

"If the riv-er was whis-ky and I was a duck!
I would dive to the bottom and nev-er come up!"

Mr. Lynn had raised pale, questioning eyes. What Mrs. Lynn did was worse, so far as Nancy's inner comfort went. She acted as if no foreign sound had penetrated her consciousness. She began, with slow animation, to speak of the last club meeting.

FOR fifteen minutes more Nancy had lived a dual existence ghastly to recall. Outwardly she was calm, sweetly alert, and entertaining. Inwardly she was seething with anger, fear, and shame.

For the singing had kept on, changing with great versatility on the soloist's part into several minor keys, until at last the lyric of the bibulous duck had been abandoned, and instead there had floated clearly down to the strained listeners in the living-room:

om, Nancy, in her best frock, which emphasized the fresh, atural pink of her cheeks, was trying to be calm and not flit bout, while the minutes sped by and *Jack did not come.* She ad warned him about being late. Dinner was at seven.

At six-thirty Jack arrived, very much begrimed from the rst hot day of spring, but affectionately blithe as usual.

"Hello, honey! Why all the dolled-uppedness?"

Then, at her expression, he sank heavily onto the ender hall chair, which was meant only for looks, anyway.

"Great suffering suckers!" he ejaculated. "I forgot this inner business! But say, listen, honey. Do you know what I ulled off today? I landed old Griscom! Yes, sir, with a good, g, fat order. I've been after him for *two years*, and today I t him, darn his old thick hide!"

"Hurry, Jack—yes, that's fine—but *hurry!* They're likely come any minute and you have to shave. *Please* hurry, ck. You know the Lynns."

"Oh, to the dickens with the Lynns! Say, you haven't ven me a kiss. Isn't it the cat's, though, about old Griscom's der? Wait till they see that roll in at the office. Oh, baby!"

Original from UNIVERSITY OF IOWA

"And so they carried Carrie to the fer-ry,
And the ferry carried Carrie to the *shore!*
And the reason that they had to carry Car-*rie*,
Was that Carrie *couldn't carry any more!* Te dum, te dum . . ."

Still Mrs. Lynn pretended not to hear. That, to Nancy, set the absolute stamp of disgrace upon the whole proceeding. There was literally no hope.

AT LAST Jack had *run* down the stairs, as usual, kicking up the hall rug and then kicking it straight again. At the living-room door he had stopped aghast. His expression was really penitential.

"Why, I didn't know you folks had come! Well, say, I'm sorry. I guess you must think I'm the prize bathroom tenor! How d'you do, Mrs. Lynn. How d'you do, sir."

Dinner had been announced. But in spite of the excellent viands and Jane's really perfect service, there was something wrong. Mrs. Lynn's attitude was more and more condescending as she tried to converse with Jack.

"I've just been reading a new book on psychoanalysis. Are you at all interested in it, Mr. Blair?"

"Not a bit," Jack returned promptly. "I think it's a lot of bunk. I can't see—"

"Oh, *do* tell us about it, Mrs. Lynn; I'm really so interested!" Nancy had intervened, and from that time on had made the conversation three-cornered, while Jack ate steadily on with unmistakable appetite.

After dinner it had been little better. The subjects Jack introduced were so *plebeian*. He had even asked Mr. Lynn if he was having any trouble now with the ash man, and if he knew which kind of fertilizer was best for raising peas. And he didn't act really interested when Mr. Lynn was telling about his old pieces of pottery and his first editions.

The guests left early. There was something, *something* in the air of their goodbyes, which gave Nancy a constricted feeling in her throat, though her smile was still sweetly upon them until the door had closed. Then she had sunk miserably into the nearest chair.

"Jack," she said, and there was bitterness in the tones, "they'll never come again!"

"Gosh, I hope not," Jack had agreed calmly, as he stretched his long legs before him and clutched his pipe and tobacco box. "Say, he's the driest old bird outside a museum. He ought to be stuffed, that fellow! Poor old beggar, though. I'll bet he can't even call his toothbrush his own with that woman around him all the time!"

"*Jack!*" Nancy's voice was stern. "You must remember these people are *my friends*, and the kind of people I want to—"

"Oh, all right, honey. Like 'em if you want to. Say, wasn't it great, though, about old Griscom? Got under his skin at last, eh? He's a good old scout when you once understand him."

But Nancy was not to be dissuaded.

"Jack, those *awful* songs. We could hear every word! Why *can't* you be careful and act like a gentleman. That Carrie thing sounded perfectly disgusting. What does it mean, anyway? '*Couldn't carry any more*'?"

Jack pressed a caressing finger down his pipe bowl and reached for a match.

"Lady was stewed, I guess," he explained succinctly.

Nancy sat very still, the cold shame in her heart going deeper.

"I suppose," she said, with a deadly quiet, "that that is only another echo from army days. Did you never think nor speak of *anything* elevating in the A. E. F.?"

"Oh, sure," Jack grinned, as he blew rings in the air, "we used to sit round for days and discuss Browning's poems with the top-sergeant. Great stuff for the army, Browning!"

And that had been all. She had gone silently to bed, and pretended to be asleep at once. Against Jack's invincible good humor she felt helpless. She couldn't argue with him; she couldn't change him, or explain to him why she wanted to. He met everything with his impervious cheerfulness, his joking, his slangy banter. And she was sick of it.

As she sat now in the early morning, having reviewed all that had passed, she knew suddenly that her abilities were being wasted as Jack's wife. She was capable of taking her place on a higher social and intellectual plane. She was being held back by an uncultured husband. That was the bald truth.

And the provoking part of it was that Jack was really clever, if he would only take pains to show it to the Right People; if he would only try, as she was always urging him, to enlarge his appreciation of The Best Things.

She felt startled and shaken by the discovery. It seemed so disloyal to admit it. But the anger over last night's happenings still burned. It was by its light that she saw herself an injured and disillusioned wife. She saw her love for Jack overcast by a shadow.

THROUGH the day, as she went about her duties, the heavy sense of unhappiness alternated with a feeling of interesting sophistication. She had become one with all the important heroines of fiction who were made of finer clay than their husbands.

Little vignettes of comparison kept popping into her mind as she worked. She saw herself conscientiously reading Shaw's last play, while Jack sprawled in the big chair with the sporting sheet wide before him, and his pipe emitting great puffs. He wouldn't even smoke cigarettes. And they were *so* much more refined than a pipe! Of course, he did read stacks of books on salesmanship, and a few on travel, but outside of that he stuck to the newspaper and detective stories.

Then there was Grand Opera. He went with her, it was true, because she wished it, but it was *terrible* to have him always call it "Grand Uproar," even before strangers.

And as for that play that she had been so anxious to see—the one all the critics pronounced the best of the season—Jack had been unbearable about that. She had been thinking on the way home about the report she was to give of it at a club meeting, and she had said (somewhat experimentally, but still, she felt, rather cleverly), "It's so mellow, Jack. Mellow with life!"

And Jack had given a great snort: "*I'll* say it's mellow! It's so mellow it's rotten; that's what's wrong with it!"

And as to people! He called that handsome Mr. Whitney who almost *ran* the Country Club, "a wind-jammer." And the Mr. Carson who had played at the Lynns' musicale! Jack had been positively rude about him. He imitated him when they got home. He twirled an invisible waxed mustache delicately with his big fingers, and smirked: "Oh, sweet sassafras! Where did I leave my crocheting?"

He was like that about people who mattered.

She kept recalling, during the day, these and other instances of their real incompatibility, wondering dully what would be the outcome of it all, and sinking into an abyss of fear at what she had allowed her mind to admit as the truth.

WHEN Jack came home she tried to meet him as usual. He came bounding into the hall, his blond, giant frame seeming to fill the small space completely. He was attempting to hide a long bundle behind him.

"Got a surprise for you," he chuckled, when he had at last satisfied himself with kisses. "Guess what?"

Nancy suddenly forgot she was tied to an uncongenial mate. Her lovely face flushed delightedly.

"Oh, Jack! did you get *the roses?*"

"You bet I did. Blew myself! Two dozen of the very top-notchers! All guaranteed to bloom this summer. Say, let's plant them now!"

Nancy flew for her gardening apron and gloves. Dinner could wait.

There was indeed one point upon which they did agree perfectly, she and Jack. That was the garden. It was not large, but it was as fair as careful planning and hard work could make it. The little vegetable plot bordered by currant bushes; the banks of iris and peonies; the hollyhocks along the fence, the long beds of old-fashioned perennials; and now—the rose plot! Everything was young yet, but growing prodigiously. And every shoot, every promise or fulfillment of a blossom was watched over and discussed with loving pride. They rushed out in the morning before breakfast to see what miracle had transpired during the darkness. And every moonlight night they walked along the paths before they went to bed, planning new beauties and breathing in its peace.

Of course, Jack made wicked paraphrases on all her quotations, his favorite being: "A garden is a lot-of-work, God wot!" But sometimes, in the moonlight, he listened respectfully to what the poets had to say about gardens.

"Darned if that's not the truth!" he would remark.

Now, she could hear him rattling his spades and rakes in the cellar and singing joyously:

"My grandfather's whiskers were too large for his face,
So they grew round the rim of his hat!"

She tried to put the absurd words from her mind and think only of the roses.

It is barely possible that in the united joy of the planting and in the thrill of a particularly important bridge-luncheon invitation that reached her that night, Nancy might have successfully covered

She had slipped up behind and put her hands across his eyes. "Guess who," she had whispered in his ear

er angry, unhappy confusion of hts, if the letter had not arrived the lay.

pale gray, innocent-seeming enve-ame the match that was to light the ering fuse. It was a message from who had been Nancy's great in the little mid-Western college they had both attended, and who er married a Banker! A Bank t! Frederick Sloane. He be-a wonderful old New England family, and was considered a brilliant man. Nancy had never seen her since, although they wrote each other their news regularly; but she had feasted her soul on lofty thoughts of what Grace's life must be. The letter asked her to visit them at their town residence, where they would be until later than usual that year.

That night at dinner, her eyes very bright, her voice eager and yet awed, she explained to Jack the quality of the household to which she was going. For of course she *was* going! The thoughts of the day before had decided her at once.

"It will be like a different world. They dress for dinner every night."

Jack looked up in sheer amazement.

"*Every* night! Do you mean even when they're alone?"

"Every night," repeated Nancy loftily.

"Do you mean to tell me that any regular he-man would put on a soup-and-fish if he didn't *have* to?"

How the old car seems to deteriorate

By
H. I. PHILLIPS

"Newcaritis"

ARE you feeling weak? Do you ache all over when passing motor-car showrooms? Do you experience that all-gone feeling when reading an automobile folder? Do your powers of resistance decline when you see a magazine advertisement of new models? Does your head spin when you get a circular letter announcing further price reductions? Do you get shooting pains when your neighbor goes by in a brand-new car?

The diagnosis is simple. You have that common American malady known as *Newcaritis*.

Now, newcaritis hits different people at different times, but it appears in its most virulent form in the spring, along with spring fever, first robins, colds in the head, circus handbills, blood medicines, dandelion greens, hand organs, and the urge to boo umpires.

The first symptoms are dissatisfaction, restlessness, and a sort of far-away look. You are irritable when polishing up last year's machine. You are cross on the Sunday outing. Next comes a craving to go to a salesroom and peer intently into one of those open-faced chassis which show the motor functioning under glass. You develop a thirst for automobile literature. The malady has now become serious and the victim will feel morose when not talking to a motor-car salesman. Next comes a fever, accompanied, as you price the niftier models, by severe chills.

I have an attack of newcaritis every year, and I've got it right now. I'm growing weaker by the hour. There ought to be an antitoxin or a law or something. Few men are immune. The fellow without a car feels that gnawing urge to get one; the man who has a car longs to trade it in for something bigger and better; the plutocrat with a covey of benzine rickshaws feels the impulse to add to his collection a few models with more filigree work on the panels.

A few years ago there was a classified advertisement that was always good for a laugh. It read:

FOR SALE: Automobile, nearly new; owner has no further use for it.

It was frequently found in the humor columns as a specimen of unintentional candor. But today, in the year 1929, such an ad would just about express the average owner's attitude. That is exactly why most people sell or trade in a car today—they have no further use for it, in the sense of respect or admiration. Snappier models have come out, and all pride of ownership in the old bus has been knocked flatter than a night-club hostess's smile.

THE horse was said to be Man's Best Friend, but its successor, the motor car, is seldom kept in one family long enough to become more than a stranger.

In the country's present state of prosperity people are discarding last year's automobile with the same abandon with which they used to discard last season's straw hats. A man is known in many communities, not by the cars he keeps, but by the cars he doesn't.

Study of a man who has just bought a $3,000 car with a $2.98 cigar lighter attached

"I think I'll trade this bus in; the gloss has worn off," has come to be a rather common statement.

Today's new car is tomorrow's old boiler. The automobile has made life easier but it has made contentment harder.

The fellow with a car he has driven three or four years no longer boasts of it. He apologizes.

All the world's an automobile show and all the people merely prospects, as Shakespeare might say.

It has been my experience that few resolutions are broken with more ease than the one to make the old car last another season. As early as the January automobile show I first feel that craving to possess a car that has never been rained on. I look over the new models, noting each new gadget, gewgaw, and gimcrack inside and out. But, much as they tempt me, I push the idea away with a resolute "Nothing doing! The old car is like new. The engine is a marvel, there isn't a scratch on the body, and the tires are good for another ten thousand miles."

ABOUT the first of February, after gazing into salesroom windows a few hundred times, I say to myself, "I don't see how they can turn out such beautiful models for the money. If I didn't think my old car would do pretty well after a general overhauling, a couple of new tires and a little retouching, I might consider turning it in."

By Washington's Birthday I have probably received thirty or forty circular letters and attractively illustrated folders giving pictures of the new 1929 models with an urgent invitation to "permit our Mr. Ketchum to give you a demonstration."

"Well," I say to myself at this point

hen you're getting a trade-in allowance

-everybody's *catching* it!

s just wonderful how the automobile cers improve the models each year. I der what allowance I could get on my car? It needs new fenders, all four s are pretty well worn out, and the or needs looking into. The transion is noisy and the brakes need reing. I doubt that it would pay me to t up."

hen, around the middle of March, I ken and allow Mr. Ketchum to call give me a demonstration. When this er I am pretty well sunk.

These new models have everything," use that night. "If I want to make old car last through the season I'll to have the engine taken down and hauled, the whole body burned off repainted, new gears put in the transion, the radiator fixed up, and the inr re-upholstered. I heard a funny underneath the other day and wouldn't be surprised if the chassis were broken. Maybe the wise thing to do would be to trade it in and get a new car."

Not much more is needed to pull me under, and by April the last urge comes when several of my neighbors pass the house in glistening new sedans and look condescendingly on my last year's car standing at the curb. That settles it. I go to the telephone and call Mr. Ketchum.

"HELLO, Ketchum," I say. "I've decided to buy that new car. I wouldn't feel right in last year's model any more. Drive the new one up and take the old can away."

Weak-willed, eh? Well, the automobile makers of this country plan to turn out 7,000,000 cars this year, and they won't expect to sell them to people who have never had an automobile before. There must be at least 3,500,000 others like me.

Times have changed. The man who drives the old teakettle designed by Rube Goldberg and synchronized by the American Can Company, and boasts, "I've had it seven years now and I jest can't wear it out," has almost disappeared from American life. Even the fellow who has driven the same car three seasons hurries by men with cameras in the fear he may see his picture in the papers above the caption: "Pioneer Motorist Recalls Early Days of Horseless Carriage."

Automobiles don't make the man. But they make the impression. Not that people are vain and extravagant. They just don't want to be cluck-clucks—especially not in these jolly days when the smooth-talking salesman explains the financing plan in such a way that by the time they sign on the dotted line, they feel that it is only a little more involved than subscribing to a popular magazine for a year or becoming sole proprietor of a vacuum cleaner.

There is something about this fourteen-months-more-and-you-will-own-the-car-outright psychology of motor-car sales policy that makes a financial obligation seem like coming into an inheritance. You may, to all intents and purposes, be merely driving the car on the so-much-a-month plan, but the license is in your name and you can make pedestrians jump just as far as if you had paid cash for it.

WHEN you drive up to a fashionable hotel in a new $3,000 sedan, the bell-hops will grab your baggage and the manager will raise the rates with the same alacrity they would show if you owned the car *then* instead of the following June.

Although you may have made but (*Continued on page 176*)

PICTURE NUMBER ONE

Look at this picture for five seconds. Then turn away from it and write as rapidly as you can everything that you have seen in it. You should be able to see twenty details. Turn to page 126 and read the list given there and compare with your own

THE best thing I have to say about the tests presented in this article is that I have tried them and they work. That is, I found out what was the matter with my memory and what I could do to make it better. As a result I am confidently storing away names and numbers and facts at a rate I had supposed impossible a few months ago.

For the past three years I have listened to wails about failing memories. My husband began it; he was certain his memory was weakening; and at every gathering of our friends someone was likely to seek for some elusive fact and then remark, "My memory seems to be going. I can't hold on to things any more."

I suspected, both with regard to myself and my friends, that this loss of memory was a natural accompaniment of the first gray hairs. But when our daughter, aged twelve, came in and said solemnly, "Mother, I am sure my memory is failing. I forget so much," I threw up my hands. Evidently *age* was not the answer. I wanted to find out what was. So I hunted up Dr. Thaddeus Lincoln Bolton, head of the Department of Psychology, at Temple University, Philadelphia, and put the question to him. I felt if anyone could throw some light on the subject, he could.

"DOCTOR BOLTON," I said, "until four years ago I had a wonderful memory. Tell me any name or number and I would not forget it. Then I went to California, and in a few weeks I met hundreds of motion-picture employees, actors, and directors. I found I was not remembering their names. The movie people were very sensitive and I got into difficulties. I tried my best to force my memory to retain the names, but I failed. Since that time I cannot remember names as I once could. And all around me I hear people talking about failing memories. What is the matter with us all?"

Doctor Bolton was thoughtful.

"I cannot say positively offhand," he replied, "but in your particular case it looks as if you had a great capacity for names but that you arrived at your limit. Then you tried to train your memory and failed because you had no method.

"Everyone," Doctor Bolton continued, "is born with a certain capacity for storing isolated items like names. But every human being also has a limit. Some people never arrive at the limit, and they pride themselves upon their 'good' memories all their lives. You may have reached *your* limit when you tried to remember that large number of new names, or you may have tried to learn them too quickly. If you half learn a name and then try to learn another, you suffer from what is called 'interference of learning.' The second name interferes with the first, and neither is learned. Many people who have a good memory capacity fail to use it to advantage because they want to *hurry learning.*

"Probably you also failed to be discriminating as to which of those names were absolutely essential to your business. If you are going to remember what is *essential*, you will have to refuse to clutter your mind with anything but essentials. These three things—the arriving at your natural limit for isolated facts, learning

Digitized by Google
Original from
UNIVERSITY OF IOWA

hurry or half learning, and trying to rm everything at once with no selection the vital essentials—would account for ur failure."

"But what am I to do?" I asked. "I ıst remember names; it is necessary to siness."

"*Train your memory,*" replied Doctor lton. "You cannot increase your ive capacity for storing facts. But ıy few people can accomplish anything depending on their native capacities. However, to extend the natural limits your memory, you will have to enter ı a good deal of enthusiasm on the s and the training. To succeed with thing new, it is necessary to launch ith as much enthusiasm as possible. s you will be carried on against the ositions that arise. Try to have two hree people take the tests with you. tests are comparative, and they are ıded to show up differences in human gs by which the individual learns ething about himself."

TEST I

IE first test, as Doctor Bolton told ıe, is to determine the way in which *actually* remember; that is, whether have a verbal, pictorial, or objective ory.

verbal memory means that you tend member words rather than drawings jects. A *pictorial memory* means that natural way of remembering is by res or mental images. An *objective memory* means that your natural way of remembering is by objects.

Three groups of things to be memorized should be arranged.

The first group is a list of ten words denoting simple, everyday objects. Let the persons to be tested *read the words once*, and then get them to write or repeat these words in the order they are given.

The second group is of ten pictures or drawings. Allow those being tested to look at the drawings for five seconds; then cover them and see how many are remembered.

The third group is of ten objects, arranged on a table in orderly rows. Allow about ten seconds for inspection. Remove the objects and have those taking the test recall them.

Now compare the errors in memorizing the three groups. The one in which you and any others who took the test did best shows the natural method of remembering.

"There are a few people," Doctor Bolton said, "whose remembering process is by *sound;* that is, they recall things to mind by hearing them."

"Do our occupations develop our types of memory?" I asked.

"No," said Doctor Bolton, "they do not. The method of remembering is native and individual. The first thing to do is to find the type of memory you have and train it."

The second great aid to memory, suggested by Doctor Bolton, is the association of ideas. The mind can hold only a limited number of isolated facts. After the capacity point is reached, it cannot be increased except through association, which means tying something you are learning to something you knew before.

"The more you can learn of any new thing through your senses," said Doctor Bolton, "and the more associations you can find for it with things you already know, the greater are your chances of remembering it. Get an impression of it through as many senses as possible, and relate it, as far as you can, to things you already know. How hard it is to learn unrelated things is shown in this next test."

The test, as explained to me by Doctor Bolton, follows:

TEST II

READ the following twelve words in the order given until you can say them once in order. There is no time limit. Count your number of readings for learning. If you make a mistake in repeating the list in order, finish as you can and read again until you are letter perfect.

List 1—Words:

rug	put	pay
pin	sag	not
cud	rib	sap
now	tug	pew

Then read the following twelve nonsense syllables until you can say them once in the order (*Continued on page 120*)

PICTURE NUMBER TWO

Look at this picture for five seconds. Turn away and write what you have seen. Compare what you have seen with the list shown on page 126. You should be able to see at least thirty details.

AGNES SLIGH TURNBULL *describes*

The Great Adventure of Adopting *a* Baby

MRS. TURNBULL'S delightfully human stories, most of them built around domestic situations, have been appearing in this magazine for several years. They are tremendously popular because they are so true and real. In this issue you will find "The Best Things," a short story told with the tender understanding and humor which distinguish Mrs. Turnbull's work; and in the article beginning on this page you will discover why she has such understanding and such humor. Incidentally, she answers the question which everyone has asked: How does it feel to adopt a baby? *The Editor.*

HOW does it feel to adopt a baby? This is the question which I have been constantly asked ever since a certain day nearly two years ago when I made a sudden and rather melodramatic return from a visit in another state, with a small, four-weeks-old, pink-and-white flannel bundle in my arms. Beside me was a very nervous, very proud, very much excited husband, bearing a box of nursing bottles, boric acid, sterile gauze, feeding formulas, nipples, et al.

Our good, black Julia opened the door for us on that eventful June morning with a face almost blanched with amazement, and, after peeking at the bundle, announced that she had never seen anything so *little* in her life. She further expressed serious doubts whether any baby of such small dimensions would ever grow any bigger.

She did rise to the occasion sufficiently, however, to empty the remains of the week's ironing from the clothes basket and bring forward that humble receptacle for a temporary cradle.

And when we saw the clothes basket, with its morsel of femininity, reposing upon our best chair in the center of the living-room, my husband and I sat down suddenly, looked at each other, gasped—and then laughed. All this in spite of our having spent a sleepless night on the train.

Here we were, two people on very much the yonder side of thirty, with ten years of married life behind us in which we had been free to come and go at pleasure and to order our household according to our own best comfort. And here was I, in particular, returning from what had been designed as a recuperative visit after a slight nervous breakdown—here we were, and there was the clothes basket *and* the baby!

"Great Heavens!" ejaculated my husband, "we've certainly gone and done it!"

"Yes," I returned, "and," with a flash of practicalness quite alien to my nature, "we've absolutely *no place to put it!*"

And we hadn't. Worse than that, I didn't know offhand whether infants were using bassinets or cribs that season, nor what articles of wearing apparel were necessary at once or could wait until a later day. Our ignorance of the whole problem of what to do with a baby when we had it, was minute and comprehensive.

But while we sat there, nervously discussing the matter before the child would wake up, we were reckoning entirely without the fact that already the news of our arrival had spread like wildfire along the quiet, suburban street. It was certainly less than an hour before we saw a strange procession advancing from two sides with the evident intention of converging at our front walk.

From the west came a large ivory crib on wheels, propelled by a good neighbor three doors above; from the east came a bassinet, also on wheels, proudly pushed down the street by the twins who had long since outgrown it and its mate. Behind them came their mother with an armful of sheets and tiny garments. Various other contributors fell into line with gifts new and old, and, more precious still, wise advice and encouragement.

BEFORE we knew it, one of the bedrooms had been turned into a fully equipped nursery. My husband remarked plaintively that night that he feared he would be compelled to buy a perambulator himself, as none seemed to be forthcoming from the neighborhood! As an actual matter of fact, that *was* the only piece of baby furniture we bought for nearly a year, thanks to the delighted interest and the generous loans of our friends.

On that first day, when the excitement of receiving and placing the furniture and exhibiting the baby herself had subsided, I did what I urgently advise every foster mother to do as soon as she can catch her breath long enough to go to the telephone: I called up a nurse and arranged for her to come at once. I was fortunate in getting a young woman who specialized in baby cases. She came that evening. And when I saw her calm, casual, competent ministrations begin, I suddenly realized that I had been ill, that my knees were still wobbly, that I was seeing every nursing bottle—double—or treble—and that all I asked of life at that moment was a chance to roll into bed after the most exciting twenty-four hours of my experience to date.

IN THE week that followed, however, I was initiated into all the delicate ritual of caring for a young baby. I learned, you see, as most new mothers do, from the efficient hands of a trained nurse, and began caring for my baby at just about the time that most mothers begin taking full charge of their own fledglings. The accurate information and the professional teaching I received during the week of the nurse's stay—not to speak of the relief of mind which her presence afforded—was worth three times her salary.

But now to return to the question itself which has been propounded by all types of friends and acquaintances and strangers, by grandmothers and flappers, by college youths and hard-boiled old bachelors. A few have smiled cynically and raised a shocked eyebrow, mentioning the matter as if my husband and I were guilty of something rather indecent, certainly of rank folly at the best. But most of the inquirers have shown such genuine interest that the answers to the questions have been a pleasure.

Even so, I might not have thought of setting down my reactions to the experience, on paper, if it had not been for two things: One was a remark I overheard from a woman at a tea party.

"Why," she was lamenting, "doesn't someone who has really *taken* a baby tell how the thing works? I have read articles by doctors and social workers and child welfare experts on the wonderful success of adopting children, but what I should like to hear would be a few honest remarks from a real foster mother!"

That, I said immediately to my inner consciousness, is *I*, and I shall at once set about proving it.

But the second thing goes deeper. During my search for a baby and the ultimate finding of one, I made some discoveries that were either beautiful or tragic, depending upon the viewpoint. I found out that a perfectly amazing number of childless couples are looking for a child to adopt. The very fact (*Continued on page 1.*)

ROY ANDREWS—*the* Dragon Hunter

By FITZHUGH GREEN

THE wounded man lay motionless in his blankets. Over him slatted a thin tent wall, noisy in the growing gale. By his side on a low box someone had set a dish of rice. food was cold and untasted.

feverish flush touched the man's pale ks with red. Once, when he fumbled e heavy bandages encasing the bullet in his thigh, his bloodshot eyes opened tly and rolled in pain.

utside the tent was a scene of wild dis- r. None could stand erect against the est that was sweeping down upon the from the lofty sandstone ramparts hich it was pitched. To leeward spread st waste of yellowish desert, streaked mottled by the sand-whorls that ed across its face.

ere were six tents in all. Brown men ng robes of sheepskin scurried about , piling rocks on loose gear and lash- lown the flapping edges. Every gust e rising wind brought a blast of cut- sand that made the men wince as it ed across their faces.

atch that stove!" bawled a white in a leather coat. Then, in the ear of er white man at his side, he shouted: ought to move him soon as we can!"

bsolutely," replied the other, cup- his hands to keep his words from be- hisked away in the gale.

th struggled into the tent where their ing leader lay. He roused at their nce.

i, fellows," he said weakly. "How's oing?"

retty rough," panted one of the men. v is the leg?"

ll right. Just a little throbbing."

ever mind—" The speaker hesitated. he added with finality: "We're go- take you back as soon as this beastly storm stops."

this the sick man rose to one elbow, y but defiant. "You are not," he re- .

ut it might get worse."

"It won't," the other protested grimly.

Only to avoid exciting the wounded man, the others let him appear to win the argument. They thought they could resume it next day. They did. But to no avail. Despite his pain and the danger that he might lose his leg, the leader refused to retreat.

Wounded and fever-ridden, isolated in the midst of the wild Gobi Desert in Central China, besieged by a terrific sandstorm, and shivering in the bitter cold, Roy Chapman Andrews, of the American-Asiatic Expedition of 1928, would not let a painful accident handicap his little party last spring. The work of hunting prehistoric fossils must go on, was his dictum. And it did.

This one accident of many is typical of the man who in the past ten years has thrown the searchlight of modern science for the first time on the ancient wilderness of Central Asia; a man who is known among his fellow explorers as "one who refuses to have adventures."

His theory has been that our globe was a restless creature in its early life. Its continents rose and fell; seas flowed off them and on again for many æons before our present continents came to rest. He believes that Asia was the first continent to settle down and stop rising and falling.

"This being the case," he says, "Asia must therefore have been the home of the first beasts, the first mammals, and the first men that ever inhabited the earth."

"IN OTHER words," I asked him, "it was the location of the Biblical Garden of Eden?"

"Yes, if you will," he smiled indulgently. "But the interesting part was that until our recent discoveries, such a place had been only a theory. No one had ever produced evidence that life all started in one part of the globe; and there was no way for us to tell just where to look for this part.

"But we knew that if we could locate the remains of certain early types of beasts in a country which had been geologically stable before America or Europe or the other continents settled down, then those types would indisputably be the parent stock for all the animal life in the world."

It was a bold theory and one that needed tangible proof before scientists would believe it. Theories were easy to conceive, and there were thousands of new ones every year. At the time he promulgated this one, ten years ago, Roy Andrews was, so to speak, just a young upstart. The story of how he found proof that placed the Garden of Eden in Central Asia is one of the great romances of modern exploration.

THE story really opens on January 26, 1884, in the town of Beloit, Wisconsin, with the birth of a blue-eyed baby boy. While his parents were kindly people and good, intelligent citizens, there was nothing in Roy Andrews's background or surroundings to indicate that he would become a man whose fame would echo around the world.

Yet even in his early years the lad revealed a trait that gave a clue to his spectacular future. Let his mother tell it:

"Roy liked to hunt just as most of the other boys did. And the hunting was good. His father and I didn't mind, because it was a healthful occupation and it brought fresh duck and other game to our table. However, Roy had one difference from the other boys: He didn't like to kill for the sake of killing, but for the purpose of adding a new kind of skin or head to his collection in the attic.

"He used to spend hours over this collection. I am sure he could have learned much out of books on birds and animals, but he seemed to take a greater pleasure in digging up facts for himself."

"*Digging up facts*—" How prophetic the boy's early aptitude was!

After graduation from Beloit College, young Andrews wrote to the American Museum of Natural History in New York

Digitized by Google

The camel caravan of 125 animals that carried the food, gasoline, spare parts for automobiles, and other equipment for the Roy Chapman Andrews party on its great Asiatic expedition. (Left) Andrews and "Goldie," a young eagle

for a job. He had heard that the Museum had a lot of animal mounting to do. It never occurred to him that big eastern universities were turning out thousands of men equipped for this sort of work, whereas the turnover in the Museum was not half a dozen a year.

SO IT turned out that when Dr. Hermon C. Bumpus, the Director of the Museum, read Roy's letter, he turned to his secretary and said:

"I like the sound of that young man. Tell him to come on to New York—at his expense."

A week later Doctor Bumpus sat talking to his correspondent.

"You think you would like to work in a Museum?" asked the Director, looking severely at the bright-faced boy from the West.

"Yes, sir. Try me."

Of course, that was exactly what Doctor Bumpus intended to do. Because, like all executives, he had long since learned that no amount of reputation or training is as helpful in judging a man as are the man's own actions.

It so happened that only a few days previous a whale had been reported washed up on the beach on the south shore of Long Island. Its body was half sunk in soft sand. The January weather was bitterly cold. And, as any seafaring man will tell you, there is no nastier job in the world than cutting up a dead and decomposing whale.

Doctor Bumpus sent Roy Andrews down to get that whale for the American Museum. He disappeared for about a week.

"Gone home, I guess," grinned Doctor Bumpus to his secretary one morning. At that moment the telephone rang.

"This is Roy Andrews, sir," came a faint voice at the other end. The wires were humming with the second blizzard in five days.

"Oh, hello!" The tone of the Director's response held both relief and surprise. "I hope you're all right."

"I've got your whale, sir."

For a moment Doctor Bumpus could

Andrews and one of his Oriental helpers looking for trails that lead to the East

not speak. "Where?" he asked weakly.

"Here at Amagansett, ready for shipment to the Museum. Please send some trucks as soon as you can."

That whale is now mounted in the Museum.

"Didn't you nearly freeze to death?" asked Doctor Bumpus later, trying to jump the real story of his achievement from Andrews.

"Shucks! We have it twice as cold in Wisconsin," was all the answer he got. The danger and excitement of the job were of no importance compared to the doing of it.

ABOUT this very thing, Andrews said to me: "The public wants to hear about adventure. Many of the so-called explorers are not explorers at all, but just bored people seeking excitement. They are hoping against hope that they'll have a tough time and some sort of narrow escape from death. This sort of thing is their stock in trade when they come home. It makes a book or a lecture romantic; at least, they think so.

"My idea is entirely different. The explorer who has a lot of adventures has usually made a lot of mistakes.

"For the explorer or investigator has a problem to solve just as a business man has. And so long as things go as they should, there are no adventures. It is when a man makes mistakes or underestimates the grub or overestimates his strength that he has what may be called an adventure."

The way he killed the whale in 1908 got young Andrews the position he coveted in the American Museum. Later led to his scientific study of whales along the Alaskan coast in 1908. It was the indirect cause of his being attached to the U. S. S. Albatross on a voyage to the Dutch East Indies, Borneo and Celebes in 1910. It took him into the Antarctic on a hard-bitten whaling ship for over a year. And it led, finally, to his now classic work investigating whales up the Japanese and Korean coasts until

WIDE WORLD PHOTO

Mapping the Bad Lands of Mongolia

WIDE WORLD PHOTO

The head camel man takes a look into the weird and unknown country toward which the expedition is traveling

When it was that he was first seized by the inevitable fascination of the "Dragon Country," toward which he had since—unknowingly—been heading.

In side trips he caught glimpses of the vast and mysterious Mongolian desert that lay to the south and west of Korea. He had vague tales of the Desert of Gobi in the center of China stirred strange yearnings within him.

Finally he could resist the temptation no longer. His secret was that in the center of Asia might be found the answer to the riddle—*Where did Man originate?*—was the lure that drew him.

Officially the project was called the "First Asiatic Expedition of the American Museum." It left in 1916. After covering part of Tibet and western China, it returned in 1917. Andrews went out again in 1919, and in a year encircled the outer fringes of bandit-ridden Mongolia.

"I sort of wanted to get the whole picture in my mind," he explained. "I wasn't sure what I was going to find, but I wanted to know where to look for it."

There were plenty of obstacles when the final great expedition was organized. One was money. All explorers have learned that money is the lifeblood of the modern expedition.

"My experience had already taught me that the two prime essentials of a scientific expedition are time and money," Roy told me. "I could give the former; but my friends had to provide most of the latter."

Despite this, Andrews nearly broke his health and nerves rushing about the country lecturing, writing books and articles on trains, and trying to collect his men and equipment in New York. Every penny he could scrape up in this way went into the great scheme for a final big effort to prove or disprove his theories. But it was a mere drop in the bucket.

He tells it: "In something close to despair I went to Mr. J. Pierpont Morgan. I met him in his magnificent library on Thirty-sixth Street. With some qualms I shook his hand and opened my mouth to explain my predicament.

"But suddenly I found myself speaking with confidence and ease. I think the reason was that Mr. Morgan is at heart an adventurer. His big, rugged frame, his expressive eyes, and his friendly smile made me feel that he would like nothing better than to go out and do just what I was trying to do.

"'It's a great plan,' he said when I had finished. 'What do you want me to do?'

"I told him the expedition would cost $250,000, a good deal more than I had been able to raise. He didn't ask me why, or cross-question me about how I was going to spend it. He just said: 'All right. I'll help.' And he did.

"THE expedition reached Peking on April 14, 1921. The worst dust storm in years was blowing at the time."

"'It is a bad omen,' Chinese savants told me. 'It means we shall have famine, war, disease, and death. Your enterprise is doomed to failure. You will not find what you go to seek.'

"The Chinese were largely correct in their predictions. Smallpox broke out in the very districts through which we had to go. Civil war, already raging, swept northward across our path. A drought of fourteen months began to culminate in a famine that made brigands out of peaceful Chinese farmers. But I couldn't afford to wait. I might not be able to get the money again."

So westward Andrews fought his way; literally *fought*, too. There were actions with bandits; tormenting sieges under battering, blinding sand-storms; (*Continued on page 151*)

How America's *Secret Agents*

By THOMAS M. JOHNSON

"IT IS a terrible affair," said the Chief of the French Secret Service in Switzerland. He spoke almost in a whisper. His face showed strong emotion.

"What a blow they have dealt us, those Germans!" he exclaimed. "Fooled us about their great offensive that almost crushed, first, the British Army, then ours. Tricked our secret service like schoolboys. Caught there in Germany twenty-one of our good men, that we depended on, and, *pouf!*—snuffed them out. A firing squad at dawn. Then, in those men's names, they sent us forged false reports. We never knew, until too late."

Eyes flashing, he struck the table a blow that made the glasses ring.

"One man did that!" he cried. "One man, though the master of many more, men and women. Ah, what a master, of things dark and sinister. He is a veritable Mephistopheles!"

Cautiously the Frenchman looked about the obscure café, then leaned forward and lowered his voice again.

"And now," he whispered, "that man, that devil, that Master Spy—he is here—"

The American officer in civilian clothes started, and looked about too. He was not yet inured to all the game's abrupt transitions, its dull monotonies, its melodrama. He smiled apologetically.

"You mean somewhere here in Switzerland, of course," he said.

"Right here in Berne," the French Chief replied. "Perhaps we pass him on the street, and do not know him. Perhaps," waving his hand toward a nondescript group just out of earsho "perhaps he sits at that table, and watches us. Who know He has two, three, four, one cannot know how many, identities

Then, with a shrug:

"Eh, *bien*, this Mephistopheles is human, for he leaves trai and he has not caught all the hounds of our Deuxième Burea The trail ends in Berne. He is here, contriving who know what new evil to the Allied cause. It is for us, all of us, to bre up his game. That is why I asked you to meet me here— seek the help of the American service."

The American thrilled at the idea.

"YOU flatter us," he said; "asking us to help catch t famous 'Master.' We've heard of him, even if we are no at this 'secret stuff.' The Germans can't have all the crew attachés and agents and spies they have in Switzerland wit out there being some leaks."

He smiled.

"And do you know," he said, "the American dollar is regular divining rod when it comes to finding those leaks."

The Frenchman was beginning to smile, too.

"But, yes," he said, "it is true. Last week Major v Bismarck (a schemer, that one, like his famous ancestor) w roaring with laughter over some false information they h sold the Yankees."

recognized all too well

Caught Germany's Master Spy

Illustrated by MARSHALL FRANTZ

he American's smile turned to a flush.

Oh, he was, was he?" he said dryly. "Well, maybe he'll be ised—he and the rest of them."

ow, that prediction came true. The Americans did catch laster Spy. How, is one of the most thrilling true tales of ecret service in the World War, a tale that has never been intil now, eleven years afterward.

his is not fiction. "The Master" lived and moved in his rious ways for the cause of the German Empire. Perhaps l lives; so in this narrative he must be fictitiously named, gh his name (an appropriate one) is known. He was one most formidable figures of that half-world where men and n of strange identity, or none, with motives the highest basest, flitted and dodged, unstoried and unsung, in a r, secret war—the war of the spy and his enemy, the r-spy.

that war the favorite battlegrounds were the neutral ies bordering on Germany: Holland, Denmark, Switzer- and foremost of these was Switzerland. Surrounded by ny, Austria, Italy, and France, great Powers in death e, little Switzerland had as much chance of escaping ched as a child in a white dress making mud pies.

tzerland was on the line of march of the secret war; a base for all sorts of dark operations directed by Ger- nd Austria on the one hand, by Italy and France on the other. Nor were they the only players in the masked game. To this crossroads of Europe all the nations of the world sent members of their Intelligence Services. Here were suave and smiling diplomats in their element, army officers trying to hide professional stiffness in civilian clothes, ready to buy the information peddled by "traveling salesmen," whose chief stock in trade it was, after trips into one or another of the surrounding countries, or from railroad employees, or customs guards, or hotel servants. Spies and spying everywhere. Normal, peaceful citizens scarcely knew where to turn.

The Alps had become a whispering gallery; the clear, free air was tainted with deceit. These thousands of invaders had tainted it perhaps, but some Swiss succumbed. Speaking German, French, and Italian, they could make money as spies for one Power or another—or several, sometimes on different sides. There were other pennies to be turned carrying messages, or smuggling over the borders.

EARLY in 1918, long before the Frenchman and the American met in the Berne café, all the Intelligence Services had but one thought, the great German Spring Offensive. The Germans sought to conceal their plans and to mislead the Allies, who strove by every means to find out when, where, and how the blow would fall. Fierce and unscrupulous waged the secret war. Switzerland's half-world hummed with the Allied spy-drive to get into Germany and get the precious information.

By land, black closed cars sought hidden byroads near the frontier. By water, motorboats slipped across Lake Constance,

to get strong swimmers within reach of the German shore before patrol boats brought a pistol fight and sudden death in the dark. In the air, supposedly neutral, the hum of motors was heard at night, and brave men, dropped by parachutes, tried the hard task of deceiving grim German spy hunters, who, too, lived with wits astrain, to repel the stealthy invasion. All the Allies worked together, the splendid British secret service, the Italians, adept at stealth, the Americans, supplementing their budding service with former Russian spies, and, most numerous of all, the French. From a score of points in Switzerland they tried to get their trained men through the German net.

At a French vice-consulate in a certain smaller Swiss city, perhaps the regular business that the office did with its right hand concealed and aided what it did with its left. It was part of the game to be thus ambidextrous. Anyway, there were rumors in the half-world.

There came one day to this modest and retired vice-consulate, a caller who put his foot in the door, then showed a badge that the staff recognized all too well.

"Swiss secret police," they whispered.

TO RESIST meant at least arrest and deportation from Switzerland. To yield might mean a thorough search, producing evidence that would cause far more serious international complications. With quick, nervous strides the unwelcome visitor gained the center of the room, a wiry figure of middle height, dominating all. His face, of a man of about thirty-eight, bespoke determination, magnetism, even dominance; a forehead broad, imposing, over black eyes flashing keenly behind glasses, nose straight as an emperor's, mouth masked by a dark brown mustache.

"Let no one leave," he said in excellent French. "I am, as you see, an officer of the Swiss Government. I have come to look for suspected violation of Swiss neutrality."

Then dramatically he thrust forward a pointing hand.

"Let me see the contents of that safe!" he said.

"But, Monsieur," an official remonstrated, "this is a French vice-consulate. I assure you, there is nothing wrong here—and we have never been asked to open our safe."

"Nevertheless," said the visitor, "I demand that you do so."

The Frenchman shrugged his shoulders. The really important things, he hoped, were not in the safe. He stood by while the man with the badge eagerly transferred papers and memorandum books to a small bag he carried.

"I shall examine these," he said, "at my leisure."

The Frenchman stepped forward.

"Examine them here if you must," he cried, "but you have no right to take them away."

Like a flash the visitor's hand went to his coat pocket.

"Ah, have I not?" There was a ring of command in his voice. "We shall see. Let no one move."

Nimbly as a cat, he stepped to and through the door, slammed it, and shot the bolt. Came the sudden drumming of a powerful motor.

The secret war in Switzerland began to go badly for the Allies. In another Swiss city, a prosperous Swiss merchant, perhaps a trifle pro-Ally, received a call from a Swiss secret police agent who insisted on seeing reports of his traveling men in Germany. The Swiss agent showed a badge. A masterful man—yes, middle height, wiry, not quite forty, mustache, glasses, piercing black eyes.

"It is the same man," said the French secret service.

Next day came a code telegram from Zurich. The identical Swiss agent had called there upon a trusted Allied agent, shown the badge, and asked questions that could be asked only by someone who had seen papers that might have been in the vice-consulate safe. He seemed to be on a trail or two.

"It becomes serious," said the French. "What are the Swiss up to?—Or is it, after all, the Swiss? But that badge—"

There are French Swiss as well as German, and one of these reported next day:

"A police officer of Zurich says this man is a *bona fide* Swiss agent, and it's all right."

The Zurich officer was a German Swiss and had been long on the Allied suspect list. They could prove nothing, but they could watch. Then came a report from Geneva:

"The British aviator X——, here on leave, has been seen much with a man about whom we have been curious for some time. He passes as of the Swiss secret police and speaks English well. He seems not quite forty, middle height, slim but strong, brown mustache, glasses, black eyes very keen and glittering."

Then, like a thunderclap, word from the Deuxième Bureau in Paris:

"The British Independent Air Force who conduct, from airdromes in the American area in Lorraine, night bombing raids upon the German Rhine cities, believe that the secret of their system of signaling by lights at night has been betrayed to the Germans. Several times lately German airplanes have flown at night over British airdromes, flashing British code signals to light up. When that was done, the Germans bombed and machine-gunned the airdromes, destroying airplanes and killing and wounding aviators and mechanics. There is reason to believe they got this information in Switzerland."

Search as they would, the British could find nowhere in the Royal Air Force an aviator named X——.

BUT there was worse to come. All this time, the French secret service in Switzerland had been congratulating itself on its success in getting men into Germany and their reports out again. The great German Spring Offensive of 1918, these reports said, would be a stupendous blow against the French in Champagne, possibly linked with a pincer attack on the new and small American force near Toul. So, while other channels of information contradicted, steps were taken to be ready. On March 21st the great blow fell—not at all on the French in Champagne or the Americans in Lorraine, but on the British on the Somme, a hundred miles and more away. The French could hardly believe this was the main attack, and their reinforcements were slow, all but too slow, to aid the hard-pressed British. Then, suddenly, the French spy reports from Germany became queerly mixed.

Expert checking showed them a combination of truth and falsehood so ingenious that it was almost impossible to tell which was which. Much of the true information the Allies already had—and the Deuxième Bureau found that the Germans must have known it. Horror-struck, they tested out their supposedly safe and sure information service working from within Germany via Switzerland. They ordered it to secure plans of the great plant of the Badische Anilin Fabrik at Ludwigshafen, the great German gas factory—of which they already had plans that they knew were accurate. By the underground railway, bearing the proper marks of the French secret service, came back a set of plans labeled "Badische Anilin Fabrik"—but they were not the true plans. The Germans had been tricking the French secret service.

How? For how long? Here was a task worthy the keen Latin mind, to be done in desperate haste, for other German drives were coming, even now were in preparation. Where? When? A trusted source of information had been polluted by the enemy. And the trained agents, who had crossed the German border so confidently but who seemed to have sent back false reports—where were they?

LIKE eager hounds, the Deuxième Bureau beat the cover of Switzerland and the German border, and soon found a scent here, a trail there, small bits that, put together, revealed the dim outlines of tragedy. Every one of the twenty-one skilled agents who had gone into Germany to find out about the great drive had been doomed before the frontier was reached. The Germans had let them walk into the parlor, locked the door, watched from behind a curtain while they went about getting information, noted every move. With the greatest pains they had found out how the French spies sent back their reports, by secret messengers, code telegrams, newspaper advertisements, whatever means. Then, like hawks tired of hovering, the Germans had pounced. One French spy after another had stood gray-faced before a gray-clad firing squad. One by one the Germans had snuffed them out—and sent back, in their names, falsified reports. It was indeed, for the French, a terrible affair. And how many British lives had it cost?

French secret service sought the creator of this masterpiece of trickery. Gradually there appeared the figure of The Master. But only gradually. For long he was a name, a phantom; and not even those who had seen him, like the staff of the vice-consulate, knew just who or what he was. They cursed him as The Master and then looked over their shoulders.

Again the French Secret Service Chief and the American officer were talking.

"Every vice-consulate man we set looking for him, all over Switzerland," declared the Frenchman. "And, *voila!* right here in Berne one comes to me greatly moved.

"'I have found him!' he cried. 'In the office of the police!'

"I assure you, I could hardly contain myself.

"'But certainly,' says my man. 'From e hall I saw him talking, laughing with a lice officer. A typist told me he was a od friend of the officer and comes often. e left, he took a taxicab, he walked ound a block, then to an apartment use and into a door on the first floor. e *concierge* was a veritable Prussian ter-*offizier*. No use to ask him. But e *concierge* came out, walked up the eet. I seized some newspapers from an cient *vendeuse*, I ran in, rang his door-l. There came to the door a man of height of him I followed, but broader, ker, with heavier features, different ression, in short, another man—and he uniform of a captain of the German ny. I looked into the apartment, a ll one—and I swear there was nobody . The man I had seen go in—was not re!

'I had just wits enough to offer a spaper. The German officer looked l at me, took the paper, fumbled in pocket, went back into the apartment, took from an overcoat some money—again, I swear, the overcoat was that e man I had followed, the man of the -consulate. But this captain was her man, or seemed so.'

"OU know, my friend," the French Chief continued, "we have a little t you call rogue's gallery, with pictures ose who are suspect. Almost immedi- our man chose a picture. 'Here he e said. It was a Captain von Einem, who voyaged often, by Government permission, between Germany and Switzerland, to care for German soldiers interned here. For long we had suspected that under cover of this humane work he was part of their underground railway, a messenger for and probably a recruiter of spies. I ordered him watched day and night, and soon our agent reported:

"'This morning Captain von Einem took the train for Zurich. I followed, and at the station a limousine met him. He closed the curtains. The car drove slowly for a half hour, then went to an apartment house in a quiet street. The door of the car opened, and out stepped—another man. The Captain had vanished. This new man wore rather sporty civilian clothes; was short, stooping. I caught a glimpse of his face—not that of Captain von Einem. Into the house went my man. Around the corner I bought a basket of vegetables, turned up my coat collar, and went back. The *concierge* was surely German, but a woman was sweeping and to her I said:

"'"These are ordered by Herr Glauber, who just alighted from the automobile."

"'"Get away!" she cried to me. "We know no Herr Glauber here. That was Herr Michaelsen, who has lived here this long time. You have the wrong house."

"'And they told me at our Zurich branch:

"'"Yes, Michaelsen is on our suspect list. He is attached to the German vice-consulate, in the bureau for exchanging German coal for Swiss milk, cheese, and other products. He speaks German, French, English, and German-Swiss. That would make him a dangerous spy if he were discreet enough. But this Captain von Einem, we never heard of him."'"

THE French Chief leaned back and lit a cigarette.

"What an affair, my friend," he said, with an expressive gesture. "Was the raider of the vice-consulate, with his Swiss badge, friend of the police of Berne and Zurich, also Captain von Einem of Berne, and again Herr Michaelsen of Zurich? Which was his real identity? And all this elaborate deceit by a Swiss agent merely seeking neutrality violations? He could be only one thing, a consummately clever German agent, a Master Spy—the master of things dark and sinister, a Mephistopheles. Listen:

"He had some unholy power over many of the professional spies and informers of the Swiss underworld—those who will do anything for a prize: report what indiscreet Allied officers, a little 'zigzag,' might reveal, crack a safe, steal, beat up, drug, or kill an Allied agent, for enough money. Some he held by bribes, some by threat of exposure, some wretches did his bidding for the drugs he always had. His power went beyond the underworld.

"The two Swiss police officers are only the beginning. We cross his slimy trail everywhere. We find him or von Einem or Michaelsen in (*Continued on page 138*)

"Ah, that devil!—I wish I had my hands on his throat"

The Trail Eater

A Story of Love and the Reckless Hardihood of Youth

By BARRETT WILLOUGHBY

Illustrated by GEORGE GIGUÈRE

LAST INSTALLMENT

AT THE same hour, the white light of morning was slanting in through the windows of the Golden Sands, making sickly union with the glare of electricity. Though it was nine o'clock on the third day of the race, many of the men present had never left the saloon. The news that Hinkey Scott was on the home stretch had turned the place into a bedlam. Odds changed on every entry. Money began to come in on Hinkey.

An hour went by. Rance Herrington was pacing bearishly between the bar and the Dog Room. His eyes burned in his dark, unshaven face, and he was betting with a recklessness that made gambling Nome look aghast. When he offered two thousand for one that Tokon would quit at Death Valley, it was Tolovana, up in the women's betting-parlor, who sent down the money to cover it.

Word came in that Harry Dunn had reached Candle with one dog dead on the sled and four running loose; then Gene Christy was reported with two dogs on the sled and three running loose. But the crowd in the Golden Sands paid little attention. Everyone was interested in Kerry Wayne. Though Hinkey, Jake, and Slim were all out ahead of him on the home stretch, it was said that he still slept. Some of those who had bet on him were now cursing him and trying to hedge their bets.

WHEN Kerry did leave, a little over six hours after his arrival at Candle, speculation was greater than ever. The day wore on. Reports came in between long waits filled with changing odds and restless drinking:

"Hinkey has stopped at Snyder's to rest."

"Jake has passed Hinkey."

"Slim has passed Hinkey, still resting."

"Hinkey has left Snyder's, two dogs lame in the shoulders."

"Harry Dunn has left Candle, his dead dog on the sled."

"The Trail Eater has passed Snyder's, Tokon in the lead."

"Gene Christy has left Candle on the home stretch."

"The Trail Eater has overhauled Hinkey Scott, and gone on ahead!"

The afternoon light was growing dim. Kerry had been gone from Candle five hours. He should now be nearing Death Valley. Would Tokon quit? That was the question asked by the men walking nervously about awaiting the report from Haven House.

The telephone jangled. Men jumped. Rance Herrington ceased his pacing and stood, hands clenched. The bookmaker listened, nodded his head, and rose to chalk the announcement on the board:

"Kerry Wayne arrived Haven House—"

He fumbled his chalk and dropped it. Then he finished the sentence that sent a great "A-a-a-wh!" of disappointment droning through the crowd:

"Before crossing Death Valley will feed and rest."

Two and a half hours later Kerry was talking to his dogs in front of Haven House. In the clear, cold twilight the team lay harnessed, ready for the return across the Valley. Despite the rest, during which he and his helper had massaged and rubbed the dogs down with alcohol, they were stiff, footsore.

He was very gentle with them, examining webbed traces, easing collars, adjusting dog-moccasins. He patted heads and scratched behind ears, answering yawning protests against the start by praising the dogs until dull eyes brightened and lifeless tails beat a tattoo on the snow. But beneath Kerry's forced cheeriness he was torn with anxiety.

Tokon, the only dog on his feet, stood looking out over the Valley, head up, nose twitching. Kerry went to him, and taking his head between his hands gazed into the proud, mysterious eyes. "Tokon, old man, you're packing the bank roll now. If you lie down on me here, we're all through. But if you go on, there isn't a team behind us that I'd give a hoot for, and we can pass anything in front. Old boy, are you going to stand by me?"

Tokon looked up, yawned one eye shut, and pushed his muzzle confidingly under his master's arm. There was something so natural, so reassuring in the action, that Kerry's tension vanished. He grinned and, putting his arm about the husky, swayed him affectionately from side to side. "Oh, you gosh-darned, glorious old meat-burner!" he exclaimed joyously. "You're going to stand by me! I know it!"

He seized the handlebars. "Come on, babies!" he shouted. "Let's go!"

Tokon lunged forward; a few of the pointers came to their feet, but Cultas and Tong lay flat. The leader, all business now, swirled, lashed out at them, straightened his line again, and made another start. This time the swing dogs followed, but with slack traces and mincing steps. Tokon looked back over his shoulder, growling a warning before he threw himself into the collar. The dogs responded, stiffly at first; but when they had limbered up, Tokon swung them into a pacing gait.

Meanwhile, Kerry "jollied" them into renewed interest in their work. And whenever he looked up at Tokon swinging steadily ahead through the deepening dusk, he got a lump in his throat. The leader was going on. . . . They were through the scanty timber now. . . . They were down on the floor of the Valley. . . . They were past the danger point.

He stopped the team then. He couldn't help it. He patted Tokon, murmuring extravagant endearments and praise into his tawny ears. He could have wept aloud for the thrill that ran through him.

Tokon, proud and tail-wagging, licked his face.

THEY went on across the Valley, tonight a lonely white vale glistening under the moon. It was clear, cold, brilliant, with a keen wind blowing over crusted snow. The trail was ice-silvered, glittering.

They were across the Valley, climbing to the summit of the low mountain range at the head of Telephone Gorge. . . . They were traversing the divide on top of the aurora-lighted world. . . . Now they were plunging down again into the iced dusk of the Gorge. Kerry rode the brake and a fanning of splintered ice.

The worst part of the Trail was behind him; he was certain now of the leader, and all he had to do was overtake Slim and Jake. He knew Jake couldn't last at the pace he was going. And Slim—Slim was worrying. He hadn't rested as he should have done back at Candle. . . .

But when he swung out over the ghost Fish River Flats, even though the trail was good, he could sense a new weariness in his team. Poor pups, he thought; they've been going steadily for such a long trail.

As the Trail stakes slipped by, he found sleep creeping in on him, persistent, heavy, obscuring his mind with a lulling haze. By and by his body didn't feel

When he turned to look at her, the expression in his eyes made her catch her breath. "You did this for me, Barbee?"

any more . . . didn't feel anything. s pleasant and soothing, this balanc- ıechanically on the swinging sled. . . . caught himself. He *must* keep e. Slim and Jake were ahead of him. his dogs— He wrenched his mind to them. They were going very r. He'd have to sing to them. He always get them going that way. an effort of will that stabbed him ıausea he forced himself into what l have been a rollicking song. The n was there, but his tones were hoarse, grotesque sounds breaking the stillness of the lonely night:

"Sure, old Mickey Brannigan owned a bull pup,
'Twas bred of real illigant stock.
For sivinteen hours he battled and fought,
So he did, on me soul, by the clock! . . ."

Heads began to rise along the line. Ears came up at a listening angle.

"But I'm telling you, fellas, that there isn't a pup in this outfit who couldn't lick Mick Brannigan's dog. Yes, sir—any one of you could clean him!"

Kerry's stomach began to flutter, and a film came before his eyes. As he clutched the handlebars, waiting for the spell to pass, something stirred deep within him. Something that he had buried in his subconscious when he began this race. Something he must not think about.

His stomach turned over again. But he knew what that was now. Fellows had told him about it—the first sign of exhaustion hitting him. He must hurry and get to Baker's Cabin. A few hours' rest would put him right again. He bit his lips

UNIVERSITY OF IOWA

and stepped off the sled. Trotting might clear his head a little.

He went on mechanically, yet the bottoms of his feet were so sensitive they felt every little ice crystal in the trail. And it was a good trail too. It sloped ever so gently upward in the gloom. But what was this queer thing he was running into? He couldn't recall having passed it going out. From either side great waves of white land rolled like a field of alabaster plowed into furrows with ridges high as tree tops! How high it was up here on the ridge! The rolling land made him dizzy. He shut his eyes for a moment.

When he opened them, the alabaster ridges were gone. His dogs were padding along on a trail as level as a floor. He could hardly keep from laughing at himself. He knew what was the matter with him now: Illusions. Fellows had told him about those too. Phantoms of the Trail that came from weariness and lack of sleep. But if you got over them, you got your second wind. Well, they shouldn't fool him again. He'd pay no attention to any—

But what was that down the trail now? A man with a pack? Why, it was Doorknob! And on top of his pack he'd got a little husky pup. It was Duna! . . . But there was something wrong about that. Duna was a dog now. . . . Duna was—

SUDDENLY he remembered he was racing. "Hey, Doorknob! Get off the Trail there! You can't pace me that way! I'll be disqualified! Get—"

Doorknob was gone, and it was very lonely in the dusk. Very cold. And he was tired. . . . But his team was going good. They always did when Duna led. "That's right, Duna. Not so fast. . . . Wait for me, old man . . . I'm . . . so . . . tired. . . ."

He was passing a cabin—Boston House. From a window the light shone out on the snow. Warmth, food, sleep, all there! But he couldn't go in. No business in a Syndicate station. There were two racing sleds out in front—Slim's and Jake's. His swing dogs were pulling toward the cabin. "Hey, Duna! Line 'em up, boy! That's the way to do it!" Duna was managing the swing dogs; he was taking them on by. "Atta boy, Duna!"

The helper at Boston House opened the door and stood with the light behind him. He turned to someone inside and tapped his forehead. Kerry waved to him as he passed. "Mush, Duna! Swing 'em in to it, lad!"

He went on.

Another cabin light. Baker's at last! Murphy was coming to meet him. He'd turn the dogs over to him, and rest. He'd have to rest. But first he'd go up and tell Duna what he thought of him, rub his little gray ears. "Here, fella. Tha's ' boy . . . fine pup. . . ."

But what was this—a work collar on Duna, who was leading loose? And his fur—his gray wolf coat? In the light that streamed out of the cabin Duna looked tawny, and he had two pale-gold spots above his eyes.

Kerry's head cleared suddenly. *Duna was dead.* The dog he held in his arms was Tokon, tired, trail-worn Tokon, weakly wagging his tail and snuggling his frost-scarred muzzle against Kerry's chest. Sobbing, he tightened his hold and pressed his haggard young face against the rough comfort of his leader's neck.

Meanwhile, back at Boston House, Slim Carvey was lying in his bunk trying to close his ears to the rumbling monologue of Jake. The helper had reported Kerry's passing, and Luce had promptly ordered Jake out on the Trail again.

"Oh, for Pete's sake, quit worrying abou those dogs! Win or lose, you get you money just the same. Now, shut up. you're going to shove off—get along. Slim turned his face to the wall and ke it there until the cursing Jake had d parted.

Slim's weary malamutes snored an sighed on a bed of straw in a corner. T Syndicate helper sat with his ear glued the telephone receiver. Slim lay wi closed eyes. He knew he should sleep; b his mind kept going forward to Ker now at Baker's, and back to Hinkey Sco and Harry Dunn, who were both at Te phone. Then forward to Kerry again. half an hour Jake, poor blind boob, shou pass Baker's. Would Kerry be lured in hitting the Trail again?

SLIM tossed restlessly while the clo ticked off an hour. Nothing had be heard from Baker's.

Still another hour passed, with no wor Torn with uncertainty, Slim had helper call Baker's. Yes, Kerry was s there. Yes, Murphy had seen and hea Jake go by some time ago. No, Murp didn't know when Kerry was going on

Another hour went by, and Kerry, far as Slim could learn, hadn't move

UNIVERSITY OF IOWA

Rance stood backed against the bar. "What? Stakes not high enough yet?" he yelled. "Then I'll lay fifteen thousand on Slim against the Trail Eater!"

linkey Scott had left Telephone and coming fast. . . . Again he had 's called. This time no one and.

n was badly worried now. Better afe and get on the Trail. . . . And m started out from Boston.

BAKER'S cabin came in sight he eered anxiously ahead. Kerry's sled not outside the door. He yelled. hy appeared. "Yes, the Trail Eater's " Slim shouted to his malamutes and racing them along the river trail. swung around a bend and was surto see Kerry only a short distance . The Trail Eater trudged listlessly, g on his handlebars. Two of his ere hobbling behind him in mocca-Up in the spike Tokon limped, one ind feet scarcely touching the trail. rossbreeds behind him were logy. erry, who had a reputation for never his team, was now using profanity valed Slim's. But he was doing it as ad no energy to put into his oaths. is relief, Slim could hardly keep aughing. His malamutes were at ail Eater's heels now. He sang out: ry, old man! Guess you'd better e the Trail!"

right, Slim. Wait till I pull over." took Tokon by the collar and held but the precaution was unnecessary. There wasn't one of his dogs that showed any life. They hardly turned their heads to see Slim's frisky malamutes go by.

Slim glanced sharply at Kerry. The fellow looked as if he might collapse any moment. "What's wrong with you, Kerr?"

"Stomach's all shot."

"Too bad!" said Slim with genuine sympathy. Yet he couldn't help feeling good over the outlook for himself. "Well so long, old man. See you in Nome!"

At the next telephone station he stopped and got Luce Barton on the line. In code he gave him a message:

"Kerry down and out. Nothing can stop me!"

Luce smiled to himself as he dwelt on Slim's message. His use of the Siberians had been justified. Jake had run Kerry off his feet.

The lawyer buttoned up his coonskin coat and came out of the door of the Golden Sands into the cold, bright morning—his purpose a walk around the block. He was returning to the door of the Golden Sands when he caught sight of Kitty Kramer hurrying down the street. She ran toward him.

"Ooooo, Luce! They'll be in today, won't they? Tell me who to bet on, like a good boy!" Both her hands were on his arm and her hazel eyes were regarding him as if he were the one man in the world who knew all the secrets of the race.

"Better hang onto your little money, Kitty."

She pouted. "You men are all alike. I called Rance up last night; but he wouldn't even talk to me when he found out who it was. He—"

"I know. That was just after they'd reported Tokon crossing Death Valley. He lost two thousand to Tolovana, you know, and he was sore as a boiled owl. Why, his foreman came in from the mine and tried to ask him something; but Rance wouldn't listen. You see, the boys are rubbing it in about his giving the best dog in his team to Kerry, and then losing money betting against him. But don't bother your pretty head about him. You run on up to the women's betting-parlor and I'll come up after a while and dope out a nice little bet for you so you can win back your housekeeping money."

"Oooooo, Luce! Will you?"

He took leave of Kitty and went back into the Golden Sands. He saw by the betting-board that the drivers out on the Trail were all changing positions. Slim had passed Jake and was coming in, with nothing to stop him. No doubt, Jake would soon drop out now; but his work was done, so it made little difference to the Syndicate. Harry Dunn, driving the third team, was leading Hinkey Scott. Harry would win second. Hinkey third. And that was as it should be. It wouldn't do for the Syndicate teams to take all three places.

This racing game was easy if you used your wits. Of course, he had hated to sacrifice the Siberians. He wouldn't have done it if he hadn't found out the Trail Eater's time. Kitty had done him a real service there, and he'd have to see that she won a nice little bet. He found himself feeling indulgent, even tender, toward Kitty.

AN HOUR later his equanimity vanished. Harry Dunn had withdrawn from the race. His leader had brought him in to Baker's, snow-blind.

Hardly had the buzz of comment died away, when another report was chalked up on the board. It came from Timber, sixty-five miles from Nome:

"*Kerry Wayne passed Jake Minton, every dog in the traces.*"

"Passed him with every dog in the traces?" roared Herrington. "I don't believe it! The fellow was down and out when he crawled through Council!"

"That shows (*Continued on page 184*)

"I don't favor no traipsin' wimmin . . ."

This was how the mountain folks looked upon me when I first went deep into the Kentucky hills as a court reporter. But my adventures with those great mountaineers will forever be my happiest and most thrilling memories

By JEAN THOMAS

Drawings by B. J. ROSENMEYER

WHEN I went into the mountains of Kentucky as a court stenographer, it was with misgivings, even with grave fear. Fear, because of the gruesome tales I had heard from childhood, of mountaineers, bloodthirsty and villainous, hiding behind bushes and trees, shooting down an enemy for some old grudge. All my life I had heard how these lawless men made whisky in the mountains—by moonlight—murdering revenue officers, defying taxation. How, I wondered, would these dangerous fellows look upon me, a woman court stenographer? Maybe they'd take matters into their own hands and put an end to me forthwith! I felt goose flesh creep up my spine. But it was too late to turn back.

It was almost dark when the rickety vehicle which brought passengers from the railroad station, twenty miles away, halted in front of a ramshackle frame building in the shadow of the courthouse, in the small mountain town which was my destination. By the weather-beaten sign, I knew it was the old Hawkins House, to which the judge had recommended me. I knew, too, that the old man in the doorway must be Lije Hawkins, the proprietor.

With portable typewriter in one hand and brief case in the other, I, a lone traveler, alighted. "You're the short writer, I reckon"; my host looked at me suspiciously from square-rimmed spectacles as he took my luggage. "The judge named hit to me last court about your comin' for Babe Vinton's trial. The judge and the lawyers'll be along in the mornin'," he drawled, leading the way into the house and up the creaking stairs. He pushed open a door and put my luggage on the bed. "Ye kin take this room hure alongside Vinton."

"I aim to make inquiremint into this!"

I stifled a scream.

"This hure room's a heap more comfortabler," he went on, quite unconcerned, in his slow voice; "kinda back agin' the mountainside—not so windy hure."

The advantages of the room were los upon me. I was sick with fear. It woul have been bad enough to be under th same roof with the murderer, Babe Vin ton, but here was I, alone, helpless with but a thin wall between us. Al ready I pictured the whisky-soake ruffian with bloodshot eyes and to bacco-stained beard.

"Come along down and have a bo snack a' vittals; ye look kinda peeki —tuckered out, I reckon—the road is turrible." There was nothin lacking in Lije Hawkins's hospital ity.

"I *am* tired—too tired to eat— I lied heroically. "I believe rest an sleep would be better for me." Th proprietor took me at my word an went on down the stairs.

NIGHT came at last, and with it more goose bumps.

I examined the door. There wasn even a lock on it! I banked the heart fire and, turning down the wick the oil lamp, I set about barricadin my door. Stealthily I moved abou To be sure, there was the ponderou four-poster, but I couldn't budg that. There was a washstand wi bowl and pitcher; I couldn't tou that without rattling all the crocker I decided on the old bureau. In t dim and broken looking-glass, caught a glimpse of my reflection,

Fiddlin' is a real part of mountain life

ɔked worse than peekid! Finally, I t the bureau squarely across the or. I blew out the lamp and crept to bed—clothes and all. For an ernity, I lay there in the darkness, vering with fear. Grizzle-bearded es hovered about me; bloodthirsty es leered at me; the murderer Vin- thrust his fiendish face right ough the looking-glass of the old reau. He had a gun in his hand; it s pointed straight at me. . . . . There was a loud bang!

"Kivver up your head, Sis, and come in and make your foir!" husky voice of Lije Hawkins ed from the door.

I sat up with a start. The sun amed through the window and ced on the patchwork quilt upon bed. The smell of bacon and corn d came up from the kitchen.

"Wait a moment," I called. Hur- ly I moved the bureau enough nat the proprietor of the Hawkins se could squeeze through the .

The old fellow took in the situa- at a glance. There was a look of red pride on his face. "Woman!" voice trembled, "I don't aim to my folks slurred in no sech fash- " He shook a condemning finger at the silent evidence of nistrust; then he yanked the old bureau back to its place ast the wall. He turned on me. "This hure is betwixt me you—hit won't never go no furder. I'd cut off my right arm Babe Vinton shall ever know hit." Lije Hawkins's work- ed hands fell limply to his sides. "I take hit you've ollered law—for long—around hure." There was a of tolerance in his voice—pity for my ignorance. 're strange to us mountain people."

It's my first trip to the mountains," I ventured apolo- illy.

)N he had the fire glowing on the hearth. I brushed d fixed my hair while he went down to bring a kettle t water. This ice in the washbowl had to be thawed. e didn't make much headway with it—the water d on top and the cake of ice stuck fast in the bowl. y, a young lad who had been watching timidly from oorway plucked up the courage to suggest: "Uncle was a-thinkin' if a body het the foir poker and jabbed thar, that chunk a' ice 'ud riz right up." I was sur- at the quality of the boy's voice and pleased at the e set about to help. His patched, ill-fitting clothes d quite out of keeping with the lad himself. As he ver, I saw a deep knife scar across the back of his Without knowing why, I pitied him.

low I'll fotch anuther kittle a' hot water," he said, turning his head away from me as he left the room. hat's an accommodating boy," I remarked to Lije ns at breakfast that morning.

as," he quickly replied, jerking a thumb over his er toward the boy, who had crossed over to the ouse, "he stands in good credit the countryside over. plum shame too—seventeen year old and cain't is name—has to make his mark; same as his pap and ndsir afore him. Nary one of the Vinton's ever fol- ook learnin'."

clanging of the courthouse bell interrupted us. I d up my notebooks and pencils, buttoned up my nd hurried out bareheaded. Lije Hawkins rushed e. "Hure," he said, extending my hat, "put hit on," onished, "hit 'ud make talk." I pulled on the hat nked him gratefully, calling him Uncle Lije like the and I knew he was pleased.

court-room was crowded when I entered. The odded pleasantly to me as I took my place at a ble beside the empty witness box. There was much and craning of necks among the jury and the crowd. see that a woman court stenographer was some- w in their midst. However, after I was sworn in,

As native to the mountains as the rocks and trees

and the lawyers had greeted me kindly, and the attorney for the commonwealth had placed my chair so that my back was to the people, I felt at ease.

"Commonwealth of Kentucky versus Babe Vinton!"—the clerk called the case.

AFTER a half dozen state's witnesses had been examined, defense counsel addressed the judge: "Your Honor, please, I'd like to have the defendant sworn."

"Babe Vinton!" bellowed the judge, bringing his gavel down with a bang. "Vinton! Come forward!"

In the waiting silence, I wrote the defendant's name quickly across my notebook in readiness for his testimony. I always feel a certain thrill when a prisoner is called in his own defense.

"Do you know what it means to swear a lie?" asked the judge.

"Yas—yas," came a faltering voice, "hit means the reform school an' hell's foir!"

I could not bring myself to look up at the witness. I was blinded with tears; I knew the voice. It was the boy! *He* was Babe Vinton—being tried for murder!

And now there he sat, after taking the oath, rubbing the palms of his childish hands over the knees of his faded breeches.

A stern and mighty pleader for the Lord

Digitized by Google

Original from UNIVERSITY OF IOWA

"Your Honor, and gentlemen of the jury," defense counsel began slowly, "I could pack this court-room with character witnesses for this boy and I could substantiate their evidence by Lije Hawkins—we all know Lije. He'll tell you that in the months this boy has been in his custody, he's been faultless. I'll not burden the Court—I'll show you the lad's body—take off your shirt, Babe!"

THE command was such an unusual one and so unexpected by the boy, that he blushed to the roots of his hair, drew his ill-fitting shirt closely about his throat and looked quickly toward me—seated scarcely an arm's length from the witness box. I caught the expression on his face and bent my head over my notebook. Reluctantly the boy obeyed the counsel. With his back toward me and his face to the jury he stood stripped to the waist—confused, embarrassed, the eyes of the curious crowd gaping at his nakedness.

"You see, gentlemen of the jury, not one knife wound—but twenty-five! In breast, and back, and sides. Beach Fraley tried to sever the head from this lad's body," the lawyer spoke earnestly as he indicated the ugly scar that stretched across the back of the neck. "See here, and here, and here," his hand passed quickly to ghastly scars on back and sides and breast. "Why, it's a miracle that Babe Vinton lives. Stabbed and bleeding—there was nothing else for the boy to do but shoot his way out to safety! Self-preservation, gentlemen of the jury, is nature's first law," came the low, persuasive voice. "It is your right! My right! This lad's right!" He paused for a brief second. "Gentlemen of the jury, the defendant rests." He bowed as graciously as a knight before the throne of king.

The lad sat fumbling a moment with the fastening of his shirt at neck and sleeves. Meaningless words were pounding in his confused brain . . . "self-preservation—nature's first law." Suddenly his look of perplexity gave way to understanding. He straightened his shoulders. Quickly he was on his feet—heedless of his counsel's detaining hand—heedless of the admonition of the judge. With bravely uplifted head, he looked straight at the jury, his hands raised ever so slightly in supplication.

"'Twarn't that-a-way," he began in boyish, pleading tones. "He's contraried hit all." He shook his head to clear the confusion. "I didn't keer what they done to ME, an' I warn't aimin' to hurt nobody, but—they taynted me." He hesitated, unwilling to go on with his story, looking helplessly toward the crowd. "Then—then Beach Fraley says to me, 'Yer base born! Susan ain't yer sister, she's yer Ma!'" The boy threw back his handsome, dark head; his eyes were aflame. "Then I drawed my gun." The voice and the boyish form grew tense as he re-enacted the tragedy. "'Ye kin do what yer a-mind to agin' me'—I sez to Beach Fraley, 'but ye kain't fault my wimmin folks.' Then—then—I foired."

He sat down, hands on his knees, head proudly erect.

Need I tell you Babe Vinton was acquitted?

Court reporting, I soon came to know, was not without its lighter moments. If it had not been so, I doubt that I should ever have been able to hold out. It was in another county that I made the acquaintance of Aunt Arimathea Holbrooks.

The first time I saw Aunt Arimathea, the judge pointed her out to me. She was standing under the big oak in the court-house yard with a bevy of mountain women about her. I had just reached the county seat that morning. The sheriff had kindly offered me the use of his office, adjoining the court-room, and I was busy typing orders and affidavits for the opening session.

From the window, I could see bonneted heads huddled together, nodding and shaking, and Aunt Arimathea jerking her thumb now and then in my direction. Then she'd put her cob pipe in her mouth, drawing in till thin cheeks cupped toothless gums. The other women peered suspiciously toward me from hostile eyes that were almost hidden beneath their dark slat bonnets.

"I'm plum puzzled," I heard Aunt Arimathea say, "seein' her sottin' that a-punchin' and a-jabbin' at that contrapshun that's got a whole passel a' white buttons a-stickin' up on hit. Hure that?" Her bony hand cupped a thin ear. "That's a leetle bell a-ringing on hit an' they is a leetle black rollin' pin a-goin' back'ards and for'ards on the top of hit." Aunt Arimathea shook her head in bewilderment. "I taken notice," piped a quavering voice, "that she putts paper—puore white—nary mark on hit, into that contrapshun and tirectly she pulls hit out an' there's writin' on hit." The bonneted heads wagged. "Puore wondermit!" said Aunt Arimathea.

It was with difficulty that I kept a straight face.

"I don't favor wimmin folks a-traipsin' aroun' with a passel a' lawyers and judge," a toothless mother in the group was saying, as she shifted her offspring from one hip to another. "She come hure from Morgan with 'em, an' they say she is a-goin' on to Elliott arter this court!"

Bonneted heads wagged and nodded.

"NOW, wimmin," Aunt Arimathea tapped the bowl of her pipe in the palm of her hand, "I ain't to say a-takin' sides with that woman"—the stem of her pipe was pointed in (Continued on page 161)

Jane *Loses Her* Umbrella

And with it the complex that had shut her away from happiness

By MARY BADGER WILSON

HE had all the qualifications of the perfect secretary. Even her name was secretarial. Jane Brown. Plain and eable, neat and undisished.

d Jane was like her name. ore neat, undistinguished es, which followed the , to be sure, but always at reet distance. (Her skirts short but not *that* short, u know what I mean.) ad not been born plain, he managed to achieve ess by means of large, immed spectacles and becoming coiffure.

sessing a short, slightly ed nose, a mouth that d upward at the corners, yes that quirked upward e corners too, she oby needed an impertinent ut. But she wore her ong and twisted into a knot on the crown of ad, and stray locks were ntly escaping from her cuous hairpins.

for the spectacles, she opted those for dignity's The oculist who exl her eyes had assured at she could see a fly Woolworth Tower. The sult of the spectacles, was simply to render ompletely invisible to a ine eye.

visibility is but one of o essentials for your perfect secrehe second and the more important course, efficiency. Jane had that the *n*th degree. She could take on as fast as anyone wished to give r; she could spell; she could find a fter she had filed it; she had a good y, tact, and a loathing for chewing What more could any employer

ainly Paul Wetherby asked for better. He used to cross his surreptitiously whenever he said to "Gosh, but she's good!" He never d this encomium to anyone except however, because such public on of his secretary's talents might btracted a jot or tittle from his ry. Paul, you see, was a go-getter. the junior member of the longhed advertising firm of Wetherby, nd Wetherby.

company was dying of dry rot breezed in," he often told his cronies at the club. "But I've put new life into the old dog. Efficiency. New ideas. New contacts. Pep. Up-to-date approach."

He clipped his words nicely, and his cronies nodded with brisk understanding.

Illustrated by NORMAN PRICE

CERTAINLY he had introduced into the conservative old firm a number of new titles, a quantity of new furniture, and a shiningly new vocabulary. Office managers and executive secretaries sprang into being overnight. The battered old oak furniture was replaced by glass-topped mahogany. Bells buzzed constantly, following some complicated system of signals. There was great talk of "contacts," "selling yourself," "the right approach," "psychology of salesmanship;" and many brisk young men were about the place, always beginning to get ready to start something.

Paul Wetherby himself moved snappily from conference to conference, perpetually "on his toes," as he himself phrased it. Always a correct picture of what the well-dressed man will wear, he caused many a skipped heart-beat among the typists and telephone girls in the big central office. Whenever they saw the phrase "captain of finance" in their tabloid newspapers, they envisioned Paul Wetherby.

But chiefly they were enraptured by his good looks—his quick gray eyes, his tanned skin with its pleasant suggestion of sports and country clubs, his lean fitness, his perfect grooming. Oh, he was altogether the perfect hero of modern romance!

AND at this point it has to be admitted that Jane Brown, otherwise quite the perfect secretary, did have one defect. There was just a little something lacking in her polite attention when Paul would interrupt her steady work to tell her of a new, Napoleonic plan, or a fresh efficiency in office organization brought about by his progressive zeal. There was a failure on her part to be properly impressed, an absence of sweet feminine wonder—oh, the thing was hard to define, entirely intangible. But Paul felt it.

"She's a splendid cog in the wheel, but lacks vision," he explained it to himself. And in his helpful way he took occasion more than once to speak to her of the "great value of the coöperative spirit in an office."

Jane listened politely to these helpful talks, and went on with her work. She had, you see, such a lot of work to get through in a day. First of all, when Paul arrived in the morning, he expected to find a nicely dusted desk, and in the exact center of the mahogany surface a neatly prepared memorandum which should remind him not only of the day's engagements but also of the new "prospects," the best methods of approaching these prospective clients, the best men in the office for making the new contacts.

With such a memorandum before him he could immediately start pushing bells and summoning subordinates to his desk for a series of conferences. Later, when clients began to arrive, Jane had to prepare other memoranda. For each client she must consult the files, and from the data therein make a clear, comprehensive

Digitized by Google
Original from UNIVERSITY OF IOWA

report of previous accounts, work to date on the present account, and other pertinent "remarks."

With such memoranda in hand, and with his own brisk "line," Paul Wetherby could be most impressive. Without the memoranda, he might have found some difficulty in achieving his results, because he seldom carried more than a superficial knowledge of a contract in his mind.

"Details—they are for subordinates," he would say with a disposing gesture.

Add to Jane's duties the routine dictation which Paul gave her daily, the routine filing, the non-routine and frequent consultations with those who wrote and those who illustrated the advertisements, all of whom had discovered that she alone could tell them what "Mr. Wetherby's idea was"—well, you can see that Jane's days were pretty busy. Doubtless that was the reason she had so little time to admire Paul's ability.

IT WAS good that she had much work to occupy her days. Otherwise she would have been woefully lonely. For Jane did not make friends easily and, save for her work, her three years in New York had been quite empty. People were uniformly courteous and respectful to her—but, to a young woman of twenty-two years, respectful courtesy is just about as inspiring as cold oatmeal.

At the boarding-house where she lived, when the other girls drifted off to the movies after dinner with sleek-haired young men, Jane was invariably left behind to amuse herself in her neat, small room with a library book and her sewing basket.

At the office, if she came up to a whispering group of girls, giggling over a scrap of office gossip, they promptly separated their boyish-bobbed heads, diluted their giggles with politeness until they became perfunctory smiles, and asked tentatively:

"Did you want something, Miss Brown?"

It gave Jane a shut-out feeling, and it hurt. But nobody suspected that it hurt, because everybody thought Jane's shyness was coldness. They thought she was self-sufficient and a bit high-hat, when, as a matter of fact, she was timid and afraid of rebuffs.

The real, fundamental trouble with Jane was that she was a battlefield. Inside of her small person centuries of Gallic fire and fervor and Gallic love of beauty, which she inherited through her French-Canadian mother, fought valiantly against generations of iron control and repression and distrust of anything beautiful or joyous, which she inherited from her New England father.

Her mother had died when she was little more than a baby; consequently, her father's ideas and ideals had dominated. But the very suppression of those warm impulses which were her maternal heritage caused them to burn the brighter in the secret places of her heart.

She had a little, faded picture of her mother which showed the same upquirked corners of mouth and eyes, the same tip-tilted nose, that she herself possessed. And she had two or three precious trinkets—a coral necklace with a gay pendant; three cheap little gold bangles that jingled pleasantly if one put them on together; a rather good cameo set in a brooch. Old-fashioned and unwearable, all of them, but Jane loved to put them on sometimes when she was alone in her room.

And sometimes, when she was thus alone, she would pin up her skirts so that instead of being short, they became *that* short, if you know what I mean. And she would arrange her hair to imitate an impertinent bob. And she would leave off her useless spectacles. Then she would look at herself in the mirror, and a sparkle would come into her eyes and a flush into her pale cheeks and she would make a coquettish curtsy to her mirrored self, quite as her French mother might have done.

But she never had the courage to do any of these things where people could see her. Nobody knew Jane except as the cool, quiet, unstylish, oh, so terribly efficient Miss Brown. So it would seem that on Jane's battlefield the Puritan ancestors had won the victory. Until that day, that rainy day in April.

Jane was tapping away on her typewriter, alone in the small anteroom which guarded the privacy of Paul Wetherby's spacious, impressive office. Paul, however, was not there to be guarded. He had telephoned to Jane early in the morning that he was staying over another day with the friends on Long Island with whom he had been week-ending.

Such a blustery, wringing wet, dirty day as it was made small promise of important developments; and since nothing but routine appointments were scheduled, he was suavely sure that Jane could handle them. The quirks at the corners of Jane's mouth had straightened into little indignation marks at the implication.

So Jane sat all alone, tapping the keys of her typewriter. And so busily was she tapping and so noisily did the rain swirl against the windowpane with every gust of wind that she did not hear a "drip-drip-drip" on her blue Persian rug. Until finally a throat was cleared apologetically, and a pleasant masculine voice inquired:

"Isn't there some place you would rather I'd drip? This looks like a pretty expensive rug."

LOOKING up, startled, Jane beheld the wettest object she had ever seen. From the brim of his hat, held respectfully in his hand, from the shoulders of his coat, from the ends of his sleeves, the rain dripped, while from his shoes it oozed soggily.

Every New England ancestress that Jane possessed had a voice in the housewifely horror of her exclamation:

"Oh, dear! Oh, dear!"

"Yes, darling, I know; but where else am I to stand? Your room is so small and your rug is so big that there's no space around the edges," the wet object answered impertinently.

Jane's cheeks flushed pink; but she whisked a morning paper out of her desk and spread it competently over one end of the blue rug.

"Please, if you'll just stand here until you dry out a bit," she suggested.

"Quite so," agreed the visitor, shaking himself like a great, shaggy dog, so that big raindrops splotched the outspread paper. Jane noted with instinctive solicitude that his suit was a heavy tweed that shed the water instead of absorbing it. He wouldn't catch cold then, she thought relievedly. She did hate for people to catch cold, even impertinent strangers like this one.

"But however did you get so soaking wet?" she asked.

"Well, you see, I'm one of those fo optimists who always think the sun coming out," the man said. "When I le my own office, I glanced up at the sk and I was sure I saw enough blue sky b tween the clouds to make a sailor's pa of pants. That means it won't rain a more, you know," he explained.

Jane's nose tilted a trifle more than normally did.

"Superstitions," she sniffed.

"Sure, superstitions," the man agree "I like 'em. Don't you?"

"I never think of them," Jane sa disdainfully.

"YOU miss a lot," he told her earnest "Superstitions put color into li Heaven knows, it needs color in this stan ardized age."

"But they aren't *true!*" Jane protest

The man looked across at her from newspaper island of safety, and twinkle in his sea-blue eyes was ed with a sort of tender pity.

"I'm not so sure of that, Horatio!" laughed. "Some smart person has s that in the days of superstition peo used to quarrel over how many an could stand on the point of a nee while in the day of science they qua over how many germs can get on the po of a pin. Well, you can see your dirty germs with a microscope. I grant that. And you can't see my angels un you have the superstitious eye. But angels were prettier, weren't they? when they hovered over the thought men, the soft swish of their wings m have made a lovely sound!"

Jane looked at him wonderingly. was a ridiculous figure, big and sha parked on her outspread newspaper. of course what he was saying was absurd. And yet . . . and yet . Well, the French half of her liked it. the New England half clutched practicality.

"You got pretty wet following superstition," she remarked dryly.

The man laughed. A great boom laugh that caught up everything in small room, including Jane, and wra them around with good nature.

"Didn't I, though?" he agreed. cloud came scudding over the blue turned itself upside down right on to my head. I tried to hail a taxi, but know how they whiz past you with m ing contempt when it's raining. Sti like to see them reflected in the wet p ments. Great splotches of yellow and and blue. . . ."

Jane regarded him with wide wonder. How could a man caught dirty city storm think about the flections in the wet pavements?

"And of course you had no umbre she said aloud, following her thought

"Why the 'of course,' sister?" he as

"Oh, you wouldn't ever have an brella, I'm sure," Jane said, with contempt.

Stepping across the news of the w to the very edge of his paper island reached out a long arm and extende

A group of Yosians off for a day's tramp with their leader, J. Otis Swift

The Only Entrance Fee *to this* Brotherhood *is a* Pair *of* Good Feet

SIX years ago J. Otis Swift was scurrying about town covering stories of every description for a New York newspaper—births and deaths, marriages and murders, kidnaping and graft. He was busy with everything in the world but the one thing that interested him most—at heart he was a naturalist. Every spare moment he had was spent in the hills and along the mountain trails about New York, observing animal and bird life, studying the flowers, insects, trees, the science of rocks and rivers, and other phenomena of nature.

During these hikes Mr. Swift had done considerable thinking. As far as he was concerned, these jaunts of his out into the wilds were absolute life-savers. They were the one and only thing that made city life bearable. Furthermore, Mr. Swift had a theory that in spite of our outer crust of sophistication, most of us really love the out-of-doors. Folks might not forsake the movies and the hurly-burly to get out into the country themselves, but he had a sneakin' feeling they'd at least like to hear about it.

J. Otis Swift

Now, Mr. Swift had always dreamed of becoming a nature editor. But, whenever he mentioned this idea he got the merry ha-ha. People didn't want to hear about nature! But he held on to his idea, and squeezed nature into his stories whenever occasion permitted.

Came the day, finally, when his patience was rewarded. Mr. Swift was called into the office of the executive editor, who said: "Otis, just as an experiment, we're going to run a bit of Nature in The World . . . and I want you to take a shot at it!" And soon there appeared in a lower corner of the editorial page a short item, NEWS OUTSIDE THE DOOR, in which was a curious miscellany of nature lore, with an account of a cross-country ramble. To everyone's surprise th first item brought in a flock of lette to the editor, with queries from inte ested readers. And almost every on of these letters ended up with, "Is possible for outsiders to go along o these hikes?"

This question bobbed up so pe sistently that one day Mr. Swi added a short postscript to his co umn, inviting any readers who we interested to accompany him on ramble into the Westchester hill That first Sunday morning twen folks appeared, and the tramp was huge success. They all wanted come again and bring their friends, the invitation was repeated. T next Sunday morning fifty people a peared, and the Sunday after th there were more than a hundre And so it went, until now, after a litt over five years, a great brotherho of nature lovers has developed, w 16,000 members in every part of th country and other countries of th world. They have adopted the nam Yosian Brotherhood, meaning N ture, or the Great God Heals.

And there is never a week-end, ra or shine, winter or summer, but wh hundreds of these town-tied folks esca from the roar of cities into the wilderne Boys and girls, young men and wom mature couples, white-haired patriarch sweet-faced old ladies—you'll find endle groups of them getting off trains a trolleys. Within half an hour, perha two hundred folks are waiting, gossipin meeting old friends and making new on

Digitized by Google
Original from UNIVERSITY OF IOWA

en the whistle blows and the crowd ves off across the fields and into the untain country, Mr. Swift leading the y, and talking through a megaphone out trees, birds, flowers, geology, folk-e, history, everything that is suggested the natural things along the trail.

Then there is lunch by a woodland ing, each person bringing his own prov-ler, and there is a great camp fire ere steaks and corn are roasted and fee is made. Then, as the flurry of ch is over and the fire has settled into wing embers, a song leader, sometimes man, sometimes a woman, will start ging old folk songs, songs of romance, riotism, love. Or Mr. Swift will gather group about him and give a short talk out some phenomenon of nature.

In the evening a railway station, trolley line, or bus line is reached and the Yosians depart for home. Cheeks are red, eyes bright, shoulders braced, lungs full of oxygen, and hearts happy. From the highlands of the Hudson, the Ramapos, the Orange Mountains, from Long Island, Jersey, Westchester, the Yosian groups are converging on New York, bringing back with them a little of the woodsy freshness, the peace of silent places, and the unutterable beauty of the wilderness, to help them through another week.

According to Mr. Swift, the Yosians have no set organization, and there are no dues or responsibilities of membership. Anyone in the world may become a member, irrespective of race, creed, or education. "More than anything else," says Mr. Swift, "the Brotherhood is a state of mind. It includes numberless young women from offices of big corporations, teachers, clerks, and young men from all walks of life, from street-car conductors and laborers to bank clerks, heads of departments in business houses, writers, and a few college professors."

Scarcely a day passes that Mr. Swift's desk is not piled high with letters from enthusiastic Yosians in every part of the world, including even China, Japan, India, England, and France. I know, for my desk is not more than ten feet from his. Mr. Swift is one of the busiest of men. Fifteen or eighteen hours a day on this job of his is not infrequent. And Mr. Swift's eyes twinkle as he excuses himself by saying, "You see I made myself this job out of my hobby . . . and it has turned out to be a pretty big job."

DOROTHY WORTHINGTON

The Girl Who Helped Put Radio on a Balanced Diet

'WAS early in 1921. A golden-aired girl sat in the living-room of a farmhouse in western Penn-ania, the phones of a homemade set fastened over her ears. father stood by her. He had the crude little set for his blind hter, hoping to add a bit of ty to her quiet life. She had ated herself and tried to carve niche in the world's commerce, handicapped by ill health and of sight, she was home con-cing after nearly a year's in-ism.

low does it sound, Marjory?" ther asked, a little nervously. s his initial effort at radio con-ion and Marjory was the first test the set.

program to which the girl was ng was "dead music"—that e broadcasting of a victrola or a piano roll. There was else but this type of music in days, for radio was but a huge, force feeling its way into nce and beauty.

w does it sound?" the father again.

girl tore herself away from dio, jumped out of her chair, er father's arms. "It's won- Unbelievable." And then ded softly: "At last, I be-here is a place in the world for me."

there was. That girl was Marjory t. And the same enterprise and ich enabled her to work her way h university and seek a job in New City, led her less than eighteen later to create for herself an en-new position—that of radio critic, ion KDKA, Pittsburgh.

ty-seven years ago, in the little f Perrysville, Pennsylvania, Mar-ewart was born, one of a large of strong farming folks. But hovered around that birth. A ter she was pronounced blind.

DRAWN BY C. D. BATCHELOR

Blind Marjory Stewart, who was radio's first critic

At an early age the child was sent to the Western Pennsylvania School for the Blind, at Pittsburgh. Almost immediately she showed a tremendous interest in literature and a deep love for anything dramatic. Later on, encouraged by her English teacher, she tried for and won a college scholarship, which gave her free tuition at the University of Pittsburgh.

"I was all ready for my first day at university without the faintest idea of how I was to acquire my daily assignments," Marjory explained, "since at that time there were no textbooks at the university written in Braille."

At Assembly the first morning Miss Folk, an instructor, stood up and said to the co-educational gathering: "A blind girl has come among you. Her only hope for a college education remains with you, her fellow students. If you will read to her for a small part of each day, she can achieve her desire."

The response was overwhelming. Never during the four years did she lack for anybody to read to her. After four winters of study and four summers of teaching the adult blind the Braille system of reading, Marjory was graduated from the university—an honor student.

Marjory Stewart got a job in New York City, but after a year of working she had a nervous breakdown and was forced to return home, where she lay helpless for nine months. It was during her convalescence from this illness that she heard her first radio program and resolved to become a part of this vast, new force.

Procuring a letter of introduction to Mr. J. C. McQuiston, Publicity Manager of the Westinghouse Company, she called on him and asked for a position.

McQuiston was about to turn her down flat. But suddenly it occurred to him that because this girl's sight had been denied her, her other sensibilities were quickened many-fold, and undoubtedly she would be able to detect flaws in the radio programs which a physically sound person might pass over or never recognize at all.

"I'll tell you what we'll do," he said. "You listen in every night for a month, and furnish us each morning a critical report on the previous evening's entertainment. At the end of that time we'll either dispense with or retain you if we think you can be of value to the company."

So Marjory hired a little room in which the Company installed a radio, before

Digitized by Google Original from UNIVERSITY OF IOWA

which she sat, patiently working out constructive reports and programs. At the end of her first month she was definitely engaged as a radio critic.

The changes brought about by her efforts are too numerous to detail, but among other things, it was her job to help the radio announcers perfect their art—to coach and criticize their voices and their English.

It was because of her repeated efforts, too, that a time limit of fifteen minutes was placed on each speaker. And so, today, with few exceptions, no one is allowed to speak longer than this specified time.

Also, on Marjory's advice, no opera, today, is ever broadcast until the announcer has told his radio audience a terse story of its action.

Realizing that isolated people are intensely interested in books and plays, even when they have no opportunities to read and hear them, Miss Stewart herself broadcast reviews of books and plays which she had carefully prepared.

Day after day, night after night, this patient, earnest, gifted girl has sat at her desk in front of her set, improving, developing, suggesting, hoping, and dreaming. There is not space to detail all the splendid work she has performed, but without a doubt the well-balanced radio program which comes to you today is, in large measure, traceable to the efforts of this blind girl from a Pennsylvania farm.

ROSA STRIDER REILLY

A Church Which Pays Its Congregation to Come To It

Judging from the bundles in the Reverend Mr. Hassler's arms, some folks have just heard of his wonderful work with the Junior Church

SOMETIMES it is strawberry-ice-cream Sunday at the Hassler Junior Church in Indianapolis. Every once in a while it is popcorn-ball Sunday. And in winter, when all the little boys and girls seem to have colds in the head, there is a handkerchief Sunday, and every pupil gets a large, white handkerchief. It may be the first handkerchief that many of them have ever owned, for the Hassler Junior Church draws its congregation from among those who, in many cases, cannot afford shoes, and to whom even shirts are something of a luxury.

There was Willie, for instance—one of the first members of the class which the Reverend Anson Hassler organized five years ago. One winter day Willie came to Sunday school snugly fastened up in a ragged coat and a stocking cap, both of which he seemed loath to remove. The Reverend Mr. Hassler tries to teach his pupils good manners as well as Bible lessons; and he also feared that Willie would feel the out-of-door cold more than ever if he kept his coat on in the warm hall in which the class met. So he said:

"Willie, if you want to please me you will take off your hat and coat when you come in." And Willie did.

"After that I was more careful in making such suggestions," Dr. Hassler said, "for the child had nothing under his coat but a pair of suspenders."

It was for the Willies of Indianapolis that Anson Hassler, who is now past his seventy-seventh birthday, organized his Junior Church. His kindly blue eyes beam as he tells of its growth from a class of two pupils to a gathering that frequently exceeds three hundred. The first meeting, five years ago, was held over the ice-cream table in a corner drug-store. The meetings are now held at Cadle Tabernacle, a building constructed and given free to Indianapolis for use by religious gatherings as an ex-drunkard's memorial to his mother.

"After finishing my education at Heidelberg University I preached for fifty years," the white-haired pastor told me. "I also attended services in a great many different churches. And I noticed this fact about all of them—there didn't seem to be any *poor* people in the congregations. This worried me, and I kept thinking about it. Finally I figured that the reason poor folks did not go to church, was because they felt uncomfortable among the better dressed members of the congregation. Then, too, they had no money to help pay for the support of the church and that put them at a further disadvantage. 'What's needed more than anything else,' I said to myself, 'is a church where folks won't have to worry about clothes and contributions—where they can get religion free.'

"There was mighty little money to begin with, but I found an out-of-the-way hall which I could get rent free. The next step was to get a congregation. I felt that if I started a junior church I would, through the children, eventually reach the parents. Therefore, I made the rounds of the poorer neighborhoods inquiring for children of Sunday-school age. After I'd visited seven families I found twenty-five children who were not attending any Sunday school and who evinced great interest in mine. They all promised to come the following Sunday, and I went away full of hope. But when Sunday came, only two of them showed up. Of course, I couldn't hold much of a service with only two pupils, so I took them to the drug-store and treated them to ice cream. I told them to come again the next Sunday and to bring their friends.

"Evidently the prospect pleased them, for the second Sunday there were seven children, and the third, twenty-one. Instead of asking the children to bring pennies, I gave them a penny apiece, and a penny for each new pupil they brought. Later I substituted pencils and flags and handkerchiefs—something new each week but nothing expensive, of course. Soon my work became known, and the newspapers began printing stories about it. Donations came to us—sometimes candy, sometimes clothing.

"A father was fitted out with respectable clothes so that he might come to church to see his two daughters baptized; motherless little girls were given warm dresses as well as spiritual advice; and tough little boys not only came themselves, but brought their pals and told their parents about this new kind of Sunday school; and, as a result, it has grown with gratifying rapidity. Donations of money from people in more comfortable circumstances help to support it.

"The purpose of the Junior Church is to do good in every possible way," Dr. Hassler explained, "without putting up the children or their parents a single cent of expense. I teach them Christ and the Bible; I teach them to care for both body and soul, and to get the most out of life wherever they live it."

Here is America's great family soup!

"A meal in itself"

Better meals with less time in the kitchen!

MORE vegetables mean better meals . . . Better for everybody in the house, especially the children . . . For plenty of vegetables are needed for good health . . . You place 15 different choice garden vegetables on your table when you serve Campbell's Vegetable Soup . . . And here's the wonder of it . . . It's already cooked — on your table in almost no time . . . It's a lunch or supper in itself . . . 12 cents a can.

Your grocer will supply you

Asparagus
Bean
Beef
Bouillon
Celery
Chicken
Chicken-Gumbo (Okra)
Clam Chowder
Consommé
Julienne
Mock Turtle
Mulligatawny
Mutton
Ox Tail
Pea
Pepper Pot
Printanier
Tomato
Tomato-Okra
Vegetable
Vegetable-Beef

I bring good news to all who choose
To please their appetite:
My sure appeal is Campbell's meal
For health and real delight!

The Drift Fence

(*Continued from page 23*)

etter. Your dad would have throwed a t. I reckoned it'd be better to get face to ace, an' have it out. Don't you figger that ay, too?"

"I certainly do, Uncle, especially if it's s big and hard a job as I imagine. And it's really true that you have made me our heir. I appreciate your kindness, ut if I can't make good as a rancher—ell, I don't want the property."

"Ahuh, I see." Jim felt the piercing in-nsity of eyes like a pale blue gleam, yet ot lacking understanding. "However, hat becomes of my property ain't the ain issue with me. Blood is thicker than ater. An' under any circumstances I'd ant my only kin to have what I left."

"Then, Uncle, what is the main issue?" eried Jim anxiously.

"Wal, I reckon it's I want you to be as ar a son to me as possible."

"That's easy, Uncle, if it depends on sin-rity and affection and obedience."

"They'll help; but it depends most on at I said in my letter. Guts! Jim, the I want you to take is the hardest in the st."

"I don't care. The harder the better," lared Jim.

"Son, that's straight talk," returned his le, nodding his head thoughtfully. "An' ked the way you spoke up to Ring ke. If he took a shine to you, it'd help t. . . . Jim, the thunder of it is no cher who knows the West ought ever ive a tenderfoot from the East such a but I'm just bullheaded enough to t a Traft an' nobody else to take my e."

"If you were a young man, Uncle, d you take care of this job?" asked curiously.

"Yes. An' I reckon I could do it yet."

"All right, then," returned Jim, "I'll mit myself here. I'll *do* it."

"INE! I like your spirit, son," ex-claimed Traft warmly. "Now, listen. runnin' about eighty thousand head ttle, mebbe more. But we can never count. That's a lot of stock, Jim. er out the value at forty dollars a head, h is a low estimate. Wal, I lose from usand head up every year. Most of oss can be laid to cattle thieves. I've n to believe Ring Locke knows it's than he'll tell me. Anyway, he's the posted cowman on the range. Blod-uns a big lot of cattle. So does Hep itt. They're all losin' stock, too."

"ncle Jim, this is bad," declared Jim, rprise. "You're being robbed, but on't know where the cattle go?"

"umph! We know darn well where e goin'. South of here, in the brakes the Diamond. An' the Diamond, I l explain, is high country south of On three sides it sheers straight an' cattle can't get off. But on the or forty miles or so, it slopes off into ghest canyon country in Arizona. r than the Tonto. These canyons p high in the timber an' run down rough. All of them have fine grass ter. Wal, a good deal of stock, lly cows with unbranded calves, drift into these draws an' work down into the brakes. There the cows are killed an' the calves stolen. It used to be these thieves would take the meat an' bury or burn head an' hide. But lately they kill too many. Locke's last report riled me."

"Then, Uncle, this tough job you're giving me has to do with the thieves," asserted Jim.

"Wal, I should sort of smile it does," drawled Traft.

"But why not entrust it to an experienced Westerner, like Locke?"

"Locke can't bother with it, an' wouldn't if he could—at least, the way I want to stop it. An' as I told you, I want a Traft to do this. Son, it'll be a big thing for the range, if we succeed. I don't want one of these gun-packin' cowboys to have the credit when I can throw it to you."

"You're very kind, Uncle," said Jim. "Are you sure anyone but a fool tenderfoot would tackle the job?"

Traft laughed. He was growing more at ease with Jim. "Some of my boys are achin' to get the job. Jim, my Diamond outfit is the toughest bunch of cowpunchers in Arizona. An' it's this Diamond outfit you're to take charge of. . . . Now to come out with my plan. I want a drift fence built from my ranch here clear down across the Diamond to where it jumps off. A hundred-mile fence!"

"What's a drift fence?"

"It's just a fence along which cattle will drift south as far as they can go, then drift back. It'd have several good uses, but the main one is to keep the cows an' calves from driftin' down into the brakes."

"Well, the building of a fence even a hundred miles long oughtn't to be so difficult."

"Shore, it won't. But keepin' it up after it's built is where the difficulty comes in."

"There'll be opposition? Down on the Diamond?"

"Shore will. An' for that matter, all over the range. Even Blodgett is oncertain about fencin' the range. You see, a barbed-wire fence in this country is nothin' short of murder. An' these nesters an' homesteaders an' backwoodsmen will lose by it. An' as for cowboys—Lord, how they hate any kind of a fence! I reckon I used to. But I'm ahead of my day. I can see what is needed an' what is comin'. So, Jim, you can trust me so far as the benefit to ranchers is concerned."

"UNCLE, have you an actual right to fence the range?"

"Shore, but it's open to question. If it even went to law I'd have to prove my contention. An' whoever sued me would have to show why he was bein' hurt. No honest cattleman will ever take such action. An' I'm shore doubtful about any of the homesteaders goin' so far."

"Could you prove your contention, which, of course, is that you are being robbed?" queried Jim earnestly.

"Wal, I could if Ring Locke an' some of my cowboys would testify. But they hate the idea like sixty. I'll expect you to find out what they know, an' then add evidence of your own."

"I see. How about your moral right?"

"Jim, I'm glad you ask that. You're no fool, if you are a tenderfoot. The question of moral right is the most puzzlin' one—the most open to argument. My own conscience is clear on that. I *know* in the long run the range will benefit."

"How do you know? Prove it to me."

"Wal, you can see how us big cattlemen will profit by it, an' the little cattlemen will have to stop stealin'."

"If there's no more to it, you're absolutely right. But won't you close the range or fence off part of it from them?"

"In some sense, yes. But only those draws an' canyons I told you about. There's shore water an' grass enough in them for ten times the stock they own. Any one of them will admit that. These honest ranchers will just stop appropriatin' calves they're not shore they own. An' the other kind—wal, we'll put them up a stump. Some of them will quit. An' others will cut our fence an' go right ahead stealin'. That's where our trouble will come in. Mebbe we can stop it in a few years, mebbe not. Some of the ranchers here think it'll start a long, hard fight. An' that's why they're leavin' it to me."

"WELL, Uncle, what do *you* think it will lead to?"

"Nothin' much compared to what I've been through. But I reckon some fence-cuttin' an' hard ridin' an' shootin' will seem a whole lot to you. Jim, I'm puttin' a lot on you. An' I reckon in a way it's selfish."

"No. Nothing of the kind," replied Jim hastily. "I believe implicitly in you, Uncle Jim. I'll make your ideals and motives mine . . . otherwise I'm scared stiff, but I believe I like the tough job you've given me. If I can only make a go of it!"

"Wal, the best encouragement I can give you is that I like the way you face it," returned Traft.

"Thanks, Uncle. That'll help a lot," declared Jim feelingly. "I'd like some advice, too. At least you can tell me what you'd do, if you had all your knowledge of the range, yet were only my age."

"Haw! haw! That's a stumper. Jim, I reckon I'm a-goin' to like you, outside of blood relationship. What'd I do? Wal, let's see. . . . First off I'd go to town an' buy the best cowboy outfit I could get, an' that means saddle, bridle, spurs, chaps, sombrero, gun, boots, an' so on. That would be for special occasions. Then I'd wear most of the time just plain overalls. I'd pack the gun an' begin to learn to shoot it. I'd have a little straight talk with the boys who was to work under me an' I'd let them know I was to be boss. I'd always do my share of any an' all kinds of work. I wouldn't be too nice to take a drink on occasions when it might be wise, but I'd leave drink alone. Also—an' I hardly need to tell you this—I'd leave the town slatterns alone. I'd lend my money free, but never my hoss or saddle or spurs. I'd always stand the brunt of any trouble directed against my outfit. That'll be hard, for you'll find each an' every one of your

Digitized by Google
Original from UNIVERSITY OF IOWA

cowboys keen to do that same thing. Last, an' I reckon most particular an' hard, I'd stand up under the hell the Westerners will make for a tenderfoot. I'd run the gantlet. I'd make all the decent fellows like me—an' most of them *are* decent—an' I'd make the others respect me."

Jim had the good humor and the nerve to laugh in his uncle's face.

"Ha! ha! ha! Is *that* all, Uncle? I thought you were going to give me something hard."

"Wal," declared Traft gruffly, with a dubious look at his nephew, "I was a-goin' to add somethin' that I never could do myself. Get married pronto."

"Whew!—Uncle, that's a sticker. I'm afraid I'll have to jump the traces on that one."

"Jim, I'm onreasonable," said Traft wistfully. "But I'd shore like to hear the laughter of children round this ranch house before I die."

A WEEK elapsed before the Diamond outfit came in from the range.

Jim made the most of that reprieve. He went at Ring Locke like a youngster who could not swim in a swift current and was going to hold on or die. But Locke seemed only kind and aloof. He answered some questions; he never vouchsafed any range lore. Jim was sharp enough to find out, however, that Locke had a keen eye for him, and this gave him some grain of comfort.

During this wait he rode or tried to ride all the mustangs and bronchos about the place. He familiarized himself with every nook and cranny of the ranch, and there were a thousand acres and more, including the timber. He could not avoid coming into occasional contact with his uncle's cowboy outfits. And these instances were painful.

One morning he had returned from a disastrous determination to stick on the back of a mustang and had again taken up a dirty job at the barn, when a farm hand brought him a message: "Boss says the Diamond outfit is in, waitin' for you."

Jim let them wait a while until he got himself thoroughly dirty and tired and cross. Then he limped round to the bunk houses. His uncle did not appear to be among the bunch of cowboys at the last house.

Jim approached the young men, and before he got even close he saw that they constituted a remarkable group.

"How do, boys," he said bluntly, as he halted before them. "So you're the Diamond outfit I'm to boss? . . . Well, I'm not a darn bit gladder to meet you than you are to meet me."

Most of them greeted him with a word or nod. Jim found that he had not exactly spoken the truth, for he certainly sustained thrills when he looked these cowboys over. There did not appear to be one as old as he was, nor for that matter as big, though several were as tall. Lithe-bodied, long of limb and bow-legged, with small, round hips and wide shoulders, lean and sharp of face, bronzed and sunburned, with expressionless eyes like gimlets, they certainly belonged to a striking and unique class.

"Who was your last foreman?" asked Jim.

One of them replied: "Jud Blue."

"Is he here with you now?"

"Jud was shot last month down on the Diamond."

"Shot! . . . Was it an accident?"

"Shore was, for him. But whoever did it was lookin' pretty straight."

Jim did not betray the shock this intelligence gave him.

"Which one of you has been longest with my uncle?"

"Hump Stevens, heah, was in the first Diamond outfit. Six years ago, wasn't it, Hump?"

"Round aboot thet," drawled a tall, tawny cowboy.

"Stevens, then, ought to be foreman of this outfit," returned Jim. "And after him every one of you according to your service. Well, let's understand each other right here. I certainly am not stuck on the job and think I'm the last fellow on earth to tackle it. But my uncle has put it on me. He wants to leave his property to me. And I won't have it unless I can deserve it. And that means make good at ranching from the ground up."

Blank, still faces baffled Jim. It was impossible to tell whether or not these cowboys were in the least impressed. They certainly thought he was a liar.

"You can lay off till Monday morning," added Jim curtly. And he gathered that his first order to them had been received with a pleasant surprise.

Perhaps the ensuing hour was the most profoundly thoughtful of any since he had decided to embark upon this adventure. What an unknown quantity, the Diamond outfit! He had needed only one look at these devil-may-care boys to realize it. Cowboys were not wholly strangers to him. These, however, were the dyed-in-the-wool range product. They were potential chain lightning and firebrand. He was conscious of admiration, dread, and an acute desire to make friends with them. After meeting them, he realized he could not expect any material help from Ring Locke or his uncle. The matter was personal.

WHEREFORE, he carefully kept out of their way for a day and a half. On Saturday afternoon he went to town, and he had not been there long before he heard that the Diamond outfit was painting some very vivid red.

Presently he went into a pool room to buy a smoke. The place was fairly well crowded, and at the very first table he saw a cowboy he recognized as one of his Diamond outfit. He was in the act of making a shot. But he straightened up. His fine, tanned young face was flushed and there were other indications that he had been drinking.

"Boss, I ain't doin' nothin'," he said.

"Who said you were?" returned Jim.

"You're lookin' for Curly then? Sheriff Bray just collared him. Honest, boss, Curly was behavin' himself strick proper. But Bray has got it in for us Diamond fellars. This sheriff is a four-flusher, boss. He's never had one of us in jail yet."

"Which way did they go?" asked Jim.

"Down the street. The jail's across the tracks."

Jim hurried out and in the direction mentioned. He did not take kindly to the idea of one of his cowboys going to jail. While crossing the tracks, he espied Bray dragging a reluctant and protesting cowboy along the station platform. Jim intercepted them. This cowboy he also recognized, a tall, handsome fellow with curly yellow hair, just now very red in the face, but not so drunk as Jim had been led to suppose.

"Hold on, Sheriff," called Jim, as he confronted them. "You've got one of my boys. What's the charge?"

"Hullo!" gruffly returned Bray.

He was a burly man, thick-featured, with a bluish cast of countenance, and he wore his sheriff's badge and gun rather prominently. "Oh, it's young Mr. Traft. I didn't know you. . . . Wal, this boy was gettin' a little too obstreperous to suit me. So I'm runnin' him in."

"Curly, what'd you do?" inquired Jim.

"Boss, I was singin'," asserted Curly. "This heah one-hoss occifer sings in—choir an' he thinks he's—only singer."

"Wal, you can sing in jail," declared the sheriff.

"Bray, I reckon you'd better not run Curly in," said Jim coolly. "Let's walk along and get away from this crowd. I'll take Curly around the block."

"Say, for a tenderfoot you're startin' right in to play a high hand," sneered Bray.

BY THIS time Jim's blood had grown a little hot. He jerked Curly free from the sheriff.

"I'll arrest you both for resistin' an officer," threatened Bray.

"Boss, let go an' stand aside. This heah ain't funny no more," spoke up Curly. The change in him, the ring in his voice, made Jim jump, but he did not release the cowboy.

"No, Curly, I'm responsible here," he replied.

Bray had subtly altered, which fact Jim attributed to Curly's sudden menace.

"Wal, Traft, I'll let him go in your care," he growled. "But I'm givin' you a hunch. Prentiss said somethin'. This Diamond outfit ain't funny no more."

"Thanks, Bray. I consider that a compliment to me. Come on, Curly."

Jim walked the cowboy down the block and up a side street until they got out of the center of the town. Finally Jim halted in a corner.

"Curly, will you go back to the ranch? I'd go with you, but I've errands to do."

"I reckon. The Diamond ain't disobeyin' orders. But what'd you want to go do this heah trick for? The outfit will be sore at me. They ain't a-goin' to stand for me bein' friends with a tenderfoot boss."

He wheeled and strode away. He across the street he turned. "Boss, I fo got. I'm in an orful fix," he said, and stro back. "My gurl's in town. I haven't la eyes on her for two months. Shore, it wou be safe to let it go longer."

"Well, I daresay you *are* in a fix. Curl I'll help you out. Promise you'll not ta another drink today. Then walk out the ranch and walk back tonight. That sober you. And you can see your gir

Curly swore. He bent a strange, bl gaze upon Jim.

"I reckon there ain't no help for it," muttered. Then he went away.

Jim was entering the hotel, where he pected to meet his uncle and ride ho with him, when he was detained by ano member of the Diamond, who barred way obviously, if not rudely. Two o cowboys drew back.

"Excuse me, Mr. Traft. I'm H Jocelyn, an' I'm wantin' a word with yo He was cool and insolent.

86% of those who try it discard their old-style methods. Will you do us the kindness of sending the coupon for your test? It's free.

LEMEN: Some time ago we asked 1000 men to advise creating a new shaving preparation—Palmolive Shaving ı. They told us 5 important ways old methods failed ıse. After much experimenting we've finally succeeded millions of men have acclaimed the cream we make. ou had been one of the 1000 men we asked, what *you* have suggested? Please read this list and see if ıre not the things you, too, have sought:

ltiplies itself in lather 250 times.

tens the beard in one minute.

intains its creamy fullness for 10 minutes on the face.

ɔng bubbles hold the hairs erect for cutting.

e after-effects due to palm ive oil content.

Our free test offer

rder that men might know ɔur great laboratories had achieved we told them: "Don't buy—yet." For we wanted to prove to them, *at our expense,* the wonders of the shaving cream we'd made.

And of the millions who have made our no-risk test, we find 86% stick to Palmolive Shaving Cream—reject their former methods for this new one.

Probably you will find we have anticipated your desires in our unique new cream. So we ask you, in fairness to yourself—and to us who have tried to please you—to mail the coupon now. A generous 7-day test will come to you by return mail. Act now.

the final touch to shaving luxury, reated Palmolive After Shaving Talc ly for men. Try the sample we are ee with the tube of Shaving Cream.

LIVE RADIO HOUR—Broadcast every Wednesday night—from 9:30 .m., eastern time; 8:30 to 9:30 p. m., central time; 7:30 to 8:30 p. m., time; 6:30 to 7:30 p. m., Pacific Coast time—over station WEAF and 39 sociated with The National Broadcasting Company. 4326

"Aren't you one of my cowboys?" asked Jim.

"I've been ridin' with the Diamond, if thet's what you mean. But I ain't shore I'm stayin' with the outfit."

Jim had been told by no less an authority than Ring Locke that horses and men could not separate the Diamond outfit.

"You're not, eh? Well, you want to be pretty sure, or you won't be riding for it. What do you want?"

"I was in Babbitt's an' they told me they'd sent out a wagonload of barbed wire to the ranch. Fer the Diamond outfit! An' I calls him a liar."

"Then you'll have to apologize. It was for the Diamond. And there's a carload more ordered."

"Thunder you say!" ejaculated Jocelyn, in amaze and gathering anger. "An' what's it fer?"

"None of your business, Jocelyn," retorted Jim. "If you'd asked me civilly I'd have told you."

"But barbed wire is most used fer fences!" exclaimed the cowboy. His two comrades edged closer until they were beside him, watchful, hiding their feelings, if they had any. "An' nobody would reckon the Diamond'd have anythin' to do with thet!"

"The Diamond is in for some new experience, Jocelyn. And you may as well know fence building is one of them."

"Haw! haw! It shore is. A tenderfoot dude foreman! Then barbed-wire fence! What's the range comin' to?"

Jocelyn had half turned to his companions, to whom, in fact, his exclamation had been directed. Jim shot out a hand and spun him around like a top.

"Did you call me a tenderfoot dude foreman?"

"Wal, Mr. Traft, I reckon I did," Jocelyn drawled.

Jim knocked him flat. He had not calculated consequences. In accepting his uncle's job he had burned his bridges behind him. But when Jim saw Jocelyn lying there, then slowly rising, his hand to his face, which was black as a thundercloud, he awoke to another sensation. He would not, however, have recalled the blow.

"Jocelyn, you're fired," he said, as coolly as the cowboy had spoken. "But if you come out to the ranch and apologize to me, I'll take you on again."

THEREUPON Jim turned to enter the hotel, where among several persons who had been spectators of the little byplay he found his uncle and Ring Locke.

"Hello! Say, I'm sorry you happened to see that," said Jim regretfully.

"Come inside," rejoined Traft, and when the three of them were out of earshot of bystanders, he turned to Locke. "Ring, he called Hack's bluff. An' mebbe he didn't poke that puncher's snoot! I darn near choked myself to keep from yellin'."

"Uncle!" exclaimed Jim, as surprised at this speech as at Traft's glee.

"Son, the only fault I can locate in you so far is you talk too quick an' too much. It'll get you in serious trouble."

"But I couldn't stand for that," expostulated Jim.

Ring Locke shook his lean, hawklike head forebodingly.

"Wal," he said, "it's bad an' good. More good, I'd say. If the new foreman of the Diamond had stood fer that—wal, he couldn't have had a chance. But I was thinkin' of what it'd mean. . . . Young man, this same Hack Jocelyn has shot fellars for less."

"It's true, son," corroborated Traft somberly. "That's the worst of it. This gang of yours has made 'way with nine men since they rode for me. Shore, some of them were darn good riddance."

"More'n nine, boss," corrected Locke. "Lonestar Holliday got drove out of Texas fer a shootin'."

"What!" gasped Jim. "Those fine, clean boys murderers?"

"Jim, you're out West now," said his uncle testily. "When two men get into an argument or quarrel an' draw, it ain't murder if one is killed. We couldn't run the range without cowboys and they're shore a tough crowd of young roosters. . . ."

LATE on Sunday afternoon, while Jim sat on the porch, his uncle called attention to a cowboy approaching.

"Bud Chalfack," announced Traft, with a chuckle. "He's the peacemaker of the outfit. Whenever anyone is in wrong Bud is elected to set him right."

"Ahuh," returned Jim dubiously. He watched the cowboy stroll up the lane and down the path to the porch. Bud appeared to be a little fellow, but sturdy, bow-legged, and otherwise suggestive of long association with horses. He had an open, guileless countenance and he reminded Jim of a rosy-faced cherub.

"Good evenin', Mr. Traft, an' howdy, boss," he said cheerfully. "May I set down?"

"Shore, Bud," replied Traft genially. "Reckon you look sort of weak. What ails you? Too much town?"

"Weak? We bin wrastlin' all day with Hack. But you ought to see the other fellars. They're laid out."

"Is Hack here?" asked Jim quietly.

"He's down at the bunk house. I been sent fer him."

"Why didn't he come himself?"

"Wal, fust off he wouldn't come, an' I reckon now he ain't able."

Bud's grave, infantile face was averted for a moment, during which Jim shot a quick glance at his uncle, to be rewarded by a wink. Jim drew a breath of relief.

"What ails him? Did he get drunk last night? Sick this morning?"

"Boss, I reckon both. But it ain't them. We was sorta put out with Hack. Shore we didn't mean to let him bust up the Diamond. An' he was daid set on thet. So after arguyin' all day we got tired, an'—wal, Hack's in bed."

"I see. Then he can't come over to apologize and get his job back. Or did he want to do it?"

"Wal, Hack shore wanted the job back all right, but he hated the terms. He said, 'Jest tell the boss I'll apologize if he'll swear I won't have to dig no post holes.'"

"Bud, I'm afraid Hack will have to dig holes along with the rest of us," said Jim.

The cowboy looked incredulously to Mr. Traft for corroboration.

"Bud, it's up to Jim. You can tell the boys, though, that Jim will not give them anythin' he won't tackle himself."

"All right, sir. Thet's shore fairer'n any foreman I ever rode under. . . . But Hack won't never dig no fence-post holes. We had it out with him an' so I may as well tell you. Boss, shore your uncle has told you what this drift fence will do!"

"He hasn't told me anything."

"Wal, some of us will have to then," said Bud. "Hack swears we'll have to fight. He knows Seth Haverly an' his outfit of the Cibeque. Bad hombres, he called them. An' Slinger Dunn don't need introduction 'round Flag. You can see his trade-mark in more'n one place. . . . Some of the boys agree with Hack. We'll have hell buildin' thet fence an' wuss'n hell when we get it done."

"Bud, is the Diamond outfit game to build that drift fence?" queried Jim.

"You bet your life it is," flashed Bud.

"Are you going to stick together?"

"Wal, we reckon nothin' but death can bust the outfit."

"If I left it to a vote, how many of you would be for building the fence?"

"Boss, we've already voted. This mawnin'. An' Hack was the only fellar to drop a black mark in the hat. Leastways, we think it was Hack. The most of us believe that Mr. Traft knows more an' sees farther, an' wouldn't never do no homesteader or little cattleman a low-down trick. We're goin' to believe he's right an' stand by him."

"But you all think he shouldn't have saddled this job onto a tenderfoot nephew?" queried Jim penetratingly.

"Wal, I—I reckon we do," replied Bud.

"There!" cried Jim triumphantly to his amused uncle. "See what you've done! . . . Come, Bud, I'll walk down to the bunk house with you."

He found half a dozen of the boys there, but missed Curly Prentiss. Hack Jocelyn lay on a bunk under a window, the light of which showed him badly bruised up.

"Hack, you get your job back, but it was a half-hearted apology," said Jim.

"Boss, I'd never give in but fer this low-down, lousy outfit," replied Jocelyn. "An' I'm tellin' you straight I won't dig no fence-post holes. I'll cut an' haul posts, I'll cook an' wash an' I'll pack water an' run errands."

"Hack, you don't look as if you were sorry you insulted me."

"Boss, I don't reckon it no insult. I was only bein' funny. But you shore do wear nice store clothes, don't you?"

"Can't I wear overalls all week and put on clean shirt and pants without being a dude?" inquired Jim.

"Wal, it depends on the pants an' the shirt."

"Matter of taste, eh? Well, I'll wear out my St. Louis clothes pronto."

Jocelyn peered hard out of his uncloses eye at this new specimen of range foreman and then gave up with a disgusted grunt.

NEXT morning before sunrise the Diamond rode out upon their momentous adventure. Thirty saddle and pack horses, one four-horse wagon hauling wire and tools, and the chuck wagon, made quite a cavalcade. Ring Locke's last word was one of commendation of Jim's wise move to pitch the first camp five miles out of town. Jim intended to drop bales of wire along the way, then work back from camp.

Jim started the work just after the noon hour, and it beat any circus he had ever attended. He dug the first hole himself.

"There!" he exclaimed, in satisfaction.

"Whoopee!" yelled Hack Jocelyn in a stentorian voice. "Boys, hear ye! The grandson of the Diamond!"

A Loving Thought for Mother

Back of the gift is the giver.

It's the loving thought that mother craves, whether it be expressed in a diamond or a box of chocolates.

If you choose chocolates, select the same assortment you give the debutante—Whitman's Sampler. Mother will appreciate your thought.

The symbolism of the package expresses the beauty of Mother's Day. Starting with a quaint and quiet sentiment, the Sampler has acquired a particular and special niche in the regard of candy-lovers.

It is not merely "a box of candy," it is a message, a token, a fit symbol of "a loving thought for mother."

Order it early from the Whitman agent near you—usually the leading drug store. He gets his supplies *direct* from Whitman's.

An added touch of sentiment is the special wrap for Mother's Day illustrating—*"A Loving Thought for Mother."*

CREATORS OF THE MODE

SPORTS ENSEMBLE BY RÉGNY . . . CAR BY HUPMOBILE

DRAWN FOR HUPMOBILE BY BERNARD BOUTET DE MONVEL

17 COS

Success is always interesting. And when a long-established business, after 20 years of steady and notable progress, suddenly bounds ahead to an increase of 60 % over the previous year, the facts are worth telling and worth reading. This truly sensational growth in HUPMOBILE sales has a definite explanation. For it came with the birth of the New Century cars. For 20 years men have used the word "HUPMOBILE" as a synonym for never-failing motor car integrity. But with the advent of the New Century cars, HUPMOBILE received a nation-wide acceptance as the mentor of the motor car mode. It expressed a new and finer art in motor car smartness and beauty. So, today, in the typical American family, he and she are agreed. His car of matchless deed is her car of unrivaled dash. For the HUPMOBILE has been made to look as good as it is! The CENTURY SIX . . . $1345 to $1645. The CENTURY EIGHT . . . $1825 to $2625. Standard and custom. All prices f. o. b. factory. Equipment, other than Standard, extra.

THE NEW CENTURY SIX & EIGHT HUPMOBILE

His fellow cowboys whooped so wildly reply that Jim felt constrained to be-e Jocelyn's pessimistic augury. Then, ler Jim's orders, they set to work, and y yelled and swore, and kept up a con-nt harangue with each other. Jim had ee of them dragging in long poles, which e cut into seven-foot lengths, five feet which were to stand above ground. Jim thought out his plan and it bade fair work. Bud Chalfack, Lonestar Holli-, and Hump Stevens had volunteered handle the wire, which, next to post-digging, seemed to be the most ob-ous to these aristocrats of the range. ortunately for Jim, it was not neces-to build the drift fence in a straight A general direction to the south, ing to levels and the easiest way, was ule. Jim marked the line and the holes certain distance, then went back to in all details of the labor.

HE first day ended with Jim's adding a me back and blistered hands to his ills. They had camped in the open where a few straggling pines had es-d the lumbermen, and the site was far pretty.

e cook had been highly recommended m, by no less a person than himself, hat, too, in writing. He claimed to fairly well, but he was dumb. Shot throat once, by a vicious cowboy!

ay, when is thet cadiverous galoot to yell 'Come an' get it'?" de-ed Hack.

nybody know what his handle is?" another.

oys, our cook's name is Jeff Davis," nced Jim. " He hails from Alabama. n't talk but he wrote he could hear well."

dumb cook! Holy Jupiter! We're ed for keeps."

ne. He cain't cuss the daylights out

al, if he can cook—O-Kay!"

r supper they had a camp fire, which they sat and smoked. Jim d that hour. The infinite and vari-ods of the boys seemed to have flag-hen, one by one—some without re-their boots—they rolled in their lins. Jim took off some of his clothes, en he stretched out in his bed with a he felt that he would never move How delicious that bed! He burned ed all over, and, tired as he was, could n go to sleep. The canopy of white eemed so wonderful and strange. , which had turned cold with the ind down off the mountain, blew s face. Jim had heard his first coy-us at the ranch, so he was, in a way, d for another at close range. Evi-this visiting bunch sat round in a le, just behind his bed, and barked, and whined their wild cacophonies. enly he felt something tugging at k of his bed, at the blankets under made him start violently, and in-ely frightened him. A coyote! Did engering beggars steal that close? ed, with much meaning but poor tion:

t!"

e popped up. He could see a short back of his bed. Nothing there! oot he beat around back of his coat, had folded up for a pillow. Then, ll shaking hand, he felt back there. And it came in contact with a rope. It had been tied to an end of the blanket over him, and this had been drawn half off.

"Well, by gosh!" he muttered.

From all around strange sounds arose. He sat there amazed, until he grasped the situation. The cowboys had played their first trick on him and were now trying to hold in a fiendish and bursting glee.

Jim untied the rope and flung the end as far away as he could. Sons-of-guns, he called them to himself! Nevertheless, he took this as an augury of good luck. His uncle had assured him that if they played tricks on him, there was hope. If they suffered him in silence and let him severely alone, the case was hopeless. Jim lay back happy despite his chagrin at being scared half out of his wits, and went to sleep.

Next morning he hobbled around cheerfully without mentioning the incident, and went to work. That turned out to be a trying day, particularly in keeping at it. Upon returning to camp, he washed his blistered hands and then, thinking to rest a little before supper, he sought his bed.

But it was gone. At first, he imagined he had mistaken the place, but he soon reassured himself that he was right about the location. After a few moments he discovered his bed-roll high up in the pine tree, swinging by the rope. Jim swore under his breath. If he had to climb that tree, crippled as he was, it would afford these devilish cowboys a treat. He just would not attempt it. They stood and sat around, waiting for the call to supper, and obviously they were aware of his predicament.

"Oh, were I a little bir-r-rd," sang one of them.

Jim decided he would make one gigantic bluff. He had been pretty lucky so far. Why not play that to the limit? Whereupon he went to his pack and, taking up his revolver, he aimed steadily at the rope above his head and shot. He cut the rope. As he gasped, the bed-roll fell with a heavy thump. Jim flipped the gun in a way he had learned through a week's practice, and carelessly tossed it over to his pack. Then, approaching the cowboys, he said seriously: "I sure hope none of you hombres make me throw a gun on you."

They seemed to be a wide-eyed and stricken group.

"Boss, I shore ain't goin' to do thet little thing," spoke up Curly.

So they had to score another for the tenderfoot. That night around the camp fire they were thoughtful, and whispered behind Jim's back. He went to bed knowing the war was on and that he was in for utter rout. Ring Locke had said cowboys, when pressed, would do anything under the sun. Jim had thought it all out, and he could only regulate his conduct according to theirs. The main issue for him was to earn their respect.

BY the end of the week they had finished the drift fence townward to where it joined Traft's ranch. They had also about finished Jim. Saturday night he spent alone in camp, except for the cook. Late Sunday afternoon the cowboys began to straggle back in twos and threes, some of them still pretty drunk. Jim resented that. He watched them come, careful to see who were the sober ones. Bud returned, holding Hack Jocelyn in his saddle: and Curly performed a like office for Cherry Winters.

At sunset Jim took a long walk, which in a way mitigated his mood. The supper gong recalled him. As he neared camp, his keen ears caught Curly saying, "Wal, it's shore eatin' into my gizzard. I reckon he's pretty decent, considerin'."

Jim wondered if this talk referred to him or his uncle, and after a moment's consideration decided it was about himself. Curly then, as Jim had grasped before, was leaning a little toward championing him. It was the one bright spot in a gloomy week-end.

ON Monday at dawn they broke camp and drove south to the edge of the timber, perhaps another five miles. Here the camp site delighted Jim. It was on a grassy bench just where the pines began, and near a beautiful spring.

At this camp matters came to a pass where Jim grew beside himself with rage. And the incident that capped the climax was when Curly Prentiss, after gradually and perceptibly leaning toward friendship for Jim, suddenly became alienated. Jim laid this to influence of a clique of four in the Diamond outfit, the ringleader being Hack Jocelyn.

"Curly," Jim said, "you've got a saffron streak as wide as the road."

"Boss, is thet thar relatin' to my work on this heah drift fence?" queried Prentiss, with a keen glance on two of the cowboys who had certainly heard Jim.

"No. I'm bound to admit you do more than your share."

"Wal, then, I'm takin' your remark as personal, an' if *you* ain't just as yellow, you'll step out with me."

"Good heavens, Curly!" ejaculated Jim wearily. "You wouldn't make it a matter of guns?"

"Wal, in this heah country a man has to protect himself."

"Ahuh. And how am I to protect myself from most of this devilish bunch without a friend?" queried Jim bitterly. "I've been banking on you right along. You have helped me a good deal, though you may not know it. I like you. And I swear you were beginning to like me. Then all of a sudden you turn cold and mean."

"So that's why you called me saffron?" asked Prentiss, with curious little flecks of light in his eyes.

"Yes, it is."

"Wal, the outfit put it up to me this heah way: They accused me of bein' friends with you. An' they made me cut the deck. You or the Diamond."

"So that's it," replied Jim. "I never thought of that. Naturally you'd stick to them."

"Shore. An' I'm demandin' an apology before the outfit," said Curly, with the air of one who held the whip hand.

"Suppose I won't?"

"Wal, then, as you cain't stand fer a little gunplay, I'll have to lick you," drawled Curly.

"Curly, you couldn't do that if you tried it every day we are building this fence."

This retort, as amazing to Jim as to Curly, came out of the past days of Jim's turmoil.

"Mr. Traft, I'm shore differin' with you. An' I'll show you pronto."

"Well, let's get the apology over first," replied Jim dryly.

It happened to be just before supper-

CHRYSLER MOTORS

FOR BETTER PUBLIC SERVICE

All branches on the same tree; all growing out of the Chrysler root principle of standardized quality

Benefiting the buyer in every price class

One great idea permeates all activities of Chrysler Motors: to key its tremendous forces to a common policy and to provide better public service.

The unity with which Chrysler Motors is organized—its personal management, its group team-work in engineering, purchasing and manufacture—enables Chrysler Motors to make *each* of its products beyond question the *finest in its field.*

Group engineering assures the applied brain-power of *many* engineers instead of a few. It means a mutual exchange of ideas and discoveries to the obvious advantage of every car in the group.

Group purchasing permits buying of materials for all on an immense scale which can be done far more advantageously than if each unit did its own buying on a smaller scale.

Group manufacturing enables each plant in Chrysler Motors to contribute to and to share in the general increased efficiencies and savings that come through the free inter-change and general application of new methods and practices.

Because it is organized in this way and functions in this way, Chrysler Motors is able to apply a uniformly-high standard of basic quality to its all-inclusive group of cars covering al markets—all price classes.

Thus, the family that buys Chrysler Motors product—whether it be a Plymouth, De Soto Six, a Dodge Brother Six or Dodge Brothers Senior a Chrysler "65," "75," o Chrysler Imperial—is assure the greatest possible value fo every dollar invested.

For the fundamental principl of Chrysler Motors, whic extends the benefits of Chrysle Standardized Quality to all pric fields, is, in itself, a pledge to th buyer that each Chrysler Motor product is the finest he can bu at anywhere near its price.

Chrysler Motors Products Include:

Chrysler "75" . . . Chrysler Imperial . . . . Chrysler "65

Dodge Brothers Senior . . Dodge Brothers Six

De Soto Six . . Plymouth

Dodge Brothers Trucks, Buses *and* Motor Coaches

Fargo Trucks *and* Commercial Cars

Chrysler Marine Engines

PLYMOUTH 4-DOOR SEDAN, $695

America's Lowest-Priced Full-Size Motor Car

full-size of the new Chrysler-Plymouth is in striking contrast to the small dimensions usually associated with lowest-priced cars. Plymouth is a *full-size* motor car in every way.

size, however, is only the beginning of Plymouth's superiority. Plymouth's value and popularity are based on a great deal more than size and comfort alone.

Chrysler-designed—Plymouth engineers sponsors all that is new and advanced in style and charm. Chrysler-engineered—it excels in power, in pick-up, and in sustained high speed affording big-car steadiness and typical Chrysler smoothness.

Know, too, that Plymouth has big-car solidity; big-car dependability; big-car safety and sureness. Beneath its *full-size* body are a *full-sized* rugged chassis; *full-size* axles; *full-size* springs with compensating, shock absorbing leaves, and Chrysler *full-size* weatherproof internal-expanding hydraulic brakes on all four wheels.

Best of all, Plymouth's low first cost is followed by consistent economies in gas, oil, tires and general upkeep.

With the introduction of the Plymouth, the day definitely passed when a small price automatically implied a small car.

$655
AND UPWARDS
F. O. B. Factory

PRODUCT of Chrysler engineering and craftsmanship, the Plymouth has been so named because its endurance and strength, rugged honesty and freedom from limitations so accurately typify that Pilgrim band who were among the first American colonists.

PLYMOUTH

Coupe, $655; Roadster (*with rumble seat*), $675; 2-Door Sedan, $675; Touring, $695; De Luxe Coupe (*with rumble seat*), $695; 4-Door Sedan, $695. *All prices f. o. b. factory.*

PLYMOUTH

CHRYSLER MOTORS PRODUCT

Digitized by Google
Original from UNIVERSITY OF IOWA

time and all the boys were there. Jim did not require to be told that they had heard about what he had called Curly.

"Fellows, I've a word to say," he began, and the slow, sly glances he drew made him want to swear at them. "I want to apologize to Curly before you all. I told him he had a streak of saffron. Well, I take it back. And instead of Curly, I'll apply it to those of you who made Curly turn me down. I don't know who they are but *you* know. It is pretty low-down. This rotten job I've tackled for my uncle has got on my nerves. There's so much I don't know. Curly or any one of you could help me. I think he was leaning that way. But you made him quit."

Then Jim turned to Curly.

"There, Mr. Prentiss. You politely invited me to a gun party. And then threatened to lick me. But neither of these made me apologize to you. It was because I had done you an injustice. Now I'll tell you some more before your grinning ape pards. You can't lick me. And unless you make a blamed good stab at it right here and now, I *will* say you're yellow."

Curly's face was more of a study than that of his allies, which certainly presented a good deal in puzzles.

"Boss, I reckon your uncle will—" began Bud, conscience-stricken.

"Shet-up, you durn little crow!" bawled somebody, presumably Hack.

Lonestar Holliday burst into the circle: "Fellars, heah comes thet Slinger Dunn," he whispered warningly.

TWO riders had come out of the woods. They were not cowboys, yet Jim could not in a glance determine why he made that distinction. The first rider looked like an Indian, but his skin was dark bronze instead of red. His features were shadowed by the brim of an old black sombrero, yet piercing eyes shone out of that obscurity. He wore a buckskin shirt, much the worse for long usage. The rest of his apparel corresponded with any cowboy's.

The second stranger was a lean-faced, hard-lipped young man, with eyes that appeared to oscillate like a compass needle.

Both were mounted on long-haired, ragged, wild-looking horses. The saddles were superb, with long tapaderos. Rifles were slung in saddle sheaths.

The foremost of these two riders did not greet the Diamond, individually or collectively. And Jim, quick to note this, and that none of his men spoke, waived any sort of greeting himself. But he stepped out in front with an air of authority. This placed him somewhat closer to the rider, in a better light, and he looked up into a handsome, still, strange face.

"You the new boss of this heah Diamond outfit, hey?" inquired the rider, in cool hostility.

"Yes. I'm supposed to be," replied Jim.

"Howdy, Mr. Traft, I shore am glad to meet you," drawled the rider, without any intimation that he intended to reveal his own name.

Presently Jim replied. "I can't return the compliment if you don't say who you are."

Holliday took a couple of slow steps, which placed him beside Jim, an action that somehow thrilled Jim, though he might have misunderstood its significance.

"Boss, it's Slinger Dunn an' his pard, Seth Haverly, from the Cibeque," said Holliday crisply.

"Howdy, Lonestar," returned Dunn.

It was noticeable that Holliday had no more to say. But Jim greeted the visitors and asked them to get down and stay for supper. Dunn might not have heard, for all the sign he gave.

"Say, ain't you buildin' sort of a long fence?" he queried. "An' barb' wire too. What kind of a fence is this goin' to be?"

"A drift fence to hold cattle, Mr. Dunn," returned Jim.

"What's the idee—a drift fence?"

"What do you suppose?" counter-queried Jim, just as curtly. Then he gazed up into burning eyes that positively gave him a shock.

THE second rider came up. "Arch, let's be goin'," he said.

"Wal, I suppose a lot. But I'm askin' questions," went on Dunn. "This heah fence is ole Jim Traft's idee?"

"Certainly it is."

"Is he aimin' to fence free range?"

"It will divide the range, that's sure."

"Wal, I reckon you won't go far," drawled the other meaningly, and he rolled a cigarette without ever taking his gleaming eyes off Jim.

"Arch, I'm sayin' let's rustle out of this," interposed Haverly.

"I'm going to the end of the Diamond with this drift fence," averred Jim. "And after it is finished my outfit will see that it stays up."

"Your outfit? Say, Mister, you cain't have it in your haid thet *your* Diamond outfit will stick to you."

"I've got that notion."

"Wal, you're plumb off the trail. Even down in the brakes we heah what Jocelyn thinks of you. An' Cherry Winters. An' Uphill Frost."

"I'm sorry to admit that some of my men ridicule me," said Jim feelingly. "Perhaps it's deserved, for I sure am a tenderfoot. But all the same the drift fence goes up and *stays* up, if it takes half a dozen Diamond outfits."

Dunn poised his cigarette, arrested by a speech that evidently struck him.

"Traft, no drift fence will ever stay up in Cibeque country," he returned presently with grim passion.

"That remains to be seen. Thanks for giving me a hunch. And now, since you're neither polite nor agreeable, will you please mosey on out of my camp?"

Dunn's face showed the darker for a wave of blood. His companion roughly seized him, nearly unseating him from the saddle.

"Slinger, I shore ain't waitin' to be ordered out of no tenderfoot's camp," he said gruffly, dragging at Dunn.

"You're a little late," put in Jim, with sarcasm. "My invitation included you. Now I say to both of you—*get out!*"

THE instant Jim had delivered this contemptuous order he realized he had done something terrible. Not only Dunn's aspect, but his own men appeared to freeze. Jim had never seen such a blazing hell in human eyes as he encountered in Dunn's. Haverly reached down and, grasping the bit of Dunn's horse, wheeled it and rider away.

Jim turned to his men. As he did so, he observed Curly Prentiss move his right hand, containing a cocked gun, from behind his back.

"I don't think much of you men," he said, with a ring in his voice. "You may be the great Diamond outfit, but to me you're a lot of four-flushers. What do I know about Slinger Dunn and his kind? Some of you might have chipped in and stood by me."

"Boss, I reckon we stood by you without you knowin' it," declared Curly Prentiss. "You were doin' the talkin'. An' if we'd chipped in there would have been gunplay."

"Curly's right, boss," added Lonestar Holliday. "I don't know if Dunn seen Curly slip his gun out. But I reckon he did, as he was shore civil for him. This Slinger Dunn has a bad rep. He's killed several men an' shot up more'n you could count."

"Boss, I'll chip in a word," said Hack Jocelyn. "It shore was nervy of you to fire Dunn out of our camp. If you hadn't been a tenderfoot, you'd never have done it. You want to look out for Slinger Dunn."

"Aw, I'm not afraid of him, even if he is a gun-slinger," declared Jim passionately. "How do I know it wasn't another trick, hatched by some of you? You may think you're having fun at my expense. Perhaps you are. But there ought to be a limit. You're such awful liars I can't believe one word you say."

"Boss, are you callin' us liars?" inquired Curly, in a queer tone.

"I reckon I am. You're more. You're a flock of swell-headed, cross-grained, cantankerous cowboys. Now put that in your cigarettes and smoke it!"

NEXT day the stretching of wire fence went on, and now with a remarkable celerity, compared with the work done in the open country. The strands of wire were nailed upon trees, and seldom had a post-hole to be dug. Three days later the camp was moved ten miles down in the woods into a wide, pleasant draw where a creek ran. And another week-end went by, including Sunday, when Jim was left in peace.

He was nearing the end of his rope now. As the days passed and the drift fence lengthened, these incomprehensible cowboys of the Diamond outfit were driving Jim to distraction. They meant to break him. They were going to. No tenderfoot out of Missouri could ever run the Diamond! So Jim had overheard.

On Monday the wire wagon went on ahead, along a line Jim had blazed on Sunday, and dropped its load, then went back to town for another, necessitating now a trip of three days.

Jim, driving the men hard that week, reached the end of the blazed line before the wagon returned. Friday, at the lunch hour, Bud Chalfack approached him.

"Boss, I'm talkin' fer the outfit," he announced. "We figger thet we're aboot done on this week's work, an' we want this afternoon an' tomorrow off. There's a rodeo on in Flag, an' tomorrow's *rodeo* day. Most of us are entered."

"But we can't stop our fence building to go to *rodeos*," protested Jim.

"Shore, we can. We-all cain't see a hurry aboot the fence. An' when the Fourth comes we'll be way down too far to ride in. So we want to have a chance at this *rodeo*."

Jim actually could not decide whether

High speed gives oil its hardest test

Oil which lasts longest at high speed lubricates best at any speed

You will find that the New Mobiloil outlasts other oils at high speeds. This explains why Mobiloil keeps the first-year feel in your engine.

MODERN roads . . . higher speed-limits . . . modern nes . . . have made fast drivers s all. And probably you've ced that oil consumes most dly when the pace is swift.

ur assurance that the New iloil will stand up better and onger than other oils under speed is really a conserva- reflection of the speed-test ds made in thousands of s of running at the Atlantic Speedway. And it is an lished engineering fact that il which lasts longest and s up best at high speeds, cates best at any speed.

believe, that with draining efilling at regular intervals, and with reasonable care of your car, the New Mobiloil will keep the first-year feel in your new engine for at least 30,000 miles. Actually, our tests have shown that Mobiloil has preserved the first-year feel in many engines for more than twice this distance.

The New Mobiloil can save *your* good engine from growing old before its time. It can bring new pleasures to your miles of spring and summer driving, and *new economies* in oil consumption and in repairs. Mobiloil is made by the Oldest and Largest Specialists in Lubrication.

VACUUM OIL COMPANY
Makers of high quality lubricants for all types of machinery

Make this chart your guide

It shows the correct grade of Gargoyle Mobiloil for certain prominent cars. If your car is not listed below, see complete Mobiloil Chart at your Mobiloil dealer's.

Now . . . your morning shave lasts longer

smoother, closer,* small-bubble *principle gives altogether different shave

COLGATE LATHER

Colgate's lather (greatly magnified) showing moisture contact with beard and minimum air. A common-sense principle scientifically authenticated and proved out practically by millions of men.

ORDINARY LATHER

Ordinary, big-bubble lather (greatly magnified.) Note air-filled bubbles which can't soften the beard sufficiently. Only water can do the job. Only small bubbles permit sufficient water.

AT five or six in the evening do you wonder if you'd better shave again—or do you figure on "getting by"—do you hope that others won't notice? A longer lasting shave is wholly a matter of proper preparation so as to get a closer shave. That means the beard must be properly moistened. Big air-filled bubbles won't do. Only Colgate small-bubble lather can carry sufficient water to do the job thoroughly. Common sense confirms this principle.

Now home-shaving is infinitely easier, for the minute you lather up with Colgate's, two things happen: 1. The soap in the lather breaks up the oil film that covers each hair. 2. Billions of tiny, moisture-laden bubbles seep down through your beard . . . crowd around each whisker . . . soak it soft with water.

Instantly your beard gets moist . . . easier to cut . . . scientifically softened right down at the base . . . then your razor can do its best work.

A comparison between ordinary big-bubble lather and Colgate small-bubble lather awaits you, if you mail the coupon below. We will send also, a sample of After-Shave, a new lotion—refreshing, delightful . . . the perfect shave finale.

FREE

COLGATE, Dept. B-1711, 595 Fifth Avenue, New York

Please send me, FREE, the seven-day trial tube of Colgate's Rapid Shave Cream; also a sample bottle of "After-Shave."

this was insubordination or the legitimate claim of a cowboy.

"Very well, you go on your own hook," he said to Bud.

They rode off, a gay and superb group of young riders who made his heart swell with pride and yet saddened it with the thought that he never could be received by them. Why had they not asked him to go with them? He would have been delighted. He had never seen a *rodeo*. But they did not want him; they were ashamed of their tenderfoot foreman.

After they had gone, Jim strode off toward the woods. He was astounded to hear the supposedly dumb Jeff Davis call:

"Boss, you oughtn't go out alone. But if you must go, take a rifle."

Jim did not answer, though he was grateful to Jeff. The cook, then, had perpetrated a hoax on the Diamond. Here would be one on the cowboys, presently. Jim assured himself that he would not betray Jeff. He did not, however, take the latter's advice, but went on into the forest alone and unarmed.

THE afternoon passed and he returned to camp, there to eat supper in silence without appearing to remember that the cook had spoken to him. He slept well but in the morning the old bitterness and hopelessness assailed him again. An impulse to ride to town seized him, and straightway he acted upon it.

He reached home about noon, to ascertain that his uncle was at the fair. Jim rode out there, and walked his horse. Weary and distressed, he entered the fair ground and, espying a gayly decorated booth advertising lunch, he dismounted and approached the counter. He gave an order to a girl behind it. When he was about through, he happened to look up to see a pair of gold-brown eyes upon him.

And they wrenched out of him the question, "What would you do if you were abused licked?"

It was when the girl had finally said, "I'd get up an' fight some more!" that Jim really looked at her with seeing eyes. If her spirited reply had stirred him, how much more did the toss of her pretty dark head, with its glints of gold.

She was a little girl, very young, and she wore a dainty blue dress. Still, there were contours under it that betrayed womanhood. She had a small, oval, almost dusky face. Her hands were small and brown, yet they struck him as strong and capable. She was western, of course, but she was a little lady of quality. He kept talking with scarcely any idea of what he was saying. And that suddenly betrayed to him a swift and remarkable interest in her.

By the time he had found out she did not have a sweetheart, he seemed faced with a strange, new adventure; and when he rode away toward the stands, with her shy but promise of a dance that night, he changed his mind about his mission to Flagerstown.

"I'd get up an' fight some more!" She had looked it, too. What a sweet and fiery little girl! Evidently she had taken it for granted that he had been knocked down. Well, he had been. But he had gotten up. And he would act precisely and indomitably upon her advice. Fight! He would whip each and every one of the Diamond outfit.

He gave his horse to a boy at the stands and went around to the stand, where

Stimulants, Sedatives or Food ~

From a Health Standpoint

© 1929 M. L. I. CO.

THE desire for extreme slenderness is bringing serious consequences. When stimulants, sedatives or drugs are substituted for the food ded to build health and strength, the penalty is ain and severe—frequently broken health and ietimes death.

f-truths are often more dangerous than false-ds. While it is true that an excess of fat is lesirable and frequently dangerous in the later rs of life, it is not true that young people—er thirty years of age—can ordinarily expect to e good health if they avoid wholesome body-ding foods and persist in a rigid "re-ing" diet. There are certainly more cases uberculosis among young "underweights" n there are among those of normal ght.

ing childhood and the early adult years, ure demands a bodily reserve upon which can draw in time of need to fight disease. outh a few pounds of excess weight are a able protection against physical break-n. The sacrifice of this needed tissue may lt in permanent injury, although the unting may not come until years later.

ite the claims of faddists and selfish interests, there is no mystery today in what constitutes an intelligent diet. The doctor who would not hesitate to prescribe a stimulant or a sedative in case of emergency, would forbid their use in place of needed foods.

A famous health expert was asked bluntly, "Do you think stimulants are harmful to everybody, no matter in what degree the stimulants are used?" He said, "Not always, but everyone should try to put himself in such fit physical condition that he will not need or desire artificial stimulation. The hunger for stimulants is an indication of weakness and evidence of improper diet or other incorrect living habits."

Certain practices trick the appetite and dull the desire for nourishing food. When the demands of a normal appetite are too frequently denied, the appetite may be lost and food be made repugnant.

Perhaps it is too late to talk to older people stubbornly set in wrong habits, but if the fathers and mothers of tomorrow will eat properly, exercise properly, work properly, sleep, breathe, stand, walk—yes—and *think* properly, they and their children will have better health and longer lives.

The Metropolitan Life Insurance Company has the privilege of consulting famous specialists on important questions of health. While the Metropolitan wishes to point out most emphatically the danger of too strenuous dieting at the earlier ages, it also wishes to stress, no less emphatically, the danger of overweight at the older ages.

Our booklet, "Overweight", tells the best methods to control these evils. It also tells what you should weigh considering your age and height. Ask for Booklet 59-A which will be mailed free. Address Booklet Department, Metropolitan Life Insurance Company, New York, N. Y.

soon found his uncle and was welcomed in a way that made him ashamed. It pleased his uncle that he had come to town in his work clothes.

The *rodeo* was on. And Jim sat enthralled. He saw Curly Prentiss ride wild bronchos that threw all the other riders; he saw Hack Jocelyn break the record for roping two-year-olds; he saw Bud Chalfack climb all over a horse, racing at breakneck speed; he saw Jackson Way ride two beautiful horses, standing with one foot on the back of each, and beat his opponents two full lengths; and lastly he saw Lonestar Holliday win the money for the perilous feat of bulldogging steers.

Out of sixteen events, the Diamond outfit took nine first prizes. Jim could scarcely contain himself. That was his band of cowboys. He might have hated them before today, but now he loved them. He gathered vaguely that something tremendous had happened to him.

He rode out to the ranch house in a trance, divided between pride in his cowboys and anticipation of the momentous dance near at hand. He shaved and washed and changed his clothes, aware of an undue regard for his appearance. Then he was off to the dance, eager, with palpitating heart, amused at himself, amazed and glad.

But he had not prepared himself for a vision in white—his girl of the booth—stunningly transformed by a gown, a brown-armed, brown-faced beauty with haunting dark eyes. She saw Jim at once. She bowed. And whatever had not already happened to his heart happened then.

Jim did not approach anyone; he saw only her. And he was in a torment waiting for her to give him the opportunity he longed for. How the dark eyes met his across the hall, through the whirling throng! Soon she sought a seat with her young partner, and obviously dismissed him. Jim made haste to reach her, to bend over her.

"My dance!" he whispered.

(*To be continued*)

America's Biggest Problem

(*Continued from page 13*)

never forget it. I am rather remembering as one must remember here in Europe, the indirect, oblique, long-drawn-out consequences of modern war. We cannot any longer let so much power loose for destructive purposes and expect civilization to survive the ruin.

Scientists, today, are facing the possibility of breaking up the atom. What that means it is not easy for a layman to imagine. We are told that a bird-shot magnified ten billion times would be as large as the earth; that an atom magnified ten billion times would be less than three feet through; that the nucleus of an atom magnified ten billion times would be as large as a pin point; but that within this nucleus one ten-billionth of a pin point, as many as three hundred and eighty-four electrons may freely operate. Science is getting to the point where, in requiring faith, it makes even the most incredible of religious creeds look simple! Whatever it may mean, the breaking up of the atom, which scientists now are aiming will, the

New facts about CLEANING TEETH

YOU KNOW . . . .

at there are thousands of tiny crevices healthy, normal teeth and gums?

ut no toothbrush can get down into these croscopic places?

at food particles and mucin deposits lge in these crevices and may start decay?

ut the real test of a toothpaste is its ability cleanse these crevices?

EMARKABLE scientific discovery has recently brought to light some new facts cleaning the teeth.

entist carefully measured the power thpastes to penetrate the tiny crevices th and gums where food particles lodge and where begins.

und that some dentifrices merely scrub the outer e of the teeth. Others go partly down into the crevices. *Then he discovered that Colgate's has her penetrating power than any of the leading rices on the market today.*

is the secret of Colgate's remarkable ability to —it gets down deep into the hard-to-clean places the toothbrush cannot reach.

Colgate's superior penetrating power is due to the fact that it contains the world's greatest cleansing agent. When brushed, this cleansing agent bursts into a sparkling, snow-white foam that sweeps over teeth and gums. This foam possesses a remarkable property (low "surface-tension") which enables it to go deep down into the tiny tooth crevices where decay starts. There, it dislodges clinging food particles and mucin, washing away these impurities in a detergent wave.

In this foam is carried a fine chalk-powder—a polishing material used by dentists—which polishes the enamel safely, brilliantly. Thus Colgate's cleans and beautifies; purifies and refreshes the entire mouth restoring natural loveliness of teeth and gums.

and only 25¢

The famous 25c tube of Colgate's contains more toothpaste than any other leading brand priced at a quarter. This is because Colgate's is the largest selling dentifrice in the world.

Colgate's Cleans re The Toothbrush Cannot Reach

Greatly magnified picture of tiny tooth crevice. Note how ordinary, sluggish toothpaste (having high "surface-tension") fails to penetrate down where causes of decay may lurk.

tell us, release unimaginable stores of energy for human use.

More and more the problem of Western civilization lies in the handling of power.

Here is one of the deep distinctions between the Occident and the Orient, one of the major reasons why the East and West do not easily understand each other. In China, for example, the root difficulties, which must be overcome before the dream of her forward-looking minds can be realized, are problems of lack.—First, lack of food! The excess population of China presses so cruelly upon the inadequate food supply that a famine is always ravaging the land, and only when it rises a little above the threshold of the ordinary do we hear about it. One of the most experienced correspondents in Peking told me that he never thought it worth while to report a famine until he found at least 25,000 starved to death in one town.—Second, lack of literacy! The estimates of literacy among the vast population of China vary from 5% to an obvious whitewashing of the situation which dares say 20%. Surely, I think no more than 10% of the Chinese can read and write.—Third, lack of communication! There are hardly enough railroads in that continental land to supply a decent city in the United States, and not only do outward communications fail, but so many and varied are the dialects that Chinese living only a few miles apart often cannot talk to one another. When the Manchu dynasty fell in 1912, friends of mine found villages, within twenty-four hours' walking distance of Peking, that three months afterward had not heard of the great event and would not believe it.

Such are the root needs of China—elemental lacks which it will take centuries fully to supply.

When one returns from China to the United States one feels acutely the contrast. Here is plenty to eat, education spreading with amazing speed, mechanical means of swift communication beyond anything ever known on earth before, and permeating all, a constant increment of harnessed energy, the forces of the universe trained to do our bidding. The prospect is exciting. The possibilities are immense. But the outcome of it depends upon what hitherto has proved to be the most difficult thing for any society to acquire: the moral and intellectual ability wisely to handle power.

EVERY department of American life is being affected by this problem. Obviously our personal morals are. Here is a young girl from an American family who has gone the limit and at fourteen has first more to learn about the raw side of life. Says the report of the juvenile court proceedings: "Situations that would make a woman physician grope for words, Clara took at a leap with a dialect composed of Elizabethan English and the coarsest of modern slang. She knew every dance hall, cabaret, skating-rink in town. Her favorite waiting places were drug-store telephone booths and rest rooms of department stores." And her parents never dreamed that anything wrong was going on.

What interests one most, however, is the comment of the social worker: "A generation or two ago," she says, "Clara would have been flirting, more or less innocently, at husking parties and church socials. The automobile, modern hot

Here is all
t Now costs to Telephone

60¢ New York-Philadelphia Hartford-White Plains Chicago-South Bend Cincinnati-Lexington Milwaukee-Chicago	**75¢** Scranton-New York Indianapolis-Dayton Decatur-St. Louis Philadelphia-White Plains Ashland-Cincinnati	**$1.15** Houston-Shreveport Pittsburgh-Detroit Montreal-Albany New York-Washington Waterloo-Omaha

"Bill must be doing WELL!"

AN investment in *good* tailoring always pays real dividends. And "good" doesn't mean "expensive." No matter how costly the materials nor how smart the style, you will never be judged really "well dressed" unless your clothes not only have been cut to *your own* measurements, but also draped and balanced to your attitude.

That is exactly what the exclusive Ed. V. Price & Company "Attitude Method" of tailoring does—and at prices that will amaze you.

Especially this Spring! We have never offered greater values! Smart imported and domestic weaves to please every taste and suit every purse.

By all means go to the nearest Ed. V. Price & Company representative—see what he offers you. If you don't know him, we will gladly send his name. Mail the coupon.

City _____ *State* _____

and city have merely enlarged her opportunities." That comment covers m facts in our present situation. Humanture has not changed; the same eleme desires and passions, motives and stincts, are at work in us that were in grandsires; but into the hands of our eration have come countless new m ments of power, from autos and movi knowledge about birth control, and power always means a moral strain many cannot stand. If Clara had b born in one of those European pea families whose daughters I see in the f plowing behind their oxen, she prob would have been a husky, chaste, h working girl, marrying a yokel in her and bringing up a family of hardy Instead she was born in America. She to cope with a situation much easier, tically, than that which a peasant meets, but inflicting, I suspect, a h strain on moral character. She ha handle the freedom and power conf on American youth by the amazing instruments of modern life.

Our problem of criminal gangs in like Chicago and New York is a p esque illustration of this same fact. are no worse in their essential morals they used to be. Consider, for exa the following statement and guess, i sible, when it was written: "I thin world is worse than it used to be; a rate, that part of the world which is k as New York is a great deal worse. Riot, disorder, and violence increa our city; every night is marked by outrage committed by the gangs of y ruffians who prowl the streets." comes from the diary of a citizen of York on New Year's Day, 1840.

What has changed is not gang psy ogy or gang morals, but the instru which gangs can use. The new th the situation is having "young ru armed with gas bombs and machine

THE effect of new instruments of po on character, however, does not com acutely home to most of us in outrageo moral delinquency and criminality. Wh concerns us is the attitude which the gre mass of our normal, healthy youth are g ing to take in the presence of America central problem. Some young people co ceivably might make it their ideal to l themselves go, do as they please, ha their fling, and take what they wa when they want it. Marooned on a Sou Sea island, youths might pursue that ide without doing the world at large gre harm. Such an ideal, however, will not for young people who are to be trust with more power than ever was committ to any generation in history before.

Our loosening of moral grip, therefo is more than an individual matter; it i national disaster. Mussolini represe attitudes and policies poles asunder fro my own ideals; I utterly disagree with h on almost everything he does, from urg prolific families to rattling the sword war. But I have been deeply stirred wh listening to an Italian prince pleading Mussolini's régime because of its moral fect upon the youth of Italy. "It has re stated," he said, "the all-but-lost ideal self-denial and self-discipline." In o own democratic ways we must somet achieve that same result. We Americ need to relearn the serious meanin

hecking dandruff in children

YOUR children are attending school watch t for dandruff. There, thousands of cases heir start. The cause: contact with others. the first sign of it, douse Listerine full gth on the hair and scalp. With fingers about ch apart, thoroughly massage the scalp with n rotary motion. Move the scalp itself—not ngers. Keep this treatment up systematic- for several days. You will be amazed to find quickly you get results.

s a curious fact that often, after costly and licated "cures" have failed to check dan- Listerine has done the trick.

ndruff is an infection caused by germs. Derma- sts advise repeated massage and the frequent ation of effective, but healing, antiseptic solutions as a successful method of combating it.

As you know, full strength Listerine is a powerful germicide yet so safe it may be used full strength in any body cavity. Even such stubborn organisms as the Staphylococcus Aureus (pus) and Bacillus Typhosus (typhoid) are killed by it in 15 seconds. We could not make this statement unless we were prepared to prove it to the entire satisfaction of the Federal Government and the medical profession. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

Sidney Lenz tells *Jim Henry*

Jim Henry, *famous Mennen salesman, is talking with Sidney S. Lenz,* the *bridge authority. Mr. Lenz—as every card player knows—is acknowledged the most brilliant player in the world.*

"Shaving finesse *works* when there's COOLNESS in the lather"

"I don't say, Jim, that this new shaving cream of yours helps a man's bridge game—but I do say that I, for one, am all for it.

"My opponents and partners at the card table are usually pretty well known people. Naturally I try to look fairly presentable. That's why I like the smooth shave that Menthol-iced lather gives me. But the best part is the *coolness*. I suppose it is the menthol in the cream that makes the difference. Anyway — it certainly makes my face feel cool and fine all evening long . . . Jim, I think that this new Menthol-iced idea is the extra trick in shaving!"

Mennen Menthol-iced—
The Young Man's Shave!

Cool—the moment the lather bubbles up from the brush—Cool while your blade does its work—Cool for a long time after—that's the new Mennen Menthol-iced shave! Its bracing, tonic-like stimulation suits young faces, young ideas—and young standards of well grooming.

Skin specialists say that cool shaves are *good for the skin*. The menthol, blended into Mennen Menthol-iced by a secret process, does these three things: (1) tones tired facial nerves, (2) soothes and heals tiny shaving abrasions, (3) protects the skin after shaving. Try this Modern, young man's shave. Send the coupon now!

Both creams have Dermutation

Mennen Menthol-iced Shaving Cream is the team-mate of the regular Mennen Shaving Cream. Both creams give you *Dermutized lather*, the lather which whips up fast and thick in any water—hard or soft, hot or cold. Dermutized lather softens the beard and lubricates the blade — gives quicker, smoother, happier shaves!

Finish the shave with a dash of Mennen Talcum for Men. *It does not show. Protects the skin after the shave . . . Great after a bath, too!*

MENNEN MENTHOL-ICED SHAVING CREAM

Jim Henry's treat—14 COOL shaves

JIM HENRY, The Mennen Company, Dept. D-3, Newark, N. J. All right, Jim. If Mennen Menthol-iced is as good as you and Sidney Lenz say it is, send me a FREE tube. And a trial tube of Skin Balm, too.

self-denial and self-discipline, not in subjection to a prudish morality, but in view of a towering fact: We must handle world power.

I have before me a letter from a student, a girl devoted to her art and of rather typical modern views. "This week," she said, "has been sensational in the extreme—ending last night with an orgy so bad that I am a wreck today, sick of it all and scared to death to go on a bit more this way. It's like tearing along on a toboggan, getting up more speed every moment, not knowing if you can ever stop." When I face, as so frequently I must face, this aspect of our modern life, whether in people old or young, I am concerned first of all, as a Christian minister should be, for the individual's character. But always in the background the larger problem looms. A generation which must handle more power than any generation ever got within reaching distance of before has no business to run wild in such aimless license.

The whole matter comes down to this. It is one thing to win freedom and power; it is another thing to use them. Our emphasis in America during these last two generations has been chiefly on the first. We have been the most acquisitive people in history. We have been amassing wealth and power with incredible speed. In modern India the entire rural population, constituting about ninety per cent of the inhabitants, lives on an average of twenty-five dollars a year per person. Many of our ancient forefathers used so to live, but our new civilization has liberated us from this and countless other limitations and fears. We are a powerful and prosperous people. And precisely at that point we run headlong into the real question—have we stamina and morale enough to handle all this well?

THIS question concerns more crucially, if possible, our handling of social problems than it concerns our personal morals. I have had this present line of thought in active operation before national conventions, first, of America's leading bankers, then of America's leading iron and steel men. They were men of influence; they held in their control the financial and industrial reins of the nation. One felt as he watched them how crucial for the country, bane or blessing was their handling of power. No magnates in history ever controlled so much influence as do American financiers. I am writing this article within easy reach of the home of the Fuggers, the medieval prototypes of modern capitalists, and within the last few weeks I have seen dozens of castles from which fastnesses old barons controlled the traffic of river and mountain passes. But the ancient worthies were infants compared with those who run America's economic life. Many a merchant on a side street in an American city does more business and carries on a more far-flung trade than any medieval king ever dreamed.

This amazing creation and control of wealth is stimulating to watch, but no blind man can fail to see questions which loom above it all. Arabia facing desolation is like a river run dry; America facing unrivaled prosperity is like a river at flood. If it goes wild, it will wreck everything in sight.

Restrictive laws will not solve our problem. Endless legislative don'ts are hard

NEW DEPARTURE BALL BEARINGS

NOTHING ROLLS LIKE A BALL

Because engineering science has taken advantage of that fact to eliminate friction evils, machinery used in the home and on the roads, in the factory and on the farm, is today more efficient, more dependable, more economical, longer lived.

New Departure Ball Bearings never need adjustment. This is an exclusive characteristic of ball bearings—an important advantage which year after year holds all working parts of the machine to their original efficiency and reduces repairs and replacements to the minimum.

For ball bearings are the longest lived bearings. Because of their design they cannot slide; they roll. Because they roll so easily they are freest from wear and high upkeep expense.

The heavier the load, the higher the speed of the machine, the more manifest are the longevity and ruggedness of New Departure Ball Bearings.

Tom Sawyer's secret . .

how mothers are using it today

"LIKE Tom Sawyer, mothers are finding that an easy way to get children to do things is to turn routine into play," says Dr. Leslie E. Luehrs, noted child psychologist.

Other authorities on child guidance are telling mothers the same. When youngsters rebel at restraint and the routine of everyday habits, there are simple ways of handling them. Just such ways as Tom Sawyer's, when he made whitewashing seem the one pleasantest thing in the world.

You remember that when Aunt Polly made him whitewash that fence, on a bright Saturday, Tom racked his brain and—made a game of it! Treasures piled up at his feet, boys argued to wield the brush, while Tom sat back and relaxed!

The secret is to turn routine into a game. Every mother can do it, beginning with breakfast. Of course she wants her children to eat the right kind—the *hot, cooked* cereal authorities recommend.

Naturally you do feel earnest about it. You know that it's been proved that children who eat *hot, cooked* cereal do better in lessons and in games than children who don't eat it. In 70,000 schoolrooms this rule is now displayed:

"Every boy and girl needs a hot *cereal breakfast"*

Perhaps you've approached it as nothing to do with fun. Perhaps you say, "Eat your nice cereal! That's what little boys and girls need." What child responds to the stark plea of *need?*

Yet all the time there's an easy, happy way you might be using. Children don't dawdle over their Cream of Wheat—or oatmeal—or whatever hot cereal they're given—when they're having fun. This way is a children's club so full of interest that youngsters scramble to eat a bowl full of good *hot* Cream of Wheat.

FREE — *the plan that works wonders*

A club—called the H. C. B.—that children work out for themselves. A plan that arouses their interest in *hot, cooked* cereal breakfast and makes them want to eat it regularly. Badges and a secret for members, gold stars and colored wall charts. All material free, sent direct to your children with a sample box of Cream of Wheat (if desired). Children cannot resist it! Eating Cream of Wheat becomes a fascinating game, then an enjoyable habit. Mail the coupon now—watch the club idea work.

For 32 years the choice of child specialists

Specialists in child health have for years recommended Cream of Wheat as an ideal *hot, cooked* cereal.

1. It is abundantly rich in the physical and mental energy growing children need. It is all real food.
2. With every harsh part of the grain removed, Cream of Wheat is amazingly quick and simple to digest.
3. Its creamy goodness is easily varied by adding raisins, dates or prunes while cooking.

Safeguard your boys and girls by giving them regularly, Cream of Wheat for breakfast.

a palliative, much less a cure. The American citizen's own sense of responsibility in handling the power committed to him must issue in self-imposed codes of behavior which the individual will accept for himself and the separate businesses and professions encourage and support.

This building up of codes of honor within special occupations and trades is one of the most thrilling events in man's moral history. Take nursing. A century ago, so a historian tells us, a nurse meant "a coarse old woman, always ignorant, usually dirty, often brutal, a Mrs. Gamp, in bunched-up sordid garments, tippling at the brandy-bottle or indulging in worse irregularities. The nurses in the hospitals were especially notorious for immoral conduct; sobriety almost unknown among them; and they could hardly be trusted to carry out the simplest medical duties." That was widely true only a century ago in spite of the constructive service that Roman Catholic nuns long had rendered to the sick.

Then came Florence Nightingale. Her parents were frantic when she wished to be a nurse. Year after year they fought her off from this disgraceful occupation, but while at times discouraged, so that she wrote once in her diary, "In my thirty-first year I see nothing desirable but death," she carried on. She was determined to redeem nursing, and she did. In retrospect, the Crimean War is notable chiefly, not because of the Charge of the Light Brigade, but because of Florence Nightingale. The soldiers used to kiss her shadow as she passed, and the upshot of her work and that of her companions and successors is with us still. Nursing bears a noble name. Its code of honor is among the highest.

HELPING to build up such standards of honorable procedure in our professions and businesses is one of the most necessary and useful contributions that anyone can make to this generation. Consider the influence of a man like Charles P. Steinmetz, of the General Electric Company. Tall tales used to circulate about his large holdings in the company and his tremendous salary. Then he died and his will was probated. What he had was a workman's life insurance policy for $1,500, an antiquated automobile, and a few extras. He had no share-holding in the company. He did not have any salary at all. He had only an expense account. He did not want to be bothered with money. He said he would do his work for its own sake; money should have nothing to do with it. I hasten, as a married man, to add that I do not see how such a policy can be carried out in detail except by a bachelor! But when anybody puts himself into his work with Mr. Steinmetz's spirit, makes it not a trade but a fine art, how the name of his calling is lifted!

Physicians tracing their code back to the Hippocratic Oath know what it has cost and costs still to maintain in their profession what military men call "the honor of the corps." Men on the stock exchange, where millions pass upon a nod or a word, know how indispensable is the honor of the corps. Today, when so often our public morals seem to be slipping, these standards of honorable behavior in our businesses and professions, like sheet-anchors to the windward, are among the finest elements in American life. They need to be strengthened and improved. They are g

ing to face more strain than ever yet has been put upon them.

America's economic history has been a succession of graduations to new levels of financial ability. We are like a child that has moved on from a baby carriage to a kiddie-car; from that to a bicycle; from that to an automobile; from that to an airplane. The process is very stimulating. The possibilities are great. But the result will be disastrous unless each new increment of energy to be controlled is matched by an increased steadiness of head.

THE danger in a nation's enjoying such prosperity as we enjoy is a sentimental optimism. We have had so rich and prolific a continent to exploit, we have lifted the standard of physical comfort so far above the point reached by any other land or time, that for us genially to think that probably everything will come out all right, no matter what we do, is as natural as breathing.

Moreover, along with such sentimentality, the vanity with which all nations are afflicted and which constantly bedevils the world tends to be accentuated among us. Cecil Rhodes said that he thought the British "the greatest people the world has ever seen." Voltaire prophesied: "Some day, to be approved of others, it shall suffice for one to say: This was the taste of the French; it is thus that this illustrious nation thought." Wrote Professor Lasson, of Berlin: "We are morally and intellectually superior to all, without peers. It is the same with our organizations and with our institutions." Said a great American diplomat, my personal friend: "God has yet made nothing or nobody equal to the American people; and I don't think He ever will or can." Of course, such "boasting as the Gentiles use" is nonsense.

That America peculiarly is tempted to it is obvious. As roughly as such matters can be figured, the United States probably has in its possession about one third of humanity's wealth. Mr. Hoover has told us that in the last half-century the country, while a little more than doubling its population, has increased its riches tenfold. No nation in history ever faced such a situation before. No nation ever was so assailed by the subtle temptations that come with conspicuous wealth.

Repeatedly in our history we have shown that we can handle adversity. We go back to rememberable origins in that regard—to pioneers, for example, who, if they could not raise anything else on New England's rock-bound coast, proposed to raise men there. They were a rugged breed. In days like those of Valley Forge also we have shown that we can face calamity, and the figure of Abraham Lincoln sitting all night by the telegraph instrument, waiting for the news, reminds us that stamina and morale have not been lacking when disaster overhung the nation.

If adversity should befall us again and instead of being the richest we should become one of the poorest peoples in the world, we may be sure that self-denial and self-discipline would rise to the occasion. We should be drawn together in a riveted fellowship of endurance and endeavor. We could handle adversity with high spirit and resounding consequence.

Today, however, we face another kind of problem altogether. We are the rich-

DR. LEONARD WILLIAMS

recommends yeast in place of the old-fashioned cathartic

Famous Harley House, where Dr. Leonard Williams has his office . . . Fellow of British Royal Society of Medicine; Corresponding Member, American Climatological Society and Hydrological Society of Paris; has served as physician at the Metropolitan Hospital and the Millar Hospital and the Princess Hospital for Soldiers; author of *Minor Maladies, The Science and Art of Living*, and other works.

"Yeast possesses a power of physical purification superior to all the purgatives. It rouses the system to full physiological efficiency.

"A large number of persons at or about middle age have forgotten what it is to feel perfectly well. They are not ill but they ail . . . For such I should like to prescribe less feasting and more yeasting."

Leonard Williams

IN THE words of Dr. Leonard Williams, famous British authority on glandular and intestinal disorders, *Yeast is superior to every known cathartic.*

To quote his exact statement, yeast "rouses the system to full physiological efficiency."

Nobody escapes constipation completely. Between "not being sick" and being really healthy and vigorous there is a vast amount of difference.

For keener spirits, renewed vigor, a clearer complexion, and protection against colds, headaches, sore throat —eat Fleischmann's Yeast regularly. In a recent survey half the physicians reporting said they prescribed fresh yeast.

Fleischmann's Yeast is fresh. Unlike dried or killed yeast, it contains millions of living, active yeast plants. As they pass through your intestinal tract daily they combat harmful poisons, purify the whole system.

Start now! Eat three cakes of Fleischmann's Yeast daily, one cake before or between meals, plain or in water (hot or cold). To get full benefit you must eat it regularly and over a sufficient period of time. Buy 2 or 3 days' supply at a time. It will keep in a cool, dry place. At all grocers and many leading cafeterias, lunch counters and soda fountains. Write for latest booklet on Yeast in the diet—free. Health Research Dept. J-64, The Fleischmann Company, 701 Washington Street, New York, N. Y.

90 per cent of your ills start here

Here is where yeast works. From throat to colon is one continuous tube. Poisons from clogged intestines spread through your body —to blood, skin, throat, head. Eat Fleischmann's Yeast daily to keep this *entire* tract clean, active and healthy.

This tire is built to stand abuse..

then BONDED *against abuse*

YOU want trouble-free tires. How are you going to be sure of getting them?

Suppose you were offered a *certainty*, by a manufacturer who had had a 40-year record of absolute reliability.

Suppose that tire company backed each tire with the most sweeping guarantee ever offered. Suppose this guarantee not only covered your tires against usual tire hazards, but also against accidents, such as collisions and milk bottles . . . and even against ABUSES.

Why Dunlop Tires can be Bonded.

Dunlop would be too intelligent to offer such a guarantee on an ordinary tire. If brains and materials were not put into each Dunlop in such full measure as to make it stand abuse, a guarantee like this would be suicidal.

From Egypt, where only the finest long-staple cotton is selected . . . through Dunlop's own spinning mills at Utica . . . from the rubber plantations on the other side of the globe . . . through the great Dunlop factories at Buffalo . . . where rubber and cord are transformed into the finished tire by master craftsmen . . . at every step this question guides all: "Will this make a tire that can stand abuse?"

Dunlop is confident of the answer.

This Surety Bond is a seal of confidence.

A guarantee? It is far more than that. "What will make the public SURE that this guarantee will be fulfilled?"

Dunlop asked that question and thought it through like this: The public knows that a Surety Bond is certain. The public knows that no company issuing Surety Bonds has a higher rating of intelligence and reliability than the American Surety Company of New York. "Is the tire good enough to justify such a Surety Bond?"

That was the natural question of the bonding experts. The fact that they decided to put the name of the American Surety Company behind the guarantee, was the answer.

It is sweeping . . . it covers tire hazards from accidents to abuses. It is iron-clad . . . a guarantee in the form of a regular Surety Bond, backed both by Dunlop and the American Surety Company. Before you buy another tire, you will want to know about this. Without obligation to you we will mail you a specimen Surety Bond FREE. Mail the coupon today.

Send for SPECIMEN BOND Free . . . .

est nation in the world and the crucial question is whether we are intellectually and morally fit to be that.

No reading could be so profitable to Americans today as history. The Greeks, for example, were magnificent in the early days when their small and doughty armies were fighting off the hordes of invading Asiatics. One cannot read the stories of Marathon and Salamis unmoved. I have stood above the Straits of Salamis and in imagination pictured that incredible victory when Themistocles, with his few ships, beat back the multitudinous fleet of the Persians under the very eyes of their king. No wonder Themistocles ascribed the victory to God! "It is not we that have done this!" he said.

Then, through victory came prestige, power, wealth, empire, world-dominion, and that saddest story of the ancient world—the inward rot and external disintegration of Greece.

Some peoples have fallen through calamity, but the list of such is short and sweet compared with those who have fallen through prosperity. They did not lack success. They climbed ever higher before the applauding or the apprehensive eyes of all the earth until they plunged over the precipice of their own power. One who has walked above the decay of Egypt, Nineveh, Tyre, Greece, and Rome has seen the lesson written in their ruins.

TODAY America needs to pray for mental and moral balance, for a return of self-discipline and self-denial, for an unselfishness of spirit and an international good will which will make her prosperity a justifiable and a safe, because a well-handled, possession.

Some of us have lived in communities where there was one rich man to whom nearly everybody in town was beholden for help or owed money. Was he popular? Upon the contrary, he had to be extraordinarily decent even to be understood. Such is America's position in the world. We would better not swagger, develop arrogance or superciliousness, lecture the rest of the world, or talk as if we had the men, the ships, and the money too. Not only is that attitude on the part of the world's creditor nation vulgar; it is desperately dangerous to peace. St. Paul said, "I know how to abound." That is a very high art. America needs to cultivate it.

In particular, the American people are under a heavy responsibility to throw the whole weight of their prodigious influence constantly and undiscourageably against war. What we are fighting when we fight war is not simply war, but the debacle of Western civilization. One feels this acutely here in Europe. War cannot be reformed; it must be abolished. If ever another world war breaks upon us and the debacle of civilization occurs in consequence, it will not be the weak nations which are responsible. The great nations will be responsible. Once more we shall face the age-long fact that the tragedies of history are caused by misused power. To keep the United States from any share in such responsibility must be for a patriotic citizen who cares about his country's name a foremost task. For the good name of America, as history will record it, depends on one thing—the way we handle our power.

Here's One Car that You'll Remember

The New Oakland All-American is a car that you remember. Its style is so distinctive . . . so original . . . so different from anything else. Its radiator design, for example. You remember that . . . and its flaring one-piece fenders . . . its smartly modeled hood.

And once you drive it you'll have something more to remember. Something else to tell your friends about. We refer to All-American performance . . . a type of performance that's new to the moderate-priced field.

Drive it hour after hour . . . as far and as hard as you like. Note the feeling of security instilled by its roadability and balance . . . qualities derived from its sturdy, rigid frame. The sustained high speed produced by its big, L-head engine . . . the easy control provided by its new type steering mechanism and noiseless internal-expanding four-wheel brakes.

Naturally, it's smooth and silent to a remarkable degree. Because of the Harmonic Balancer which counteracts vibration . . . rubber cushion mountings which insulate engine from frame . . . the G-M-R cylinder head which minimizes spark knock using ordinary gasoline.

Yes . . . you remember its appearance . . . its originality of style. But "handsome is as handsome does" . . . and once you drive it, you'll remember its performance most of all.

Oakland All-American Six, $1145 to $1375. f. o. b. Pontiac, Michigan plus delivery charges.

Scattergood Encounters Broadway

(*Continued from page 33*)

rather amazed him, but he being of a practical nature, it elevated the theatrical business in his estimation. There was volume to it, and it was not to be judged wholly in the light of the troupes which played one-night stands in Coldriver.

He entered the first theater at hand and approached the box office.

"Young feller," he said, "I'm lookin' fer a man by the name of Strong. He's kind of connected with this here business, hain't he?"

"Melvin Strong?"

"That's the i-dentical one."

"He owns this theater and the production now playing."

"Um. Is he to home?"

"He ought to be in his office soon," said the seller of tickets.

"He ought to if he calc'lates on gittin' there before dark," said Scattergood. "Kin you direct me there?"

THE young man did so and, twenty minutes later, Scattergood found himself in the reception-room of Melvin Strong's offices and confronted by an office boy whose chief value lay in an ability to present a hard face to visitors.

"Mornin', bub," said Scattergood affably. "I come to see Mr. Strong."

"Got an appointment?"

"Got nothin'."

"He's busy."

"So be I," said Scattergood. "You jest knock on his door and tell him Scattergood Baines is a-waitin' out here."

"You can't see him today."

"He's here, hain't he? Is that his door?"

"I tell you he's busy."

"Glad to hear," said Scattergood, "he hain't loafin'."

With which he placidly lifted the young Cerberus over the railing by the scruff of his coat and ambled toward the sacred door, upon which his knuckles resounded impiously.

"Hey," bellowed the boy, "you can't git away with that!"

"Seems as though I could," said Scattergood, as the door opened and a young woman's inquiring face appeared.

"How be ye, ma'am?" said Scattergood, as he walked past her astonishment into the room, where, behind a huge, flat-topped desk, he saw a middle-aged man of dark complexion working in his shirt sleeves.

"Mornin', Mr. Strong," he said.

Mr. Strong frowned.

"How'd you get in here?" he demanded.

"That," said Scattergood, "hain't got nothin' to do with it—so long's I'm here. I gen'ally git to see folks I aim to see. Jest like folks that's got legitimate business allus gits to see me."

Something about the old man's voice and presence arrested the sharp answer which arose to Strong's lips.

"The's been times," said Scattergood, "when I'd 'a' lost money if I hadn't seen a feller. Yes, sir. Mostly, I set out on the front stoop right where anybody kin stop. I kind of found out that when folks know

Tools that eat DIRT!

more d.p.m.
—DIRT PER MINUTE

The accurate measure of electric cleaner efficiency is d.p.m.

Hoover dusting tools live on dirt.

Let them but touch the draperies, the walls, the door nd window frames—dust is gobbled up. Let them elve in the corners of the piano and radio, among ıe radiator coils, in the depths of the upholstery of ırniture and automobiles—fluff and dirt are instantly evoured. Give them a chance to poke in the corners f the stairs, around the tufts of mattresses, among the ooks on the bookshelves, in the fireplace—you'll see ow cleverly they search out, how greedily they swalıw, all the dust and lint and elusive bits of dirt.

Hungry dusting tools! Hoover dusting tools!

Light and easy to handle, their swivel joints make it ınecessary for you to twist your wrist, their spring ıtches lock the units instantly in place. Such helpers ve to your housecleaning, to all your routine dusting, very special speed and ease.

Yet above-the-floor cleaning is a small matter compared with that of cleaning floor coverings, which store about ninety per cent of the dirt in your home. Helpful as are the Hoover dusting tools, of even greater importance is the faster, easier, more thorough cleaning of rugs which results from the exclusive Hoover cleaning principle, "Positive Agitation." It is so effective against the embedded grit which eludes ordinary cleaning that The Hoover removes more *dirt per minute* than any other cleaner.

Ask your local Hoover dealer for a demonstration of The Hoover and its dusting tools. Three Hoover models, $59.50, $75 and $135. With dusting tools, $72, $87.50 and $150. Floor polisher, $7.50. Only $6.25 down. Liberal allowance for your old cleaner.

CANADIAN NATIONAL—TO EVERYWHERE IN CANADA

Vacation in CANADA

...Choose a Mountain, Forest or Seaside Resort

Enjoy the august solitudes and towering heights of the glorious Canadian Rockies this summer. See mountains crowned with eternal snow, giant glaciers, deep-rent canyons, jade-green lakes, and wild life forest sanctuaries.

Stop at Jasper Park Lodge in the heart of Jasper National Park. Here you can play golf and tennis, swim, motor, climb mountains, ride trail and in the evening dancing, music and other social diversions complete the day's enjoyment.

The forest empire of the Highlands of Ontario also offers wonderful opportunities for those who love the great outdoors; splendid fishing, canoeing and swimming. Or come to the sea-swept shores of the Maritime Provinces—Nova Scotia, New Brunswick and Prince Edward Island.

Explore ancient Quebec with its old-world customs, or choose a quiet haven among the many delightful watering places along the Lower St. Lawrence.

Come to Canada this summer—here an enjoyable, invigorating vacation awaits you.

For booklets and information on Canada's vacationlands, consult the nearest Canadian National Office.

they kin talk to you whenever they want to, they don't spend time schemin' to git to you with suthin' that hain't wuth while. It's shuttin' yourself in that kind of gits 'em all het up to see ye."

"Indeed," said Mr. Strong; but his voice had lost its edge. "And why do *you* want to see *me?*"

"Did ye ever," asked Scattergood, "ketch ye a seven-pound-and-a-half speckled trout?"

"No, nor did anybody else."

"I done so," said Scattergood, "and"—he opened the box he had been carrying under his arm,—"there she be!"

"Gosh!" exclaimed Mr. Strong. "A *fontinalis!* Man, where'd you catch him?"

"Stream I call Blind Brook. Kind of meanders through ten-twenty thousand acres of timber I'm holdin'. It's back a piece, and I don't countenance the boys in fishin' there. Come to think of it, that there stream hain't been fished in twice for five year back. Broad enough fer fly-castin' too, though I mostly use wums."

"I'd bait with alligators to catch one like that," said Strong, lost in admiration.

"The name," said Scattergood, "is Baines—Scattergood Baines. That there fish's been on ice, and she's fresh. . . . Now, I was thinkin' we could ketch a train, say, tomorrer night, and git there in the mornin'. My rig'll meet us at the junction around four o'clock, and we kin be fishin' close to five."

"What? Man, you're crazy! Do you think I can pick up and go fishing any day I like?"

"To be sure," said Scattergood. "It's jest little men that lets their business run them; fellers like you'n'me—we calc'late to run our business."

MR. STRONG became suddenly suspicious. "Who are you, anyhow? What's the game?"

Scattergood exhibited mild surprise. "I don't foller ye."

"Why did you come to me? Am I to understand you are inviting me to fish this stream of yours? Why? I don't know you. You don't know me."

"More folks knows ye than you'd think," said Scattergood, which was no unpleasant saying in Mr. Strong's ears. Then, "I allus heard city folks was suspicious. We don't run much to suspicions in Coldriver. . . . I come because I took a notion."

"But—"

"Know a feller by the name of Stillman Harper?"

"I do. What of it?"

"Got a telephone, hain't ye? And a gal to run it?"

"Yes."

"Stillman's to home," said Scattergood.

"Well, I'll be—darned!" said Mr. Strong. Nevertheless, he gave directions to the young woman, who called a number. Mr. Strong went on the wire.

"Hello—Harper? . . . Strong speaking. There's a man here who says his name is Scattergood Baines. He broke in—with a trout as big as a whale. Know him?"

"Scattergood Baines in New York!" So came back Mr. Harper's voice. "In your office! . . . Say, hang onto him till I get there."

"Who is he, anyhow? What's his game?"

The AIRPLANE FEEL of the Franklin opens the road to new motoring thrills

You are driving the Franklin for the first time. "Incomparable," you say, as you start ahead in second speed, mounting to fifty-five miles an hour—as quietly as in high.

There's a short, easy shift to high and you are even more thrilled! Actually you feel as though you were piloting an airplane. Such a surge of power. The acceleration is amazingly fast. How smooth—like a gliding gull. Relax—you can be more relaxed in the Franklin than in any other car. The riding comfort is truly restful. *Effortlessly and confidently* you control the car.

Air-cooling has made all this possible. Franklin is first to introduce such a revolutionary and different motor car. Will you drive it? We promise you will not only enjoy it—but you will immediately become a life member of the large group of Franklin enthusiasts.

New Zealander Takes Stump For This Pipe-Tobacco

Shades of Sherlock Holmes! Mr. McDonald gives us a clue for tracking down lovers of Edgeworth

There are certain sure-fire clues on the books of Scotland Yard—an Irishman is marked by his brogue; a French chef by his cooking; a Swiss by his yodel.

And now from far-off New Zealand comes Mr. McDonald, who has discovered the telltale clue for tracking down the ardent Edgeworthite. Read the solution in his letter:

Ashburton, New Zealand
December 8, 1927

Larus & Bro. Co.
Richmond, Va., U. S. A.

Dear Sirs:

I read with interest in a recent copy of the Saturday Evening Post a letter from an appreciative Australian smoker of Edgeworth Tobacco.

I can assure you, however, that Australia has by no means a monopoly of Edgeworth enthusiasts. I am one of them myself, and New Zealand appears to possess quite a large number of them. Quite recently a spirited correspondence engaged the columns of one of our leading newspapers, the controversial subject being "Who has smoked Edgeworth longest?" In fact, a stranger to New Zealand at the time might have assumed that the bulk of our population was composed of octogenarian smokers of Edgeworth.

I have noticed that those who smoke this fine tobacco of yours appear to possess a vice (or is it a virtue?) in common. That is, that they are continually inducing, or attempting to induce, other smokers to get the Edgeworth habit.

Good luck to your fine tobacco. I am,
Yours faithfully.
(signed) H. C. McDonald

A shrewd observation Mr. McDonald—but then pipe-smokers have a happy faculty of seeing clearly through any proposition.

Pipe-smokers as a rule are calm, thinking men. Somehow with a briar between your teeth you simply can't be hurried into nervous, jumpy decisions.

FREE Offer

Let us send you *free of charge*, a trial package of Edgeworth Ready-Rubbed smoking tobacco so that you can try it in your pipe. Simply write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

Edgeworth "Ready-Rubbed" is sold in various sizes from small pocket packages to pound humidor tins. Also "Plug Slice" Edgeworth comes packed in thin slices, for pipe-smokers who like to "rub up" their tobacco in the palm of the hand.

"Listen, Strong, that old gentleman could buy you and throw you away. And if he's got any game you'll never find it out till he's ready to let you in on it. What's he want of you?"

"Just dropped in to ask me to go fishing with him."

"Hey—don't move till I get there. I'm on my way. Tell him I'm coming too."

Mr. Strong turned away from the instrument. "He seems to know you," he said.

"Calc'lated he would," said Scattergood.

"But—I'm puzzled, Mr. Baines; why come to me with this invitation?"

"I jest got the notion," said Scattergood.

IN TWENTY minutes Stillman Harper burst into the office and wrung Scattergood's hand, reproaching him for failure to notify him of his coming.

"Calc'lated I'd see ye," said Scattergood.

"When do we start?" asked the young man.

"Hey, there!" Strong interjected. "Go easy."

"Am I invited?" asked Harper.

"To be sure. To be sure. And welcome."

Scattergood got to his feet in a few minutes. "W-al," he said, "I'll leave you two to argy about it. I'm leavin' tomorrer night. Ye kin come or stay—whichever suits ye best."

And so he went out, while Harper remained to make plain to Strong numerous facts about Scattergood Baines—all of which served to increase that gentleman's astonishment.

"But why should he walk in here and invite *me* to go fishing?" he asked.

"There's a reason," said Harper. "But you won't know it till it's too late. One thing you can bet on—the old gentleman knows what he's up to."

"By Jove," said Strong, "I'll go. Nine tenths to fish, and one tenth to satisfy my curiosity."

On Thursday morning they arrived at the junction. They fished Thursday and Friday and Saturday with such results as made Strong's eyes bulge. It was a trout-fisherman's heaven.

"But why," he asked Harper at every opportunity, "did he ask me, a complete stranger?"

"Can't say," said Harper. "Just thank the gods and keep your mouth shut."

Late Saturday afternoon they drove into Coldriver and Scattergood took them home to Mandy, who cooked the dinner in person. And there Mr. Strong became acquainted with the meaning of the term "a square meal."

"Mandy," said Scattergood, after the blueberry pie had disappeared, "seems like we got to entertain these here city fellers through the evenin'. You'n' me hain't satisfyin' talkers, seems as though. Hain't they no movin' pitchers?"

"No. The Congos has got the Hall," she said.

"What fer?"

"Some kind of a entertainment," said Mandy.

"Um. I bet ye you fellers hain't been to a real country church entertainment—mebbe never, eh?"

"I haven't," said Strong.

"Dunno what it 'll be. If we don't cotton to it, we kin git up and git. Might prove amusin'."

"If," said Strong, "it's on a par with the rest of the entertainment you've given me, it'll be a large evening."

"Don't promise nothin'," said Scattergood. "What is it, Mandy, singin'?"

"Don't seem as though. The young folks has been practicin' nigh a month fer it."

Scattergood, who never had owned a car, borrowed one for the occasion, and at eight o'clock they found themselves seated in the hall where Coldriver's dances and entertainments were held. The large room was full, including the babies and the orchestra of the Congregational Church, which latter intrigued Mr. Strong to no slight extent.

"What," he asked, "is the nature of the performance?"

"Suthin' the young folks got up," Scattergood said noncommittally, and with that the guest had to satisfy himself.

Then the curtain went up jerkily upon a set devised and painted by home talent. It represented the kitchen of a farmhouse, and Strong closed his eyes and sighed mentally.

But, somehow, the dialogue interested him. Crudely and amateurishly though the lines were spoken, he found, to his astonishment, that he was listening—and then listening eagerly. The piece was unfamiliar, and he thought he knew all of the old stand-bys likely to be attempted by home talent shows. But this was one he never had heard—never had heard of. It troubled him that it should have escaped his attention—he who could have written a history of the American Theater. . . . At the end of the first act he sat silent and frowning.

"Had enough of it?" Scattergood asked.

"I'm—er—rather interested. Let's stay along, if you don't mind."

Then, to himself he said, "Well, it was a first act; but the second can't live up to it. . . . Where in blazes did it come from?"

Whoever had drilled the players had been wise. There was no attempt at elocution, a minimum of stage business—only such action as bare necessity demanded. But the act moved, it marched. There was an inevitability about it, a sure march of events to some climax. Why, a play such as this should be well known to any theatrical man!

Simple it was, yet full of stark realities, naked with truth, flowing, marching, crowding its characters on and on through moving events to some peak of destiny. . . . There was humor, too. Deft touches. . . . When the curtain went down Strong sat tense, excited—moved as few plays had moved him. . . . He saw that act as he himself could produce it.

Then the third act and the final curtain.

"BAINES," he said, "where'd they get that play?"

"'Tain't Shakespeare, is it?" Scattergood asked innocently.

"No, it's not Shakespeare," said Mr. Strong.

"Putty good, wa'n't it?" Scattergood asked. "Didn't nobody forget their piece."

"I'm ashamed. I ought to know that play; but I must confess I never read or

Digitized by Google Original from UNIVERSITY OF IOWA

saw it. It is new to me. And I can't comprehend that it should be. I thought I knew every great play that has been produced in this country."

"Was this here a great play?"

"If," said Strong, "that play, newly written, came into my office, I would throw a fit. I'd say that at last America had produced a dramatist."

"Um. . . ." Scattergood stood up and called across the moving crowd. "Hey, Pliny, what's the name of the piece they jest acted?"

"Dunno. 'S on the program."

"Know who wrote it?"

"Sure. Jason Wentworth."

"No! Dew tell!" He turned to Strong. "It was wrote by a boy in town, Elder Wentworth's young'un."

"I don't believe it," said Strong.

"W-al, Pliny does sometimes slide off'n the edge of strict truth," said Scattergood.

"Please find out," Strong said, his voice vibrant with excitement. "Where's the young man! I want to see him."

Again Scattergood's voice arose. "Where's Jason?" he bellowed. "Tell Jason I want he sh'u'd come here."

"Here he is," somebody called, and Jason forced his way across the house to Scattergood's side.

"JASON," Scattergood said, "this here is Mr. Strong. He's kind of int'rested into theater plays. Somebody jest said you made up this here one. Did ye?"

"Yes, sir."

"You are the author of this play?" asked Strong, his eyes on the boy's face.

"Yes, sir."

"Have you—er—a manuscript of it handy? I—er—would like to read it."

"Why, I think Lucy has a copy." His eyes grew eager. "Did—did you think it was terrible, sir?"

"Have you been writing plays long?" Strong asked, disregarding the question.

"This," said Jason, "is my third."

"What did you do with them? Have they been produced?"

"No. I— Well, I just wrote them. I didn't think about their being produced. If you can understand anything so foolish, sir—I just wanted to write down the things I saw and thought."

Strong continued to eye the boy's face, the face and eyes of a dreamer of dreams. "Yes," he said, "I fancy I can understand. . . . But about that manuscript. May I read it?"

"I'd be grateful to you, sir."

Scattergood coughed. "Know who this feller is, Jason?"

"No, sir," said Jason. "I never met him before."

"Um," said Scattergood.

Presently Jason returned with an ill-bound, ill-typewritten manuscript, which Strong seized eagerly. "I'll read it tonight," he said. "I want to see you in the morning."

"Ye might come out to the house when I git up," said Scattergood to Jason.

Strong was eager to be gone; a fever possessed him, nor was he content until, beneath Scattergood's oil reading-lamp at his elbow, he sat with eyes upon the first page of the manuscript. Nor did he lay it down until he reached the final word "Curtain." Then he sighed and went to bed.

At breakfast in the morning he was absent of mind. More than once he shook

LUBRICATE
the skin for
Painless Shaving

YOU KNOW that glycerine is good for the skin. But do you know its amazing benefits in a shaving cream?

The very first time you whip up that big blanket of Listerine lather and touch the razor to your face, you will relax and grin from ear to ear. Gone are the scrape and pull which heat and harshen the skin. The razor fairly glides along. For its path has been prepared, made smooth and easy by a cushioning film of glycerine.

Right at the base of the beard, where friction between face and blade is greatest, Listerine Shaving Cream deposits this microscopic film of cosmetic lubricant. That ends the dreaded nick and pull which cause most shaving pain.

Dense and packed with moisture, Listerine lather in addition quickly subdues the toughest beard, while giving tender skins the coolness of menthol and the antiseptic benefits of Listerine's essential oils.

The next time you are buying a bottle of Listerine, ask the druggist for Listerine Shaving Cream. We promise you an utterly new experience in smooth, quick, painless shaving.

LAMBERT PHARMACAL CO., *St. Louis, Mo.*

LISTERINE
Shaving Cream

50c
for the big 5 months' tube

Frankly, Listerine Shaving Cream is made only for men who appreciate quality. It is no 25c or 35c product, but a rich blend of costly ingredients, painstakingly developed by Listerine chemists to achieve the ultimate in shaving comfort. The big tube actually contains 118 inches of cream, easily a five-months' supply. And no man can say how many times that it is worth to him until he has tried it and knows its rapid beard-softening, its soothing coolness, its new lubricating and skin-saving effect.

UNITED STATES SENATORS SILVER FLEET ON STEPS

Republican and Democratic Leaders Extend Official Welcome

Senators and Congressmen Sign Book of Good Will Greetings

15 Cars and 19 Pilots Pause on Demonstration Tour to Receive Greetings of Nation's Law Makers

Fifteen gleaming silver cars rolled up before the steps of the Nation's Capitol in Washington . . . Nineteen smartly uniformed pilots hurried into line before their shining hoods . . .

A courier hastened up the steps . . . disappeared through the great portal. .

Then . . . at the door . . . a group of men. Senators, Congressmen . . . lawgivers to the Nation. From below, a command.

The Silver Fleet stood at salute before the Congress of the United States.

* * *

Fittingly, the Silver Fleet . . . on parade before 120,000,000 people . . . was received in Washington by the elected representatives of the Nation.

Congressman Tilson and Congressman Garrett, Republican and Democratic floor leaders signed the good will book. Senator Capper of Kansas and other members inspected the fleet . . . asked interested questions . . .

Then, while cameras clicked and news reels ground, the last signature was added, the last inspection made.

Pilots slipped again behind wheels . . . motors hummed.

A double blast from the Flagship siren . . . and the Fleet wheeled away . . . down Pennsylvania Avenue, lined with crowds to watch another notable procession.

From the broad avenues of Washington the Fleet heads South. Across Vir-

And prolongs those
FIRST FEW WEEKS OF NEW CAR BEAUTY *for years*

You buy a new car! It is beautiful and you are proud of it! Now, that it is yours, why let sun, rain, dust, dirt, traffic fumes, and other pirates of motor car beauty rob the finish of its lustre and brilliance . . . when Simoniz will keep your car looking new and beautiful for years. And, after years it will be worth more when traded in.

Whether Duco or lacquer a new car should be Simonized at once. The hard durable surface of protection that Simoniz provides, guards the finish from injury, makes it last longer and keeps color from fading.

Simonizing does more than keep new cars looking new. If your car is dulled and discolored, Simoniz Kleener will restore its former beauty by removing all dirt, stains and blemishes. Then Simoniz gives the finish lasting beauty and protection.

The sooner you SIMONIZ your car the better.

THE SIMONIZ CO., CHICAGO, U. S. A.

his head and demanded, "Where's that boy? Why doesn't that boy come?"

It was late, nearly nine o'clock, before Jason appeared.

"Young man," Strong said, as he entered the door, "I am a producer. I'd like to produce your play—in New York."

"Why . . . ah . . . is it worth producing, sir?"

"So much so," said Strong, "that I have wakened men by telephone in New York on this Sunday morning who have never before been awake earlier than noon. . . . I think contracts will be here in the morning, if trains don't break down. Now, let's talk business."

"I don't know a thing about business, sir."

Scattergood spoke. "I calc'late ye kin leave that all to Mr. Strong," he said. "I figger he'll deal fair by you."

"I'll try," said Strong. "I'll try."

It was at dinner that, turning to Harper, he said, "You can't beat it. You never can tell when a miracle will happen. Imagine coming up here for a couple of days' fishing—and stumbling onto the finest play I've read in years."

"Miracle, was it?" asked Harper, with a grin. "And you stumbled on it?"

"Didn't I?"

"I'd say you were pushed over it," said Harper.

"What do you mean?"

"Well, you wanted to know what Baines's game was, didn't you? Why he popped in and asked a complete stranger to go fishing? . . . It looks to me as if you've found out."

STRONG swung upon Scattergood. "Is that so?" he demanded. "Was this the nigger in the woodpile?"

"W-al," said Scattergood, "I kind of had to find out if the boy was any good. So I calc'lated the best way was to fetch up somebody that knowed. And I figgered you'd be more apt to git int'rested in a piece bein' acted than one that you jest read. So Lucy got up this here show. . . . Calc'late it was wuth your while?"

"Mr. Baines," said Strong, "my hat's off to you. I didn't think I could be bamboozled into reading a play. By and large, this is the smoothest game ever worked on me. . . . And I'm much obliged!"

"Money in it—fer Jason?"

"I'd say there was some—some."

"Enough to git married on?"

"I think so."

"But the main thing," said Scattergood, "is convincin' the Elder playwritin' is more profitable than cow-milkin'."

"I think," said Strong, with a faint smile, "we can convince him of that."

HOW the convincing was done has become a part of the history of the theater. "The Kitchen" was produced in October. It ran for upward of two years. Second and third companies played the Road—and royalties poured in upon Jason until that young man was as sadly bewildered by so much wealth as his father, the Elder, was astounded. And then a second and third play succeeded. Jason was famous, a recognized genius of the theater, acclaimed, interviewed, photographed.

The Elder paused to speak of the matter to Scattergood.

"I dunno but what Jason's come out full better'n I expected," he said. "The' was a time when I was doubtful about that theater play-writin' of hisn."

"Seems like I recall it," said Scattergood. He took off his flapping straw hat to rub his head. "Kind of teaches us the's a heap we don't know, Elder," he said.

"Mebbe so."

Scattergood chuckled. "City fellers is mighty smart," he observed. "But the's a bait to ketch the smartest of 'em. I calc'late folks is more alike'n you'd think, city or country. The way to make 'em take their medicine's to convince 'em 'tain't medicine but molasses. That feller Strong wouldn't 'a' come up here on the off chance of makin' half a million, but he come a-gallopin' to ketch him a mess of fish he could buy fer a dollar.

"Seems as though the one feller that's curiouser 'n any other is the next feller you meet. . . . G'-by, Elder. When ye write Jason and Lucy kind of remember me to 'em. . . . G'-by!"

"WOMEN do not make good spies—though married men may not believe it!" So said the chief of Scotland Yard after his wartime experience with fair "Eves-droppers." There are three reasons why women usually fail in spy work. One is that they fall in love with the men they are set to watch. Can you guess the other two? Next month Thomas M. Johnson tells you about women spies in the World War. At least three of them were brilliant successes, but scores were terrible flops! Mr. Johnson gives you their stories. It's a fascinating article.

The Dentist Made Me What I Am Today—I Hope He's Satisfied

(*Continued from page 35*)

going to touch one of them unless I am there."

"Well, and how are you today?" my dentist greeted me cheerily, as my wife and I went in together hand in hand.

I gave him one look and he laughed. Then he took from an envelope a sheet of gray cardboard on which, apparently, somebody had been pasting camera films. On a table in the room stood a mahogany box with a piece of ground glass in one side. Somewhere a switch clicked and immediately a bright light sprang up inside the box. The doctor held the pictures before the ground glass and Maude and I pushed forward. I didn't know exactly what we expected to see, but what we did see was apparently a head-on view of a

The MOST BEAUTIFUL, LOW-PRICED WILLYS KNIGHT

NEW "FINGER-TIP CONTROL"

A single button, in the center of the steering wheel, starts the motor, operates the lights and sounds the horn.

COACH $1045

Coupe $1045; Sedan $1145; Touring $1045; Roadster $1045. Wire wheels included. Prices f. o. b. Toledo, Ohio, and specifications subject to change without notice. Equipment, other than standard, extra.

LARGEST AND MOST POWERFUL KNIGHT-ENGINED CAR EVER OFFERED AT SO LITTLE COST

THE tastefully modern design, the beauty of line and color of the new style Willys-Knight Six distinguish this attractive car as the outstanding creation of the country's leading style specialists. Only among the costliest custom-built cars can you find adequate comparison with the artistry of finish and perfection of appointment which characterize this inexpensive Willys-Knight.

There are thousands who have always desired a Knight-motored car but until now have been restrained by the necessarily higher cost of the *patented* double sleeve-valve engine. By them, this distinctive new Six is welcomed as history's finest Willys-Knight value.

A statement from a

World-famous Golfer

"WHO am I? I'm the man who pays the green-keepers, supports the pro—buys the prizes—makes the game what it is. I'm just the Average Player.

"And I maintain that I'm one of the best judges of a golf-ball in the world. When I say the Dunlop-made Maxpar drives farther, *I know.* I do get 10 to 15 yards more than with other 75c balls. And when I say the Maxpar stands punishment without becoming egg-shaped, *I know.* I can punish a ball more in 18 holes than the best pro can in a week. And I know Maxpar putts true, because putting is one thing I *can* do.

"I say that for the man who wants a golf-ball with the famous Dunlop resiliency, endurance and distance, the Maxpar at 75c is a BUY. Ask your pro."

75¢

MAXPAR

MADE BY DUNLOP

dead horse. One of the other views looked like a field of peanuts.

I think that the doctor must have been rather hurt at our lack of enthusiasm, for he took a sharp pencil and began to point out the most interesting spots.

"You notice that shaded area? That is very bad."

"Is it?" I asked, for to me it looked very much like the rest.

"And this," he continued, "and this—and this—and this. There are at least seven that should come out at once."

I knew that Maude was calculating rapidly—seven from thirty-two.

"But what about the others?" she asked.

This was evidently the very subject that the doctor had wished to avoid. "Well," he answered slowly, "they are none of them very good. I am afraid that it is only a question of time—"

There was a very long silence. Seeing that no one else seemed inclined to break it, I thought that it was incumbent on me. "Do you think, then, that—that I ought to have them all out?"

The doctor seemed so relieved that at last someone had guessed it. "That is what *I* would advise," he said archly. Again he picked up the snapshots and began to study them. "What I don't understand is why you're not flat on your back. Have you ever had rheumatism?"

I shook my head.

"Or kidney trouble?"

Again a shake.

"Or anything the matter with your heart?"

"I am sorry. I haven't."

"I don't understand it," repeated the doctor, and he seemed so genuinely disappointed that I wished with all my soul that I could be more responsive. Suddenly I had an idea.

"DOCTOR," I said, "is there anything in those pictures that would explain why, for several years, a great, healthy lout like myself has felt the most utter repugnance to every form of work, mental and physical, and has shown no inclination to do anything but sit in an armchair and smoke a pipe?"

The doctor brightened instantly. "There certainly is," he responded. "Fatigue is one of the very first symptoms."

"And would it also account for the fact that when I go out to play golf I miss the ball entirely on the first tee, and on the seventh throw away my bag and burst into tears?"

"It is all a matter of nerves," said the doctor happily. "In six months you would be a new man."

I looked cautiously at Maude and saw that she was distinctly intrigued by the turn that the conversation was taking. There remained, however, a lingering doubt in her mind, and it was some time before she could find courage to put it into words.

"But, Doctor," she ventured at last, "would—would he have to take them out at night?"

The doctor laughed heartily. "In a glass of water? Oh, dear, no! You have no conception of modern dentures. They would be an absolute replica of his own teeth and he would wear them all the time.

As far as I was concerned, I was sold already, and so, I think, was Maude. Evidently seeing that he had caught us at a high spot, Doctor Wilson began to stir about briskly. "Now," he suggested, "if you will just step in for a moment and see Doctor Casey."

Still somewhat in a daze, I was led to another little office where still another young man in a white coat was apparently mixing a cream puff. But it wasn't a cream puff. It was a plaster cast, and when I left the office my poor old teeth had been made immortal.

THAT there was a great deal of truth in Doctor Wilson's promises seems to be clearly proved by the fact that now, looking back on it, I have no great interest in the morbid events of the following month, whereas six months ago I would have regarded them as an ideal subject for a blank-verse drama. I have always maintained, and I still maintain, that nothing that a dentist can do to you is as bad as a plain, ordinary filling. For cumulative, lingering horror, nothing can touch it, and in comparison a modern extraction is an episode. The only event to report chronologically is that, after the second yank, I discovered that if I reached out my hand and quivered it slightly, the nurse would hold it, and so, after that, I always reached it out.

As a matter of fact, the real interest of that month was purely sporting. The first returns showed my teeth to be much worse than even the X-rays had promised, and after that it was a daily excitement to see how bad they really could be. For if the removal of seven plague spots would make me a new man, you can imagine what I could expect from ten or fifteen. Each time, as the doctor would go through his familiar motions and the little fledgling would lie in the tray, I would lean over eagerly.

"Is it abscessed?" I would ask.

"A Zeppelin!" he would answer, and I would smile happily.

Once we actually struck a perfectly sound tooth, and you have no idea of our disappointment.

There was also another surprising discovery that belongs to this period—the number of teeth that you can lose and still both eat and look the same. It was first decided to take out the seven teeth that had screened so badly in the X-rays, and I supposed that I would come out of the office looking like an elderly pirate. Nothing of the sort. Those teeth were well dispersed in outlying districts, and their loss made no difference whatsoever in my daily life.

Then came one of those spring days that are absolutely built for sport. I don't know how many the doctor had intended to pull that morning, but each time that he paused we would look at each other and decide to go just one more. In the end, we had cleaned up twelve at that single sitting and I had now only seven teeth left, all in the front. At table I was no longer the man that I had been, but, oddly enough, I had still not changed in looks. I suppose this made me overconfident and I had no feelings of distrust about losing the last seven. But my confidence was short-lived, for on the way out I looked at myself in the mirror. Somewhere, in some magazine, I had seen a picture of a horrible old man with a

NOW YOU'LL LIKE BRAN MUFFINS

TRY THESE MUFFINS — MADE OF THE WORLD'S MOST POPULAR BRAN CEREAL!

How natural it is that the most popular bran cereal in all the world makes the most marvelous bran muffins!

The muffins made of Post's Bran Flakes are as feather-light as the mellow golden flakes themselves. Their crunchy crusts as crisp as the delicious flakes that fall from the package. Their flavor made doubly delicious by the other parts of wheat that Post's Bran Flakes contains. For tenderness, and for a flakiness that only *flakes* of bran can give, try this recipe masterpiece—the bran muffin recipe you will want to call your own.

Post's Bran Flakes as a cereal with milk or cream has taught you to enjoy thoroughly the bran you need to eat each day to keep you regular, fit and normal. Now surprise the family by putting part of their daily ration of bran into these piping hot bran muffins. They are as delicious as they are effective—as superior to any other bran muffins as Post's Bran Flakes is superior to any other bran cereal in the world! Serve Post's Bran Muffins two or three times a week.

Cases of recurrent constipation, associated with too little bulk in the diet, should yield to Post's Bran Flakes. If your case is abnormal, consult a competent physician at once and follow his advice.

HAVE YOU TRIED THEM?

POST'S BRAN MUFFINS

1 cup sifted flour — 1 egg, well beaten
5 teaspoons baking powder — 2 tablespoons sugar
½ teaspoon salt — ¾ cup milk
1 cup Post's Bran Flakes — 3 tablespoons butter, melted

Sift flour once, measure, add baking powder and salt, and sift again. Add Post's Bran Flakes. Combine egg, sugar, and milk. Add flour gradually, beating after each addition until smooth. Add butter and beat thoroughly. Pour batter into greased muffin pans, filling them ⅔ full. Bake in hot oven (450° F.) 25 minutes. Makes 12 medium-sized muffins.

All measurements are level.

ideous grin—and I looked just like that ld man. When Maude saw me she began cry.

Now, as this happens to be one of the w stories that I have ever written that is a good natural plot, I have not stopped often as I usually do to lay out the ckground and etch in the characters. efore, however, we proceed to the third d last act of the drama, I must pause d do so, because, quite properly, the st act is constructive and spiritual. It ncerns itself with the human or social le. In order to give the whole picture, I ust explain that while most of the events at I have described took place in the art of a great city, yet actually we live a little country village. In a country lage, life is nothing if not intimate, d so, from the start, my wife and I were ed with a mighty problem: "Shall we l?"

RANKLY, I must say that if I were to do it again, I would *not* tell. If I had y known how good a sculptor a modern tist could be, I would have slipped ay for a month or two and then rened to a life of harmless dissimulation. t the only false teeth that I had ever iced particularly had been the kind t they show in glass cases in side ets, and I decided that the best course to have the world well prepared.

hus, one day, before the X-rays were , we went to dine with our friends, the dersons. Jimmy Sanderson is a man of ut fifty, an eager, solicitous soul, and, e was taking my coat in the front hall, sumed the brave air of a man who is ut to go to the hospital.

Well, Jimmy," I said, "I'm afraid this is one of the last dinners that I l eat here for some time."

mmy looked at me in his kindly, tened way. "What do you mean?"

I'm going to have my teeth out."

stantly Jimmy was all interest.

ell, look here," he said. He glanced iously at the doorway where Maude Mrs. Sanderson had passed into the g-room, then, putting at least four rs into his mouth, he took out some- g that looked like a horseshoe crab. ny blinking eyes made it out more ly I saw that it was really a stiff, r wire in the shape of a crescent, with teeth fastened at one end, three at other, and two at intervals in the le. Meanwhile, as he grinned his siasm, Jimmy was looking as I was to look inside of a month.

ut what was the matter with you?" ed. "Why did you have them out?"

tomach," said Jimmy. "I went to doctor under the face of the sun be- hey found out what it really was."

nd did it cure you?"

bsolutely. It made me a new man."

this I felt something of a chill. I ot realized before that the world was new men. I had thought that I was to have the field to myself.

a matter of fact, I soon found that y Sanderson was rated as a com- ve amateur among the rebuilt men country, that there existed, indeed, p class distinction among the un- d. Those who had lost *all* their looked with condescension and con- on those who had lost merely part n.

MEMORIAL DAY emphasizes our human duty to erect memorials. On this day we pause to revive the memories and renew the honors pledged in public and private monuments of the past. Thus we bear high the torch of history, heroism and family tradition. Thus should we, in turn, perpetuate beyond the span of memory our own tributes to those whose service or example we deem admirable, inspiring and superb.

From the beginning, Vermont Marble has been the nation's noblest Memory Stone. For a simple tablet, civic monument or memorial building, you too, may use the same matchless marble that was chosen by Government test to make the Tomb of the Unknown Soldier beautiful and inspiring for unmeasured time.

Vermont Marble memorials are available through Master Craftsmen in Marble in every American city.

ALL THAT IS BEAUTIFUL
SHALL ABIDE FOREVER

This is the title of a booklet illustrating the 12 basic types of design used in modern family memorials. It will greatly simplify your problems in selecting a memorial. It will be sent promptly on request.

THIS offers something that may surprise you—in what it does for your teeth. A delightful, quicker-acting tooth paste which *combines* the good results everyone desires. Four facts about it are of outstanding importance. (1) It has a gentle two-fold polishing action (*not* scouring!). (2) It *combines* all the good desired results. (3) It acts *very quickly*, to meet hurried modern demands. (4) It is solidly backed by a name and reputation valued at millions—your assurance that this test will be worth while making.

NOTE: *Go to your favorite store, today. Buy one of the famous* DR. WEST'S *toothbrushes. You will receive, without charge, the large 25c tube (not a sample) of this remarkable* DR. WEST'S *tooth paste. Try it. Compare results with what you have known.* THE WESTERN COMPANY, CHICAGO. *(This offer good in Canada also.)*

Dr. West's
TOOTH PASTE
An advance as great as the famous toothbrush

By this time it was no longer necessary for me to advertise my condition. I was now in the intermediate stage when the old site had been cleared and graded but the new structure had not yet appeared above ground. I was no longer willing to speak at banquets, but I would go to small, friendly affairs if they would agree to serve soup. For weeks my old friend, Alec MacGregor, let me go on without a signal, then, one night, when his wife was not present, he drew me aside. "Phil," he said, "I don't think you need feel so blue about it. Mildred won't let me tell anyone, but the truth is that I have been eating by machinery since 1912."

"What was it in your case?" I asked. "Heart or rheumatism?"

"They say now that it was debility of the blood," said Alec, "but at the time we thought it was the Princeton team."

From Alec, and also from our groceryman—another veteran—and also from the minister's cousin, and also from a sports writer I met on the train, and also from a carpenter, a bricklayer, and a plumber who were working on a house next door, and also from a motor-cycle policeman who happened to stop me, and also from about eighty other unsuspected people who gave me the high sign during the strange interlude, I gleaned many facts concerning the great clanship that I was about to enter.

For one thing, I learned that there is a certain etiquette among the elect. Just as a real Yale man never says that he has been at Yale, but always "at New Haven," and just as a West Pointer never speaks of West Point, but always of "The Academy," so do the chosen ones never use the words "false teeth." Even "artificial teeth" is rather bad form. If you want to be very jocose and hearty about it, you can say "store teeth," or you can say that you have turned in your old set and are now using mail-order molars. But the most approved way, the most elegant and nice way, is to talk about "plates."

ANOTHER thing I discovered is that there is a sharp distinction between the old-timers who lost their teeth, one by one, because they were no good anyway and the modernists who have lost them at a clip because they had some complaint or other. The former never seem to care to talk much about the subject, but some of the latter are positively garrulous.

There are also, I learned, certain grades of skill, certain championship steps in the art of wearing plates, to which the neophyte can aspire. According to one of my first authorities on the subject (I think it was the confidential bricklayer next door), the sign of the master is the ability to eat corn on the cob, but, according to Alec MacGregor, that is nothing. The real test is the ability to bite into a russet apple. Personally, I still foozle my shots and go all to pieces when munching figs.

There came the day, as the movies say, when I had an appointment with the dentist to which I was looking forward not merely with unconcern, but with positive ecstasy. I had not felt that way since the day I got my first bicycle. I was so excited that I couldn't eat my hominy porridge, and when I walked into Doctor Wilson's office I almost expected to see holly over the door. It was such a cheerful, friendly little place with all its nice, shining instruments and interesting electrical devices. "How wonderfully," I thought, "science has advanced."

As I seated myself in the chair, the doctor became positively coy. With a smile at Maude, he bustled into his laboratory and came back with a tray. Exactly like a man milliner fitting a sports toque, he held out the new, shining plates in his two hands, with the little fingers lifted at a most refined angle. "Now, open," he said.

With considerable backing and turning, we finally got the upper set in through the front doors, but the lower set was easier. I turned to Maude.

"Marvelous!" she exclaimed. Then I tried to smile at her and both sets skidded badly. She may have thought that I looked marvelous, but personally I felt like a badly made jack-o'-lantern.

"Never mind that," said the doctor hastily. "You will soon grow accustomed to it."

Again his hands went into the attitude of perfect refinement. "Now let me have them a minute," he suggested, and also with a pang I gave them up.

FOR fifteen or twenty minutes Maude and the doctor studied me in every [illegible] and from every angle, and when they were not quite sure, they would call in the nurse. It was not so much a question of what they could do as of what they *might* have done. It was the inevitable lingering doubt that always comes when one has ordered something very costly and tailor-made. Should the color have been just a shade more tawny and were the front uppers just a hair's breadth too long?

As for me, I had suddenly begun to be very silent and somber. I was like one who was looking over an old battlefield when all the war bitterness was gone. I think I was almost tearful when I rose from the chair and held out my hand.

"Good-bye, Doctor," I said. "Good-bye."

The doctor took my hand. "Oh, don't worry," he said. "You'll have to come back. You'll have to come very frequently in the next few weeks."

"I know," I said, "but it will be so cold and impersonal. It will never be the same."

And it never *would* be the same. The doctor must have known that as well as I, but it was a scene that he had frequently lived through and perhaps repetition had made him a little hard. Of course, he said, I would come back frequently for a while, and on the surface things would seem as usual. But the personal element would be gone out of it. Even if I spent a half hour now and then in his little office, he would be working in one corner and I would be waiting in another, restless and bored. It would be more like visiting a jeweler than a dentist—but better than going to a garage.

The spell of the moment must have hung over me rather thickly, for in the elevator I could see that Maude was watching me rather closely. We walked out into the crowded city streets, but still I could not shake it.

"Maude," I suggested, "do you want to do something very silly? Let's go and eat some ice cream."

THE FINEST TYPE OF CENTRALIZED CHASSIS LUBRICATION

FINALLY, a system of centralized chassis lubrication has been perfected which operates easily, immediately, and invariably.

Nash now offers it on every Advanced and Special model of the new "400" series . . . Nash-Bijur . . . the finest device ever produced to supply chassis bearing points with necessary lubrication.

You simply press a convenient pedal (a child can do it), and twenty nine chassis points, spring shackles, steering knuckles, clutch bearing and the like . . . are bathed in fresh, clean, wear-resisting oil.

Nash-Bijur centralized lubrication does away with all the bother and expense of old-fashioned chassis greasing. Press the pedal once a day, lubrication follows. Chassis squeaks are avoided, chassis wear is prevented . . . when you drive the new and finer Nash "400."

Radio Program Monday Evenings

A Shirt Flapping in the Breeze Became an Airplane in the Sky

(*Continued from page 29*)

airplane. You have no idea how much I longed to see their blue prints," he sighed. "I was burning with desire to build a flying machine, but I hesitated before the thought of the months of work I must do, simply in retracing the steps of the Wrights. Still, I had one encouragement they lacked: I knew when I began that it was possible to fly."

He went to his father and obtained some money. It was necessary to hire workmen and buy materials.

WITH the sublime optimism of all geniuses, Sikorsky forthwith started at what has since been recognized as a final stage of aëronautical development. His first design was a helicopter—a vertically rising machine. Many inventors have gone to the poorhouse trying to build this potentiality. Only last year did the first successful model appear on European flying fields.

"It was a foolish idea, now that I look back on it," Sikorsky mused, "but it seemed brilliant enough then. You see, I realized that one of the biggest drawbacks to the general use of the airplane must be the lack of good landing fields. If I could build a plane that was able to rise and descend in a straight line, this impediment would be eliminated."

It was late in 1908 that the Sikorsky helicopter, an extraordinary contrivance of circular wings and dinky motor, was ready to revolutionize the science of flight. A goodly crowd of friends was on hand to see the test flight. The young designer hopped aboard and tested the wings. Then he started the motor. It chugged gallantly enough and the wings beat furiously, but the helicopter stayed where it was.

Whereupon his colleagues conferred upon the young inventor the Russian equivalent of the raspberry, which is painful in any tongue. He did not smile. But he gently turned to them and said:

"I have made a mistake. It will fly next time."

He went home and informed his father that he needed more money. Professor Sikorsky, too good a psychologist to ask what happened to the first investment, dug into his pocket again. In the spring of 1910—when Bleriot had already made his spectacular flight across the Channel—the second helicopter was built and ready for testing.

Still grotesque it was, yet improved in design over its predecessor. Suspended under its ungainly wings was a puny 15-horse-power motor. More hopefully than before, Sikorsky wheeled it out of the hangar and took his place in the seat. He started the motor.

Lo! The helicopter swayed, tottered, and tore itself from the ground . . . hopped five feet or so . . . and then sagged to earth again, collapsing gently about the shoulders of the designer.

The skeptics who had come to jeer were mute. The ultimate fact of collapse was eclipsed by the penultimate fact of flight.

Perhaps that five-foot hop might have been construed as a success of a sort. But Sikorsky was through, for the present, with helicopters. He decided that the time had not yet come for them. He turned toward the development of the plane that is standard today.

Before the year 1910 was out, he had designed and built three extraordinary planes, all financed by his father. The S-1 (S being the Sikorsky symbol) was a biplane with a 15-horse-power motor. Cajoled by a wind of about gale intensity, it was persuaded to leave the ground. But when it returned to Mother Earth, they gathered it up in wheelbarrows.

The S-2 followed hotly upon the heels of its predecessor. It was a larger craft and was equipped with a 25-horse-power engine plant. With a great flourish it flew for six hundred feet before gravity took command of the situation. This time, the indomitable Sikorsky set about building the S-3 on the spot.

"I realized then," he said, "that what I needed was a more powerful motor. My wing designs were good. I needed only more power."

The S-3, completed in the fall of the year, flew splendidly for fifty-nine seconds before it pitched earthwards. It fell simply because the designer did not know how to fly it.

IN THESE days when our casual young flyers stay aloft for sixty hours or so at a time, it may seem rather droll that not many years ago men should have worked so hard and so long for a few seconds of flight. But don't minimize the hazards they overcame. No matter where today's trained aviators go, over oceans or mountains, flying planes twenty times as powerful, they confront no greater risks than do the pioneers like Igor Sikorsky, who perched timidly on the lower wing of a fragile and often obstreperous machine could never predict with any certainty what the next moment would hold for him.

"Yes, you can wager that I was somewhat frightened," he recalls. "You see, I had worked out certain maneuvers on paper, but I had no assurance that they would work in the air. Usually," he smiled ruefully, "they didn't."

In 1911, he built the S-4 and S-5, progressively stronger and more reliable than his earlier models. The S-5 fairly carried him into a career. Taking off from a field behind his factory, he soared to 2,000 feet. Confidence came as the ship responded perfectly to the controls. He stayed aloft for an hour, dipping and rising in various evolutions.

It was a little accident that brought about the multi-engined plane from which sprang the great transport planes now moving across the skies today. Incidentally, it almost brought about the end of a budding career. On a test flight over Sikorsky's motor quit. He had to come down, pronto—skidding desperately between a stone wall and a line of freight cars. For a moment thereafter, Sikorsky sat on the lower wing, thinking.

The New Thrill in Motoring

[Four Speeds Forward *Standard* Gear Shift]

OWNERS say that the only new motoring thrill they have enjoyed in recent years is the distinguished performance of the Graham-Paige four speed transmission, with its *two* high speeds and *standard* gear shift. The smoothness and swiftness of *fourth*, and the rapid acceleration of *third*, can only be appreciated by personal experience. There is nothing new to learn — you start in second; first is instantly available, but seldom used. We invite *you* to enjoy a demonstration of this new thrill in motoring.

Five chassis—sixes and eights—prices ranging from $885 to $2495. Car illustrated is Model 615, six cylinder Cabriolet with rumble seat, $1295 (special equipment extra). All prices at factory.

Name.....

Address.....

"I don't remember exactly what I thought," the Sikorsky of forty recalls, "but I was convinced that the airplane of the future must have more than one motor.

"Why not two motors, I thought, or even three, or four? Thus, if one should stop, the plane could maintain flight on the others. More motors, other things being equal, would mean more power. More power would mean a greater margin of safety and reliability."

Other builders before him had tried the idea and failed. But Sikorsky paid no heed and went forward by putting his idea on blue prints. By this time officials of the Russo-Baltic Railroad Car Works, one of the biggest industrial corporations in Russia, had been so impressed by Sikorsky's experiments that they offered him a position in its research department. Having an eye to the future, they agreed to finance his experiments. He accepted because this would put a mighty organization behind him.

Although heart and soul absorbed in his contemplated giant, Sikorsky built only two planes in 1912, both single-engined craft. The first, the S-6A, won the highest award in the Moscow Aviation Exhibition; the S-6B captured the first prize in the Petrograd Military Competition.

The day on which he won the Petrograd award was one of the greatest in Sikorsky's young life. He piloted the S-6B himself. He was determined that it should be first. Also, there was a prize of 30,000 rubles—pre-war values—which he was eager to win. When the prizes were awarded, he became one of the foremost designers in the world. He was then twenty-three years old.

"My real joy came, however, when the Russo-Baltic company told me to begin work at once on the multi-motored plane," he said. "It would cost many thousands of rubles, and few officials believed it practical. Others said it was a sheer waste of money."

The few who believed in Sikorsky did not lose. Within a year, he built the first two multi-engined planes that ever flew. They were, for a time, the marvel of the world. The first, the S-7, derived power from four 100-horse-power, water-cooled motors.

Judged by modern standards, Sikorsky's epoch-making invention was underpowered, but it was the first successful multi-engined plane in history and it definitely proved its significant prophecy in some fifty splendid flights in a short period of time.

THE forced landing between the freight cars and the stone wall that gave Sikorsky the idea of multi-engined airplanes henceforth sharply bounded his career. He moved completely out of the school of little ships and turned his energies toward building huge transports. He built and flew the first multi-engined seaplane. Then he built a larger land plane which blithely cracked world's records right and left. One of its most noteworthy accomplishments was a 1,600-mile flight from Petrograd to Kiev and return, a trip marred neither by forced landing nor accident.

Step by step, developing new methods and principles, he molded his aërial leviathans, creating finally the giant of them all, a four-motored plane, driven by 225-horse-power Renault engines which could lift a total load of twelve tons. Now he was dreaming of commerce, of building air routes between Petrograd and the world capitals on the continent. A few months, he thought, and the time would come.

Then war shouldered into his life, and for four long years the only commerce he could plan for his beloved airplanes was bombs, machine guns, and explosives instead of the good-will cargoes of peace. Although he had designed his planes for the less spectacular missions of transportation, he had foreseen their incalculable potentialities as mechanisms of war. When Austria, Bulgaria, and Germany began to hammer in concert upon Russia's 1,400-mile front, he was already marking a place for a 1,000-pound bomb in the slots of the powerful ships he planned to build.

IT WAS in the fall of 1914 that the Grand Duke Alexander, in charge of aviation, summoned the twenty-five-year-old designer before him. The Germans were storming into France. A terrific thrust was momentarily expected on the Eastern front.

"We must have as many bombers as possible," Grand Duke Alexander told Sikorsky. "Nothing must delay you. We shall give you as much aid as possible. But we must have bombers. Success in a large measure depends upon you."

The youth gently accepted the command. He went back to his plant and thought things over. Here was his country at war with highly industrialized nations. Russia possessed few factories, and these few must be converted into munitions plants. There were no factories to build motors, and airplanes can't fly without engines. There were few pilots whom he could trust to fly them, once they were built. He turned to his foreman.

"We must work at once," he said.

He began that day, and for three years he did not stop. By the spring of 1915, the first of his fleet was ready and hotly engaged. By the spring of 1917, seventy-two others, progressively improved, had followed it. He trained workmen and built up his factories. He begged, pleaded, and demanded motors from the Allies, who had few enough to spare. He used eleven kinds of motor plants in his planes, and seldom had a sufficient number to equip the planes as he turned them out.

Of his seventy-four ships, not more than half could be released at a time for active service; the others must be kept behind the lines for training service. In summer and in Russia's dreadfully cold winter they worked untiringly. They undertook dangerous night flights, attacking enemy ammunition dumps.

In all, these ships undertook some four hundred missions, most of them against fearful odds, for the German High Command leaned heavily upon its combat planes—nasty, vindictive pursuit ships that could fly circles around the heavily loaded bombers. More serious still, the Russians did not have enough planes properly to guard the bombers. Yet, it is one of the great traditions of aërial warfare that Sikorsky's bombers always came back, some with one and even two motors literally shot out of the plane; others with the fabric sides torn to shreds by machine-gun fire.

Only one of these magnificent eagles fell to earth, and that was literally forced

Pipe jurors *Attention!*

IF you want to give your favorite pipes a fair trial, start them all at scratch with Sir Walter Raleigh's favorite smoking mixture. It's milder than most, it's rich and mellow, and its fragrance is kept fresh by the heavy gold foil that lines the tin. Let Sir Walter show you how good *your* pipe can be.

LIMITED OFFER
(for the United States only)
If your favorite tobacconist does not carry Sir Walter Raleigh, send us his name and address. In return for this courtesy, we'll be delighted to send *you* without charge a full-size tin of this *milder* pipe mixture.
Dept. 168, Brown and Williamson Tobacco Corporation

SIR WALTER RALEIGH

Who discovered how good a pipe can be

It's *milder*

down by the weight of its attackers and the displacement of lead they poured into it. Even when the Germans took Warsaw and the ultimate collapse of the Empire was written luridly in the skies, Sikorsky's bombers worked with the zestfulness of the victorious. They furnished a glorious overtone to a somber chord.

Bitter days they were for the young dreamer. The joy he had in the realization that his planes had proved their worth was chastened by the knowledge that their mission was one of destructiveness. He hoped for peace and victory.

The Revolution streamed about him, engulfing his career as it reached his peak. The disorder and the new government were more than he could stomach. Heart and soul with the cause of the Allies, he quit his country accompanied only by his foreman, and went to France. The Bolshevists denied him his plans and his blue prints, but his blotting-paper memory made good the loss. The French government immediately commissioned him to build his famous bombers for use on the Western front.

In the midst of production, the Armistice arrived and stilled the clamor in his factories.

"I drew a deep breath," declared Sikorsky, "and came to the United States, because here was the home of the airplane, and here I knew I could build my airplane of the future."

But five years were to pass before Sikorsky could build his first airplane in this country—five years of anguished waiting. Comparatively few had heard of this Russian builder. Besides, the war over, the public had little enough interest in aviation. Those who wanted airplanes could buy them for a song from a government eager to get rid of its surplus war materials.

Sikorsky became a lecturer before boys' and men's clubs. He did odd jobs for the government, everything he could think of, to hold body and soul together. The big aëronautical companies were too poor to employ him. He must wait for what he has now learned to call in English "the breaks." His foreman patiently waited with him.

FINALLY, in 1924, a "break" came. His compatriots, among them Rachmaninoff, raised $100,000 to incorporate the Sikorsky Aëro Engineering Corporation. He gathered about himself a few Russian mechanics who had followed him to this country, and started to build the S-29, one of the most famous planes of its time.

"We rented an old garage on a farm on Long Island," he recalled. "We were all very poor. There was hardly enough money to spare for salaries. Sometimes not even enough to buy materials. We worked in the open. But my men were good, and they could do wonders with old automobile parts.

"We did not mind these difficulties. The hardest thing to bear was what the newspapers wrote. They called us refugees, insisted that we were all grand dukes, princes, and what-nots, and wrote sentimental things about our plane being the 'last hope of the aristocrats'! We couldn't make them believe that we were just plain engineers."

Difficulties notwithstanding, the S-29 was finally completed. An automobile towed it to Roosevelt Field, which did not then boast of its trans-Atlantic runway. Sikorsky looked over the rough, rock-strewn field. A very bad place to attempt a take-off.

"We'll try it," he declared.

The ship crashed against a bunker on the golf course on the take-off. Then followed headlines lamenting the crushing of "the last hope of the Russian Royalists."

Crushed? Not mild-eyed Igor Sikorsky. He and his comrades began to rebuild the S-29. Carl B. Allen, well-known aviation editor of the New York World and a war flyer himself, strolled out to the field one day and returned to tell the city that this soft-spoken, shy engineer was the man who gave the multi-engined plane to the world. And when the S-29 was rebuilt and flown, Allen was the first to extol its virtues—its extraordinary performance, and its singular ability to fly with one motor dead. "No matter what critics may say," he wrote, "the fact remains that the principles incorporated in the Sikorsky machine must fundementally affect the commercial planes of the future."

Even then Sikorsky found life very hard. What orders came in were not enough to make him prosperous—a few orders for single-engined planes, for his famous wings. "Wait, wait," he reassured his friends. His faith soared higher than his airplanes.

HIS chance came when René Fonck, the French ace, commissioned him to build, for a non-stop flight to France, a tri-motored biplane—the first tri-motor, incidentally, built for the purpose. Its cost was set at $100,000. In 1926 it was ready, having performed very efficiently in test flights. In its tanks were eight tons of fuel.

Whether the actual cause was overloading or faulty handling, no one can say; but, whatever the cause, the S-35 thundered down the runway and, unable to rise, staggered over the lip of the precipice at the end of the field and crashed in flames.

It was a blow that might have crushed a lesser faith. Sikorsky wept that gray morning, but not in despair.

"Let us not have bitterness," he told his friends. "Pioneering is always dangerous. We must take risks to learn. It is easy to blame, but courageous to try again."

Sikorsky went about his building and in 1927 created the first multi-motored amphibian to fly successfully. It possessed the characteristics its name implies—equally at home on land, on sea, or in the air.

Meanwhile, the indomitable Fonck returned and ordered another transatlantic ship—a huge biplane—to be powered by two Rhone-Gnome-Jupiter motors and capable of 4,500 miles of unbroken flight. In its construction, Sikorsky undertook a significant experiment. Designing the plane for commerical use, he made it peculiarly adaptable to transformation into a bombing plane. Thus, with a few minor changes, a peaceful transport ship can be metamorphosed overnight into a powerful engine of war.

"It is true that the next war will be largely fought and won in the air," he told me then. "It is equally true that the nation equipped with efficient aircraft will have a broad advantage. And it is true

No one needs to give up friendly coffee

So MANY people enjoy to the fullest their breakfast coffee—and yet strictly deny themselves its flavor and cheer at the evening meal. And all because ordinary coffee contains a drug that often upsets sleep.

If they only knew it—how unnecessary! For there's a coffee, today, that lets you sleep. A coffee with 97% of this drug caffeine removed. Kaffee Hag Coffee will not disturb your nerves nor keep you awake.

Kellogg's★ Kaffee Hag Coffee is not a substitute. In fact, there's no purer, more satisfying coffee on the market. It's a blend of several of the world's choicest coffees. Mellow, full-strength, heartening.

Try Kaffee Hag Coffee. All the family can drink this delicious coffee morning, noon and even at night, without harm. And what could be more welcome to the coffee lover who has been putting up with substitutes!

Kaffee Hag Coffee comes in sealed cans. Steel cut or in the bean. Sold by dealers everywhere. Served in hotels, restaurants, on diners. Let us send you a generous trial can. Mail the coupon.

KAFFEE HAG CORPORATION
1874 Davenport Ave., Cleveland, Ohio

Please send me, postpaid, enough Kaffee Hag to make ten cups of good coffee. I enclose ten cents (stamps or coin).

KAFFEE HAG COFFEE

The coffee that lets you sleep

that no nation can afford to build and maintain huge fleets of fighters, however interested in preparedness they may be.

"True preparedness lies in building convertible planes, planes that serve in peace times as carriers of commerce and, in an emergency, can become warcraft without expensive alterations."

The United States Navy was sufficiently impressed with Sikorsky's new model to order a sister ship.

AT THIS moment, Sikorsky is concentrating his energies upon his amphibian, the perfected instrument of ten years of careful planning. Powered by two Pratt and Whitney Wasp engines, the Sikorsky amphibian is guaranteed a top speed of 128 miles an hour while carrying a total load of 4,000 pounds and a pay load of 2,210 pounds, the latter including nine passengers, mail, express, and baggage. Its motors are powerful enough to "climb" that load at the rate of 940 feet a minute, and to hold it at a height of 20,000 feet.

This is the ship, Sikorsky believes, that must radically affect commercial design. It can be landed with equal facility on land and water. A lever in the control cabin regulates the position of the landing wheels.

"There are many who contradict me," Sikorsky declared, "but it is my belief that the amphibian is the logical ship for intercity transport. It is not to be denied that one of the greatest problems facing the cross-country pilot is the lack of good landing fields near the big cities. Yet most of the cities are adjacent to rivers, bays, lakes, or ocean harbors. An amphibian can rise, say, from the Hudson River, New York City, and settle near the water front at Boston, saving the air traveler the time he now loses in commuting to and from the flying fields at both terminals.

"Again, there are the safety factors to consider. Too many forced landings result in crashes because of the scarcity of good landing fields. A pilot who is overtaken by fog, storm, or snow urgently requires a place where he can land in safety. Not always are such spots accessible to a distressed land plane. But almost every cross-country run shows the presence of rivers, lakes, or harbors upon which an amphibian might alight with safety.

"For instance, we recently studied the air route between New York City and Washington. On the strip of territory thirty miles wide that the planes follow we found that emergency landing fields total only seven and one-half square miles, while the available water landings within the same area total five hundred and fifty square miles—seventy-three times greater.

"That is a fact which cannot be ignored."

Apparently this factor is *not* being ignored. The Sikorsky program for 1929 calls for the production of one hundred Sikorsky amphibians, all contracted for. The Navy has ordered thirty. Realty men in the West want these planes for use in demonstrating developments to customers. Wealthy men want them as private air yachts. A Wall Street broker wants one for commuting purposes. The head of a national business has chartered one to carry him to his scattered agents. A big air-line corporation wants others for transcontinental transport.

Yes, Igor Sikorsky has become prosperous, and it is a comforting parallel that the old S-29, conceived in such labor, should be prospering too. After many spectacular errands, it has finally landed in one of the most luxurious of American businesses—the movies. When I last heard of it, it was disguised—of all things—as a German Gotha and earning handsome dividends for its owner. Another ship, after three years of hard service, is still in use as a pay-roll truck up and down the Amazon River.

"They are very good ships," Igor Sikorsky remarked.

The troubles of the past?

"Well, they are all over, and I would be silly if I should say that I ever became discouraged. If one believes in an idea, how can one possibly lose faith when efforts to apply that idea fail? Failure of these efforts does not affect the validity of the idea. I always believed in the airplane. It is a system of philosophy in itself. Having spent years in proving its truths to my own satisfaction, I could not become discouraged simply because I found it somewhat difficult to make these truths immediately evident to others.

"The achievement of flight is one of the most beautiful accomplishments of man. It has opened new thoroughfares to his growing mobility. It has provided him with a new dimension, both spiritual and mathematical. It has given him mastery over his horizon!

"Years ago, when I was very young, long before I even heard of your brilliant Wright Brothers, I believed that we not only would, but must, fly. It was the next and inevitable step in mobility.

"Of course, it took time for the public to become of the same belief. The first airplanes, after all, were little better than freaks. Under-powered, fragile, undependable, they had barely strength enough to sustain the pilot, let alone passengers. And the pilots themselves had to learn how to fly by the trial-and-error method. So, too, with the designer. Only by often dangerous errors could he learn how to build stronger and more reliable planes. I think that we have learned."

SIKORSKY pointed to a huge map which hangs in his office.

Little ribbons of red, yellow, and green symbolizing air routes either in operation or projected, crept across the map. Here was one hurdling the jungles of Africa, another reaching from Paris, across the South Atlantic, to Rio de Janeiro. Here were routes etched across the steaming jungles of Indo-China, the frozen plains of Siberia, the mountains of South America and the Candian Northwest. Thick bands crisscrossed the world capitals of Europe, threaded the cities of the United States—everywhere a speeding up of old highways and a building of routes where none existed before; straight lines for commerce where lines had bent and curved.

"I believed that these routes would come," Sikorsky concluded simply. "The airplane has ceased to be a freak. It is the fact of today and the promise of tomorrow. And the realization that my machine have perhaps contributed to the hastening of that day is recompense enough for what ever disappointment I may have suffered.

"Nearly all of us, I suppose, must learn to be patient and to wait."

Now presenting six ALL-STEEL MODELS

INTRODUCING STILL HIGHER STANDARDS OF EFFICIENCY

CAN'T WARP

STRONGER, STURDIER

COST LESS TO OPERATE

An outstanding achievement—distinct contribution . . . the st all-steel refrigerators. Revolutionary designs—new low ces. The greatest values ever ered by General Electric.

is all-steel refrigerator development marks climax of years of painstaking work. It is other contribution to better living—made the engineers and scientists of the General ctric Research Laboratories. This is the same up that perfected the hermetically sealed chanism which, by reason of its quietness l efficiency, has already made the General ctric Refrigerator so great a success.

w you can buy a refrigerator with a cabinet lt like a safe. One with doors that will always fit perfectly. One which will operate with the least amount of current.

The hermetically sealed mechanism remains just as it has always been . . . sealed away from dust and difficulties, permanently oiled, quiet, unseen, untouched . . . one of the miracles of modern science.

Mass production has made possible many important economies. Prices now start at only $215, at the factory, and there are six sizes of the all-steel models to choose from. Investigate them thoroughly and drop a card for a descriptive booklet to Section A-5, Electric Refrigeration Department, General Electric Company, Hanna Building, Cleveland, Ohio.

D&C LAKE LINES

Is Your Memory as Good as It Ought to Be?

(*Continued from page 43*)

named, counting the repetitions necessary for learning.

List 2—Non-sense Syllables:

zin	dey	piz
tud	yin	wix
lum	mox	kug
pox	lup	lek

Compare the number of repetitions necessary for learning List 1 with the number necessary for learning List 2. If you have a very good memory you may have learned the first list with one or two readings, and the non-sense syllables may take you from nine to seventeen!

"The non-sense syllables mean nothing," said Doctor Bolton, "and they have no associations in your mind. But the *words* have many associations. Every day of your life you have to learn unrelated names, figures, and facts. It will be many times easier for you to learn them if you can associate them with something already known to you."

TEST III

THE following is one of Doctor Bolton's tests of your power to remember unrelated facts. Read the following statements through once:

1. About twenty miles down the St. Lawrence River from Quebec is the quaint village of Ste. Anne de Beaupré.
2. The area of the Irish Free State is 26,592 square miles.
3. Few people seem to know that the name Lewis Carroll was a pseudonym adopted by the Reverend C. L. Dodgson.
4. Rayon, the first successful artificial silk from a commercial standpoint, has been on the market since 1910.
5. The bridge over the Delaware River between Philadelphia and Camden, completed in 1926, has a span of 1,750 feet between its two piers, making it the longest suspension span in the world.
6. The American Bible Society was organized on May 8, 1816.
7. Females may be married, with parents' consent, at twelve years of age in Kentucky, Louisiana, Maryland, Mississippi, and Virginia.
8. In January, 1925, there were reported 299,100 producing oil wells in this country.
9. Rays of light sent out by the sun require a little more than eight minutes to reach the earth.
10. King Tutankhamen died 3,275 years ago.

Now read through the following questions and see how many of the statements you have remembered.

Questions for Test III

1. When was the American Bible Society organized?
2. What is the area of the Irish Free State?
3. What is the name of the first successful artificial silk? When did it come upon the market?
4. How long does it take a ray of light to travel from the sun to the earth?
5. Where is the longest suspension span in the world? When was it completed? How long is it?
6. How long ago did King Tut die?
7. Where is Ste. Anne de Beaupré?
8. How many producing oil wells were there in this country in 1924?
9. What was the pen name used by the Reverend C. L. Dodgson?
10. In what states may girls of twelve be married with their parents' consent?

If you can answer seven of these questions correctly you are doing well. The average reader will answer five or six.

TEST IV

HERE is a test, given me by Doctor Bolton, for memorizing related facts. Read the following paragraph once:

On October 10, 1925, a strong wind which blew for sixteen hours from the north wrought havoc in and about New York City. Five persons were killed, nineteen were injured, hundreds of small boats and some barges were wrecked on the Hudson, thousands of trees were blown down, and telephone and electric services were interrupted.

Now read the questions on this test and see how you make out.

Questions on Test IV

1. On what date was there a bad wind storm in New York City?
2. How many people were killed?
3. How many were injured?
4. What other damage occurred?
5. How long did the windstorm last?

The average reader will answer all the questions correctly.

"How," I asked Doctor Bolton, "can I *use* association in connection with names?"

"Associations for names are often hard to find," he replied. "If John Smith is a blacksmith, you will have no difficulty in remembering his name; but if John Smith happens to manufacture lace, there is no connection.

"Adopt a system for remembering if you need to know names in business. Look at the person you meet, and associate him with the place in which you meet him.

"Also, it is essential that you *hear* the name and know how to *spell* it before attempting to remember it. A great many failures to remember names occur because you never really knew them in the first place. Take your time in introducing people and make others take time in introducing you. No one minds in the least your being sure of his name. Write the name down, if you can. Say it aloud, repeating it a number of times if you have any capacity for remembering by *hearing*.

"*Then fix the person in your mind by a distinctive mark.* The distinctive or characteristic mark is absolutely necessary when three or four people are presented at once. Fix each one of them by a distinctive mark and then link up the names.

"I assume," Doctor Bolton continued, "that as you have had difficulty in remembering names, you have some a

A sunbeam made her cry . . .

HER mirror was dimly lighted—a compassionate mirror that told only of lovely contours, charming hair and eyes, white teeth. But one morning a spying shaft of sunlight pitilessly revealed the truth. The skin of her face was *wearing out!* Rounded shoulders still kept the silky softness of girlhood, but the face! In spots it was actually *rough.* She had been so proud of her skin—thought she had cared for it.

The cause of roughened skin is really very simple and may be simply met. Your face is exposed to many drying conditions. Wind dries it. Dust is very harmful. Smoke, always in city air, is bad. Cooking over a hot stove is ruinous. Your face and hands constantly undergo a weathering process that robs them of their natural moisture. And it's the natural moisture that makes the skin velvety, dewy, soft.

What to do about it? Obviously, this natural moisture must be replaced, otherwise the skin is certain to become rough and coarse.

As a child, when your hands and face became almost brittle from chapping, didn't you always smooth on Hinds Honey & Almond Cream? And didn't the skin miraculously grow soft again—and stay soft?

The truth is that this wonderful liquid Cream possesses just what dry skin needs. How else could it have remained a household necessity for generations?

Will you be fair to your face—will you believe the truth of your mirror? Examine your skin honestly in a strong light and then compare your face with the sweet delicacy of shoulder skin. When you are convinced, please try Hinds for a week or two. Smooth it in gently whenever your face is exposed to weathering conditions. We know you will be delighted. Your skin will grow softer day by day. That rose-petal texture will return. Hinds Cream really never fails. Its many years of universal use for the more serious cases of skin drying (chapping) prove it to possess invaluable power to restore natural skin moisture.

Would you like to try Hinds Cream? We know that even a brief trial will convince you of its benefits in keeping your face and hands soft and smooth. So sure are we, that we shall be glad to present you with a sample bottle of generous size. To get it just send us your name and address on the coupon below.

remembering numbers, telephone numbers, addresses, and so on. You can overcome it if you will apply this law of association. But first you ought to know what kind of memory you have for numbers; therefore, the test I will arrange for you will show you *how many digits, or single numbers, you naturally remember,* and you will learn how to extend that natural memory."

The test mentioned follows:

TEST V

THIS is an auditory, or hearing, test. Have someone read the following groups of figures to you one at a time, as digits, thus: 5-2-9-0-7-8-4-6. Write down each number as soon as it is read. When you have heard and written them all, take the list and mark your errors.

52907846	8061[illegible]
72641583	5896[illegible]
46830917	61590[illegible]
68397152	35729810
39170584	79408263

You will find that in the majority of instances you have remembered five or six or seven of the digits correctly. That number is approximately your memory span. A few repetitions with similar lists should give you a final span.

"The ordinary memory span varies between six and seven digits," Doctor Bolton said. "If your memory span is below six, you are slightly below the average and need all the help you can get in remembering numbers. If it is above six, you are fortunate.

"Look over the numbers you wrote and *see where your memory began to fail*—not in the writing of the first four figures, probably, but, in the main, about the beginning of the last four, and so on towards the end of the line. You can easily remember four digits; very well, then, when you have, as in this case, eight to remember, *divide them into two groups of four each.* This *grouping of figures* as an aid to memory is well understood and is the reason for the peculiar formation of our telephone numbers.

"Group your numbers first, then use your powers of association to help fix them. You want to remember a telephone number, say, 6234-J. You ought to be able to remember the four digits 6-2-3-4, but if you are afraid you will forget them, add to that the association that the first '6' and the last '4' make ten and the tenth letter of the alphabet is J, which is a distinctive mark for remembering J.

"*It is remarkable how many numbers and dates, fixed beyond question in your mind by your own experience, can be forced into practical use in association.* I remembered my auto license number for 1926, which was 189294, because I took my first degree in '89, which gave me 1—89, and my second degree in '94, which gave me 2-94.

"You have been advising me to take my time in observing," I said to Doctor Bolton. "What can I do when I have to act quickly? Sometimes I have to see a number of things at once and remember at least some of them."

"Fortunately," replied Doctor Bolton, "the ability to receive simultaneous impressions is one that can be greatly helped by practice. Fix your powers of observation and you will be surprised at their rapid improvement."

No Other Cleaning Device Has This Wonderful Sanitary Feature

That's why hundreds of thousands of women are discarding equipment which the Air-Way Sanitary System has made obsolete

ice—Why, Marge, come in and sit own for a minute—I'll be ready in I didn't expect you quite so soon ould have had my things on.

—Well, from now on I'll be early erything. Congratulate me, Grace; y took your advice and bought one se Air-Way Sanitary Systems and lighted with it. Now I know why ways say housework isn't disagree- one has the proper tools.

—Then you've used it?

—Used it! Why I cleaned my house n less time than ever before—and oo.

—So that's the reason you were get away early. Maybe we'll be shop before lunch and take in a terwards. Why, it's only a quarter n now!

—I'm so elated over my Air-Way. k of a machine that will not only gs and carpets but will polish lean upholstered furniture, dra- mp shades, under furniture with- ing it—and enable me to control festations.

Why, you haven't mentioned one fourth of the things it will do. I use mine to clean almost everything that doesn't have to be washed. And don't forget you'll never have to perform that disagreeable task of emptying the filthy contents of a bag. There's a *real* contribution to sanitation.

Marge—Indeed it is. No other cleaning device has that sanitary feature. It's a marvelous idea, and so simple and efficient. No wonder so many thousands of women are discarding old-fashioned equipment for the Air-Way System. Just think! All the dust and germs are collected and sealed in a Sanitary Cellulose Filter Fibre Container that can be detached and burned or discarded.

Grace—And no contact with the germs or dirt, either.

Marge—My husband says it's the smartest purchase I've made since we've been married. So reasonable, too, for all that wonderful service.

Grace—Tell me how you happened to get it.

Marge—You had told me so much about it and I saw it advertised in leading magazines. When a courteous young fellow called at my house yesterday I just had him come in and demonstrate. It certainly convinced me that I was not up on modern cleaning equipment, and incidentally revealed the reasons for your leisure.

Grace—Frankly, you thought I was telling you about just another old-fashioned cleaner didn't you?

Marge—Frankly—yes. I'm sorry now I didn't get one when you first recommended it. Now I'm so enthusiastic that I'm going to write mother about it. She certainly ought to have an Air-Way. I think of her lugging that heavy old-fashioned cleaning equipment around her big house when this lighter, more efficient Sanitary System is available, I'm just shocked.

Grace—Yes, write her and tell her to look up Air-Way Branch in the phone book and call for a demonstration.

Way is represented in hun- s of cities and listed in the hone books under "Air-Way ch of (your city)." Sold direct in any store. A telephone call bring a trained, gentlemanly, led representative to demon- Air-Way in your home.

Air-Way
SANITARY SYSTEM
It has raised the standard of sanitation in the home

If you do not find an Air-Way Branch listed in your phone book we will gladly supply you with complete information about The Air-Way Sanitary System. Just write your name and address on the corner of this page, tear off and send it direct to the factory.

ONLY HALF THERE

EAT YEAST IN THIS MODERN FORM

IF YOU ARE RUN DOWN, FAGGED OUT, AND CONSTIPATED

If you are aware of the health benefits of yeast (and millions of people are) you'll want to try this improved, modern form of yeast—Yeast Foam Tablets. Easy to swallow . . . good to chew . . . a peculiar rare flavor that everyone likes.

Eat these tablets of pure yeast for constipation, indigestion, skin disorders, "nerves," run-down conditions. As to their quality and effects it is enough that this yeast is used by leading universities and by the U. S. Government in their Vitamin B studies.

Only 5c for the little glassine envelope or 50c for the 10-day bottle. At drug stores. Northwestern Yeast Co., 1750 N. Ashland Ave., Chicago.

The test given me by Doctor Bolton on this point follows.

PICTURE TEST VI

LOOK at Picture No. 1, page 42, for five seconds. Then turn away from it and write, as rapidly as you can, everything that you saw in it. You should be able to name twenty things. Turn to page 126 and read the list given there, and compare it with your own.

Look at Picture No. 2, page 43, for five seconds. Turn away and write what you have seen. Compare what you have written with the list of things shown on page 126. Then compare your success with this picture with that on Picture No. 1. You should be able to see at least thirty details.

"Suppose, Doctor Bolton," I said, "that you want to sit down and *systematically* memorize something, something that must be learned, some part of your work, or a prayer, a lesson, a Masonic ritual, rules of the road for drivers, and so forth. How can you learn quickly and easily and retain as long as you wish?"

"I have already given you two aids," he replied; "but there are other aids. One of these is *order*.

"*To learn facts, present them in orderly form whenever it is possible.* Prove that to yourself by another test that I will give you."

This test follows:

TEST VII

LOOK at the following form for thirty seconds. Cover it and try to reproduce the letters in the positions they hold.

S A
N
&H
T M
L

Then look for one second at the letters of the second form. Cover it and write them in the order in which they stand.

W E R N
S D F H
R I M B

The first form contains eight letters in disorder; the second contains twelve letters in three orderly rows of four letters each. In all probability you will be able to place three or four of the first group correctly and *twice that many of the second group*.

"This illustrates directly," said Doctor Bolton, "the effect of order on the memorizing process. Order helps to fix things in your mind.

"Anything you wish to learn systematically *must be put into order*. Rituals which are fairly orderly are much more easily learned if the sentences to be remembered are divided into separate paragraphs and the initial letters of the paragraphs spell some well-known words. Suppose the words 'Grand Senior' represent the ruling member of the society. The first sentence of the ritual will begin with a G, the second with an R, and so on. The letters G, R, A, N, and D are distinctive marks for beginning the sentence and they are in order.

"You may be able to fix a long essay or a lecture in your mind by arranging the main points in order and numbering them. But any system of *order* you can devise will help.

"Your daily life is filled with a miscellany of things to be done. You forget many of them. Put them in order as a business man does, by tying them to *time*. The practice of sitting down at night and mentally arranging the next day by hours will help any memory for details. If you date yourself for nine, ten, and eleven o'clock on the morrow, you will soon find that at nine, ten, and eleven o'clock you become aware of the task assigned for that hour.

"When you shop, remember your lists by grouping them so that the first letters of the words spell a cue. If you want to buy paper, ink, carbon sheets, a ribbon for your typewriter, and stamps, arrange the list so that it reads:

c arbon
r ibbon
i nk
s tamps
p aper

"The first letters spell the word 'crisp' and the remembering of the single word will help to recall each item."

"I want you to tell me," I said to Doctor Bolton, "*exactly how to go about memorizing something*. How can I quickly and easily memorize so that what I learn will be permanent?"

"I don't know how often you will have to relearn anything until it will be permanently yours," he replied, "but I can help you to find out for yourself."

TEST VIII

He then gave me the following test:

He who plants a tree, plants love;
Tents of coolness spreading out above
Wayfarers he may not live to see.
Gifts that grow are best;
Hands that bless are blest.
Plant. Life does the rest.

TAKE this stanza of six lines and read it until you can say it correctly once. Mark the number of readings for *learning*. It may take from twelve to forty, depending on your native ability and your control of your memory faculties.

Lay it aside and twelve hours later try to repeat it. You will make mistakes. *Yet you have learned the lines.* To learn them permanently *something more is needed.*

Now take the poem and read it until you can say it *twice*, without fail. Mark the number of readings necessary.

Twelve hours later try to say the poem. If you make any mistakes *they will be very few.*

You have done what is called *relearning;* that is, you have learned the lines, you are *certain* of the lines. They will stay with you at least twelve hours.

Now see how many days elapse before you forget the lines. Put them away for five days. Try to repeat them. You will make many mistakes. Then *relearn* the lines. If it took twelve repetitions to *learn* them, and eight more to *overlearn* them, you will probably find it takes four readings to relearn them. Compare the number of readings necessary with the two former numbers.

A good watch deserves a good chain

YOUR watch-chain just can't be at sixes and sevens with your watch and still do you justice. A good watch deserves a good chain . . . one as carefully, skilfully made as the watch itself! *A Simmons Chain!* The chain illustrated (a white gold-filled Waldemar, 30580, at $11.25) has been designed especially for the Gruen Pentagon. The chain may be worn, of course, with any other fine watch—yours, for instance! It is typical of Simmons leadership in smart, modern designs. Your jeweler will show you many others. R. F. Simmons Company, Attleboro, Mass.
